No. 1—1½" x 21"
No. 2—2¼" x 30"
No. 4—3½" x 42"

Below we give particulars of a recent test carried out on the No. 2 Patent Hexagon Turret Lathe:—

Material—30-ton mild steel.

Reduction in diameter, 2" to ¾".

Speed of Work—158 ft. per minute.

Weight of Metal Removed—7¾ lbs. per minute.

FULL PARTICULARS FREE ON REQUEST

We will be pleased to give a guarantee of output on receipt of samples or sketches

We also carry a complete line of

Machine Tools and High-Speed Steel

be the rating of the engine. Variations from this standard cost per thousand ton miles in the daily performance of all engines on the division should be charged against the various causes contributing thereto. The standard cost per thousand ton miles applied to the loading of the engine, will give the standard for the trip.

If a train has been run light on account of maintaining a fast freight schedule, or if the train has been run light on account of failure of the engine, or on account of weather conditions, or due to the preponderance of traffic in one direction, necessitating a return movement with less than a full load, or from whatever cause "the ratio of the results obtained to the power expended" has been reduced, the actual waste in dollars and cents from each cause is known, and intelligent endeavor can then be applied to overcome the weakness. There are, of course, certain expenses which may be considered relatively as fixed expenses which do not diminish responsive to a fluctuation in the volume of business, but a goodly proportion of the expenses of operation of any railway are these immediately and directly controllable expenses, and the simplicity of the theory, the ease with which the actual results may be determined, and the deductions to be drawn from these results are so apparent that it would seem almost as inexcusable to operate without this measure of efficiency as it would be to operate a locomotive without a water gauge. If we do not watch our costs and know the reasons why, instead of guessing, trouble may be expected.

The practical tonnage rating for an engine being the tonnage which can be handled over a trip with the least expense in dollars and cents per thousand ton miles moved, it naturally follows that this most economical tonnage is the easiest on coal consumption, and is a tonnage which does not produce excessive locomotive repair bills. It also follows that it is a tonnage which does not occasion congestion of main line tracks by freight trains stalling on grades, and which does not cause congestion of yards by keeping an engine unduly long on the road between terminals, and unduly long in the shops when in terminals. The light tonnage for fast schedule, under such conditions, will not be called for by the traffic department more than is necessary, and a scrutiny of the commodities moving under fast schedule will be sure to have attention. Excessively heavy tonnage, with resultant leaky flues, increased coal consumption, overtime for crews, congestion of tracks and terminals, and delays to traffic, will be guarded against. There is in the utilization of power a still more important factor than economy. In contending against a heavy run of business beyond the ordinary ability of your power to move considerations of economy must give way to the demand for volume of movement. The test of efficiency then becomes the greatest ton miles moved per engine day instead of the ton miles moved per dollar. This in theory and practice has been well worked out by the Committee on Conducting Freight Transportation of the Association of Transportation and Car Accounting Officers and was well explained at the annual meeting in June, 1909, in Montreal. The value of these figures in educating a chief dispatcher in the use of his power cannot be over-estimated. From such figures, a chief dispatcher ascertains how best to accomplish results when the power does not seem adequate to the business offering, as it demonstrates how much tonnage can be moved in a given time, at various rates of speed and various tonnage loadings.

Fuel is a transportation department expense. The cost of the fuel in Canada is 1-6 of the total cost of operation. There is no one factor in transportation expenses more subject to control, and in which efficiency is more to be desired, than in the handling and use of the coal. It is too important an item of expense to be under divided authority. The ordering of the coal forward from the mines, the supplying of cars to the mines, the checking of the receipt on arrival, the distribution to coaling stations, the responsibility for an adequate supply being at each coaling station, the unloading into coal chutes, the delivery to the engines, the stocking or lifting of reserve or storage coal, the under or overloading of the engines with train tonnage, the education and supervision of the fireman and engineer in the use of coal, comparative performance records of each engine and each engineer and fireman, the accounting to the auditor and charging out the coal to the various purposes for which it has been used—the whole handling of the matter, subsequent to the contracting for purchase, should be in the hands of the transportation department, and their recommendation should prevail in the selection of the mines and veins, and as to the quality and character of coal to be purchased.

Following are extracts from an article on "Two great needs of American railway organizations," published in a U. S. railway paper in Feb.: The tendency is toward the establishment of larger railway systems. This makes ever more pressing two great needs of American railway organizations. One is the adoption of means for the development of increasing numbers of broad executives. The other is the decentralization of management. On the railway of 100 miles the same man may be general manager, traffic manager, and several other things, and get a wide variety of experience. A railway of 1,000 miles long requires a specialist at the head of every department. The management of a railway system of 10,000 miles must carry specialization of the functions of its officers yet farther. Because it can do so, and get or develop the best specialists, is one of the main reasons why it can be more economically and efficiently operated than ten railways of 1,000 miles each. But specialization can be carried too far; and on American railways it very commonly is. Special branches and departments must be well co-ordinated to produce the best results. That they may be so co-ordinated there must be convergence of authority over them somewhere. The only way afforded by the railway business to produce men who are big enough to be not merely freight or passenger men, but real traffic managers, not merely transportation, mechanical or engineering experts, but real general managers, is to give numerous men the opportunity to get a broader experience than can be gained in any special branch, and then to select for the higher executive offices those who best avail themselves of the opportunity, regardless of their special line. Excessive centralization seriously interferes with the establishment and maintenance of satisfactory and salutary relations between the railways and the public. Of course, subordinate officers would, in each case, exercise their authority only in furtherance of a general policy laid down by their superiors, and would be held strictly responsible for the use or abuse of their enlarged discretion. Becoming experienced in assuming larger responsibility and exercising larger authority, they would be better fitted for promotion to higher positions; and the business of the road would 'be transacted with more dispatch and efficiency, and more satisfaction to the public.' "

The writer then comments, as tending to produce the desired results, on the "unit system" of organization, explained by Major Hine, and which is being tried in the operating and maintenance departments of the Harriman Lines. There are some good things in this "unit system" idea, but I doubt that the Hine system will be extended over any considerable number of railways, although it is already being tried on many divisions of the Union Pacific, Southern Pacific, and O.R. and N. companies. This is, however, indicative of the feeling which many share, that the present organization of our subordinate official staff is not producing the results that are to be desired. To what extent this may be due to a defect in our system, or to a misdirected economy, it might be difficult to estimate.

The growth of our large systems is the result of the thought and energy of our strongest men, and this development has been accompanied by increased harmony, co-operation, and specialized effort, to the advantage of railroad operation and net profits. The marked development in this respect has been in recent years. The strong men responsible for the operations of these large systems to-day, acquired their experience under somewhat different conditions than are likely to prevail in the future. The fear is prevalent that the railway officer of the future will not have that personal experience of the whole railway operation that comes from active participation in the daily work of the track, train, and station. The large systems are so thoroughly departmentalized, and the work so assigned to specialists, not only in the staff offices at headquarters but out on the line, that the opportunity for acquiring experience in the various phases of railway operation is not as free as in the past. But it is also to be noticed that the evil ferment in the press, parliament, and the public concerning railways is of recent growth, and is co-incident with the elimination of the local railways with their staffs of local officers who had a personal acquaintance and sympathy with the local people.

It is a well known fact that where the conditions otherwise are equal, the local railway has a greater traffic securing strength than has the large system between two common points. The public support the local railway, both with their business and with their sympathy, from the double feeling of a more intimate acquaintance and a recognition that their desires and needs, in transportation matters, are in harmony, whereas, with a lack of personal acquaintance and due to the distance of the headquarters from the extremities of the larger system, there is not only created a mutual condition of estrangement, but a fear of conflict in politics, which breeds discontent and agitation. There should be some means of re-establishing the relations between the large system and its patrons that is so much a factor in the strength of the smaller system. If we are in the business of manufacturing and selling transportation, we should know our market and our customers as we know our processes.

It is the practice on all railways—prevailing, of course, on the larger systems to a larger extent—that when the staff officer finds his contact with the public —or, it may be, with the employes—insufficient to bring forth the results desired, he supplements his efforts by appointing a travelling representative to strengthen the organization at the weak spot, and this has developed to the extent that we have travelling freight agents, travelling passenger agents, travelling car service agents, travelling auditors, travelling tariff inspectors, travelling baggage inspectors, claims agents, lost freight agents, weighing inspectors, etc., etc., all of whom are designed to bring the departmental head in contact with the man on the ground that his

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

policies may have proper adjustment and may prevail. The net result is inefficiency. The staff officer, the agent, and the public remain to too great an extent unacquainted, both personally and in knowledge or understanding. It is well that someone with a comprehensive acquaintance with the various departments and departmental heads, and policies, should be in personal touch with the customers or patrons, and one who in the local mind officially and broadly represents "the system." For a patron to direct a question or a complaint to an employe under present conditions partakes too much of the nature of shying the ring at the board of walking-sticks at the fair—the opening (for an intelligent reply) appears amply sufficient, but it does not seem ever to strike the right head. "I do not know," or "try the other department" is too frequently the answer.

As a possible solution of some of the difficulties, as a possible means of strengthening the present organizations where we are confessedly weak, and as a possible means of providing for the education of the railway officer of the future, I would suggest the elimination of the departmental travelling inspectors and travelling agents, or, rather, the "hop, skip and jump" features of the present travelling man who only has time now to touch the spots that protrude, and I suggest substituting therefor a line officer bearing some such title as "general agent," or "district agent," equipped by broad experience and thorough training, and who will be, within his limited territory, a direct representative of each of the departmental heads, with a personal acquaintance, not only with the departmental head, but with the individual shippers, and an intimate acquaintance with every employe within his jurisdiction.

This does not contemplate disturbing the present position and jurisdiction of, and the relations between, the superintendent, the district passenger agent, the division freight agent, and the staff officers of the various departments, nor does it contemplate disturbing the responsibilities and duties of the general agent at the large terminal, but, rather, the strengthening of these. As the superintendent should be in his purview, if not in authority, a general manager within his district and yet he carries out the policies of the staff officers at headquarters and their organizations, so under the superintendent, and assisting him in the co-relation of the departments, and assisting him in the selection, education, and supervision of the station staff, should be the "division agent" in charge of the relations with the public and of the station staff within his smaller territory and outside of the larger terminals; competent to educate, discipline and develop the station forces; thoroughly versed in all features of station work; competent to inform the superintendent of the individual needs of the stations in facilities or men; responsible for the promotion of the company's interests in securing traffic, both freight and passenger, and seeing that the same is given proper care and dispatch at the stations; that the facilities furnished are efficiently used; that the personnel of the station staff is of a proper moral character to appreciate the duties entrusted to them; that in their relations with the public the station staff is courteous, intelligent, and solicitous of the company's interests. With such a staff of subordinate officers covering, for example, let us say, 100 to 150 miles with some 20 stations, we could safely eliminate the travelling man, who perforce spends his time and energy in car seats and hotel chairs seeking or waiting the opportunity for a momentary interview with the distant or elusive stranger, hoping if he should perchance find his man at the end of the trip, that he may find to an intimate acquaintance, but in the blind chance of fickle fortune. The departmental head under such an organization as is suggested could depend upon having a local representative close to the scene of action, close to the ground, him kindly disposed, not as unto or due with a thorough local acquaintance, a live wire, a salesman, in constant and sympathetic contact with the manufacturer of transportation and the consumer of the goods.

In a recent paper describing the apprentice system in the G.T.R. mechanical department appeared the following statements, which apply to the case in point: "The problem of supplying the demand for thoroughly trained mechanics has, for some years, caused much anxiety, and the G.T.R. some years ago endeavored to fill the breach and pioneered a movement which has since been copied on a minor scale by all the great railways of Canada and the U. S., as well as the largest manufacturing firms in both these countries, namely, the technical training of their apprentices. The master mechanic is constantly in touch with each boy's progress and standing, and, if necessary, he calls a boy up and in a kindly manner points out to him the necessity of applying himself more consistently. This has been the means of supplying the company with skilled mechanics in the most satisfactory manner. The first requisite in employing an apprentice is to know that he is morally, physically, and mentally capable."

If it is essential that the mechanic, who is handling materials, should be carefully selected and then trained to give efficient service, is it not as essential that the agent, who is not only in charge of the material property of the company, but is the custodian of its accounts, is its legal representative, the representative of the whole railroad organization in the public eye, and who is, in the final outcome, the conserver of its traffic resources; who represents directly the departments of traffic, audit, treasury, car service, telegraph, etc., should benefit by the adoption of some method of selection and of education better than we have at present, and of supervision other than in response to complaints filed. The travelling men of to-day supplement the work of the agent but inefficiently.

The local agent is neither born nor made, he falls into his job. Too often he is made to feel by his superior officers and their travelling representatives that every man's hand is against him. Too much criticism and complaint and too little assitance and education from these departmental experts comes his way. But the public are with him. As a rule, they respect and like him. Let us encourage him to do still better work by selection, education, intelligent supervision, by hope of advancement through the channels suggested, by recognition and sympathy from this suggested superior officer, "the division agent," who will know what the local agent is up against and how well he is doing. "The division agent" is necessary to supplement the work of the local agent. The local agent is tied to his station; too often to the right of way, the shipper has to come to him. The departmental officer rarely sees the local agent, the agent cannot go to him. The "division agent" would be foot-free; he can go to the shipper, he can go over on the competitor's ground and take observations, he can go to the staff officer and report or ask for information or advice. The feasibility of this proposed change of methods will depend upon the willingness of the various departments to join in co-ordination of effort, and will, of course, depend for its efficiency on the number and character of men employed and their training.

An experimental examination into the conditions on our own system develops that we are employing on local work some 40 departmental travelling men, and, if in this calculation we deducted a sufficient number to leave undisturbed, of the present organization, enough staff to cover all of the large terminals, there would still be men and money ample to supply a district officer for each 100 to 150 miles of track dependent upon the importance of the stations. The field from which these general agents might be drawn would be the present travelling forces, the station agents, the headquarters offices, first, however, taking the candidate for promotion and placing him in each of the departments he is to represent and in contact with the head of the department a sufficient length of time to establish a thorough familiarity with the department's work, aims, theories, and personnel. With such a staff of subordinate officers to draw from there would be fine material, well trained, ready for promotion to the higher official positions in any of the departments of operation. In fact, education and development through this channel should be an essential factor in the preparation of the future officer.

The foregoing paper was read before the Canadian Railway Club recently.

Michigan Central Rd. Pension Fund.

The Michigan Central Rd. put into effect at the beginning of this year, a pension fund for the benefit of its employes. The management of the fund is in charge of a committee styled the Board of Pensions, consisting of eight persons appointed annually by the president. The Board shall appoint a chairman and a secretary, and shall have power to make rules, subject to the approval of the president and directors, for the government of the department. It shall have power to determine the eligibility of employes to receive pensions, and to authorize the payment of pensions as provided by the rules. All employes are to be retired at 70 years of age, and those of them as shall have been continuously in the service for 10 years immediately preceding their retirement shall be pensioned. Any employes after 20 years' continuous service who are unfit for duty may be retired and be pensioned, but in case they are less than 70 years of age a medical examination will be necessary before they will be permitted to retire. The basis upon which the pension allowance is to be computed is for each year of continuous service, 1% of the monthly average pay received for the 10 years next preceding retirement. The directors reserve themselves the right to adopt a lower basis of pensions, if at any time the present basis creates demands in excess of $56,000 a year, which is to be the maximum amount to be expended in pensions in any one year. The pension allowances will be paid monthly, but may be withheld or discontinued in the case of gross misconduct.

The persons who are entitled to pensions may have been in the employ of any of the railroads now amalgamated with, controlled or operated by the M.C.R., when they were independent; or employes on any of the so-called New York Central Lines, which has or may adopt a similar pension plan. A pensioned employe may engage in another business, but shall not re-enter the company's service; pensions may not be assigned. The rules also define continuous service; the manner in which service shall be computed; reserves various rights to the company, and provides for their revision.

The C.P.R. during 1909 handled 8,397,910 pieces of baggage, an increase of 659,189 over 1908. There was also an increase of about 50,000 in the number of parcels checked.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—Pending the completion of the investigation by the judicial commission appointed by the Alberta Legislature into the circumstances surrounding the granting of the charter, the survey parties have been recalled. Construction, however, is reported to be progressing on the first 50 miles from Edmonton, and several contracts for clearing the right of way are said to have been let. The A. and G.W.R. Co. in order to secure a Dominion charter, acquired that of the Athabasca Ry., and an action has been instituted in connection with the transfer of this, by certain Toronto interests. (Feb., pg. 99.)

Alberta Central Ry.—We are advised that the press report that the C.P.R. has secured control of this company's charter is incorrect. It is, however, stated by interested parties that the A.C.R. promoters have an understanding that the C.P.R. will, when the line is built, lease and operate the line. The Board of Railway Commissioners has approved of the location from Red Deer to Rocky Mountain House.

The Minister of Railways has approved of the route maps for this projected railway from Red Deer, Alta., westerly to the Rocky Mountains. J. T. Moore, President, and J. G. MacGregor, Chief Engineer, were in Ottawa recently in connection with the matter. They stated that construction would be gone on with this year.

Algoma Central and Hudson Bay Ry.—The time for receiving tenders for the construction of the extension of the line between Hawk Lake Jct. and Hobon, Ont., on the C.P.R. transcontinental line was extended to April 30. The work tendered for includes clearing, grading and bridge work, and the extension of about 31 miles. This line will connect up the company's Michipicoten branch with the C.P.R., and it is intended in the future to complete the construction of the main line from the present track-end near Pangissin to Hawk Lake Jct. Grading had been practically completed between Pangissin and the Montreal River, prior to the reconstruction of the company in 1903. (Mar., pg. 185.)

The Dominion Parliament has extended the time within which the company's authorized lines may be built, and has increased the amount of bonds which may be issued, including securities already issued, to $40,000 a mile.

Arnprior and Pontiac Ry.—A company with this title was incorporated by the Dominion Parliament in 1909, to construct a railway from between Quyon and Campbell's Bay, Que., on the Pontiac Pacific Junction Ry. (Ottawa and Northwestern Ry.) southerly to Fitzroy Harbor, Ont., crossing the Ottawa River at Portage du Fort; thence via Arnprior to High Falls on the Kingston and Pembroke Ry.; and from Fitzroy Harbor to Britannia on the C.P.R., and to South March on the G.T.R. The company has power to generate and dispose of electric power. The provisional directors are A. H. N. Bruce, R. Bruce, J. G. Gibson, Ottawa; J. Bell, Arnprior, Ont.; H. Kedey, Fitzroy Harbor. (June, 1909, pg. 413.)

Athabasca Ry.—See Alberta and Great Waterways Ry.

Bay of Quinte Ry.—The Dominion Parliament has extended the time for the construction of branch lines authorized in 1896, and for the Bridgewater-Actinolite line, subsequently authorized. (Mar., pg. 185).

British Columbia and Alaska Ry.—The British Columbia Legislature has incorporated a company with this title, to construct a railway from Lytton, following the Fraser River Valley through Lillooet to Fort George, thence by the Stuart River valley via Fort Connelly to North Tacla Lake and thence to Teslin Lake on the northern boundary of the province; or, in the alternative by the most feasible route between Lytton and Teslin Lake; also from a point on the line to Vancouver, with branch lines, except that no branch shall be constructed, by the route now adopted by the Howe Sound, Pemberton Valley and Northern Ry., provided that nothing shall prevent the company from constructing its branch to Vancouver along the south side of the Anderson and Seaton Lakes, and via the Lillooet Lake and River. The provisional directors are J. Wolkenstein, New York; R. Smailes, Seattle, Wash.; H. B. Robertson, Victoria B.C. (Mar., pg. 185.)

A press report from Victoria, states that two parties have been organized in Seattle, Wash., for the survey of this projected railway. The parties, it is reported will make a start in May.

British Columbia and Manitoba Ry.—See Northern Empire Ry.

British Columbia Central Ry.—The British Columbia Legislature has incorporated a company with this title to construct a railway from Lillooet northerly by way of the Fraser River valley or other feasible route to Fort George, B.C. The provisional directors are:—J. C. Keith, A. McEvoy, J. C. Gill, Vancouver, B.C. (Mar., pg. 185.)

B.C. Mainland and Coast Industrial Co.—The British Columbia Legislature has authorized the company to build a railway or tramway from its works near Prince Rupert to the shore of the south-west of Kaien Island, to build a wharf there; and to build railways from its mines to its works. (Mar., pg. 185.)

The Cabano Ry. Co. was incorporated by the Dominion Parliament in 1909 with power to build a railway from Long Lake, Que., on the National Transcontinental Ry., through Temiscouta County to Cabano, Que. The provisional directors are:—D. Fraser, D. Fraser, jr., Plaster Rock, N.B.; A. Fraser, R. England, Cabano, Que.; W. Hayes, Notre Dame du Lac, Que. (Feb., 1909, pg. 101.)

Calgary and Fernie Ry.—The Dominion Parliament has granted an extension of time for the construction of this projected railway. (Feb., pg. 109).

Cariboo, Barkerville and Willow River Ry.—The British Columbia Legislature has incorporated a company with this title to build a railway from near Eagle Lake, on the projected line of the G.T. Pacific Ry., thence following the watershed of the Willow River to Barkerville on the Cariboo Road, with branch lines not to exceed 10 miles in any single instance. The provisional directors are:—W. F. Dunphy, W. V. Marshall, Pincher Creek, Alta.; B. A. Laselle, Barkerville, B.C. (Mar., pg. 185.)

Chibougamau District, Que.—In reply to questions in the Quebec Legislature, April 10, it was stated that the Government will send a survey party into the Chibougamau district during the summer, and if the conditions warrant it a railway will be built into it, either directly by the Government, or by a company, aided by a subsidy.

The Minister of Mines and Fisheries stated in the Legislature, April 10, that engineers will go into the Chibougamau district as soon as circumstances will permit. If the country is, "as we are told it is." he added, "the Government will build a railway to it, or we will get one built, if we don't do it ourselves. The nearest railway point is at Roberval, on the Quebec and Lake St. John Ry.. and 170 miles from the Chibougamau district.

Chicago, Milwaukee and St. Paul Rd.—Winnipeg city authorities stated April 8, that this company had not filed plans of a route into the city. nor had any correspondence on the subject been then received. The statement was made on account of the circulation of a report that the company had, through intermediary agencies, acquired land for a right of way within the city limits, and was negotiating for terminal facilities. At present the nearest point of contact from Winnipeg with the C.,M. and S.P. Rd. is at Fargo, N.D., but surveys have been made this season for an extension of the line now terminating at Harlem, to Valley City, N.D. A Minneapolis, Minn., report states that this latter line will be extended north into Canadian territory. (April, pg. 271.)

Comox Logging and Ry. Co.—The British Columbia Legislature has incorporated a company with this title with power among other things to build a railway from Comox Harbor, 750 ft. east from the south-easterly corner of lot 82, north-westerly to the south side of Lower Campbell Lake, with branches not to exceed 10 miles in any one case, none of the lines to enter upon lot 48, Sayward district. The railway is to be used only as a private railway in conjunction with its general logging and manufacturing business, and the company has no power to carry on express, freight or passenger business. The company may purchase or lease the rights of the Comox and Campbell Lake Tramway Co., and can enter into agreements with any other railway or tramway company for running rights or to make connection. The provisional directors are:—A. D. McRae and R. J. McRae, Vancouver. (Mar., pg. 185.)

Diamond Coal Co.—The Alberta Legislature has amended the company's powers in certain particulars, so that it may take over and operate the Diamond Ry. (See Diamond Ry. and Coal Co., Jan., pg. 19).

Dominion Atlantic Ry.—The Dominion Parliament has extended the time for the construction of the projected North Mountain Division. (Mar., pg. 185).

Eastern Townships Ry.—An extension of time for construction has been granted by the Dominion Parliament. (Jan., pg. 19).

Edmonton, Dunvegan and British Columbia Ry.—An extension of time has been granted by the Dominion Parliament for the construction of this projected railway. (Mar., pg. 185).

Erie, London and Tillsonburg Ry.—The Dominion Parliament has granted an extension of time for the construction of this projected railway. (Mar., pg. 185).

Fort Erie and Buffalo Bridge Co.—A company with this title was incorporated by the Dominion Parliament in 1909, with power to construct a bridge for railway and general traffic across the Niagara River with the necessary approaches from Fort Erie, Ont., to Buffalo, N.Y., subject to the necessary authority being obtained for the construction of the bridge from the Legislature of the State of New York. The provisional directors are:—D. McGillivray, Port Colborne, Ont.; W. E. Phin, Welland, Ont.; J. Battle, Thorold, Ont.; S. Casparis, Columbus, Ohio; D. Hyman, Buffalo, N.Y.; W. S. Hartuppe, Pittsburg, Pa.

Fraser River Lumber Co.—Press reports state that this company has let a contract to W. A. Gilley, New Westminster, B.C., to build a logging railway of 3.5 miles from Comox, to its timber limits. The contract includes the construction of a landing place and booming pond for logs at Comox.

Fredericton and Grand Lake Ry. and Coal Co.—A company with this title has

38 & 39

Full Automatic

A. R. WILLIAMS MACHINERY CO., LIMITED

Toronto, Winnipeg and Vancouver. WILLIAMS & WILSON, Montreal

been incorporated by the New Brunswick Legislature to build in connection with its collieries a railway from Grand Lake to Fredericton.

Graham Island Ry.—The British Columbia Legislature has declared that the Graham Island Ry. Co. has been since Mar. 12, 1909, a body corporate and politic, with all the rights and privileges conferred by chap. 54 of the Statutes of 1909. This act provided for the construction of a railway on Graham Island. (Mar., pg. 185.) See also Island Valley Ry. and Queen Charlotte Island Ry.

Great Northern Mining Co.—At a meeting of shareholders at Eastern Harbor, N.S., Mar. 26, a resolution was passed authorizing the directors to apply for a charter authorizing the building of a line from the company's mill at Cheticamp to Eastern Harbor. The projected railway will be about 2.5 miles long. A preliminary survey has been made, and a route selected through an undulating country presenting no construction difficulties. The G.N. Mining Co. manufactures gypsum products, its mines and mills being at Cheticamp. The officers are:—President, P. J. L. Fiset, M.D.; Vice President, M. Fiset, M.D.; Managing Director, M. V. Grandin, M.E.; Secretary, P. Leclerc. (April, pg. 271.)

Hartland and Miramichi Ry.—The New Brunswick Legislature has incorporated a company with this title to build a railway from Hartland on the St. John River, to the Miramichi River.

Howe Sound and Northern Ry.—The British Columbia Legislature has changed the name of the Howe Sound, Pemberton Valley and Northern Ry. by striking out the words, "Pemberton Valley," leaving it as above. Sec. 3 of the act of 1907, provided for the construction of a line to Anderson Lake, and the present act authorizes an extension to Lillooet; and the extension of the line from the starting point near Newport, at the head of Howe Sound, to Vancouver, there to connect with any intermediate points. The adopted route of this projected railway is set out in the act incorporating the British Columbia and Alaska Ry. as follows:—Starting from the head waters of Howe Sound; thence north-easterly along the valleys of the Squamish and Cheakamus rivers to Green Lake; thence by way of Green River, Pemberton Meadows, and Pemberton Portage to Anderson Lake, thence along the north shore of Anderson Lake and Seaton Lake to Lillooet. (Feb., pg. 109.)

Howe Sound, Pemberton Valley and Northern Ry.—See Howe Sound and Northern Ry.

Hudson's Bay and Pacific Ry.—It appears from an interview with G. Attwood at Prince Albert, Sask., that the railway with which he is connected is the Hudson's Bay and Pacific Ry., and not the Prince Albert and Hudson Bay Ry. as first reported. This company was incorporated by the Dominion Parliament in 1896, Admiral Markham, together with other London, Eng., men being the provisional directors, with power to build a railway from Fort Churchill to Prince Albert, Edmonton and Lake Athabasca, about 1,600 miles. Surveys were made for the line by J. W. Tyrrel, C.E., Hamilton, Ont., in 1900-01, the route followed from Prince Albert to Fort Churchill being an almost direct one passing through Split Lake. During the winter of 1909, further surveys were made by A. H. May, and now Mr. Attwood has taken charge of the work. He states that he is organizing parties, obtaining supplies and equipment, and that the final surveys will be started early in May. A company has been formed in London, Eng., with the title of the Hudsons Bay and Pacific Ry. and Development Co. to finance the construction. Tenders have been asked for, and J. A. Taylor & Co., of New York, have submitted prices, but, Mr. Attwood added, the contract has not yet been awarded. The company's plans are said to be that as soon as the survey parties have got out about 50 miles from Prince Albert, construction will be started. Mr. Attwood further stated that J. G. F. Greville and Herbert Spicer of London are interested in the company, the latter owning over 50% of the stock. H. Spicer is connected with the family of which Spicer Bros., one of the most extensive paper makers in Great Britain, is the representative in the mercantile world. (See Prince Albert and Hudson Bay Ry., Mar., pg. 187). (July, 1909, pg. 477).

Intercolonial Ry.—We are advised that a contract has been let to P. G. Kirk, Ant'gonish, N.S., to build a line between George's River and Sydney Mines, N.S., 9.09 miles.

The advertisement asking for tenders for building a diversion of the line at Chatham, N.B., has been withdrawn, and a new one is being inserted.

The Minister of Railways, stated in the House of Commons, April 4, that the Department had under consideration the question of developing water power at Riviere du Loup, Que., in order to supply electrical energy for use in the railway shops there.

A proposition is under consideration in Truro, N.S., with a view of asking the Dominion Government to build a branch line from Truro to Bruce or Tatamagouche, and establish a car ferry service thence to Charlottetown, P.E.I. (Mar., pg. 185).

International Ry. of New Brunswick.—A train service has been in operation on the first 55 miles of this railway, from Campbellton, N.B., since Jan. 2, and up to the end of March, 4,213 passengers and 23,000 tons of freight had been carried. It was expected to start tracklaying on the remaining portion of the line a few days after we were advised, April 6, and to have the line completed to St. Leonards, on the St. John River, in June. (Feb., pg. 109).

Island Valley Ry.—The British Columbia Legislature has incorporated a company with this title to build a railway from Queen Charlotte townsite on Skidegate Inlet, Graham Island, westerly to the Hound River, thence northerly along the valley of that river and its tributaries, and the Yakoun River to the mouth of the latter river on Masset Inlet. The provisional directors are:—S. J. Castleman, W. Y. Corry and W. Henderson. (Mar., pg. 185.) See also Graham Island Ry.

Kamloops and Yellowhead Pass Ry.—The Dominion Parliament has extended the time within which this projected railway may be built. (Jan., pg. 19).

Kettle Valley Lines.—The British Columbia Legislature has confirmed the agreement made Feb. 28, between the B.C. Government and the Kettle Valley Ry. Co. The agreement provides that in consideration of the company constructing without subsidy a line from Midway to Penticton, the Government will grant a subsidy to extend the line from Penticton to a junction with the Nicola, Kamloops and Similkameen Ry., near Nicola, 150 miles. The amount of the subsidy is to be $5,000 a mile in cash or in the Province's 3% inscribed stock, payment to be made for the first section of 10 miles as soon as the second section has been completed, and so until the whole has been completed. The lines to be constructed from Penticton to Midway, and from Grand Forks to Franklin Camp are to be exempt from taxation for 10 years after the completion of the line to Nicola. The Government is to grant a free right of way through provincial lands, and to grant the use of public lands adjacent to the right of way for the procuring of stone, timber, gravel and other material which may be necessary for the construction of the line. Construction is to be started within four months, and to be completed within four years after the ratification of the agreement. The line referred to from Grand Forks to Franklin Camp, a distance of just over 30 miles, extends up the North Fork of the Kettle River. Some little construction has been done on it.

The act confirming the agreement provides that independent valuators shall appraise the grade, or actually constructed line, between Midway and Rock Creek, of the Midway and Vernon Ry., constructed prior to 1909, breaking it as part of, or to be part of a completely constructed line, and the amount of such appraisement shall be paid to the credit of the valuators, who shall apportion it among the contractors who did work, or the merchants who supplied goods, during the construction of the Midway-Rock Creek section. During 1910, the company shall complete 25 miles of line; 50 miles during 1911; a further 50 miles in 1912, and the remainder of the lines within the four years mentioned in the agreement.

In connection with the carrying out of the agreement, an act has been passed repealing the provisions of chap. 45 of the Statutes of 1902 granting aid, or authorizing the grant of aid to the Midway and Vernon Ry. (April, pg. 271.)

A press report states that a contract has been let to W. P. Tierney & Co., for building a 10 mile section up the north fork of the Kettle River, from Grand Forks, B.C.; and that tenders will be asked at an early date for the construction of the Midway-Penticton line, and for other sections of the proposed extensions to be constructed under the agreement with the Government.

Lacombe and Brazeau Ry.—The Alberta Legislature has incorporated a company with this title to build a railway from Lacombe, north-westerly to the Brazeau River coal fields.

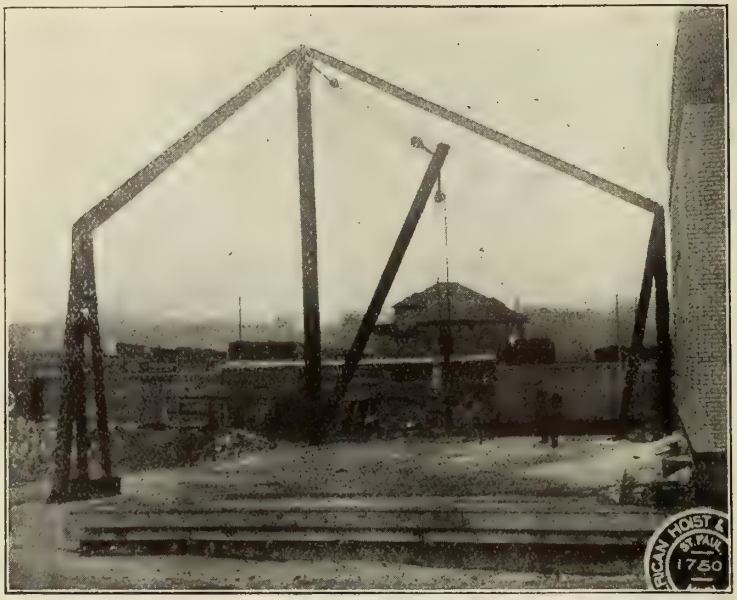
Liverpool and Milton Tramway Co.—The act incorporating this company has been amended by the Nova Scotia Legislature. The amending act gives power to extend the line to Bear River, passing through Greenfield. The extension proposed, it was stated in the Legislature, would pass through a level country, presenting few difficulties in the way of construction. The Government was asked to make a survey of the route to ascertain the probable cost of a line, with a view of making a contract with a company for its construction by means of a guarantee of bonds. (May, 1909, pg. 357.)

The London and North-Western Ry. was incorporated in 1909 by the Dominion Parliament to build a railway from London to Sarnia, Ont., and from London to Grand Bend, Ont., passing through Ailsa Craig and Parkhill, or either of them. The provisional directors are:—D. A. Stewart, T. E. Pound, J. Hall, London, Ont.; A. J. Stoner, Fernhill, Ont.; T. G. Turnbull, Komoka, Ont.; J. C. Knapton, Parkhill, Ont.; D. Milne, Sarnia, Ont. (Mar., 1909, pg. 173.)

Manitoulin and North Shore Ry.—An extension of time within which the company may construct its authorized railways has been granted by the Dominion Parliament. (Mar., pg. 187.)

Menzies Bay Ry.—The British Columbia Legislature has incorporated a company with this title to build a railway from Menzies Bay, Vancouver Island, either north or south of Trout Lake, approximately to the junction of Salmon River and Memckay River; also from Menzies Bay where the Quinsan River touches the south-east corner of lot 81 near the 50th parallel of north latitude. The provisional directors are:—J. H. McDonald, A. Charleson, J. T. de Pencier. (Mar., pg. 187.)

"American" Railroad Derricks



15 ton Structural Steel Stiff Leg Platform Derrick in New "Soo" Freight Yards, St. Paul, Minn.

Are the Best Value of Their Kind To-day

More particular buyers of hoisting machinery do not exist than Railroad Companies, and the continued use by them is one indication that

"American" Hoisting Engines, Derricks, etc.

are exceptionally well adapted for Railroad use.

CHICAGO NEW YORK PITTSBURG NEW ORLEANS

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

MONADNOCK, CHICAGO

Midway and Vernon Ry.—See Kettle Valley Lines.

Northern Empire Ry.—The Dominion Parliament has granted an extension of time for construction.

A Lethbridge paper gives the officers of the company as follows:—President, D. L. McKinnon, Sudbury, Ont.; First Vice President, M. J. Fagan, Ottawa; Secretary-Treasurer, C. Brown, Ottawa. Among the moving spirits in the company, it is said, are, J. E. Lerter, of Chicago, Ill., and Lord Arthur Somerset, London, Eng., but it is reported that as the line will connect with the Great Northern Ry., south of Cardston, Alta., J. J. Hill's interests are really behind the company. The company also owns the charter of the British Columbia, and Manitoba Ry., and the two companies have power to construct somewhere in the vicinity of 2,000 miles of line. (Feb., pg. 111.)

Northern Vancouver Island Ry.—The British Columbia Legislature has incorporated a company with this title to build a railway from Hardy Bay or Port McNeill, or some point between them, or some other point convenient thereto on the east coast of Vancouver Island, to Coal Harbor on the west arm of Quatsino Sound, or to Rupert arm, Quatsino Sound, or to some other convenient point on Quatsino Sound, with branch lines, not exceeding 10 miles in any one instance. The provisional directors are:—J. H. McGregor, W. B. Garrard, H. W. R. Moore, H. B. Robertson, Victoria, B.C.; J. N. Britton, Seattle, Wash. (Mar., pg. 187).

The Ottawa, Brockville and St. Lawrence Ry. Co. has been granted by the Dominion Parliament an extension of time for the construction of its projected railway. (Nov., 1909, pg. 829.)

Ottawa, Montreal and Eastern Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Lake Megantic, via Montreal, to Ottawa, and other points. (Mar., pg. 187.)

Ottawa, Rideau Valley and Brockville Ry.—The Dominion Parliament has incorporated a company with this title, to build a railway from Ottawa to Brockville, and a branch from Ottawa to Hull, Que., west of the Gatineau River. The company is given power to operate a steam ferry from Brockville across the St. Lawrence River to Morristown, N.Y. The provisional directors are:—A. McDiarmid, R. E. Elliott, Montreal; W. C. Maclaren, J. H. Gilmour, Brockville, Ont.; G. E. Kidd, D. H. McLean, Ottawa; F. A. Heney, E. W. Clarke, Nepean tp., Ont.

Pacific Ry.—The British Columbia Legislature has incorporated a company with this title to build a railway from the point where the Salmon River crosses the International boundary between British Columbia and Alaska, following the Salmon River to its source, with branch lines not exceeding 10 miles in any single instance. The provisional directors are: E. P. Davis, D. G. Marshall, C. B. Macnell, J. S. W. Pugh, Vancouver. (See Pacific and North Western Ry., Feb., pg. 111).

Pine Pass Ry.—The Dominion Parliament has incorporated a company to build a railway from Edmonton, Alta., via Pine Pass to Fort George, B.C. (Jan., pg. 23.)

Port Moody, Indian River and Northern Ry.—The British Columbia Legislature has incorporated a company with this title to build a railway from Port Moody to the north shore of Burrard Inlet, thence westerly to the westerly side line of lot 256, thence westerly or north-westerly to the eastern shore of the north arm of Burrard Inlet, and along the easterly shore line to the mouth of Mesliloet or Indian River, at the head of the north arm. The provisional directors are:—C. T. Dunbar, F. J. Henderson, J. H. McWatters, Vancouver, B.C. (Mar., pg. 187).

The Prince Albert and Hudson Bay Ry. Co. was incorporated at the 1909 session of the Dominion Parliament, with power to construct a railway from Prince Albert across the Saskatchewan River, north-easterly to the mouth of Nelson River, on Hullson Bay, or to York Factory. The provisional directors are:—H. C. Hamelin, G. Russell, P. D. Tyreman, F. W. Halliday, Prince Albert, Sask., F. Eugen, Saskatoon, Sask. (April., pg. 271).

Queen Charlotte Island Ry.—The British Columbia Legislature has incorporated a company with this title to build a railway from lot 15A on Skidegate Inlet, north-westerly to Stewart or Kundes Bays, Masset Inlet, with branches to Masset Harbor, and Rennell Sound. The provisional directors are:—H. R. Bellamy, A. Mours, E. W. Maclean, R. C. Brown and J. L. Kerr. (See Graham Island Ry., Mar., pg. 185; see also Island Valley Ry.)

St. John and Quebec Ry.—The New Brunswick Legislature has incorporated a company with this title to build a railway from St. John along the St. John River alley to the Quebec-N.B. boundary.

St. John River Valley.—The New Brunswick Legislature has authorized the Government to make a survey for a railway from Grand Falls, on the National Transcontinental Ry., via Centerville, Lakeville, Woodstock, Fredericton and Gagetown to St. John, or to the C.P.R. near Westfield; the line from Woodstock to be on the west side of the St. John River, and to have estimates prepared as to the cost of building such a line. The Government is authorized to guarantee the principal and interest of the bonds of any company prepared to build the line to the amount of $25,000 a mile, and to take a first mortgage of the line as security. No guarantee of bonds shall be made until the Dominion Government shall have granted a subsidy at the usual rate, and shall have authorized the making of a contract between the two Governments for the leasing of the line and its maintenance as part of the Government railway system, 99 years. The line shall be constructed in a first class manner with gradients of 0.4%, laid with 80 lb. steel, and provided with masonry and concrete culverts, steel bridges with concrete piers and abutments.

The Government is also authorized to guarantee the payment of the principal and interest of the first mortgage bonds of any company building a railway from Andover via Centreville, and the same route as in the first mentioned line to St. John or to the C.P.R., to the extent of $25,000 a mile. The line to be constructed shall be of the same standard as the I.C.R. in the province, the tracks to be laid with 70 lb. steel, and the bridges to be of steel and concrete. Construction to commence as soon as a contract is entered into, the line is to be completed by 1914. (April, pg. 273).

The St. Maurice and Eastern Ry. Co. was incorporated at the 1909 session of the Dominion Parliament to build a railway from near St. Stanislas or St. Prosper, westerly crossing the Batiscan River, and the St. Maurice River, to and through Shawinigan Falls, Que.; or alternatively from the above line 10 miles east of Shawinigan Falls, north-westerly to a crossing of the St. Maurice River between Shawinigan Falls and Grand Mere, thence to Shawinigan Falls, Que. It is declared that the line is to cross the Canadian Northern Quebec Ry. near St. Stanidas, and the St. Maurice Valley Ry. near Shawinigan Falls. The provisional directors are:—J. Bourgeois, Shawinigan Falls, Que.; R. B. McDannough, Three Rivers, Que.; J. L. Rintoul, J. A. Walls, F. P. Kaelin, Montreal. (June, 1909, pg. 415).

Saskatchewan Central Ry.—The Dominion Parliament has incorporated a company with this title to build railways in Saskatchewan, between points given on pg. 23 of our Jan. issue. (Mar., pg. 187.)

Southampton Ry.—The New Brunswick Legislature has incorporated a company with this title to build a railway in York County, N.B., connecting with the C.P.R. (Feb., pg. 111.)

Temiskaming and Northern Ontario Ry.—Tenders are under consideration for the building abutments for a bridge at mileage 48.91; and for the substructure for a steel bridge across the Wabis River at mileage 119.13. Neither of these are large works.

The Commission has under consideration plans for the elimination of the curvature on the original portion of the line between North Bay and New Liskeard, Ont., 113 miles. The intention, as expressed in the annual report of the Commission, is to carry out the work of improvement until all curves exceeding three degrees have been eliminated. The report adds:—"Further surveys are now in hand covering proposed improvements of main line out of North Bay. Present gradient is 1.46 compensated—northerly directions. Preliminary reconnaissance to the west has been made, which points out that we have every reason to believe a line can be located, not exceeding gradient .75. Increased traffic warrants these surveys—opening up of north country—its possibilities in minerals, pulpwood, timber, et al—the connections at Cochrane (junction point of National Transcontinental Ry., and G.T. Pacific Railway)—the possibility of additional branches. Agricultural future, which after all is the mainstay, not alone of railway, but of the people. Agricultural prospects are so pronounced that we are warranted in assuming that largely increased traffic will arise therefrom ere the lapse of many years. These in themselves demand the re-alignment of the very heavy grades out of North Bay, even though the cost should exceed $1,500,000. The sum though large can readily be absorbed, as the prospective increase of traffic appears to be within measurable distance, hence would warrant the re-alignment of railway in due course. Curvature—First Division of railway (say North Bay to New Liskeard, 113 miles), exceeding 50% of mileage (curvature in miles 50.2). Our efforts continue to be directed to improve; a very large amount of work in that direction has been done during the year, and, as traffic conditions warrant, improvements and betterments will continue, on similar lines."

Additional siding accommodation has been laid down at Cochrane; work has been restarted on the station (to be used jointly with the National Transcontinental Ry.); and it is proposed to expend considerable money during the current year upon improvements in and around the station, yard and townsite.

Engineers have located a route for the proposed branch line from Charlton to Elk Lake and Gowganda, 49.5 miles. On the first 19 miles to Elk Lake the maximum gradient will be 0.8% and the the maximum curvature three degrees, while on the section to Gowganda the maximum gradient will be 0.8% and the maximum curvature five degrees. Location plans have been prepared for a spur line of 7.25 miles from Cochrane to Frederick House River; and for the extension of the main line northerly from Cochrane. On this extension track is reported to have been laid. We were advised April 13, that it has not been decided whether any construction will be done on these lines this year. pg. 273).

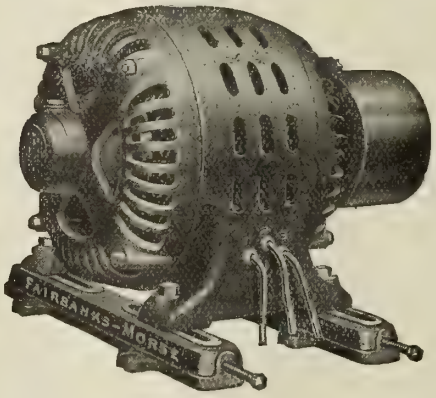
Fairbanks-Morse Electrical Machinery

DYNAMOS



MOTORS

Fairbanks-Morse electrical machines have many points of excellence. They will stand unusual overloads without heating up and lowering the efficiency, as they have a conservative rating. Every detail is built for long wear, constant service and high efficiency. Fairbanks-Morse dynamos and motors were developed with the idea of producing machines of general excellence – not one that sacrificed any mechanical feature to obtain high electrical efficiencies.

We can supply the entire equipment for your factory from the Power House to the Shops. Tell us your requirements.

THE CANADIAN FAIRBANKS CO., Limited

FAIRBANKS SCALES — FAIRBANKS-MORSE GAS ENGINES.

Montreal Toronto St. John, N.B. Winnipeg Calgary Vancouver

Vancouver and Nicola Valley Ry.—The British Columbia Legislature has ratified and confirmed the act incorporating the company, passed in 1908, and extending the time for the construction of the line, for three years for starting work, and for eight years for its completion, from the passing of the amending act. (Mar., pg. 187).

Vancouver, Westminster and Yukon Ry.—The Dominion Parliament has granted an extension of time for the construction of the company's authorized lines. (Dec., 1909, pg. 887.)

The provisions asking for power to construct a bridge across Burrard Inlet were struck out by the House of Commons, although approved by the Railway Committee. (Dec., 1909, pg. 887).

Victoria and Barkley Sound Ry.—A company with this title was incorporated at the 1909 session of the Dominion Parliament, with power to build a railway from Victoria, by way of Otter Point and San Juan, to near Sarita River on Barkley Sound, with a branch from between Metchosin and Sooke to Beecher Bay, on Vancouver Island, B.C. The company is authorized to operate a steam ferry service in connection with its railway between Beecher Bay, or other convenient point, on the Strait of Juan de Fuca, to a point in the United States. The provisional directors are:—W. K. Houston, H. H. Jones, W. E. Laird, C. L. Betterton, Victoria, B.C.; J. M. Hawthorne, Seattle, Wash. (Aug., 1909, pg. 577).

White Pass and Yukon Ry.—We are advised that it is expected to complete the ore track to the Pueblo mine early in the current season. The extension involves the construction of about five miles of track, and is a continuation of the branch, started in 1908, but on which construction was suspended owing to the fall in the price of copper. The work on the extension is light in character, and involves no engineering difficulties. (See British Yukon Ry., July, 1909, pg. 475).

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases from 1908-09, from July 1, 1909:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.
July	$ 813,500	$613,900	$229,600	$26,700+
Aug.	807,100	602,700	204,400	18,300+

Aggregate operating revenue for eight months ended Feb. 28, $571,670.35; expenses, 489,294.32; net revenue, $82,376.03, against $551,255.01 aggregate operating revenue; $458,574.85 expenses; $92,680.16 net revenue for same period 1908-09. Approximate earnings for Mar., $69,779. and for two weeks ended Apr. 14, $27,155, against $68,647 and $28,685 for same periods 1909.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RY.—Operating revenue for Feb., $843,090.22; expenses and taxes, $654,679.38; net revenue, $188,410.84, against $776,653.05 operating revenue; $583,731.44 expenses and taxes; $192,921.61 net revenue for Feb., 1909. Aggregate operating revenue for eight months ended Feb. 28, $10,648,617.24; expenses and taxes, $5,909,942.37; net revenue, $4,738,942.37, against $8,578,093.88 aggregate operating revenue; $5,316,970.60 expenses and taxes; $3,261,123.28 net revenue for same period 1908-09. Approximate earnings for Mar., $1,880,360, and for two weeks ended Apr. 14, $874,651, against $1,576,818 and $717,268 for same periods 1909.

CHICAGO DIVISION.—Operating revenue for Feb., $652,753.80; expenses and taxes, $472,371.36; net revenue, $180,382.44, against $535,919.59 operating revenue; $443,238.24 expenses and taxes; $92,681.35 net revenue for Feb., 1909. Aggregate operating revenue for eight months ended Feb. 28, $5,653,263.08; expenses and taxes, $3,999,685.86; net revenue, $653,577.22, against $5,002,885.31 aggregate operating revenue; $3,605,930.55 expenses and taxes; $1,396,954.76 net revenue for same period 1908-09.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. and M. Ry., separately, for Feb., as compared with Feb., 1909:—

GRAND TRUNK RAILWAY.

	1910.	1909.
Earnings	$2,248,000	$1,964,900
Expenses	1,866,000	1,643,800
	$382,000	$321,100

CANADA ATLANTIC RAILWAY.

	1910.	1909.
Earnings	$116,000	$106,700
Expenses	111,000	120,800
	$5,000	*$14,100

GRAND TRUNK WESTERN RY.

	1910.	1909.
Earnings	$461,000	$351,900
Expenses	372,000	321,700
	$89,000	$30,200

DETROIT, GRAND HAVEN AND MILWAUKEE RY.

	1910.	1909.
Earnings	$140,000	$105,900
Expenses	118,000	101,500
	$22,000	$4,400

*Deficit.

TRAFFIC RECEIPTS FOR THE SYSTEM.

Aggregate from Jan. 1 to Mar. 31:—

	1910.	1909.	Increase.
Grand Trunk	£1,545,426	£1,310,610	£234,816
Canada Atlantic ...	87,164	71,702	15,462
G.T. Western.	310,519	258,354	51,805
D.G.H. & M..	93,958	72,485	21,473
Totals	£2,036.707	£1,713,151	£323,556

Approximate earnings for Mar., $3,793,257, and for two weeks ended Apr. 14, $1,643,783 against $3,157,251 and $1,462,946 for same perior 1909.

G.T. Pacific Ry. and Prince Rupert.—The British Columbia Legislature has incorporated as a city Prince Rupert, the Pacific coast terminal of the G.T. Pacific Ry. Section 23 declares that the G.T.P. Ry. shall continue to have the first right to use the water of branch no. 1 of Hays Creek for the purposes of its railways and steamships not exceeding 40 miners inches. Section 26 gives the company a continuance of its easement for its pipe line as shown on the registered plan of the townsite, subject to the regulations of the city council with reference to entering upon, breaking up, interfering with and restoring the city streets.

Canadian Westinghouse Co., Ltd.

Following is the annual report for the year 1909:—The net profits as a result of operations for 1909 were $498,379.94 an increase of 6% over 1908. From the year's profits, quarterly dividends at the rate of 6% per annum have been paid, amounting to $261,540.33; $70,000.00 has been added to the general reserve for depreciation of plant and property, which account now totals $300,000.00; in addition to complete absorption as expense items, of all maintenance and replacement charges during the year, $62,460.56 has been written off items included in property and plant account which are not directly productive from a manufacturing standpoint, and $104,379.05 has been carried forward to the credit of profit and loss account, which shows the company's unapportioned surplus on Dec. 31, 1909, to be $536,103.87.

In respect of the physical activities of the company the year 1909 has been the reverse of its predecessor. While in 1908 the process was one of continuous and severe contraction of activity, in the year just ended a gradual and accumulative resumption has taken place to approximately normal conditions in quantity of output. The condition of keen competition in prices and deliveries, both foreign and domestic, has experienced no abatement; in fact, has magnified during the year, making it a matter for very close attention in both the present and future conduct of the company's affairs. All departments, sales, engineering and manufacturing, have responded ably to the call laid upon them by this situation, and the result accomplished by the total of net profits realized is a measure of successful effort.

In the work of the past year your company has amply maintained its advanced position in the engineering and manufacturing fields. Many important engineering undertakings have been reduced to practical calculation and realization in recent development of Canadian resources, and your company has had its usual large share in the resulting orders for electrical apparatus. Incidentally, the distinction rests with your company of having manufactured during the past year, the only transforming and switching apparatus yet produced in Canada for operation in connection with lines transmitting electrical energy at a pressure of 110,000 volts, the highest transmission voltage yet attempted in any part of the world. Also, as an item in the year's manufacture, is included the largest generator yet built for Canadian installation, and which embodies the highest refinement of electrical and mechanical structure.

Sales during the year were the largest in the history of the company, about doubling those of 1908, and considerably greater than in 1906, our previously largest year, when much higher prices for apparatus were obtained. The cost of manufacturing has appreciably reduced during the year, and is an evidence of the continued efficiency of the plant and its manufacturing organization.

The company has, during the year, acquired office and warehouse premises in Winnipeg. A suitable site on Portage Ave. East, one block from the principal commercial centre, was secured and a building erected, adequate for our present needs and of sufficient capacity to take care of, for some years, the constantly increasing business of the Northwest, for which Winnipeg is the main distributing point.

The Niagara Falls, Ont., city council passed a resolution, April 11, requesting the Michigan Central Rd. to electrify the section of its line between Niagara Falls and Niagara-on-the-Lake, 15 miles.

How to Improve the Roadbed.

By E. Desharnais, Roadmaster C. P. R., Medicine Hat, Alta.

Section ballasting should be done with material which is not too coarse. Roadbed should have a sub-grade according to height of dumps. In some places the sub-grade should be 18 to 20 ft. to retain ballast, as all big dumps settle for years after grade is completed, and if we give only 16 ft. sub-grade on big dumps and the dumps settle down 1 to 2 ft. in a couple of years, then we are obliged to haul ballast to lift the dumps to the grade and the result is that we have no shoulder to keep ballast firm.

Second applications of ballast for shoulder, especially on big dumps, never make strong shoulders, grass will not grow in ballast as well as in the dirt, when the frost comes out of the dump. I have seen many cases where ballast rolls down because there is nothing to hold it down to the dump and old ballast. I have never seen good grass grow in ballast. I think all big dumps should be built according to the height and a few feet allowed for settling down. Draining is one of the most important, if not the most important, thing in connection with the subject of which I am treating.

The division should be ballasted every six years, especially where there is heavy traffic, and if it is possible, ballast should not be too coarse, and each division should not have more than 25 miles of ballasting to do each year. This should be done as soon as the frost is out of the ground, or as quickly after as possible, in order to have the roadbed as solid as possible before the frost sets in in the fall. After the track has been lifted and put in good line, all track should be trimmed and the ties well filled with ballast. The ballast should be sloped from the rail to the ends of the ties, to only one inch below the top of the ties. My experience of trimming ballast in this way is that it will save the life of ties, because where ties are filled and a good shoulder is made we will have better track in all seasons of the year. The way we trim track to-day, we cannot judge the life of the ties, as the sun affects the ends of the ties too much and causes the ends to split, which allows the wet and dirt to get into the heart of the ties and causes them to rot quicker. I think we have changed more ties since we started the new standard way of trimming track than before this came into effect. It is more difficult to keep our track in good line by not filling up the end of the ties, especially on curves, and where the track heaves, and more expense is incurred in handling ballast. No matter how deep ballast is trimmed to the end of the ties, water never runs from the centre of the track to the ends of the ties. Even if the water does run from the centre to end of ties it does not improve the track, because it leaves the centre part of the roadbed too hard and makes the outside, especially near the rail, too soft, causing the track to go out of level. I have noticed this when riding an engine after three or four days of wet weather, especially where the track has been trimmed rather deep down the ties.

With the weight of rolling stock and the speed run, our system of changing ties cannot be improved upon at present. All our ties are inspected before they come out; after our old ties are taken out of the track they are piled up in such a way that they can be inspected by anyone, and they have been inspected from time to time, and I have found very few cases where ties have been taken out that should have been in the track any longer. I think if we abide by reports made by Mr. Dixon we will have no end of trouble with our trackmen, because, where the trackmen are lifting track is where they find the bad ties, and in many cases the tie will not be marked by the inspector, and will require to be taken out the same day, and there will be no tie to take its place, as we distribute ties according to the marking of the inspector. If we cannot trust our section foremen after long experience, to mark the ties in the spring, we should not trust them in the fall to find out how many ties are required for next year. My opinion is, if a foreman works on a section every day in the year, he is able to tell where the bad ties are, better than any inspector who may come along once a year over the division. I do not see how a man is able to test ties by sounding or looking at the top. The greatest trouble with ties to-day is, rotting underneath the tie, and breaking under the rail, and in many cases the tie may be sound in the centre, also at the ends, and may look to the inspector as good as new. We must lift the line and gauge our track to know where the bad ties are. We have also to consider the speed of the trains on certain parts of the road. I approve of tie plates being put on all ties on tangents as well as curves, and they should be put in before the frost is in the ground. If they are put in after the ties are frozen solid, it is liable to cause more broken rails. I also think tie plates would save the life of the ties a couple of years at least.

Especially on a new roadbed, all steel should be laid before the frost is in the ground. If steel is laid on a frozen roadbed all the loose ties should be blocked before any engine is allowed to run over the steel. No matter what kind of roadbed you may have you will always find loose ties, and if an engine is run over the steel without blocking, you will have bad track until the steel is changed. I know by experience that an engine running over steel without the ties being blocked will cause a large number of surface bent rails, and these rails cannot be straightened out, which will cause bad gauge as long as this steel remains in the track. The track will also spread in winter and you will never have smooth track. More expense is also incurred in trying to keep the track in good surface.

Where roadbed is over muskeg I would recommend 10 ft. ties with 56 lb. steel, to make a guard rail to be placed on the end of the ties with slot in each side and well spiked, to prevent the ties from bunching, and also to keep the main line rails from creeping and help to keep better line. I do not approve of cinders being used for lifting track on the main line, but when you come to muskeg, or soft places as may be found in cuts, etc., I think cinders are the best material to use, unless you have a very short soft place in the roadbed, which should be dug out a couple of feet under the ties and filled with crushed stone, and ties tamped with good ballast, and drained at that place to take the water out of the hole. If this is done, I do not think there will be any further trouble with that spot.

Each roadmaster having charge of a division should start a gang with 10 men, and place his best liner in charge of them, and line his division from one end to the other about the first of July after the heavy rain is over. Section foremen should have all their ties in by that time and most of the track up in good surface, but, as a rule, track is in poor line. This is due to the fact that every section foreman is not able to line track properly on account of his gang being too small to throw the track to line in many places, but by having a good gang to line track, especially at switches, you will have better riding track and switches, as it is impossible for a small section gang to line switches. Some foremen may be good trackmen, but may not be able to line track as well as others.

Shims should be supplied one year ahead of the time they will be required, and piled in a shed so that they will dry out without being exposed to the sun. In this way it will keep them from warping and cracking. Using green timber shims placed under the rail is the cause in many cases of spreading track. In places where a man is shimming from one-quarter of an inch up, four to six braces should be placed in each rail length. If we only shim one side of the track a brace should be placed on both sides, I mean a brace on each end of the tie. If you put a brace on one side only, the side the brace is on, when the spring comes, a loose tie in the ballast will cause a spread track on account of there being only one spike to hold the rail where there is no brace, and, the braced side will pull the tie from the rail where there is no brace. All braces should have a hole bored through the brace to put one spike in to prevent the brace from moving sideways, two spikes should be used to a brace, one at the end and the other in the hole, on light shimming. On shimming over two inches three spikes will be better on each brace. In a country like Alberta we should be supplied with two inch hardwood plank, four inches wide, so the sectionman can cut his braces to suit his shimming. A brace should not be more than 10 inches long. This would be economy to the company, as these braces will last from three to four years, and also save section foremen cutting new ties every year, the brace from ties being too soft, and the plank making a much better brace.

All shims over 1½ ins. should have a shimming spike every second tie from 2 ins. and upward. Shims 2 ft. long should be used and shimming spikes should also be used in every tie. No shimming should be done without level board.

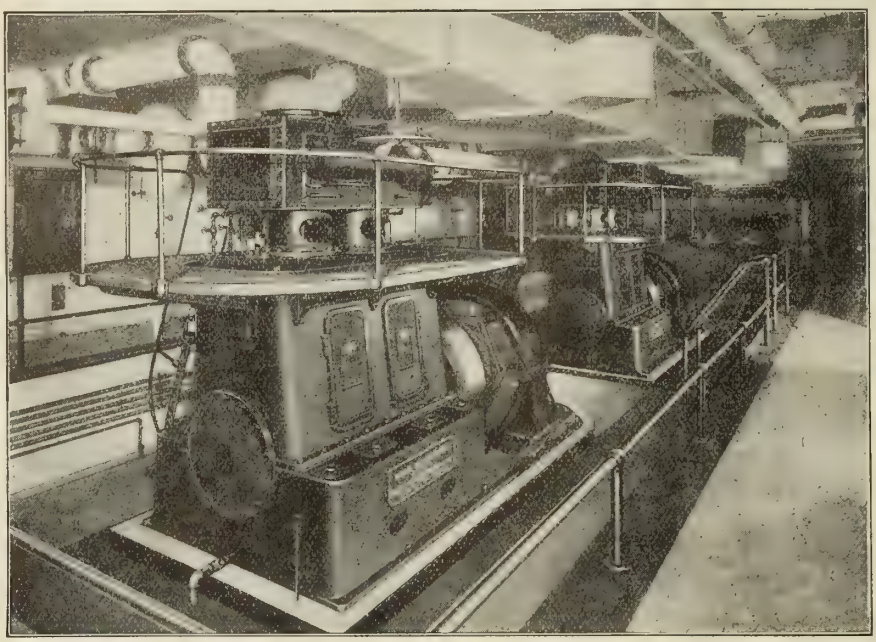
In some cases I have found the stakes set up by the engineers, especially on lifting track, have been put in very loosely, having been adjusted by the engineer, either by driving down or pulling up, after being put in ground. I think a good way of setting stakes for lifting track would be to drive the stake in the ground solid, the stake being long enough to be cut to adjust, and the stake not be adjusted by driving down or pulling up.

The foregoing paper was read before the Western Canada Railway Club recently.

The New York Railroad Club's committee on electrification, after a year's study of the subject, reports that no general information is available on the basis of which steam railways as a whole would be justified in electrifying terminals or main lines solely on the ground of economy. They consider that more attention should be given to the possibility of electrification in connection with heavy grades, and that it is necessary to proceed with caution in attempting the electrification of large freight terminals, which necessarily involve the traffic of a number of different roads.

The Board of Railway Commissioners has received an application from the C.P.R. for formal approval of the uniform bill of lading in use in the United States with respect to shipments from U. S. points to points in Canada, and from U. S. points through Canada to U. S. points, on the ground that doubt exists as to whether Canadian railway companies would have the protection of the U. S. bill of lading in the event of loss or damage affecting such traffic while in transit within Canada. The Board will discuss the situation fully with the railway companies subject to jurisdiction at the traffic sittings to be held in Ottawa on May 17.

HAS COST NOTHING FOR REPAIRS



A Customer says:

"We have used one of your vertical high speed engines, English type, forced lubrication, since 1907. The engine runs at 425 revolutions per minute almost constantly night and day. It has given us every satisfaction and so far has cost us nothing for repairs.".

An Item in the Maintenance of Locomotive Boilers.

By George Twist, Locomotive Foreman C.P.R., Minnedosa, Man.

A great deal has been said about the trouble experienced in keeping locomotive boilers free from mud and scale, particularly in bad water districts. Boiler compounds of various kinds have been used, but the experiments in this direction cannot be said to have been successful. The water has been treated at the supply tanks, but has usually resulted in making no difference whatever, or else has caused boilers to foam so badly as to necessitate the washing out of the boiler each trip or the changing of water at stations where treatment is not necessary. Various designs of blow-off cocks or valves have been tried, some with part success, others resulting in complete failure. However, we still seem to be far away from the solution of the difficulty. In spite of the fact that the trouble has always existed, we still find ourselves with blow-off arrangements, the same in number, design and location as 15 years ago. The water legs of boilers seem to be the only places which have received attention in this respect. In the last few years it has been thought desirable to provide ports in the bottom of the barrel, which would suggest that we are alive to the fact that this part of the boiler requires most careful washing out. Then why not apply blow-off arrangements whereby this portion of the boiler may be cleared of a large proportion of this mud? Provision has been made for the more thorough washing out of boilers by providing additional holes for the purpose. Good washout tools have also been designed and provided. Have the same ideas been followed out in the effort to keep boilers free from mud when under steam? I think not. Very few designs of blow-off arrangements make them practical for use when an engine is running, a time which is a good one, and I think, a proper one, to blow out the superfluous muddy water, as at this time the water is in better circulation than when the engine is standing idle.

So much for our present arrangements for keeping our boilers free from mud and scale. Let us now consider whether a little different design of boiler could not be used for our bad water districts. Is it better to have engine failures, necessitating the removal of part or the whole set of tubes, or is it worth while to depart from the hard and fast rule which seems to prevail of having our tubes spaced so very close together? Undoubtedly, by spacing them further apart we would lose a little heating surface. But this would be overcome in a short time after the boiler has been in service by the fact of having little or no scale for the heat to penetrate. We would be able to wash the scale to the bottom of the barrel, which is now impossible to do, and with blow-off arrangements in the barrel we would be able to keep scale away from the tubes to a much greater extent than we can at present. Scale which lodges between tubes has a tendency and undoubtedly does gather other scale and mud, and in all cases in my experience of tubes being what is termed mud blocked, the examination of scale shows that the accumulation has been built there, not by the formation of scale, but by the gathering together of separate pieces of scale, the same being bound together and forming a solid cake around the tubes and causing them to leak. The only remedy then is to take out and renew the set or part set of tubes, which costs considerably, especially when the same performance is necessary every three or four months. I think the enormous expense of maintaining our boilers could be considerably curtailed by starting out on the principle of designing boilers to suit bad water districts and the systematic installation of good reliable blow-off arrangements, together with enforced regulations to those responsible for using same. I would suggest that you invite others interested to give their experiences and suggestions.

[Editor's Note.—We hope that others will follow Mr. Twist's example and write us on this important subject.]

Reid Newfoundland Ry. Construction.

The Newfoundland Legislature has confirmed a contract between the Government and the Reid Newfoundland Co., for the construction of branch lines as follows:—From near Duffs on the West End branch, to Trepassey by way of the southern shore, 70 miles; from Broad Cove, on the Carbonear branch, via Heart's Content to Grates Cove, 70 miles; from between Come-by-Chance and Northern Bight, on the trans-island line, to Fortune Bay, 40 miles; from Shoal Harbor, on the trans-island line, to Bonavista, 70 miles; from Howley or Bay of Islands, on the trans-island line, to Bonne Bay, 30 miles. The contract provides that the lines are to follow the routes laid down by the Government, and are to be in all respects equal to the work of the railway constructed for the Government by the late Sir Robert G. Reid, under the contract of May 16, 1893. The right of way, station grounds, borrow pits and ballast pits are to be provided by the Government as required, and the company may take all necessary lumber for construction purposes from Crown Lands. The rate of wages paid on the work is not to be less than $1.50 a day, and no work is to be done on Sundays. During the construction the contractor may carry such freight and passengers as may offer at rates not in excess of those charged on the existing lines. The Government agrees to pay, upon the completion of each five mile section of the lines a subsidy of $15,000 a mile, and to admit free of duty the rails, fish-plates, fish-bolts and spikes necessary. The contractor also agrees to manufacture in the colony all the rolling stock necessary for the operation of the branch lines, all material and fittings being admitted duty free. The stations and other buildings are to be erected by the contractor, to whom the Government will pay the par value.

A second contract provides for the operation of these branch lines from the period of completion of each of them, until July 31, 1951, at least one passenger or mixed train being run in either direction daily, Sundays excepted, and as many additional through local passenger or freight trains as traffic may require. Mail and mail cars are to be carried as required at the rate of $69.50 a mile a year. For such operation the company is granted 4,000 acres of land for each mile of branch lines to be constructed; such land to be granted upon the completion of each branch line. The existing clauses of the contract of 1898 and 1901, and the acts confirming them are to apply to these contracts unless specifically excepted.

The branch from Shoal Harbor to Bonavista, 70 miles, is under construction and is expected to be completed early in 1911. The contract calls for the construction of 50 miles each year until the whole mileage is completed.

Winnipeg press reports state that negotiations between the C.P.R. and its mechanics of the Western Lines, came to a conclusion Apr. 17, when the employes accepted the terms as laid down by the company, which are the same as were agreed to at the conclusion of the 1908 strike.

Recent New Brunswick Legislation.

The New Brunswick Legislature, which was prorogued Mar. 26, passed the following acts affecting transportation interests:—

Eastern Electric and Development Co.—Investing in the company the powers and franchises of the Sackville Electric Light and Telephone Co.

Fredericton and Grand Lake Coal and Ry. Co.—Incorporation.

Fredericton Street Ry.—Incorporation.

Hartland and Miramichi Ry.—Incorporation.

International Ry. Co. of New Brunswick.—Amending company's powers.

Imperial Dry Dock Co. of St. John.—Amending acts relating to the construction of a dock.

Moncton.—Authorizing city to issue debentures, to make agreements with respect to construction of electric railway, etc.

Moncton Electric Ry., Heat and Power Co.—Amending 9 Edward VII., chap. 69.

New Brunswick Coal and Ry. Co.—Amending acts.

New Brunswick Ry.—Amending 33 Vict., chap. 49.

New Brunswick Railway Act.—Amending chap. 91, Consolidated Statutes of 1903.

Northern New Brunswick and Seaboard Ry.—Authorizing Gloucester municipality to grant $25,000 to provide a right of way for the railway, and to procure and complete shipping facilities in some port in Gloucester county.

St. John and Quebec Ry.—Incorporation.

St. John Drydock.—To aid the construction of a dry dock.

St. John River Ry.—To aid the construction of a railway along the St. John River Valley.

Tobique and Campbellton Ry.—Amending acts authorizing construction of the railway, and extending time for construction.

Wireless Telegraphy.—H. LaV. Twining, B.A., of the Physics and Engineering Department of the Polytechnic High School, Los Angeles, Cal., has rendered a valuable service to amateur electricians and the students in technical schools by the publication of a little volume on "Wireless Telegraphy and High Frequency Electricity." It aims at supplying in a clear and concise manner such information as will enable anyone to design and manufacture high potential transformers for wireless or high frequency work. The first chapters deal entirely with the construction of the transformer and other apparatus, and are followed by detailed instructions for its installation and operation; and, in conclusion some theoretical information is given. There are 11 full page half-tone illustrations, and 86 cuts illustrating the text, but what gives the work a particular interest is the table at the end giving data for the construction of 14 sizes of transformers from 100 watt to 5 kilowatt. In the preface, the author refers to the help given him by the boys of the school in the experiment work.

Railway Guarantees in British Columbia.—The B.C. Government under the authority of the Shuswap Ry. Guarantee Act, 1890, and the Nakusp and Slocan Ry. Aid Act, 1894, has to make provision for paying interest on the bonds of these railways in excess of earnings; and under authority of the Victoria and Sidney Ry. Subsidy Act, 1892, for paying interest on its bonds. The amount estimated to be required to provide for these payments for the year ending Mar. 31, 1911, is $40,000.

The C.P.R., it has been announced will put on a motor car service on the Lenore and Miniota branches, May 1. The service will be operated from Brandon, Man.

Railway Freight Statistics.

During the year ended June 30, 1909, Canadian railways carried 66,830,019 tons of freight, against 63,071,107 tons in the previous year. Of the total tonnage relating to commodities 36,075,101 tons were reported as originating on the lines, and 30,754,918 tons as having been received from connecting lines. The following table shows the grand totals of the various classes of freight carried, whether originating on the various lines, or received from connecting lines:

NAME OF RAILWAY.	Tonnage Originating on Road	Tonnage received from connecting roads & other carriers.	Total freight tonnage
Alberta Railway and Irrigation Co.	96,901	54,084	150,985
Algoma Central and Hudson Bay	361,950	983	362,933
Atlantic and Lake Superior	16,238	21,781	38,019
Atlantic, Quebec and Western	3,975	9,295	13,270
Bay of Quinte	92,403	49,372	141,775
Bedlington and Nelson	2,053	447	2,500
Bessemer and Barry's Bay	18,864	2,505	21,369

C.P.R. Hotel Improvements.

The alterations, improvements and additions being made, or which it is proposed to go on with during the year at the various C.P.R. hotels in Western Canada are as follows:—

Banff Springs Hotel.—Work will shortly be started on an extension which will provide 30 additional rooms for guests. Besides this addition a new bathing pool, 60 by 120 ft., is being constructed, with private bath rooms and dressing rooms attached. The estimated cost of these improvements is $80,000. This is really the beginning of the very extensive improvements contemplated.

Glacier House.—The construction of a new power plant and laundry building is being proceeded with, the estimated cost being $12,800.

Sicamous Hotel.—In addition to the construction of a new power plant an extension, providing 25 additional rooms for guests and 10 new bath rooms, is being built. The estimated cost of the improvements is $32,000.

Empress Hotel, Victoria.—An addition, six stories high, is being built. It will add 67 rooms for the accommodation of guests, with an additional 53 bath rooms. The contractor is L. Skene, Victoria, and the estimated cost of the work is $136,000.

The work in each case is being done under the superintendence of the company's architect, W. S. Painter.

The Railway Committee of the House of Commons, April 7, threw out the bill introduced by A. C. Macdonnell, M.P., in respect to the granting of commutation tickets by railway companies. The object of the bill was to provide that the granting of a commutation fare could not be revoked except by the consent of the Board of Railway Commissioners, and that when one railway granted reduced rates from a central to an outside point, all other railways must do so within the same radius.

Great Northern Ry. Lines in Canada.

Midland Ry. of Manitoba.—The Winnipeg City Council has refused to adopt the plans submitted by the company for an entrance into the city, and has referred the whole matter back to the railway committee for further consideration. The principal objection to the plans was that they only provided for the erection of a freight shed, whereas the city had been led to expect that a passenger station would be provided.

At a joint meeting of the Winnipeg City Council railway committee and a number of ratepayers with L. C. Gilman, a proposition was submitted to the company that opposition to the entrance of the line, on the plans presented, would be withdrawn if provision be made for operating the line in the city by electricity. Mr. Gilman said the matter would be considered by the officials at St. Paul, Minn.

Brandon, Saskatchewan and Hudson's Bay Ry.—The Dominion Parliament has granted an extension of time for building the remaining portion of the company's projected railway.

Penticton Ry.—A company with this title has been incorporated by the British Columbia Legislature to build a railway from Penticton to the International boundary in the vicinity of Osoyoos Lake. The provisional directors are:—A. H. MacNeill, J. H. Kennedy, and E. B. Howes.

J. H. Kennedy, Chief Engineer V.V. and E. Ry., was in Oroville, Wash., April 3, for the purpose of going over the route surveyed for this projected line by —. Russell. The line is to connect with the V.V. and E. Ry. at Penticton.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Work on the roundhouse and other divisional buildings at Princeton, B.C., the present end of track, is reported to be proceeding rapidly. Sixty acres have been reserved for yard and other purposes.

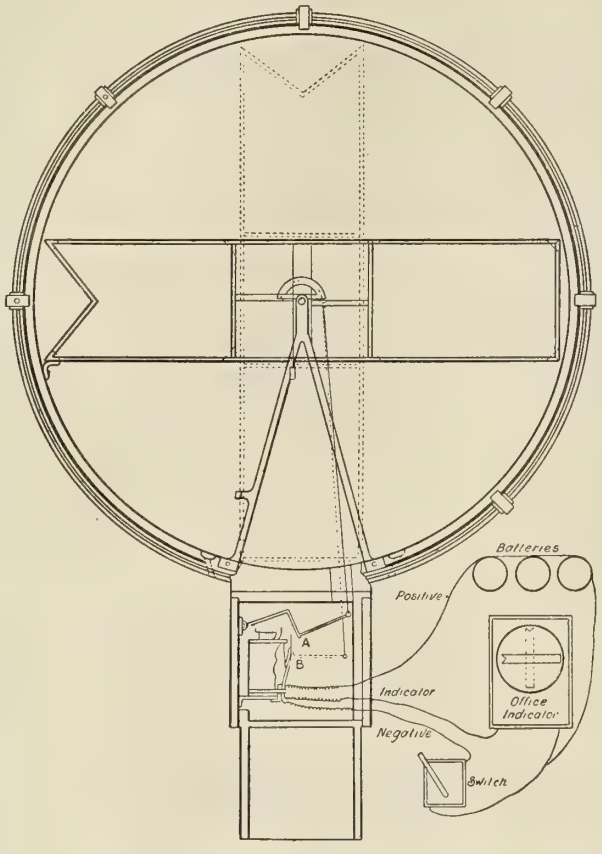
J. H. Kennedy, Chief Engineer, arrived at Keremeos, April 5, from a trip of inspection of the construction going on between Abbotsford and Hope.

An agreement was finally made April 12, between the company and the Vancouver City Council with respect to location of the proposed terminals for the Great Northern Ry. lines at the head of False Creek. The corporation assigns to the company its right to the bed of False Creek, between certain defined points, which is to be filled in by the company, and there is to be erected thereon, freight and passenger stations and terminals within five years, to cost not less than $1,500,000. A union passenger station is to be constructed near Gore Ave., and the company releases to the corporation certain riparian rights in the bed of False Creek, east of Westminister Ave. The agreement has to be approved by the ratepayers before becoming operative.

The Provincial Engineer has written to the mayor of New Westminster, B.C., stating that the Government will not permit the Great Northern Ry., to erect a station on the grounds leased at the north end of the Fraser River bridge, until it agrees to allow the station to be used by any other railway company, which may make an arrangement with the Government to operate trains over the bridge. (April, pg. 275).

The C.P.R. is reported to have ordered 100,000 tons of steel rails from the Algoma Steel Co., Sault Ste. Marie, Ont.

Sir C. Rivers Wilson, ex-President G.T.R., speaking at the Crystal Palace Engineering School, London, Eng., April 12, said there was room for thousands of competent engineers in Canada.



Position of Semaphore Banner is always absolutely indicated to operator.

THE McAVITY ELECTRIC RAILWAY SIGNAL

SIMPLE RELIABLE ECONOMICAL

The McAvity Electric Signal can be used either in a Block System, as a Semaphore for Station, Yard, Junction and Drawbridge Protection, or as a Train Order Signal.

The banner in a horizontal position signifies "STOP." When current is applied the banner comes to position of "CLEAR," or perpendicular, as shown by dotted lines; this brings lever A down, making contact with point B, which contact must be made before Office Indicator will operate, and as the Semaphore only works to "CLEAR" electrically, therefore, in case there should be any derangement of the wires, **the banner instantly assumes the position of "STOP" by gravity,** where it will remain until the cause of the disturbance is discovered and removed.

G. W. VAUX, Gen. Passenger Agent, MONTREAL

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

9972. Mar. 22.—Rescinding order 7075, May 25, 1909, authorizing G.T.R. to build across highway, undergrade, between secs. 27 and 28, tp. 37, range 18, w. 3 m., West Saskatchewan District.

9973. Mar. 22.—Amending order 8685, Nov. 5, 1909, in regard to removal of C.P.R. tracks from McPhillips St. Winnipeg.

9974, 9975. Mar. 22.—Authorizing C.P.R. to build four spurs for North Pacific Lumber Co., New Westminster, B.C.; and one for Norcross Bros. Co., Iberville, Que.

9976. Mar. 18.—Ordering G.T.R. within 60 days to install electric bell at crossing just south of Concord station, Ont.

9977. Mar. 23.—Approving Alberta Central Ry. location from Red Deer to Rocky Mountain House, Alta.

9978. Mar. 23.—Approving Dominion Atlantic Ry. location from its junction at Centreville, N.B., to 300 ft. west of Turner Road.

9979. Mar. 22.—Authorizing Dickson Bridge Works Co. to construct two five-ton hoisting cranes across G.T.R. branch line to Northumberland Paper and Electric Co., Campbellford, Ont.

9980. Mar. 22.—Authorizing C.P.R. to open for traffic its Lacombe Branch extension from Stettler to Castor, Alta.

9981. Mar. 23.—Authorizing A. C. Beatty, M.D., Garden Hill, Ont., to place wires across G.T.R. between lots 12 and 13, con. 8, Hope tp., Ont.

9982. Mar. 23.—Authorizing Consolidated Telephone Co. to place wires across C.P.R. near Bath, N.B.

9983. Mar. 22.—Authorizing Manitoba Government Telephones to place wires across C.P.R. near Hartney station.

9984. Mar. 24.—Authorizing Princeton and Drumbo Telephone Co. to place wires across G.T.R. at Eastwood, Ont.

9985 to 9989. Mar. 22-26.—Ordering that C.P.R. be relieved from providing further protection at crossings, at mileage 7.8, between lots 20 and 21, con. 5, York tp.; between lots 12 and 13, con. 12, Sydenham tp.; at mileage 54.3, Owen Sound branch, Grey co.; and at mileage 13.7, Guelph and Goderich branch, Guelph tp., and that G.T.R. be similarly relieved in respect of crossing two miles west of Glencoe, Ont., it appearing from inspections by the Board's Engineering and Operating Department, that the views are excellent, and proper signboards and whistling posts provided.

9990. Mar. 26.—Authorizing Trenton Electric and Water Co. to place wires across Bell Telephone Co. wires at Belleville, Ont.

9991. Mar. 22.—Authorizing Bell Telephone Co. to place wires across G.T.R. at Elgin St. Brantford, Ont.

9992. Mar. 26.—Authorizing H. E. Beach to place wires across C.P.R. at Honeydale station, N.B.

9993. Mar. 21.—Authorizing Trenton Electric and Water Co. to place wires across G.T.R. at Belleville, Ont.

9994, 9995. Mar. 26.—Authorizing Bell Telephone Co. to place wires across C.P.R. at Daniel St., Arnprior, and across P.M.R. at Park Ave. and Whitehall St., Chatham, Ont.

9996. Mar. 22.—Authorizing G.T.P.R. to take certain lands in Edmonton, Alta., for constructing connecting tracks and Y for transfer of cars, water station and coaling plant for passenger trains, repair tracks, warehouses and other buildings and facilities necessary for traffic.

9997. Mar. 23.—Adding town of Napanee and Bay of Quinte Ry. as parties to the application re protection by G.T.R. at Centre St., Napanee, Ont.

9998. Mar. 23.—Ordering C.N.O.R. to divert road between lot 12, con. 4, and lot 13, con. 3, Scarboro tp.

9999. Mar. 23.—Approving G.T.R. plans for shelter sneds.

10000. Mar. 23.—Ordering C.P.R. to install, within 60 days, electric bell at Zorra St., Beachville, Ont.

10001. Mar. 26.—Approving Windsor, Essex and Lake Shore Rapid Ry. by-law authorizing W. T. Piggott, Managing Director, to prepare tariffs of tolls.

10002. Mar. 26.—Authorizing C.P.R. to build spur for Davenport Coal Co., Burmis, Alta.

10003. Mar. 26.—Authorizing C.P.R. to build its Regina, Saskatoon and North Saskatchewan branch across highways between mileage 0 and 14.7.

10004. Mar. 29.—Approving C.N.O.R. plan of subway on Massey Farm, lot 35, Con. B, Scarboro tp.

10005. Mar. 22.—Dismissing Elder Dempster & Co.'s application for order directing C.P.R. and G.T.R. to apply established export basis covering general merchandise shipped from Eastern Canada to Montreal, St. John, N.B., and Halifax, N.S., for export to Vancouver, Victoria and other B.C. points.

10006. Mar. 11.—Ordering C.P.R. to build highway crossing over Graham-Grinton Road, 1½ miles south of Armstrong, B.C.

10007. Mar. 26.—Authorizing C.P.R. to cross highways with its Snowflake extension and spur to International boundary from mileage 9.2 to 15.9, Man.

10008. Mar. 26.—Authorizing C.P.R. to build its Virden-McAuley branch across highways between mileage 0 and 14, Man.

10009. Mar. 26.—Authorizing C.P.R. to build across all highways on its Teulon extension from mileage 56.55 to 73.88, from Rugby Jct., Man.

10010. Mar. 21.—Ordering that C.P.R., G.N.W., and Canadian Northern Telegraph Companies file, not later than Apr. 12, new tariffs covering telegraphic services to newspapers.

10011. Mar. 29.—Amending order 9854, Mar. 11, relieving G.T.R. from providing further protection at crossing one mile south of Caldwell, Ont., and G.T.R. application to amend same by striking out the words Caldwell and Grey and substituting Colwell Jct. and Simcoe.

10012. Mar. 29.—Authorizing Bell Telephone Co. to place wires across London & Port Stanley Ry. at Ottawa Ave., London, Ont.

10013. Mar. 29.—Ordering G.T.R. to install within 60 days an electric bell at its crossing of Canfield St., Belleville, Ont.

10014. Mar. 29.—Authorizing Hamilton Powder Co. to ship by railway in its present packages, which do not in all respects comply with the requirements of order 7881, Aug. 27, 1909, explosives now on hand in its magazines at Nanaimo, Vancouver, Cranbrook and Nelson, B.C.

10015. Mar. 30.—Authorizing C.P.R. to build branch near Marysville station on lot 2377, group 1, Kootenay District, B.C.

10016. Mar. 30.—Approving Essex Terminal Ry. Standard Freight Tariff, C.R.C. 37.

10017. Mar. 26.—Authorizing C.P.R. to build across and to divert highways on its Lethbridge-Aldersyde branch from mileage 0 to 28, Alta.

10018. Mar. 30.—Authorizing G.T.R. to build spur to I. J. Rank's premises, Hagersville, Ont.

10019. Mar. 30.—Approving agreement between Woodbridge and Vaughan Telephone Co., Bell Telephone Co. and Union Telephone Co.

10020. Mar. 30.—Authorizing C.N.O.R. to divert and cross overhead road between lots 20 and 21, con. 2, Scarboro tp., station 499-50.

10021. Mar. 31.—Authorizing C.N.O.R. to build across public road between lots 18 and 19, con. 4, Pickering tp.

10022. Mar. 25.—Ordering that cost of operating and maintaining gates at M.C.R. crossing just west of Comber station, Ont., be paid, 10% by the township and balance by the company.

10023. Mar. 30.—Ordering that G.T.R. be relieved from providing further protection at crossing 1½ miles south of Lacolle Jct., Que., it appearing from inspection made by the Board's Engineer and Operating Department, that view is excellent and that signboards and whistling posts are properly placed.

10024. Mar. 22.—Adding Peel county and Toronto tp., as parties in matter of protection at G.T.R. crossings at Port Credit, Ont.

10025. Mar. 22.—Adding Oxford county as party in matter of protection at G.T.R. crossing just east of Beachville station, Ont.

10026. Apr. 1.—Approving C.N.R. location through tps. 5-6, r. 11-18, w. 2 m., Sask., mileage 95.58 to 147.14, from junction at Maryfield.

10027. Mar. 31.—Authorizing C.P.R. to build spur to H. N. Sereth's premises at mileage 15.04, east of Cranbrook, B.C.

10028. Mar. 26.—Authorizing C.P.R. to build across all highways on its Weyburn-Lethbridge branch from mileage 0 to 26.2.

10029. Mar. 31.—Authorizing Montreal & Atlantic Ry. (C.P.R.) to divert highway crossing in Sweetsburg, Que.

10030. Mar. 24.—Rescinding order 9782, Feb. 21, 1910, in connection with Bell Telephone Co.'s refusal to connect with West Williams Telephone Co. at Parkhill, Ont.

10031. Mar. 31.—Authorizing G.T.R. to build bridge carrying farm crossing at lot 2, con. 1, Fullerton tp., Ont.

10032. Mar. 31.—Amending order of Railway Committee of the Privy Council respecting interlocking, derailing and signal system at intersection of G.T.R. with C.P.R., four miles west of Chatham, Ont., by approving the addition of a four lever section to the original interlocking machine.

10033. Mar. 31.—Approving stress sheet for bridges 17, 18, and 20, being highway crossings adjoining Soulanges canal, Que.

10034. Mar. 31.—Ordering the G.T.R. within 60 days to install electrical bell at crossing just west of Rockwood station, Ont.

10035, 10036. Mar. 31.—Authorizing J. A. Coleman, Winger, Ont., to lay gas pipe under G.T.R. 4½ miles west of Marshville, and under M.C.R., at Montague station.

10037. Mar. 31.—Authorizing Canadian Niagara Power Co. to place wires over International bridge and G.T.R., at Bridgeburg, Ont.

10038. Mar. 31.—Authorizing C.P.R. to build spur for P. Burns & Co., between Golden and Morrow Aves., Toronto.

10039. April 1.—Authorizing Chatsworth Rural Telephone Co. to place wires across C.P.R. near Chatsworth station, Ont.

10040. April 1.—Authorizing Saskatchewan Public Works Department to build highway over C.P.R. Pasqua branch, by extending Rouleau St. southerly, at Wilcox, Sask.

10041. April 1.—Amending order of Railway Committee of the Privy Council, Sept. 10, 1895, in connection with interlocking, derailing and signal system at intersection of G.T.R. Air Line with C.P.R., east of Tillsonburg Air Line station, by providing for addition of two levers to original interlocking machine installed, so as to permit of each derail being operated by a separate lever, C.P.R. to pay G.T.R. cost and maintenance.

10042. April 2.—Authorizing C.P.R. to build branch line in block 165, Saskatoon, Sask.

10043. Mar. 29.—Amending Standard Conditions and Specifications for Wire Crossings, by inserting "or copper-clad steel wire" after "copper wire" at end of third line sub-clause (Na) in clause N.

10044. April 2.—Authorizing city of Toronto to place power cables under G.T.R. on Pacific Ave.

10045. Mar. 22.—Refusing G.T.R. application for approval of location of semaphore, wire fences and works on its Northern Division between Old Yonge St. and Yonge St. near Holland Landing, Ont., with leave to parties interested to renew application upon usual notice.

10046. Mar. 22.—Rescinding order 7706, Aug. 3, as amended by order 8079, Sept. 14, 1909, authorizing G.T.R. to build spur to Davis & Doty's premises, Oakville, Ont.

10047. Mar. 22.—Relieving C.P.R. from providing further protection at crossing on Dundas St., Lambton, Ont., it appearing from inspection made by the Board's Engineer and Operating Department, that views are excellent and that signboard and whistling posts are properly placed.

10048. Mar. 22.—Rescinding order 8055, Sept. 13, 1909, authorizing G.T.R. to build spur to Shields & Hilmer's premises, Oakville, Ont.

10049, 10050. April 1 and 2.—Relieving G.T.R. from providing further protection at crossings at second highway east of station at Upton Road, Que., and 1¼ miles south of Moorefield station, Ont., it appearing from inspections made by the Board's Engineer and Operating Department that the views are excellent and that signboards and whistling posts are properly placed.

10051. April 2.—Authorizing C.P.R. to build spur line at mileage 27.62, Woodstock section, for Hon. J. K. Fleming, Woodstock, N.B.

10052. Apr. 2.—Approving G.T.P.R. road diversion in s. w. sec. 1, tp. 44, r. 4, w. 4 m., North Alberta District.

10053. Apr. 2.—Ordering G.T.R. to install within 60 days an electric bell at crossing just east of Maxville station, Ont.

10054. Apr. 1.—Relieving C.P.R. from providing further protection at the crossing at mileage 27.5, Teeswater branch, Arthur tp., Ont., it appearing from inspection made by the Board's Engineer and Operating Department, that views are excellent and that signboards and whistling posts are properly placed.

10055. Mar. 22.—Ordering M.C.R. to provide protection at Tillson Ave. crossing, Tillsonburg, Ont.

10056, 10057. Apr. 2.—Authorizing Bell Telephone Co. to place wires across G.T.R. at Daniel and John Sts., Arnprior, Ont.

10058. Apr. 2.—Authorizing J. Sidey, to place wires across G.T.R. just north of Garden Hill, Ont.

10059, 10060. Apr. 2.—Authorizing Ontario Power Co. to place wires over G.T.R. on Welland and King Sts., Port Colborne, Ont.

10061. Apr. 1.—Relieving G.T.R. from providing further protection at crossing of second highway east of Stanfield station, Que., it appearing from inspection made by the Board's Engineer and Operating Department, that views are excellent and that signboard and whistling posts are properly placed.

10062. Apr. 5.—Authorizing G.T.R. to construct spur lines from its Northern Division, south of Bloor St., Toronto, to Fairbanks Morse Canadian Mfg. Co.'s premises.

10063. Apr. 5.—Ordering G.T.R., within 60 days to install electric bell at Laggan Road crossing, Alexandria, Ont.

10064. Apr. 5.—Extending until July 31, time within which C.P.R. should construct spur for city of Winnipeg, near Birdshill station.

VANADIUM

Contrary to the custom of things, Vanadium won immediate success in the highest branches of Metallurgy—in the manufacture of armor plate, marine forgings, locomotive and automobile parts.

Tests tell; and the tests which instantly admitted Vanadium Steels to these important fields are revolutionizing results all over the metal world.

This space is too short for the story. It is a story that vitally affects the success of every man, every machine, and every mill that uses iron, steel, brass, bronze or aluminum.

Vanadium, the "Master Alloy," is now in use all over the world. Get the complete story from our books.

American Vanadium Company

324 Frick Building,
Pittsburgh, Pa.

10065, 10066. Apr. 4 and 5.—Authorizing C.N.O.R. to cross highway between lots 8 and 9, con. 3, and between lots 14 and 15, con. 4, Hope tp.

10067. Apr. 5.—Authorizing Dr. A. C. Beatty, Garden Hill, Ont.,. to place wires across C.N.O.R. in Hope tp.

10068 to 10072. Apr. 5.—Authorizing Bell Telephone Co. to place wires across C.P.R. at five points in Ontario and Quebec.

10073. Mar. 25.—Refusing E. N. Richards' application for order directing G.T.R. to provide farm crossing at lot 102, con. 1, Sandwich East tp., Ont.

10074. Apr. 5.—Amending order 8627, Oct. 21, 1909, by substituting "Railway" for "Applicant" where it appears in lines 7 and 11 of preamble in first and second paragraphs of operative part and in conditions 2 and 10; and by adding "Railway" before "Company" where the latter appears in conditions 3, 4, sub-section 3 of conditions 4, 5, 7, 8 and 9.

10075. Apr. 6.—Ordering G.T.R., within 60 days to install electric bell at crossing just east of Breslau station, Ont.

10076. Mar. 15.—Refusing application of P. C. Larkin Co., Toronto, for lower rating in the Canadian Classification for packet tea, boxed, than for bulk tea, boxed.

10077. Mar. 22.—Ordering G.T.R., within 60 days to put approaches at crossing allowance for road between con. 7 and 8, Esquesing tp., on both sides in condition to comply with Board's General Regulations Affecting Highway Crossings of Jan. 26, 1909.

10078. Apr. 6.—Authorizing Metcalfe Rural Telephone Assoc. to place wires across O. & N.Y.R. at Edwards station, between Osgoode and Gloucester tps., Ont.

10079 to 10081. Apr. 6 and 7.—Authorizing Canadian Niagara Power Co. to place wires across Bell Telephone Co.'s wires at three points in Ontario.

10082. Apr. 6.—Ordering G.T.R., within 60 days to install electric bell at first crossing east of Mallorytown, Ont.

10083. Apr. 5.—Relieving G.T.R. from providing further protection at crossing 1½ miles east of St. Basile le Grand station, Que.

10084. Apr. 6.—Approving Alberta Ry. and Irrigation Co.'s by-law respecting spitting in cars stations, etc.

10085. Apr. 5.—Authorizing Ontario Hydro-Electric Power Commission to place transmission lines across Niagara, St. Catharines and Toronto Ry. in Thorold tp.

10086. Apr. 7.—Ordering C.N.Q.R. to provide farm crossing for M. Francoeur, St. Jerome parish.

10087. Apr. 7.—Ordering G.T.R. to install within 60 days, electric bell at first highway crossing west of Norval station, Ont.

10088. Apr. 5.—Authorizing C.N.O.R. to build across public road between lot 25, con. 2, and lot 25, con. 3, Pickering tp.

10089. Apr. 5.—Relieving G.T.R. from providing further protection at crossing at Third Line north of Stottsville, Que.

10090. Apr. 7.—Amending order 9973, Mar. 22, 1910, by striking out "November" in second line of operative part and substituting "February."

10091. Apr. 7.—Approving C.N.O.R. plan of standard crossing over highways, frame, trestle and beam span.

10092, 10093. Apr. 5.—Relieving G.T.R. from providing further protection at crossing west of St. Madelene, Que., and crossing third, east of Upton station, Que.

10094. Apr. 5.—Authorizing C.N.O.R. to build across road between cons. 2 and 3, Hope tp., station 392-19.

10095. Apr. 6.—Relieving C.P.R. from providing further protection at crossing immediately east of Mountain Grove station, Ont.

10096. Apr. 7.—Approving C.N.O.R. plan of standard crossing over highways, pile, trestle and beam span.

10097, 10098. Apr. 7.—Relieving G.T.R. from providing further protection at crossings three miles west of Stamford, and just east of Walsh, Ont.

10099. Apr. 6.—Approving protection provided by G.T.R. at crossings at Cherry St., Spadina Ave., High Park Entrance East, Humber Bay and Swansea, Toronto; Shoebottom's crossing, about 4 miles west of St. Marys Jct.; Queen St., Brampton; first crossing west of Burlington Jct.; first crossing east of Paris Jct; first crossing east of Wyoming; Plank Road, Sarnia, Ont.

10100. Mar. 15.—Amending order 6147, Jan. 21, 1909, which fixes a stop-over charge of 25c. per car a day for the first 48 hrs., and car service toll thereafter, on western grain and grain products in car loads consigned to Cartier and Sarnia Tunnel, Ont., by striking out "25 cents" in the 13th line of operative part and substituting "$1."

10101 to 10103. Apr. 7.—Relieving G.T.R. from providing further protection at the crossings at mileage 113.75, east of New Sarum and east of Wainfleet station, and just east of Sherkston station, Ont.

10104 to 10116. Apr. 9.—Authorizing Ontario Hydro-Electric Power Commission to place telephone and relay wires across various railways at 13 points.

Railway Rolling Stock Notes.

The G.T.R. has received six mogul locomotives from the Canadian Locomotive Co., Kingston, Ont.

The Michigan Central Rd., has received one hump switching, and 10 consolidation locomotives from the Montreal Locomotive Works.

The Portland Canal Short Line Ry has bought two locomotives in the U.S. for construction work and has ordered one combination passenger car and caboose and 23 flat cars from the Canadian Car and Foundry Co.

The Canadian Northern Ry., between Mar. 15 and Apr. 15, received the following additions to rolling stock, 25 cabooses, 30 flat cars from the Crossen Car Mfg. Co., Cobourg, Ont., and 125 box cars from the Canadian Car and Foundry Co., Montreal.

The 10 consolidation locomotives which the C.P.R. is having built at the Montreal Locomotive Works, some details of which we gave in our April issue, are, we are advised, similar in all respects to the locomotive described and illustrated on pgs. 165-175 of our March issue.

The 1,000 steel frame box cars which the C.P.R. has ordered from the Canadian Car and Foundry Co., Montreal, are to be exact duplicates of the cars described and illustrated in our Jan. issue, except that Farlow draft gear will be used in place of the M.C.B. twin springs.

The C.P.R., between Mar. 18 and Apr. 13, received the following additions to rolling stock:—six D-10 locomotives, four baggage and express cars, one mail and express car, 67 wooden box cars, five vans, and one pile driver from its Angus shops, Montreal; 249 steel frame box cars from the Canadian Car and Foundry Co., Montreal, and one 3-ton travelling derrick from England.

The C.P.R., between Mar. 18 and Apr. 13, ordered rolling stock, as follows:—two first class cars, 76 wooden box cars, 203 refrigerator cars, 50 palace horse cars, 14 stock cars, 25 flat cars, five vans and one ballast car, at its Angus shops, Montreal; 1,000 steel frame box cars from the Canadian Car and Foundry Co., Montreal, and one 75-ton wrecking crane in the U. S.

The Temiskaming and Northern Ontario Ry., has ordered three parlor-cafe cars from the Canadian Car and Foundry Co., Montreal, which it is said are the first all steel under-frame passenger cars to be built in Canada, and of which the following are the chief particulars:

Length over vestibule buffer plates	80′ 3¾″
Length over side sill angles	7′ 3½″
Width over side sill angles	9′ 8½″
Width over wide side sills	9′ 10⅝″
Width overall at eaves	10′ 3¼″
Width at deck opening between deck sills	5′ 6″
Height from rail to under side of side sill angles	3′ 7½″
Height from rail to top of roof boards	14′ 1½″
Distance centre to centre of trucks	51′ 10″
Truck wheel base	11′ 0″
Underframe, posts and carlins	Structural steel
Couplers	Tower steel
Platforms	Standard steel
Heating	Gold combination steam and hot water
Lighting	Pintsch gas
Air brakes	Westing house LN 1812, with L3 triple supplementary reservoir and slack adjuster
Trucks	All steel, 6 wheel
Wheels, diar.	36″
Journals	5″ by 9″
Journal bearings	Canadian Bronze Co.
Brake shoes	Amerian steel back

Following are the chief particulars of the 11 ten-wheel locomotives, class D-10, which the C.P.R. is building at its Angus shops, Montreal, as mentioned in our April issue:—

Weight on drivers	141,000 lbs.
Weight, total	190,000 lbs.
Cylinders, diar. and stroke	22½″ by 28″
Drivers, diar	63″
Boiler, type	Radial stayed, wagon top
Boiler, pressure	180 lbs.
Heating surface, tubes	2,263 sq. ft.
Heating surface, superheater	408 sq ft
Heating surface, firebox	190 sq. ft.
Tubes, no. and diar.	24—5″, 241—2″
Tubes, length	14′ 6″
Firebox	100⅞″ by 69¾″
Grate area	49 sq. ft
Capacity, water	5,000 gals
Capacity, coal	10 tons
Air brakes	Westinghouse ET 6
Brake shoes	C.P.R standard
Brake beams	Simplex diamond, inside hung
Couplers	Tower
Headlight	Pyle National Electric
Journal bearings	C.P.R. standard
Lubricators	Detroit 5-feed
Springs	C.P.R. crucible steel
Wheel tires	Crucible steel
Wheel centres	Cast steel
Tractive effort	34,400 lbs.

The Minneapolis, St. Paul and Sault Ste. Marie Ry., has recently received four Pacific type and four consolidation locomotives from the American Locomotive Co., of which the following are the chief particulars:—

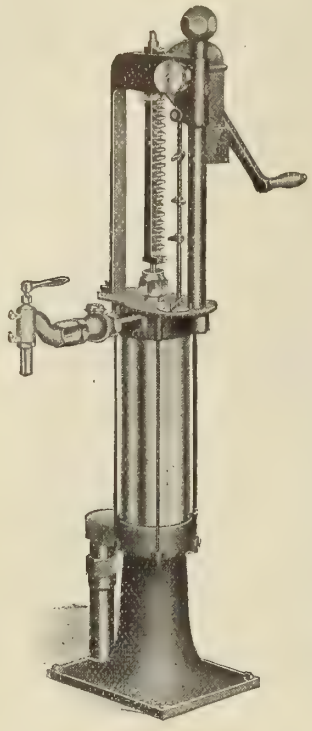
	Pacific	Consolidation.
Tractive power	30,800 lbs.	40,500 lbs
Wheel base, driving	12′ 0″	17′ 0″
Wheel base, total	32′ 2″	26′ 0″
Wheel base, total engine and tender	59′ 10¼″	57′ 1¼″
Weight on drivers	145,000 lbs.	192,500 lbs.
Weight, total	217,000 lbs.	220,000 lbs.
Weight, engine and tender	343,000 lbs.	347,000 lbs.
Heating surface, tubes	2,695 sq. ft.	2,971 sq. ft.
Heating surface, firebox	181 sq. ft.	187 sq. ft.
Grate area	47 sq. ft.	52.7 sq. ft.
Driving journals, main	10″ by 12″	10″ by 12″
Driving journals, others	9″ by 12″	9″ by 12″
Engine truck journals	6″ by 10″	6″ by 12″
Tender truck journals	5-½″ by 10″	5-½″ by 10″
Boiler, type	Extended wagon top.	
Boiler, diar.	70″	76-¼″
Boiler, pressure	160 lbs.	160 lbs.
Firebox	96-⅛″ by 70-¼″	108-⅛″ by 70-¼″
Tubes, no. & diar.	217-2″ 24-5-¼″	290-2″ 30-5-¼″
Tubes, length	18′ 6″	15′ 6″
Brakes	Westinghouse	American.
Capacity, water	6,500 gals.	6,500 gals.
Capacity, coal	10 tons.	10 tons.
Wheels, driving	69″	63″
Wheels, material	Cast steel.	Cast steel.
Wheels, engine truck	33″	33″
Wheels, trailer	46″	—
Wheels, tender	33″	33″

Following are the chief particulars of the 10 Pacific type locomotives which the G.T.R. is building at its Point St. Charles shops, Montreal, as mentioned in our April issue:—

Tractive power	31,559 lbs.
Weight in working order	210,000 lbs.
Weight on drivers	139,000 lbs.
Weight, engine and tender	353,300 lbs.
Wheel base, driving	13′ 4″
Wheel base, total engine	33′ 2″
Wheel base, engine and tender	62′ 3½″
Length overall	72′ 3″
Cylinders, diar and stroke	22″ by 28″
Driving wheels	73″
Driving wheel centres	Cast steel
Boiler, type	Wagon top with wide firebox
Boiler pressure	200 lbs.
Boiler, diar	66″
Tubes, no. and diar	309—2″
Tubes, length	20′ 6″
Heating surface, tubes	3,340 sq. ft.
Heating surface. firebox	169 sq. ft.
Grate area	50.62 sq. ft.
Tender, total weight	143,300 lbs.
Capacity, water	7,000 gals.
Capacity, coal	10 tons
Brakes	Westinghouse ET

Weight on drivers ÷ tractive effort = 4.1.
Total Weight ÷ tractive effort = 5.5.
Tractive effort x diar. of drivers ÷ heating surface = 96.1.
Heating surface ÷ grate area = 46.1.
Heating surface firebox ÷ heating surface without superheater = 11.9.
Weight on drivers ÷ total heating surface = 52.8.
Total weight ÷ heating surface = 84.
Heating surface ÷ vol. cylinders = 175.

An agreement was reported to have been reached April 15, between the Temiskaming and Northern Ontario Ry. Commission and the G.T.R., for the use by the latter of the T. and N.O. Ry. terminals at North Bay, for 21 years, the Commissioners reserving the right to make similar agreements with the C.P.R. and the C.N.R. The Commission proposes to build a short piece of line between North Bay and Nipissing Jct., 2.5 miles, so as to secure a connection with the G.T.R., independent of the C.P.R.



BOWSER

SYSTEMS FOR RAILWAY OIL STORAGE

are backed up by twenty-five years of experience in the manufacture of Self-measuring Pumps and Tanks.

The Tanks are made of any capacity, either cylindrical or rectangular, may be buried underground and connected with the pumps which are placed any distance away, wherever most convenient. No danger from FIRE.

The Pumps measure accurately, and by means of a Gallon Meter, keep an accurate record of all oil drawn. OVER FIFTY RAILROADS ARE USING BOWSER EQUIPMENT. Drop a card for BULLETIN 18.

S. F. BOWSER & COMPANY, LTD.

TORONTO, ONT.

ADDITIONAL SAFETY AND ECONOMY IN

TRACK MAINTENANCE

has been proved by the use of Continuous, Weber and Wolhaupter base-supported rail joints—after fourteen (14) years' service, having a record of over **50,000 miles in use**—the extent of which is evidence of their excellence.

Canadian Northern Ry. Construction, Etc.

W. Mackenzie, President, in a recent interview in London, Eng., stated that in Ontario the company's line from Toronto to Ottawa, will be finished as far as Trenton, Ont., about 100 miles, by the fall; and progress would be made with the line from Toronto in the opposite direction. On the northern section the end of steel is about 60 miles beyond Sudbury. On the Western prairies about 600 miles in all will be added to the company's lines. Construction will be gone on with on the line from Edmonton to the Yellowhead Pass, 240 miles. This year will also see the beginning of the new line of 500 miles across British Columbia, from the Yellowhead Pass to Vancouver. Further progress would be made with the line to Hudson Bay, and he confidently expected that the line would be in operation within three years.

Canadian Northern Quebec Ry.—The Quebec city council decided, April 15, to serve a notarial protest on the company calling on it to reimburse the city for the $200,000 voted to the Great Northern Ry. (one of the companies taken over) upon certain conditions which, it is claimed, are not being observed. One condition was the location of the company's workshops in the city. The question has been discussed on several occasions, but no definite understanding can be reached.

G. Tombs, General Freight and Passenger Agent, is reported to have said in Montreal, April 14, the matter of a new terminal there had been under consideration for some time, but as it was an undertaking of considerable magnitude, a decision could not be arrived at in too great haste. There were a good many developments going on in connection with railway matters in the city, and it was impossible to say what would be the outcome.

Canadian Northern Ontario Ry.—A start has been made in tracklaying on the line now under construction between Toronto and Ottawa—the contractor for the first section of which is Angus Sinclair. The tracklaying was done in the vicinity of Trenton, at the point of crossing the Central Ontario Ry. The connection has been made for the purpose of bringing in ties. Track had also been laid from points on the old Midland Ry. of the G.T.R., about a mile north of Scarboro Jct., in order to bring supplies to the construction gangs. Rapid progress is being made with the grading from the Don Valley, and through Scarboro tp. A steam shovel is at work just east of the Kennedy Road, where there is a big cutting, the earth from which is being used on an adjoining farm where there is a big fill. At the point where the line will run under the G.T.R. at Scarboro Junction, 20 ft. below the G.T.R. tracks, there are several gangs at work, as it is a point where the supplies, etc., are brought in off the G.T.R. Grading is also well advanced in Pickering and Whitby tps., as well as in Durham county, and right through to Trenton. All along the route, in addition to the regular gangs of men, the sub-contractors have taken on all the farmers' teams that could be hired, in order to push forward the work as rapidly as possible. Culvert and bridge work is light, and generally speaking the work is easy. It is expected that a contract for a further section of the line easterly from Trenton will be let at an early date. A Trenton press report states that L. D. Barchfield has been securing options on land for right of way into Belleville, Ont.

With reference to matters in Toronto, the reports as to the intentions, not only of the C.N.O.R., but also of the other companies, are as wild as they are numerous and contradictory. The recent large purchases of property, together with the unsatisfactory conditions generally, point to the fact that the whole railway situation in Toronto is likely to undergo a change. What the outcome will be it is impossible to tell, the only thing that is certain is that the Mackenzie, Mann & Co. interests will not be satisfied with having to take the subordinate position they have to do in the present Union Station.

Referring to the location of the company's shops in Toronto, D. D. Mann, Vice President, said, April 14, that shops would be built in Toronto, but whether in the Ashbridge Bay district or not he would not say. No progress had been made in the negotiations with the city council on the subject. The Riverdale Business Mens' Association passed a resolution, April 12, asking the city council to grant the company the right of way asked for on the east side of the Don, so that the shops could be located in the Ashbridge Bay district.

The party, of which G. F. Hanning was in charge, completed its survey of the route of the proposed line from Toronto to Buffalo, along the right of way of the Toronto and Niagara Power Co., as far as Niagara Falls, April 8. From the point where the power line crosses the Niagara Falls town boundary the route will diverge and pass through the centre of the city to the river about 300 feet north of the upper steel arch bridge. Surveys have been made for the erection of a bridge there.

Ontario and Ottawa Ry.—The Dominion Parliament incorporated a company with this title, with the powers, etc., mentioned in our March issue, pg. 183.

James Bay and Eastern Ry.—The bill referred to in our March issue, pg. 183, for the incorporation of a company with this title, has been passed by the Senate.

Canadian Northern Ry.—In an interview at Port Arthur, April 9, General Manager McLeod is reported to have stated that the company intended to do a large amount of work during the summer, not only on the main line, but also on the Duluth extension. The work on the Slate River-Kashabowie division will be completed in about two months; this will cut down the gradients out of Port Arthur very materially, and will shorten the line between Port Arthur and Kashabowie. Some of the bridges will also be rebuilt. Long sidings are being built along the line between Port Arthur and Winnipeg, about every four miles, and as soon as the necessity arises these can be coupled up and a second track provided. So far as Port Arthur itself was concerned additions would be made to the terminals; stalls added to the existing roundhouse; the yards rearranged and new tracks laid down, and a new freight shed will be built on the dock as soon as the rail business was over.

The bridge at Rainy Lake was so badly damaged at the break-up of ice, that it was considered unsafe, April 3, and traffic was diverted over the C.P.R. pending the strengthening of the structure. The erection of a steel bridge is under consideration, but so many interests are involved that the plans have not been finally decided on. The matter is under the consideration of the Dominion Government, the bridge being across a navigable channel.

We are advised that the Dominion Bridge Co. expects to commence the erection of the steel work of the new bridge over the Red River at Winnipeg as soon as the spring floods are over. The manufacture of the steel is well forward at the company's works, Lachine, Que.

Plans for the construction of a transfer railway in Brandon, Man., have been under discussion between the company's officials and the city council, and an offer was made to construct such a line with certain industrial spurs provided, it was allowed to operate a street railway over the lines so constructed. The council passed a resolution, April 4, asking the company to go ahead with construction, offering to provide a right of way, to arrange for a connection with the C.P.R., but expressing the opinion that the city should own the plant required for the operation of the street railway lines.

In our last issue, in referring to the company's construction programme for this year, we spoke of "the Rossburn branch, from Neepawa, Man., which is intended to connect with the main line at Dauphin, Sask." Canora should have been mentioned instead of Dauphin, which is in Manitoba.

In an interview recently at Winnipeg, R. J. Mackenzie stated that the construction programme for the year in Manitoba, Saskatchewan and Alberta, would include work on the following lines:—The extension of the Oak Point line northerly; the extension of the Rossburn branch to a connection with the line to Edmonton near Tiny, Sask., the extension of the Thunderhill branch; the continuation of the Maryfield extension towards Lethbridge, Alta.; the continuation of the Goose Lake line towards Edmonton; the extension of the line from Prince Albert towards Battleford; the continuation of the line from Vegreville to Calgary, the construction proposed being from Stettler to Calgary, Alta.; and the extension of the Edmonton and Slave Ry., now ending at Morinville, northwesterly towards Athabasca Landing. Work was started on several of these lines last year, and the contractors have still some work in hand on them to go on with.

We are officially advised that contracts have been let as follows:—For the completion of the Vegreville-Calgary line and a further extension of about 15 miles on the Saskatoon-Calgary line to the Northern Construction Co., Winnipeg; for a further extension of 50 miles on the Maryfield line, and for a branch running northwesterly from Maryfield towards Moose Jaw, 50 miles, to the Cowan Construction Co., Winnipeg.

Tracklaying is reported to be completed for 40 miles on the Vegreville-Calgary line, and is being proceeded with. The telegraph line is being strung, and the work generally is being pushed. Surveys are reported to have been completed by a party working under J. G. Mackenzie, for a line from Strathcona to Camerose, on the Vegreville-Calgary line, about 45 miles, and a press report states that construction will be gone on with this year. It is also reported that surveys have been completed for a line from Strathcona, west of the Calgary and Edmonton Ry. as far as Pigeon Lake.

The surveys have been completed for the main line for a spur at the Yellowhead Pass, under the charge of —. Hughes; he having effected a junction with C. P. Harrington, who is in charge of the survey party working easterly from Kamloops, B.C.

Winnipeg Station.—A press dispatch from Winnipeg Apr. 21, says that the contract for the interior finishing of Fort Garry station, has been let to the general contractors for the erection of the buildings, to Lyall & Sons for about $300,000, which will make the total cost of the station building about $1,300,000. The work is to be completed by Oct. 1.

Saskatchewan Midland Ry.—Application is being made to the Board of Railway Commissioners to sanction an agreement amalgamating the S.M. Ry. with the C.N. Ry.

Edmonton and Slave Lake Ry.—The Dominion Parliament has granted an extension of time for the construction of this projected railway.

Canadian Northern Pacific Ry.—The British Columbia Legislature has incorporated a company with this title with power to build a railway from a connection with the Canadian Northern Ry. at the eastern boundary of the province, to

New Westminster, thence to Vancouver, and also to English Bluff, south of the Fraser River, a distance of approximately 500 miles. The route to be followed is specifically described as being via the Yellowhead Pass, and the valleys of the North Thompson, South Thompson and Fraser rivers. The company is also authorized to construct a line from Victoria to Barkley Sound, about 100 miles; and such other lines as may be authorized by the Lieut.-Governor in council. The company is given the general powers usually conferred upon railways; its capital is fixed at $25,000,000, of which $10,000,000 may be preferred stock; and it may issue bonds or other securities to the amount of $60,000 a mile, exclusive of any bonds issued for terminal facilities, elevators, etc. The provisional directors are:—W. Mackenzie, D. D. Mann, D. B. Hanna, A. D. Davidson, Toronto, and R. J. Mackenzie, Winnipeg.

The Legislature has also confirmed an agreement with the Canadian Northern Ry. for the construction of the lines mentioned above. The second section of the act provides that the C.N. Pacific Ry. Co., when organized, can proceed to implement the agreement. In consideration of the construction of the lines as previously mentioned, the Government guarantees the company's bonds for $35,000 a mile at 4%, for 30 years, the total mileage not to exceed 600 miles, except under the following circumstances:—The company will endeavor to bring its line into Kamloops, either by diverting its main line so as to run through the city, or by the construction of a branch upon completion of this connection, the guarantee will be extended to cover the additional mileage occasioned by such construction. Among the covenants entered into by the company are the following:—to establish telegraph and telephone lines; to operate a car ferry service between English Bluff and Victoria; to build the lines to the standard of the C.N.R. between Winnipeg and Edmonton; to provide adequate rolling stock; to pay current rates of wages on constructions; to purchase supplies as far as possible in British Columbia; to begin construction not later than July 1, near New Westminster and Victoria, and to complete the same by July 1, 1914; to establish roundhouse, car repair shops, etc., for the Barkley Sound line within three miles of Victoria; and to maintain adequate terminal facilities at Vancouver and Victoria. The bonds guaranteed are to be disposed of and the money paid to a special account to the credit of the Finance Minister of the Province, on whose order it shall be paid from time to time to the comvany in proportion to the work done. In the event of the company purchasing any constructed line, the mileage so purchased to be calculated as constructed mileage for the issue of securities. It is agreed that neither the C.N. Pacific Ry. nor the C.N. Ry. shall make application to have these lines declared to be for the general advantage of Canada. This is for the purpose of carrying out section 8, which gives the B.C. Government power to regulate rates on these lines.

The surveys between Kamloops, B.C., and the boundary near the Yellowhead Pass have been completed, and good progress has been made with the surveys from Kamloops to New Westminster.

The first piece of construction to be undertaken, it is expected will be from New Westminster to English Bluff, from which point a car ferry service is to be maintained with Victoria. The company will, it is said, lay out a townsite on the south bank of the Fraser River opposite New Westminster. It is expected that the line from New Westminster easterly to Hope will be under contract by June 1, and that soon afterwards construction will be started at Kamloops, gangs working therefrom north and south. On Vancouver Island it is expected that work will also ve started this year in building the line from Victoria to Quatsino Sound. The whole of these lines have to be completed, according to the agreement with the B.C. Government, by 1914.

Portland Canal Short Line.—The steel for this line is reported to have been delivered at Stewart, B.C., and it is said that construction is to be started at once. This proposed line starts from the Stewart townsite in Northern British Columbia, and will follow the Bear River valley for about 15 miles, to some mining properties which are being developed by D. D. Mann. W. H. Grant, of Mackenzie, Mann & Co.'s staff, Toronto, left April 12, for Stewart to act as Superintendent of Construction. He was accompanied by D. O. Lewis, and a regular staff. (April, pg. 285.)

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

STOP OVER CHARGES "FOR ORDERS."

10100. Mar. 15.—The application of the C.P.R. and G.T.R., under section 29 of the Railway Act, for order amending the order 6147, Jan. 21, 1909, fixing a stop, 25c. per car a day for the first 48 hours, and the car service toll thereafter, on western grain and grain products, in car loads, consigned to Cartier and Sarnia Tunnel, Ont., "for orders." Upon hearing the application in the presence of representatives of the Dominion Millers' Association, the Canadian Manufacturers' Association, the Montreal Corn Exchange, the C.P.R., the G.T.R. and the M.C.R. companies, and the Canadian Freight Association. It is ordered that order 6147, be amended by striking out "25 cents" in the 15th line of the operative part of said order, and substituting therefor "$1."

THE MEXICAN ROUTE TO BRITISH COLUMBIA.

10005. Mar. 22.—The application of Elder Dempster & Co., under sec. 323 of the Railway Act, for order directing the C.P.R. and the G.T.R. to apply the established export basis covering general merchandise and commodities shipped from points in Eastern Canada to Montreal, Quebec, St. John, New Brunswick, Halifax, Nova Scotia for export to Vancouver, Victoria and other B.C. points, the said traffic to be forwarded from Montreal, St. John, and Halifax to Vancouver and other B.C. ports by the Elder Dempster Co.'s steamships to Puerto, Mexico, thence by the Tehuantepec National Ry. to Salina Cruz, Mexico, and thence by the Canadian Mexican Steamship Line to destination; it is ordered that the application be dismissed, without prejudice to the rights of any person interested to any relief the Board may deem proper upon a different set of facts being presented to it.

The Granting of Railway Charters.—A bill was introduced into the Senate, April 6, by Senator Davis, having for its object the transferring from Parliament to the Board of Railway Commissioners the power of granting charters for the construction of railways. He claimed that this would do away with the granting of charters to speculators who never intended constructing railways, but held them in order that they might be bought out. From 1900 to 1908, he stated, statistics showed that 65 companies, excluding the C.P.R., the G.T.R., the Canadian Northern Ry., and the National Transcontinental-G.T. Pacific Ry. had been chartered to construct 37,862 miles of railway, and of this mileage 463 had been constructed by 13 companies.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Dougall Varnish Co., Ltd., Montreal, has increased its capital stock from $150,000 to $200,000.

The Holden Co., Ltd., general railway and contractors' supplies, has removed its head office in Montreal from 302 St. James St., to 354 St. James St.

C. P. Williams has been appointed to represent the Chicago Railway Equipment Co. at 30 Church St., New York, vice E. G. Buchanan resigned.

The Dominion Iron and Steel Co., Sydney, N.S., is supplying the 100-lb. steel rails for the relaying of the G.T.R. double track between Napanee and Toronto, 193 miles.

Wallace Robb, son of W. E. Robb, Superintendent of Motive Power G.T.R., has been appointed sales manager for the Anchor Packing Co., for the province of Quebec, with headquarters in Montreal.

The Northern Engineering Works, crane builders, Detroit, Mich., have been placing orders for new tools and machinery, consisting largely of lathes, gear cutters and milling machines, etc., for several months past, and the machinery is now being installed.

The Dominion Wire Rope Co., Ltd., at its annual meeting in Montreal recently, re-elected the directors, the organization for the current year being as follows:—President, F. W. Fairman; Vice President and Managing Director, F. H. Hopkins; other directors, E. E. Fairman, G. P. Butters and C. W. Colby; Secretary-Treasurer, J. J. Rosevear.

Burton W. Mudge & Co., railroad supplies, Chicago, will, on May 1, remove their offices to temporary quarters in suite 1003, Peoples Gas Building, until such time as the southern portion of the same building is completed, when they will occupy offices overlooking Michigan Boulevard and Adams St.

In the third annual report of the New York State Public Service Commission, the locomotive boiler inspector states that amongst the list of defects of locomotive boilers 184 drilled tell-tale holes in staybolts were found stopped up and became a source of danger instead of an element of safety. The Falls Hollow Staybolt Co. claims that this danger could not possibly exist with the use of staybolts as the air currents through the entire stay would unfailingly prevent stoppage, and furthermore be a great advantage to combustion.

Recent Alberta Legislation

Among the acts passed at the first part of the current session of the Alberta Legislature were the following:—

Alberta and Saskatchewan Ry.—Incorporation.

Canadian Pacific Ry.—Confirming agreement between the company and the City of Edmonton.

Diamond Coal Co.—Amending charter

Lacombe and Prazeau Ry.—Incorporation.

The Central Ontario Ry. Co. has been authorized by the Dominion Parliament to enter into agreements to amalgamate, etc., with various railway companies.

Pintsch Light Steam Heat

Most brilliant illumination made possible by the Pintsch System using perfected Mantle Lamps and Safety Axle Driven Dynamo Electric System a product of sixteen years experience and now operating successfully on leading roads

RAILWAY, FREIGHT AND PASSENGER CARS OF ALL KINDS

C.P.R. Betterments, Construction, Etc.

Atlantic Division Improvements.—The betterments which it is proposed to carry out during the current year on the Atlantic Division, are said to include a new station at Woodstock, N.B., to cost about $20,000; addition to the station at McAdam Jct., N.B.; extension of the yard accommodation at St. Stephen, N.B.; and relaying the section from Watt Jct. to St. Andrews, N.B., with heavier rails.

Tobique and Campbellton Ry.—The New Brunswick Legislature has granted an extension of time for the construction of this projected railway.

Windsor St. Station Viaduct.—We are advised that the contract for the building of the viaduct at Windsor St. station, Montreal, has been let to the Bishop Construction Co., of that city.

Montreal Terminal Improvements.—Work has been commenced upon the improvements to the company's Place Viger terminals. The improvements are to be on a very extensive scale, and will not be completed for some considerable time. The works include a viaduct to carry the street railway tracks between Dalhousie Square and Sohmer Park, and the rearrangement of the freight yard. The freight sheds will be directly under the viaduct, and the yards on either side of it. There is nothing being done at present in reference to the additional trackage which press reports recently state was to be built from Dalhousie Square to Hochelaga.

Ottawa.—The east wing of the roundhouse near the Wellington St. Viaduct, was burned April 12, the damage being estimated at $12,000.

Cobourg; Lake Ontario and Western.—C.P.R. surveyors have been working for some time in the vicinity of Warkworth, Ont. The object of their work, local reports state, is the making of the final location surveys for the projected line through Cobourg.

Toronto.—D. McNicoll, Vice President, was in Toronto, April 15, and in an interview is reported to have said: "We have purchased some property a little back from the line of Yonge St., in North Toronto, and this will be utilized for improved freight accommodation in that district. A new passenger station is not just yet part of our programme, but we cannot say what the future will bring forth."

Tenders are under consideration for the erection of a new station at North Parkdale, Toronto. The plans provide for a structure having a frontage to the track of 100 ft. by 35 ft., with 24 ft. covered platform at either end. The waiting room will be 59 by 31 ft., adjoining which will be lavatories, baggage and express rooms, ticket office, etc. The structure will be of pressed brick.

Islington-Mimico Line.—It is said that the proposed branch from a point between the Humber River crossing and Islington, Ont., on the old Credit Valley Ry., to a junction with the G.T.R. near Mimico, about four miles will be built during the year. The object is to secure a direct connection with the C.P.R. tracks for its traffic coming over the G.T.R. from Hamilton.

Hamilton, Ont.—Reports state that three blocks of land north of the Toronto, Hamilton and Buffalo Ry., from McNab and Catharine Sts., have been purchased, and conveyed to a trust company for the purposes of the erection of a union station, etc., for the C.P.R. the T.H. and B., and the Canadian Northern Ry.

London, Ont.—Supt. McNeille, stated April 14, that while a number of sidings would be built during the current year at various points between London and Windsor, Ont., nothing had been definitely settled with reference to the proposed improvements at the London yards and roundhouse.

Georgian Bay and Seaboard Ry.—A press report states that a contract is about to be let for the construction of a section of this line between the present easterly terminus at Coldwater Jct., and Orillia, Ont., the work to be completed by Nov. The Canadian Northern Ry., it is reported, will secure an entrance into Orillia from Atherly, over a portion of this line, and the station in Orillia will be a union one.

Fort William, Ont.—A press report states that the company will expend $200,000 on doubling the capacity of its coal storage plant at Fort William, Ont., and that the work is to be completed by Oct.

An addition, 128 by 70 ft. is to be built at the machine shop, and a lot of new machinery has been ordered. Tenders have been received for the building of the addition.

Western Lines Contracts.—Tenders have been received for the following works and contracts will be let at an early date:—station buildings at Stonewall and Yorkton, Man.; new freight car shops at Winnipeg; six stall additions to engine house at Ignace, Ont.; abutments for bridge 24.4 Souris section, Man.; construction of subway at McPhillips St. crossing, Winnipeg; ditching work along the line between Fort William, Ont. and Winnipeg; for excavating and back filling of trenches for 6 in. pipe lines between Chaplin and Forrest, Alta.; Macoun and Grassy Lake, Alta.; and Walsh, Alta.

Western Lines Construction.—In addition to the contracts reported let for construction on Western Lines mentioned in our April issue, we are officially advised of the following:—

The construction of a second track between Winnipeg and Portage la Prairie, Man., 50 miles, has been let to J. Hargrave & Co., Winnipeg.

The construction of a line from Tilston, Man., where the branch from Lander now terminates, for 24 miles westerly, has been let to P. Lamb, Winnipeg.

The extension from Outlook, on the Saskatchewan River for 93.5 miles, has been let to the J. D. McArthur Co., Winnipeg. It is the intention ultimately to connect up this branch with the Lacombe branch of the Calgary and Edmonton Ry., now having its easterly terminal at Castor, Alta. A description of the bridge which is to be built over the Saskatchewan River at Outlook, was given in our Mar. issue. Outlook is the present terminus of the branch from Moose Jaw.

The construction of 54 miles southeasterly from Macklin, on the Saskatoon-Wetaskiwin line, to a junction with the Moose Jaw-Lacombe line, has been let to Janse, McDonald & Timothy, of Vancouver. It is probable that next year an extension will be built east from Castor to connect with this year's construction between Outlook and Macklin, thus giving a through line between Moose Jaw and Lacombe.

Winnipeg Stock Yards.—Press reports state that the company will build larger stockyards at Winnipeg. The new yards, it was stated, April 14, by a city official, would occupy the whole of the balance of the company's property adjoining its present stockyards.

Winnipeg Beach Improvements.—The company proposes to lay a board walk along the beach nearer the water than the present one, and as soon as the Government breakwater is completed, to extend the pier and make it more attractive.

Bredenbury Terminals.—It is stated that a roundhouse and other terminal buildings will be built at Bredenbury, Sask., and that the work now done at Yorkton will be transferred there. Among the lines spoken of for future construction is one from Bredenbury to Esterhazy, on the Kirkella line. The company has also power to construct a line northerly from Bredenbury to Kamsack, Sask.

Regina-Prince Albert Line.—The Minister of Railways has approved of the plans for the location of a line from Regina to Prince Albert, Sask., about 129 miles, with the exception of 10 miles on each side of Howell.

Entrance to Edmonton, Alta.—The Alberta Legislature has confirmed an agreement between the company and the city council of Edmonton, with respect to the building of the company's line into the city.

Lethbridge Station Improvements.—A contract is reported to have been let to J. A. McDermid, Winnipeg, for building two wings, 40 ft. each at the Lethbridge, Alta., station, and rearranging the existing building.

Pacific Division Improvements. — A press report states that among the improvements to be carried out this season is the increasing of facilities at Field and Rogers Pass, and the carrying out of gradient reduction work between these two points.

Y.M.C.A. Building at Cranbrook.—The C.P.R. has decided to erect a suitable Y.M.C.A. building at Cranbrook, B.C. The building will be of frame, but otherwise it will compare very favorably with that recently opened at Kenora, Ont. It will be two stories high, with basement and attic, and will be 90 ft. by 36 ft. over all. In the basement, in addition to the heating and store room will be a billiard room and a bowling alley; on the ground floor, rotunda, diningroom, library, and lounging room, with kitchen, pantry, and Secretary's office; on the two upper floors there will be 26 bedrooms of different sizes, lavatories and bathrooms.

Phoenix Branch, B.C.—The new branch line to the Jackpot mine in the Wellington group is expected to be ready for operation early in May. There are two large trestle bridges on the spur, the first of which was completed April 9. The bridge is 168 ft. long, with a curvature of 15 degrees, and is 100 ft. high in the centre.

Kootenay Central Ry.—We are advised that the contract for the building of the proposed Kootenay Central Ry. from Fort Steele to Golden, B.C., has not yet been let. It appears to be possible that this work may not be gone on with this year.

Esquimalt and Nanaimo Ry.—A press report from Victoria, B.C., states that there is every probability of an arrangement being made for joint terminals at Alberni, for the use of the Canadian Northern and the Esquimalt and Nanaimo railways.

Tenders have been asked for the clearing of the right of way on the Comox extension between Union Bay and Oyster River, about 26 miles north of Comox.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—A press report states that a block of land has been acquired on Lake Michigan, on the east side of Milwaukee, Wis., for terminal purposes.

The reconstruction of the old Wisconsin Central Rd. is being undertaken at a cost of about $3,000,000, the object being to reduce the distance between Chicago and St. Paul. It is stated that a cut-off will be built from Muckwonago to Portage, and that traffic will go over that line to Stevens Point, instead of the Fond du Lac, as at present. It is also proposed to run trains from Chicago into Minneapolis first, instead of St. Paul, as at present, so as to bring the two divisions together. Work on the Chicago division improvements has been started near Owen and, it is stated, will be

pushed rapidly. A contract has been reported let to Lisk & Gifford Construction Co., Davenport, Ia., and work is now said to be in progress for grading a part of the cut-off of the Soo line between Withrow and New Richmond, Wis. This contract covers the portion of the road between Withrow and the St. Croix river, about eight miles. Construction is reported to have been resumed on the Thief River Falls Division towards Duluth, and contracts are reported let as follows:—Six miles of grading near Schley, Minn., C. E. Jamison; seventeen miles of grading, from Cass Lake narrows to the Mississippi River near Bemidji, Minn.; eight miles of grading from Mississippi River to west of Wilton, Minn., J. Moberg.

The courts have authorized the company to cross the Northern Pacific Ry. tracks at grade level for two years pending the erection of an overhead approach to the new station at Sixth Ave., W., Duluth, Minn. (April, pg. 293.)

A Railway to Hudson Bay.

The Minister of Railways said in the House of Commons, April 16, that the Government, after a most careful investigation of the whole plan had fully decided to proceed with the construction of a railway to Hudson Bay. The project had its difficulties, but these could be met. He did not entertain any fears as to the success of the undertaking. The engineers who had been making the surveys reported that there were no insurmountable obstacles in the way of construction. Survey parties had been in the field nearly two years and had reported very fully as to the physical condition of the country through which the road would run. Meterological records as to conditions in Hudson's Bay and Straits were available covering the last 50 years. Careful surveys had been made of the harbor at Port Nelson and Port Churchill. This summer the Government would send up a vessel to the Straits and Bay to make further investigation of navigation conditions throughout the summer and fall, as long as the Straits remain open.

The supplementary estimates submitted in the House of Commons Apr. 20, provide $500,000 to begin the construction of this line.

Recent Dominion Legislation.

The Dominion Parliament at its current session has passed the following acts affecting transportation interests:—

Algoma Central and Hudson Bay Ry.—Extending time for construction.

Bay of Quinte Ry.—Authorizing construction of branch line, and extending time for construction.

Calgary and Fernie Ry.—Amending act of incorporation.

Dominion Atlantic Ry.—Authorizing construction of branch line.

Erie, London and Tillsonburg Ry.—Extending time for construction.

Grand Trunk Ry.—Authorizing acquiring securities of certain other companies.

Montreal and Southern Counties Ry.—Extending time for construction.

Northern Empire Ry. — Extending time for construction.

Ottawa, Brockville and St. Lawrence Ry.—Extending time for construction.

Ottawa, Montreal and Eastern Ry.—Incorporation.

Pine Pass Ry.—Incorporation.

Richelieu and Ontario Navigation Co.—Amending the company's acts.

Saskatchewan Central Ry.—Incorporation.

G. H. Kelly, son of M. Kelly, railway and general contractor, Winnipeg, was married there, April 12, to Miss F. M. A. Barreau.

G.T.R. Betterments, Construction, Etc.

Southern New England Rd.—The law giving this company power to construct a direct line through Rhode Island to Providence, was signed by the Governor of the State, April 13. The company is a subsidiary of the Central Vermont Ry., which is owned by the G.T.R.

E. H. Fitzhugh, First Vice President G.T.R., stated in Boston, Mass., April 14, that no time would be lost in making surveys for the new line. The company would apply to the Commissioners of Railroads for Massachusetts for a certificate of exigency for the portion of the projected line in that State, and construction work would be proceeded with in the two States simultaneously.

Quebec Terminals.—The G.T.R. which now has a terminal in Levis, Que., on the south side of the river, is desirous of obtaining terminal facilities in Quebec City. Several of the company's officials met the Quebec Harbor Commissioners, April 9, and discussed the matter. The company desires to secure the Atkinson wharf, G.T. wharf, East India wharf and Wellington wharf. The proposal is under consideration.

Lachine, Jacques Cartier and Maisonneuve Ry.—The plans of the company for the closing of certain streets in Montreal, the crossing of other streets, the building of tunnels, bridges, etc., were laid before the Quebec Legislature, April 7, in connection with the application for the ratification of the agreement with the city council.

Coteau Bridge.—The superstructure of the bridge across the St. Lawrence near Coteau, Que., is being renewed. The original superstructure was built in 1889 by the Dominion Bridge Co. for the Canada Atlantic Ry. (now part of the G.T.R.) and was designed for a uniform load of 3,000 ibs. per linear foot with provision for engine excess loads. The renewal is being made in order to meet conditions imposed by the heavier motive power and train loads in use on the G.T.R main line of this system, which it is contemplated to use also on this section of the line. The new superstructure has been designed for Cooper's E-50 class of loadings, specification of the American Railway Engineering and Maintenance of Way Association. The length of the new spans is similar to the old ones, as the new superstructure is being built on the old piers. The old swing or channel span of this bridge was heretofore operated by hand power, but the new one will be swung by steam power. The work is at present on this swing or channel span, and it will be completed in time for the opening of navigation down the river at this particular place. During the summer the remaining spans will be replaced. The swing bridge over the Soulanges canal in this locality is also being renewed for similar reasons to those mentioned in connection with the St. Lawrence bridge.

Kingston, Smiths Falls and Ottawa Ry.—The Dominion Parliament has granted an extension of time for the construction of this projected line. In an interview at Ottawa, April 9, W. Wainwright, Fourth Vice President G.T.R., said: "We have acquired the charter, and it is with the intention of building the line. Just when it will be done I am not in a position to state. Its construction is only a season's work, and when it is started it will be rushed to completion."

Port Hope Viaduct.—The superstructure of the viaduct carrying the line across the town of Port Hope, Ont., is being renewed. All masonry work in connection with the changes in the piers necessary in order to meet the new conditions has been finished. The new girders of the north main line are all in place and 14 of the total of 22 spans of the south track have the new girders in place also. Work is in progress on the erection of the remainder. This new superstructure is replacing that which was erected in 1892 and which was designed for a uniform load of 4,000 lbs per linear foot. The present bridge has been designed for Cooper's E-50 class of loadings, and the renewal has been made in order to meet the conditions required by the heavier motive power and train loads which this railway is using.

Toronto Union Station.—E. H. Fitzhugh, First Vice President G.T.R., stated April 2, that his company was ready to do its share in building a union station for Toronto. It had not been informed of any intention of the C.P.R. to leave the waterfront.

Block System.—E. H. Fitzhugh stated in an interview, April 2, that the company had under consideration plans for the installation of electric signals on the line between Toronto and Suspension Bridge. The signals would be installed at mile or half mile posts, and it was expected that more trains could be run over the line than is the case at present. The time tables show at present 100 freight and passenger trains a day over the line.

London Improvements.—C. M. Hays, President, together with a number of other officials, was in London, April 21, when the matter of the proposed improvements of the company's lines in the city was discussed.

Stratford Station, Etc.—The Mayor met E. H. Fitzhugh, First Vice President, and other G.T.R. officials, April 1, to discuss the plans for improvements there. The company asks that the city agree to the closing of a street, and build a subway at another street (estimated to cost $50,000), the company to build a modern two story station and office building, some additional building at the locomotive shops, and rearrange the tracks and yards, the estimated cost of the works being about $250,000. The matter is under consideration by the council. (April, pg. 289.)

Delaware and Hudson Co.

The annual report for the year 1909, states that the policy of the former management in expanding the company's railways by the purchase of the Quebec, Montreal and Southern Ry., and the policy of the present management in financing the same has been apparently justified. Previous to 1906, the D. and N.R. had extended no further than the International boundary. At that time the company bought the entire capital stock of the Q.,M. and S. Ry. in Canada, and certain electric railways and coal properties in the U. S. The purchase of the Q.,M. and S. Ry., which has now been extended as far as Fortierville, and was put in operation June 14, 1909, was largely a protective measure. The company's heavy coal haul is, of course, north, and it has needed traffic south to balance the loaded car mileage bound north. By the purchase of the Q.,M. and S. Ry. the management was able to protect the wood pulp industries located on its line and secure accordingly a considerable tonnage of lumber southbound. After reviewing the freight statistics the report states the securing of a grain tonnage amounting to 450,369 tons in 1909, as compared with 316,012 tons in 1908, is an indication that the company is able to justify its extension into the territory of the Canadian roads. Both the movement of the grain tonnage and lumber tonnage, which latter showed a considerable increase in 1909, is in the right direction, that is south. Although the revenue from freight traffic was 82% of the total revenue, passenger traffic is important, because of the future possibilities of developing a considerable through traffic between New York and Quebec. The Q.,M. and S. Ry. is to be

SIGNS

ENAMELED IRON has been adopted as the standard Station Name Sign on the Canadian Pacific Ry. and Canadian Northern Ry.

Unsurpassed for railway station names, electric car route names, express agency offices, bridge numbers, telegraph offices, station door signs, and in fact for any use where a sign is exposed to the elements. It lasts forever.

extended to a point opposite Quebec as soon as the Canadian Government decides definitely on building the Quebec Bridge. The D. and N. will then offer, in connection with the New York Central Rd. from Albany, the shortest route between New York and Quebec.

The following table shows the earnings and expenses in 1909 and 1908:—

	1909.	1908.
Mileage operated	843	845
Coal freight revenue	$8,311,179	$9,106,820
Merchandise freight rev'e	7,691,617	6,162,181
Passenger revenue	2,834,628	2,693,672
Total operating revenue	19,525,859	18,500,731
Maintenance of way	1,334,346	1,417,319
Maintenance of equipm't	2,598,566	2,219,543
Traffic	227,347	204,849
Transportation	6,821,392	6,528,112
Total operating expenses	11,458,480	10,811,721
Railway taxes	411,468	413,029
Operating income	7,655,912	7,275,982
Net earnings coal dept'm't	507,875	1,145,418
Gross corporate income	9,980,531	9,926,075
Net corporate income	5,194,840	5,254,458
Dividends	3,825,090	3,816,000
Surplus	1,369,750	1,338,458

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales for Feb., $45,211, against $43,310 for Feb., 1909. Cumulative net profits for eight months ended Feb. 28, $342,896. Traffic receipts for Mar., $34,518 against $27,627 for Mar., 1909. Aggregate traffic earnings for nine months ended Mar. 31, $285,797.

Canadian Northern Ry.—A trust deed has been filed with the Secretary of State at Ottawa, made by the C.N.R. Co. to the British Empire Trust Co., the National Trust Co., and the Province of Saskatchewan, securing an issue of 30 year 4% bonds, guaranteed by the Province of Saskatchewan. The deed is supplementary to one made May 18, 1909.

A press report from Vancouver, B.C., April 6, states that Jas. Dunsmuir has acquired $4,000,000 of C.N.R. bonds.

Canadian Northern Ontario Ry.—The Dominion Parliament has authorized the company to enter into agreements for amalgamation or other purposes with the Central Ontario Ry., Bay of Quinte Ry., Irondale, Bancroft and Ottawa Ry., and some small mining railway in Central Ontario, as well as with several other railway companies, in other parts of Ontario which as yet have not done any construction. It is also provided "for the removal of doubt," that the company has had the power to and may consolidate the various issues of securities theretofore made, and to retire the originally issued stocks.

Dominion Atlantic Ry. Gross earnings for Mar., $85,600, against $75,725 for Mar., 1909. Gross earnings for nine months ended Mar. 31, $904,750, against $864,204 for same period 1908-09.

Esquimalt and Nanaimo Ry.—In 1904 the British Columbia Legislature passed an act entitled the Vancouver Island Settlers' Rights Act, with a view of settling the position of squatters and others on the lands granted in aid of the construction of the E. and N.R. The company claimed that it was entitled to compensation, and after lengthened negotiations an agreement was entered into between the company and the Province, Oct. 21, 1909. The company is given the right to select 20,000 acres of unoccupied and unreserved crown lands on the Island, in rectangular blocks of not less than 640 acres. The lands are to be selected within three years, and are to be exempted from taxation for 10 years from the date of the issue of the crown grant. This agreement was confirmed at the last session of the Legislature.

Georgian Bay and Seaboard Ry.—The lease which the C.P.R. has of this line will run for 999 years from Jan. 1, and not for 99 years, as dated in our last issue.

Grand Trunk Pacific Branch Lines.—An issue of £1,270,500 of 4% bonds was placed on the London, Eng., market, April 6, at £98.10s. The issue is being made for the purpose of providing funds for the construction of branch lines.

North Shore Ry.—A receiver was appointed by the New York Courts, Mar. 28, for the Canadian Consolidated Mines. The company was incorporated, Mar., 1909, under the Laws of the State of Maine, with a capital of $5,000,000, as a holding company for a number of coal mining companies in New Brunswick and Nova Scotia. Of the stock there has been issued $4,890,000 of which Luella N. Von Hagen, owns $1,000,000. The indebtedness of the company is placed at $50,000, of which $19,500 is due on notes held by Luella N. Von Hagen, the petitioning creditor. D. P. Hays and D. Davis have been appointed receivers under bonds amounting to $75,000. The president of the company is H. Von Hagen.

Stock in the following companies is held by the company:—North Shore Ry. (formerly Beersville Ry., and Beersville Coal and Ry. Co.), Northern Coal Co., Kent Coal Co., Maritime Coal Co., in New Brunswick; Crown Coal Co., Great Northern Coal Co., in Nova Scotia, and one company in Maine.

Sydney and Louisburg Ry.—The Nova Scotia Legislature has incorporated a company with this title to construct, purchase or lease any railway in Cape Breton Island, N.S. The capital of the company is fixed at $1,000,000, and power is given to increase it to $5,000,000. The principal object of the company is to take over the existing railway between Sydney and Louisburg, with its branch lines to the Dominion Coal Co.'s mines, and its connections with the Dominion Iron and Steel Co.'s plant. The existing lines have a length of about 40 miles and are owned by the Dominion Coal Co. The provisional directors are J. H. Plummer, M. J. Butler, C. S. Cameron, D. H. McDougall, and R. F. McCourt, all of whom are connected with the Dominion Coal Co. or the Dominion Iron and Steel Co.

In the D.C. Co.'s annual report it is stated that the reason for obtaining this charter was that the directors were of the opinion that the railway could be more satisfactorily carried on by an independent company operating under the Provincial railway laws than by being directly operated by the company.

Quebec and Lake St. John Ry.—Total traffic earnings for Mar., $49,598.53, against $53,135.78 for Mar., 1909. Aggregate traffic earnings for three months ended Mar. 31, $119,592.54, against $136,456.02 for same period 1909. Mileage operated 280, against 285.4 in 1909. Earnings per mile for Mar., $177.24, against $186.18 for Mar., 1909, and for three months ended Mar. 31, $427.21, against $478.12 during the same period 1909.

Quebec and Lake St. John Ry.—Notice is given by the Q. and L. St. J.R. Bondholders' Protection Committee that a full majority of first mortgage and income bonds have been deposited to its order. The time for depositing bonds was extended to April 18, after which date bonds would be received on terms to be fixed by the committee.

Quebec Central Ry.—Gross earnings for Feb., $62,741.76; expenses $52,960.79; net earnings $9,780.97, against $60,892.11 gross earnings; $54,709 95 expenses; $6,182.16 net earnings for Feb., 1909. Aggregate gross earnings for eight months ended Feb. 28, $704,536.94; expenses $494,608.07; net earnings $209,928.87, against $667,669.66 aggregate gross earnings; $482,943.87 expenses; $184,725.79 net earnings for same period 1908-09.

Temiscouata Ry.—Profit on operation for Feb., $1,351, and for two months ended Feb. 28, $2,901.

National Transcontinental Railway.

A statement of the distances, mileages and the amount of work done onthe 21 contracts covering the 1804.84 miles from Moncton, N.B., to Winnipeg, Man., recently laid before the House of Commons, showed the total percentage of work done on the various contracts was 57.2%, made up as follows:—1,062.1 miles of grading completed; 728.1 miles of track laid; 439.8 miles of ballasting done; and 368 miles of telegraph lines completed, in addition to the bridge construction work.

The plans for the reconstruction of the bridge over the St. Lawrence River at Quebec have been on exhibition since Jan., and the specifications for the work are almost completed. It is expected that tenders for the superstructure will be invited in about a month.

In the evidence given by A. E. Doucet, District Engineer, April 18, before a House of Commons committee it was stated that after the grading of the 150 miles westerly from Quebec had practically been completed, the G.T.P.R. engineers insisted that the route must be changed, because the one under construction did not give the required gradient of 0.4%. The original cost of the 150 mile section was estimated at $5,297,857, and the actual cost to date, after reconstruction, was $11,219,828. Tenders were received to April 20, for the purchase of the five buildings at Matheson, Ont., owned by the Commission, and tenders will be received by May 2, for the erection complete of a station building at Lake Superior Jct., Ont.

A Montreal dispatch April 13, says the G.T.P.R. officials have a semi-official assurance that the section of the line between Cochrane, the junction with the Temiskaming and Northern Ontario Ry., and Lake Superior Jct., will be completed much earlier than was anticipated. As soon as this is done it will be possible for the G.T.R. to run trains through from Montreal and other points on its line to Winnipeg, Edmonton, etc., via Toronto, North Bay and the T. and N.O.R. to Cochrane.

As a result of the recent decision of the Board of Railway Commissioners, there has been a change in the route of the line through St. Boniface, Man. The new route will leave the Springfield road near Mission Road and will proceed along lot 74 to within a mile of the city hall, where it will cross the C.P.R. Emerson line, and continue south-easterly to the Lombard St. bridge. This change will do away with dangerous crossings of other lines.

Rapid progress is being made with the construction of the shops near Winnipeg. The whole work is expected to be completed by the end of the year. We are advised that the date for the completion of the contracts for the equipment of the locomotive shops at Winnipeg, has been extended to Oct. 1.

Grand Trunk Pacific Ry.—In an interview in London, Eng., recently, C. M. Hays, President G.T.R., said: "We are well satisfied with the progress being made with the G.T.P.R. Before the next harvest is ready to be handled we shall be ready to carry heavy traffic right through from west of Edmonton to the steamships on the great lakes at Fort William, and it is safe to say that a regular service of passengers and freight trains will be running on the G.T.P. tracks to Prince Rupert in 1913."

Mail advices from Prince Rupert, received in Montreal, April 12, state that the work of laying out the new city is being rapidly proceeded with. Several wharves are being built, and the company is planning extensions to its wharf system. A contract for laying out the terminal yards has been let to D. J. Dempsey, who has also the contract for

the tracklaying on the first 100 miles easterly..

Grand Trunk Pacific Branch Lines.—The two branch lines upon which the company is concentrating its energies are the one from Melville via Regina to the International boundary near Portal, Sask., and the other from Wainwright via Calgary to the International boundary near Coutts, Alta. On the first of these track was laid in 1909 from Melville to Balcarres, and grading is in progress an the 60 miles between Balcarres and Regina. A press report states that a contract has been let to the J. D. McArthur Co., who are grading this 60 miles, to do the grading on the line from Regina to Portal. The Government has notified the company that this section of the line must pass through Weyburn, or the guarantee will not be affixed to the bonds. The line which the company proposes to construct to Hudson Bay also starts from Melville. The section to Yorkton, 25 miles, was completed in 1909, and a contract has been let for the grading of a further section to Canora. 30 miles. It is reported that contracts have been let to the J. D. McArthur Co. for a 50 mile line from Watrous to Prince Albert, Sask.; a 50 mile line from Biggar to Battleford. Work has been started by the J. D. McArthur Co., on the Lofield-Calgary line, upon which track was laid to Cameron, 26 miles, in 1909. The surveys for the line into Calgary have been completed, and plans showing the route into the city were filed April 1. The line passes through the Pitman estate about three miles east of Calgary, on the Blackfoot trail, and turning south meets the C.P.R. about a mile east of the railway bridge on the Bow River. The route keeps close to the C.P.R. until the city boundary is reached, whence it passes through the alliance and sub-diision and through east Calgary on Eighth St. (April, pg. 289.)

Geodetic Survey of Canada.

A return has been issued by order of the House of Commons giving copies of all correspondence, reports, documents and orders-in-council relating to the establishment of a Geodetic Service Bureau and the commencement of a Geodetic Survey in Canada. The documents include memorials from engineering and other bodies, reports from the Chief Astronomer, the Committee of Surveys, etc., dating from 1886. A Committee on Surveys was constituted under an Order-in-Council in 1906, and a report was prepared in 1907, but was not submitted to the Governor-in-Council until Feb., 1909. The report states that a comprehensive and reliable survey of the Dominion for the production of an accurate typographical map, based upon a network of triangulation and showing the natural and artificial features of the country, is of urgent necessity from the standpoint of economy, the extension of public undertakings and the development of the natural resources of the country. It was recommended by the committee that the survey should be made with the co-operation of the survey departments of the different provinces, that all the survey work should be under one central controlling authority, that all maps of surveys should be deposited in a central record office, which should have charge of the printing of all maps required. The committee pointed out that at present about $900,000 a year was expended by the different departments upon survey work, and it was calculated that by a unification as suggested at least $60,000 a year could be obtained, without any increased votes, for a triangulation survey. A map is issued showing that certain triangulation survey work has been done in Ontario and Quebec, practically along the St. Lawrence River, and Lakes Ontario and Erie, from Quebec City to Windsor and Sarnia.

Nova Scotia Railways.

The Provincial Engineer for Nova Scotia, R. McColl, in reporting on the work of his department for the year ended Sept. 30, 1909, says there was very little railway work done. This apathy in the work of railway construction is not to be wondered at, as during the previous 10 years the railway mileage in the province increased rapidly. In 1998 there were 166 miles of subsidized railways coming under the jurisdiction of the Department; now there are 475 miles. The returns show a considerable decrease during the year, there being a falling off in traffic returns of about 8%. The principal decline was on the Sydney and Louisburg Ry., where there was a decrease of 16%; the Inverness and Richmond Ry. and Coal Co., a decrease of 11%; the Halifax and South Western Ry., a decrease of 4%. The Maritime Coal, Ry., and Power Co., showed an increase of 25%, and the Cumberland Coal and Ry. Co., an increase of 8%. The decrease is almost entirely attributed to the labor troubles in connection with the coal trade, so far as the Sydney and Louisburg Ry., and the Inverness and Richmond Ry. and Coal Co., are concerned; and the dulness of the lumber trade affecting the Halifax and South Western Ry.

There are 634 miles of railway owned by 11 companies under Provincial jurisdiction; the Intercolonial Ry., 467 miles and the Dominion Atlantic Ry., 221 miles, coming under Dominion jurisdiction. The total mileage of railways in the province is practically the same as in 1908, and with the exception of the construction of a branch of four miles from near Nictaux station on the Halifax and South Western Ry. to the Torbrook Iron mines, there is no new work in hand. There is one mile of railway in operation for every 343 of the population, against one mile for every 300 in the Dominion. Taking the average of the Nova Scotian railways the rate per mile for passengers appears to be slightly greater than on large railway systems, it is apparently considerably less than the average rates in Canada on the shorter lines. Over 4,000,000 tons of freight were carried at a cost of about $800,000 to the shipper. At least half of this freight could not have been moved by water. The returns show good profits on practically all the coal carrying lines, which are owned by the colliery companies. The construction of a railway for lumbering purposes by the Sable River Lumbering Co., connecting with the Halifax and South Western Ry., the reconstruction of the Liverpool and Milton Tramway and its connection with the H. and S.W. Ry., and the continued extension of the Davison Lumber Co.'s railway add greatly to the freight of the H. and S.W. Ry., these three lines being great feeders to this system, and providing a very large amount of freight. The Sable River Ry. turns over nearly 10%; the Liverpool and Milton Ry. nearly 15%, and the Davison Lumber Co. nearly 40% of the entire freight of the whole H. and S.W. Ry. It is expected that when the branch from Nictaux Falls to Torbrook has been completed it will provide an additional amount of freight much greater than the total amount now carried over the existing line. The 60 mile Inverness and Richmond Ry. hauls nearly double the tonnage, and its receipts for freight are nearly equal to those for the H. and S.W. Ry. The management of the different railways are to be commended for their efforts to have their employes guard against forest fires, and have welcomed the inspection of their locomotives by the Government.

The returns of accidents during the year show 18 casualties against 17. One passenger was killed by falling off a train; seven passengers were injured by a derailment; one employe was killed and four injured, and of those who were neither passengers or employes three were killed and two injured. There were no passengers killed or injured in the year 1907-08.

Michigan Central Ry. Report.

The directors report for the year 1909, covers the operation of the following mileage:—Main line 270.07 miles; proprietory lines, 345.05 miles; leased lines, 1,117.34 miles; lines operated under trackage rights, 14.00 miles; a total of 1,746.46 miles. The amount of capital stock authorized and outstanding was $18,738,000; the funded debt was $42,-159,000.

The total operating income was $27,415,467.20, of which $18,267,530.44 was from freight, $6,655,698.85 from passengers, $1,244,745.14 from express, $409,212.23 from mails and from miscellaneous sources $840,280.54. The total operating expenses were $18,-499,528.24, leaving a net income from operation of $7,743,254.98, an increase of $1,429,610.70 over 1908. Other sources of income brought in $941,-480.65. The deductions from income, including the payment of a dividend of 6% on the capital stock, left a balance of $11,748,216.80 to be carried to profit and loss account. The statistical tables do not give details of the operations of the company's lines in Canada, but the following items of information are mentioned:—Accrued taxes in Canada, on value of real and personal property, $38,742.78; interest on 6% Canada Southern 1st mortgage bonds, $840,000; interest on 6% Canada Southern 2nd mortgage bonds, $300,000; interest on 4% Leamington and St. Clair mortgage bonds, $5,200; rental of Canada Southern Ry., $375,000. The company expended on capital account $1,942,436.93 on improvements to property of which $251,980.65 was for yards and sidings; $22,479.79 for stations and other structures, and $486,545.19 for roadway on the Canada Southern Ry., the remainder being expended on the U.S. lines. The stocks and bonds owned or acquired under lease include 78,100 shares of the Canada Southern Ry., value $7,810,000; 3,000 shares of the Detroit River Tunnel Co., value $3,000,000; 4,464 shares in the Toronto, Hamilton and Buffalo Ry., value $446,400; and bonds to the value of $357,000 of the latter company. The total face value of stocks and bonds owned or acquired is $22,114,529.17, valued in the books at $9,375,998.38.

The Fredericton Construction Co. has been incorporated under the New Brunswick Companies' Act, with a capital of $50,000 and offices at Fredericton, to carry on a general contracting and engineering business, to survey, lay out, construct and equip electric and steam railways; to construct wharves, terminal facilities, etc. The provisional directors are:—A. R. Slipp, R. B. Hanson, H. P. Robinson, J. Walker, H. W. Walker, Fredericton, N.B.

The Practical Engineer Pocket Book and diary for 1910, is the title of a very handy volume issued at one shilling in cloth, and 1s 6d in leather, by the Technical Publishing Co., 55 and 56 Chancery Lane, London, W.C., England. There are 684 pages of solid, practical information for those interested in the construction and operation of steam engines of all classes, together with a copious index.

Temiskaming and Northern Ontario Ry.—Traffic receipts for Feb., $120,-829.75; expenditure $83,387.29; net earnings $37,442.46; ore royalties $4,953.49; total $42,395.95; less hire of equipment $2,595.94; net result $39,800.01

MAINLY ABOUT PEOPLE.

Mrs. Osler, wife of E. B. Osler, M.P., director C.P.R., died in Toronto, April 5.

E. B. Osler, M.P., director C.P.R., has been elected Hon. President of the British Welcome League, Toronto.

Sir H. Montagu Allan, returned to Montreal, Apr. 10, after having spent some time in England.

Sir Wm. C. Van Horne, Chairman of the Board, C.P.R., has been elected a director of the Dominion Coal Co.

Sir Thomas G. Shaughnessy has been elected a Vice President of the Royal Colonial Institute, London, Eng.

W. Sutherland Taylor, ex-Treasurer C.P.R., and Mrs. Taylor, have left Montreal to spend the summer in Europe.

Jean Creighton, younger daughter of T. C. Matchett, C.P.R. ticket agent, Lindsay, Ont., died there, Apr. 20, aged 6.

J. Simson, who has been in the G.T.R. Freight Department for a number of years, died at Toronto recently, aged 76.

W. I. Gear, and the Misses Gear, Montreal, arrived in Montreal, Apr. 22, from Great Britain, where they spent a few weeks.

J. P. Mabee, Chief Railway Commissioner for Canada, has sold his house in Rosedale, Toronto, and removed to Ottawa.

W. R. McRae, Master Mechanic, Toronto Ry., has been reappointed Rector's Warden of Christ Church, Deer Park, Ont.

W. Whyte, Second Vice President C.P.R., returned to Winnipeg Apr. 13, from a six weeks' trip in the Southern States.

The Hamilton Steamboat Co.'s staff presented a travelling bag recently to Miss Abraham, on her retirement from the Secretaryship.

D. B. Hanna, Third Vice President Canadian Northern Ry. has obtained a city permit to erect a $28,000 house on Castle Frank Ave., Rosedale, Toronto.

J. L. Engelhart, Chairman Temiskaming and Northern Ontario Ry. Commission spent some ten days in New York at the end of April.

Gordon Jennings, C.E., of Chicoutimi, Que., son of the late W. T. Jennings, C.E., Toronto, was married in Toronto April 1, to Miss Muriel Millichamp.

R. J. Mackenzie, of Mackenzie, Mann & Co., Ltd., Winnipeg, and son of the President Canadian Northern Ry., was married at San Jose, Cal., recently.

E. A. Forster, solicitor for the Toronto Railway Employes Union and Benefit Society, died at Toronto, Apr. 9, after a lengthened illness.

Victor Anderson, son of Lt.-Col. Anderson, Chief Engineer, Marine Department, Ottawa, is to be married to Miss Bessie Gordon, of Montreal, early in June.

Miss E. M. V. Harris, daughter of A. H. Harris, Special Traffic Representative C.P.R., was married in Montreal, April 12, to the Rev. J. K. Tibbits, of Concord, N.H.

J. Dunsmuir, director C.P.R., and formerly Lieut-Governor of British Columbia, is reported to have purchased $4,000,000 of Canadian Northern Ry. bonds.

W. Mackenzie, President Canadian Northern Ry., was entertained at dinner at the House of Commons, London, Eng., Apr. 13, by a number of members and friends.

Miss D. M. Fletcher, granddaughter of Collingwood Schreiber, C.M.G., Consulting Engineer, Department of Railways and Canals, was married to R. S. Lake, M.P., at Ottawa, Apr. 4.

Fred Shaughnessy, son of the President C.P.R., who is engaged in the Fourth Vice President's office, at Montreal, is spending a short holiday in England for his health.

Jno. Niblock, formerly Superintendent District 3, Western Division, C.P.R., Calgary, has removed to his fruit farm at Naramata, B.C., where he will in future reside.

The Souris, Man., Board of Trade, entertained General Superintendent Arundel, and the Divisional Superintendents at Winnipeg, Brandon and Souris, at a dinner, April 11.

The engagement is announced of Miss Grace Lowrey, step-daughter of Hayter Reed, Manager in Chief C.P.R. Hotels, to Harold Daly, son of Hon. T. Mayne Daly, K.C., Winnipeg.

C. B. Foster, Assistant General Passenger Agent C.P.R., Vancouver, B.C., has returned to business after having visited his home in New Brunswick, and friends at other eastern points.

Hugh Sutherland, Executive Agent Canadian Northern Ry., Winnipeg, who left for Europe at the end of March, to meet Mrs. Sutherland, is expected to return with her during May.

Jno. Simpson, who died in Toronto recently, aged 76, was for 45 years in the G.T.R. service. At the time of his retirement, about seven years ago, he was station agent at Cayuga, Ont.

Mrs. M. B. Beasley, mother of H. E. Beasley, Superintendent Esquimalt and Nanaimo Ry., Victoria, B.C., and of H. H. Beasley, General Storekeeper, Toronto Ry., died at Toronto recently.

G. H. Anthony, General Agent Pere Marquette-Lehigh Valley Line, St. Paul, Minn., and formerly General Agent Wisconsin Ry., Winnipeg, was visiting in Winnipeg during the latter part of April.

T. S. Scott, who recently resigned the position of chief assistant city engineer, Toronto, was formerly engineer in charge of construction of the McRae, Chandler and McNeill contract on the Temiskaming and Northern Ontario Ry.

D. B. Hanna, Third Vice President Canadian Northern Ry., returned to Toronto, Apr. 9, from Great Britain, where he spent some two months in organizing the Canadian Northern Steamships service.

R. R. Jamieson, mayor of Calgary, Alta., and formerly General Superintendent C.P.R. Central Division, is reported to have been asked to take the portfolio of Minister of Public Works for Alberta.

H. N. Ruttan, President Canadian Society of Civil Engineers, was recently presented with an oil portrait of himself, by the Winnipeg city engineering staff to mark his twenty-fifth anniversary as city engineer.

C. M. Hays, President G.T.R., and G.T.P.R., accompanied by Mrs. and Miss Hays, returned to Canada, Apr. 14, from England, where they had taken part in the launching of the G.T.P.R. s.s. Prince George.

Sir Thomas G. Shaughnessy, President C.P.R., has given an emphatic denial to the recent rumor emanating from the U.S., to the effect that he would shortly resign the Presidency of the C.P.R. to enter politics.

W. F. Salsbury, local Treasurer of the C.P.R. at Vancouver, B.C., is one of the provisional directors of the Western Union Fire Insurance Co., which has been incorporated by the British Columbia Legislature.

O. O. Winter, formerly General Superintendent Grand Trunk Pacific Ry., Winnipeg, is reported to have purchased about 10,000 acres in the Moose Lake district, Sask., and it is stated that he is about to take up residence there.

Major J. E. Hutcheson, Superintendent and Purchasing Agent Ottawa Electric Ry., will command the Canadian rifle team at Bisley this year. He will sail from Montreal on the s.s. Tunisian, June 17.

W. Mackenzie, President Canadian Northern Ry., who left Toronto for England, Mar. 9, accompanied by Mrs. Mackenzie will, probably return during May, by the Canadian Northern Steamships line.

H. W. McLeod, who has been appointed Trainmaster District 3, Pacific Division C.P.R., at Nelson, B.C., is a graduate in civil engineering of the University of New Brunswick, and prior to this appointment was Resident Engineer C.P.R., Calgary, Alta.

F. Leeper, cashier Pere Marquette Rd., at St. Thomas, Ont., died at Dresden, Ont., recently. He had been with the company since it took over the Lake Erie and Detroit River Ry., and had been on leave of absence since Jan. on account of ill health.

Miss F. Johnson, secretary to H. R. Charlton, General Advertising Agent G.T.R. and G.T.P.R., Montreal, was presented with a travelling bag recently, by her associates, on the occasion of her leaving the service to be married to S. Simpson, Winnipeg.

J. W. Kearns, District Passenger Agent Pere Marquette Rd., Detroit, Mich., and formerly Travelling Passenger Agent same road, London, Ont., was presented recently with a purse of gold by a number of friends at London, on his appointment to the former position.

W. A. Bowden, who has been engaged in the engineering branch of the Department of Railways and Canals for about five years, and who has been acting as Chief Engineer since the resignation of M. J. Butler, is reported as likely to be appointed to that position in the near future.

W. A. Cooper, General Superintendent of Sleeping, Dining and Parlor Cars and News Service C.P.R., has been elected President of the recently organized International Stewards' Association of Canada, the membership of which comprises stewards, hotel proprietors and hotel managers.

Lord Strathcona has subscribed $2,000 towards the erection of new buildings for the Portage la Prairie, Man., Exhibition Association, and has also sent $5,000 and offered the use of his Montreal house for the entertainment of guests during the forthcoming Eucharistic Congress there.

R. B. Thomson, who died in New York recently aged 34, from the effects of an accident, was a son of the late W. Thomson, the first President of the Old Northern Ry., now part of the G.T.R. system; and a brother of Mrs. Polson, widow of the late F. B. Polson, President of the Polson Iron Works, Toronto.

Niblock & Tull, Calgary, Alta., have located on the ground floor of the Grain Exchange Building, where they will handle their Atlantic Steamship agencies, real estate business, etc. D. B. Niblock was in the C.P.R. service for several years, among other positions being passenger agent at Calgary and Brandon.

Dunsmuir Castle, Victoria, B.C., which was built by the father of Jas. Dunsmuir, formerly President of the Esquimalt and Nanaimo Ry., at a cost of $300,000, has been sold. Three acres of land go with the residence, the remainder of the grounds having been sold in lots, of which over 120 were sold at $2,750 each.

Capt. Tatlow, formerly a member of the British Columbia Government, died at Victoria, B.C., April 10, as a result of being thrown out of his carriage a couple of days previously. He married in 1893, Miss E. M. Cambie, daughter of

DRUMMOND, McCALL & CO.
GENERAL SALES AGENTS

H. J. Cambie, then Division Engineer C.P.R., now Chief Engineer Esquimalt and Nanaimo Ry.

Miss Clara Hays, daughter of the G.T.R. President, is to be married to Hope Scott, at Montreal, June 9.

R. Wright, who retired from the position of Treasurer of the G.T.R. in 1894, died in Montreal, April 5, aged 78. He entered railway service in England in 1858, joining the London staff of the G.T.R. in 1862, and came to Canada two years later. He subsequently became Treasurer at Montreal, which office he retained until his retirement in 1894.

J. S. Carter, who has been appointed General Agent Passenger Department C.P.R. Atlantic Steamship Lines, Winnipeg, has been in the C.P.R. service for a number of years. He was for some time ticket agent at Winnipeg, and from 1901 to 1907 was District Passenger Agent at Nelson, B.C., and was transferred to Spokane, Wash., as General Agent on the opening of the Soo-Spokane Line.

D. T. Main, whose appointment as District Master Mechanic C.P.R., Nelson, B.C., was announced in our last issue, was born at Kirkintilloch, Scotland, and came to Canada in 1903, when he entered Mackenzie, Mann & Co.'s service as draughtsman, and in 1904 entered C.P.R. service, and was from 1907 to Mar. 1908, locomotive foreman at Minnedosa, Man.; from Mar. 1908 to Mar. 1910, locomotive foreman at Cranbrook, B.C.

M. S. Blaiklock, whose portrait appear on the first page of this issue, was born at Quebec, July 19, 1859, and entered railway service in 1880, since when he has been, to 1889, Assistant Engineer G.T.R.; 1889 to 1891, Assistant Engineer St. Clair Tunnel; 1892 to 1896, Inspector G.T.R.; 1896 to Apr. 1902, Resident Engineer Eastern Division G.T.R., Montreal; Apr. 1902 to Oct. 1907, Superintendent Eastern Division G.T.R., Montreal; Oct. 1907 to date, Engineer Maintenance of Way G.T.R., Montreal.

Jas. Leitch, K.C., Chairman of the Ontario Railway and Municipal Board, while investigating a Toronto St. Ry. case in his office in Toronto on April 5, suddenly lost the sight of his right eye, owing to the rupture of a blood-vessel. It is not anticipated that the loss of sight will be permanent, but it will take some months of rest and treatment to restore the sight and to correct the conditions which caused the hemorrhage. A. B. Ingram, Deputy Chairman, is acting as Chairman during Mr. Leitch's absence.

G. A. Walton, who has been appointed General Agent Passenger Department C.P.R., at Spokane, Wash., was born at Montreal, July 17, 1881, and entered railway service June, 1897, since when he has been, to Aug., 1901, clerk in G.T.R. Passenger Department, Montreal; Aug., 1901, to Feb., 1903, rate clerk C.P.R. Passenger Department, Winnipeg; Feb., 1903, to Feb., 1906, chief clerk C.P.R. Passenger Department, Winnipeg; Feb., 1906, to Oct., 1907, C.P.R. station ticket agent, Winnipeg; Oct., 1907, to Apr. 11, 1910, District Passenger Agent C.P.R., Brandon, Man.

At the investigation into the Alberta and Great Waterway Ry. matter at Edmonton recently, it was stated that F. S. Darling, formerly Division Engineer of Construction C.P.R., Toronto, who is now in Edmonton, was sent there to take charge of construction in the interest of the Royal Bank. It was also stated that W. R. Clarke, President of the A. & G.W.R. received $25,000 a year as President, J. A. L. Waddell, the Chief Engineer, receiving the same amount, with a bonus of $75,000, of which $30,000 was to be paid on the completion of the first 150 miles, and $45,000 on the completion of the whole line. G. Seymour, Auditor, has a salary of $4,800 a year.

Temiskaming and Northern Ontario Ry.

The annual report of the Commissioners recently issued, covers 10 months ended Oct. 31, 1909, is due to the fact that the Ontario Legislature has decided that the accounts for all provincial purposes shall be closed Oct. 31, instead of Dec. 31, as formerly. The railway has 252.3 miles of main line, 13.34 miles of branches, and 68.80 miles of yard and spur tracks; adding 0.64 miles of a spur at New Liskeard, under construction. This gives a total of 335.08 miles.

Following is the condensed statement of revenue account:—

Revenue from transportation	$1,298,698 27
Other revenue	62,526 61
Total operating revenue	$1,361,224 88
Operating expenses	794,796 88
Net operating revenue	$566,428 00
Ore royalties	108,516 68
	$674,944 68
Hire of equipment	19,073 47
Total earnings	$655,871 21
Paid Treasurer of Ontario	550,000 00
Balance to Profit and Loss	$105,871 21

The operating expenses amount to 58.4% of the gross earnings, and the net earnings to 41.6%, as compared with 74.2% and 25.8% respectively in 1908. The offices in Toronto and North Bay are insured for $34,225, and the other buildings, and insurable property on the line at $1,958,799; while $520,000 of employer's liability insurance, and $90,000 of guarantee insurance is carried.

The report covers in detail the work done by the different departments during the 10 months, and also gives details of the contracts entered into. The general balance sheet follows:—

ASSETS.			
Property Owned.			
Cost of road to Dec. 31, '08		$11,991,175.22	
Cost of road to Oct. 31, '09		1,350,768.00

Too Late for Classification.

Detroit River Tunnel.—In their annual report for the year 1909, the Michigan Central Rd. directors say:—"The construction of the double tube tunnel under and across the Detroit River by the Detroit River Tunnel Co., the entire capital stock of which latter company is owned by this company, has progressed almost to completion. The open cuts and approaches on both sides of the river are finished, and the tunnel under the river is finished so far as to be open for use for the purpose of construction. There remains only to be completed a portion of the interior lining of the subaqueous tunnel and the tracks and electrification work. It is expected that the tunnel can be put into use during the early part of 1910. An arrangement has been made under the terms of which this company can acquire at any time, upon demand, the title to and possession of the property in the city of Detroit desired for the location of a proposed new passenger station, and a satisfactory ordinance passed by the city providing for the necessary closing of streets and construction of subways, etc., has been accepted by this company." We were advised April 15, that the contract work covering the construction of the tunnel will be completed in May. There will then remain two or three months' work in connection with the electrification to be done. It is expected that the tunnel will be in operation some time during the summer.

New York, New Haven and Hartford Rd.—Press reports from New Haven, Conn., April 12, state that consequent upon the G.T.R.-Central Vermont Ry. extension to Providence, R.I., the N.Y., N.H. and H. Rd. will build two sections of line which will give it a direct connection with Sherbrooke, Que. It is said that surveys have been ordered to be made for a line from Brattleboro and South Vernon, and for a line between Windsor and White River Jct., and that construction will be started in the fall. The company secures its present connection over the Central Vermont Ry.

The rails which are used in the construction of the uncompleted and abandoned ship railway across the isthmus at Chignecto, N.S., after having seen some years' service on the Intercolonial Ry., are being re-rolled by the works of the Provincial Steel Co. at Cobourg, Ont. Originally weighing 110 lbs. to the yard, they are being rolled to 80 lbs. to the yard.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Ry.—J. F. McGuire, who has been appointed City Ticket Agent, Winnipeg, vice W. Stapleton promoted to Canadian Northern Steamship service.

Canadian Northern Steamships Ltd.—D. B. Hanna, Third Vice President, Canadian Northern Ry., has also been appointed Second Vice President C.N.S. Office, Toronto.

P. Mooney, General Freight and Passenger Agent, Halifax and South Western Ry., has also been appointed General Agent, Freight and Passenger Departments, C.N.S., at Halifax, N.S. Territory includes Nova Scotia, Prince Edward Island, New Brunswick and Maine.

G. Tombs, General Freight and Passenger Agent, Canadian Northern Quebec, and Quebec and Lake St John Rys., has also been appointed acting General Freight and Passenger Agent C.N.S. Office, Montreal.

A. H. Davis, heretofore chief clerk C.P.R. steamship office, St. John, N.B., has been appointed Passenger Agent C.N.S. at Montreal.

J. B. Foote, formerly Superintendent Canadian Lake and Ocean Navigation Co., Toronto, who was recently appointed Marine Superintendent C.N.S. at Montreal, has resigned and has been succeeded by —. Jones, who has been sent out from Great Britain by Capt. Gregory, Marine Superintendent at Bristol.

W. Phillips, General Freight and Passenger Agent Canadian Northern Ontario Ry., and General Eastern Agent Canadian Northern Ry., has also been appointed acting Traffic Manager C.N.S. office, Toronto.

H. C. Bourlier, heretofore in the Allan Line office, Toronto, has been appointed General Agent, Passenger Department. C.N.S., Toronto. Territory east of Port Arthur, Detroit and St. Clair River, and west of Kingston, Sharbot Lake and Pembroke, Ont. He will also perform other general duties allotted to him.

W. Stapleton, heretofore C.N.R. city ticket agent, Winnipeg, has been appointed General Agent Passenger Department C.N.S., for territory west of, and including Port Arthur, Ont. Office, 64 Scott Block, Main St., Winnipeg.

Canadian Pacific Ry.—Sir Wm. C. Van Horne has resigned the Chairmanship of the Board, but remains as a director.

H. P. Timmerman, heretofore Industrial Commissioner, lines east of Montreal, has been apointed Industrial Commissioner for the Atlantic and Ontario Divisions, and that portion of the Eastern Division east of Carleton Jct Office, Montreal.

W C. Casey, Travelling Passenger Agent, St. John, N.B., is reported to have been appointed chief clerk to General Passenger Agent Atlantic Steamship Service, Montreal.

J. R. Watson, heretofore dining car conductor, has been appointed Inspector Sleeping and Dining Car Department. Headquarters, Montreal.

H. N. Hooper, heretofore Assistant Agent Sleeping and Dining Car Department, Ottawa, has been appointed Agent same department there, vice E. A. Tupper assigned to other duties at Toronto.

E. A. Tupper, heretofore Sleeping and Dining Car Agent at Ottawa, has been appointed News Department storekeeper at Toronto.

J. S. Carter, heretofore General Agent at Spokane, Wash., has been appointed General Agent Passenger Department Atlantic Service at Winnipeg, vice S. J. Sharpe resigned to enter private business in Toronto. He will have charge of the entire west for the Atlantic Steamship Service, reporting to the General Passenger Agent Atlantic Steamship Lines, Montreal.

A. G. Richardson, heretofore City Passenger Agent, Portland, Ore., has been appointed City Passenger Agent, Winnipeg.

J. E. Proctor, heretofore District Passenger Agent, Calgary, Alta., has been appointed District Passenger Agent, Brandon, Man., vice G. A Walton, promoted.

R. A. Gamble, heretofore Inspector Refrigerator Service, Winnipeg, has been appointed Fuel Agent Western Division, vice J. F. Kane resigned. Office, Calgary, Alta.

R. G. McNeillie, heretofore Passenger Agent Nelson, B.C., has been appointed District Passenger Agent at Calgary, Alta., vice J. E. Proctor transferred

J. W. Marshall, heretofore assistant car foreman at Winnipeg, has been appointed car foreman at Lethbridge, Alta., vice E. Y. Brake transferred.

J. Rutley, heretofore locomotive driver, has been appointed road foreman of locomotives, District 4, Western Division, Macleod, Alta., vice L. E. W. Bailey resigned

E. Y Brake, heretofore car foreman at Lethbridge, Alta., has been appointed car foreman at Cranbrook, B.C., vice A. McCowan resigned.

W. J. Wells, heretofore Travelling Passenger Agent, Brandon, Man., has been appointed District Passenger Agent at Nelson, B.C., vice R. G. McNeillie transferred.

O. Johnson has been appointed Roadmaster between Farron and Midway and the Phoenix Branch, District 3, Pacific Division, vice T. H Nichols transferred. Office, Nelson, B.C.

Jno. Anderson, heretofore Roadmaster Mountain section and Arrow Lake branch, Revelstoke, B.C., has been appointed Roadmaster from Field to mileage 72.6 main line. Office, Golden, B.C.

T. H. Nichols, heretofore Roadmaster on District 3, Pacific Division, has been appointed Roadmaster from mileage 72.6 main line west of Field to Revelstoke, and Arrow Lake branch. Office, Revelstoke, B.C.

F. W. Walker, heretofore acting Superintendent, District 3, Pacific Division, Nelson, B.C., has been appointed Rules Instructor for the Pacific Division. The appointment is only a temporary one, and he will travel over the whole division giving instructions in the new rules.

W. E. Kingston, heretofore assistant chief clerk General Manager's office, Winnipeg, is reported to have been appointed chief clerk to General Superintendent Pacific Division, Vancouver, B.C , vice W. B. Semmens resigned to enter private business.

C. Adez has been appointed acting Travelling Fireman, District 2, Pacific Division. Headquarters Vancouver, B.C.

F. X. LaPrairie, heretofore Car Inspector at Kenora, Ont., has been appointed wrecking foreman at Vancouver, B.C.

H. D. Annable, heretofore General Freight Agent Atlantic Steamship Service, London, Eng., has been appointed Assistant Foreign Freight Agent at New York, vice C. W. Sellers, Assistant Export and Import Freight Agent resigned. Office, 1 Broadway.

G. A. Walton, heretofore District Passenger Agent, Brandon, Man., has been appointed General Agent Passenger Department, Spokane, Wash., vice J. S. Carter, promoted.

L. F. Knowlton has been appointed City Passenger Agent at Portland, Ore., vice A. G. Richardson transferred.

Duluth, South Shore and Atlantic Ry., Mineral Range Rd.—A. W. Martin has been appointed Travelling Passenger Agent at Duluth, Minn.

Grand Trunk Pacific Ry.—The following agents have been appointed:—Ingelow, Man., J. A. Lachance; Spy Hill, Sask., S. F. Beamish; Waldron, Sask., W. H. McDonald; Raymore, Sask., C. S. Brydges; Scott, Sask., L. C. Pearson; Chauvin, Alta., J. A. McKinnon. The station at Grandora, Sask., has been closed.

Press reports state that W. Duperow, Travelling Passenger Agent G.T.R., Toronto, will be appointed Passenger Agent G.T.P.R., at Prince Rupert, B.C.

R.Beaumont, heretofore General Agent Northern Navigation, Port Arthur, Ont., has been appointed Assistant to the Manager G.T.P.R. Pacific Coast service, Vancouver, B.C.

Grand Trunk Ry.—J. H. Taylor, heretofore Assistant Claims Agent, has been appointed acting Claims Agent (Personal Injuries), vice S. Wells, deceased. Office, Montreal.

W. J. Nixon has been appointed acting Chief Train Dispatcher at Montreal, vice P. G. Flaherty.

P. G. Flaherty, Chief Train Dispatcher, Montreal, has been appointed acting Master of Transportation, Eastern Division, vice S. B. Kramer, who has been granted three months' leave of absence. Office, Montreal.

Press reports state that C. E. Jenney of the Toronto city ticket office, will be appointed Travelling Passenger Agent at Toronto, to succeed W. Duperow, who, it is reported will be appointed Passenger Agent G.T.P.R. at Prince Rupert. B.C.

G. H. Wyatt has been appointed General Foreman at Nichols, Mich., vice G. F. Dick transferred.

G. F. Dick, heretofore General Foreman at Nichols, Mich., has been appointed General Foreman at Milwaukee Jct., Mich.

F. W. Egan, Superintendent Western Division, having been granted leave of absence, the following changes became effective Apr. 22, and until further notice:—

J. H. Ehrke, Assistant Superintendent, Battle Creek, Mich., has been appointed acting Superintendent. Office, Detroit, Mich.

F. G. Bement, heretofore Trainmaster, Durand, Mich., has been appointed Trainmaster District 25, Main Line, and District 26. Office, Battle Creek, Mich. All reports heretofore made to the Assistant Superintendent, will hereafter be made to the Trainmaster.

O. F. Clark, heretofore Chief Dispatcher, Battle Creek, Mich , has been appointed Trainmaster District 25, (C.S. & M.), Districts 27, 28 and 29 and Pontiac, Oxford and Northern Rd. Office, Durand, Mich.

The following agents have been appointed: Brechin, Ont., J. McLeod; Alma, Ont., A. Yaeck; Morrefield, Ont., J. A. Scott; Harriston, Ont., S. D. Croft; Greenfield, Ont., H L. Abrams; Moose Creek, Ont., O. Parent (temp.); Rockland, Ont., O. Parent; Kingsville, Ont., J. L. Mander (outside).

Inland Navigation Co.—L. A. W. Doherty, heretofore assistant to General Manager has been appointed Traffic Manager in full charge over all Lake Ontario and westbound package freight traffic. Office, Hamilton, Ont

Intercolonial Ry.—S. G. Tiffin, heretofore Travelling Agent, Toronto, has been appointed Agent there vice N. Weatherston, superannuated.

Intercolonial Ry.—W. E. Barnes, heretofore draughtsman in the drawing office at Moncton, has been appointed Locomotive and Roundhouse Inspector.

International Ry. of New Brunswick.—The operating staff has been appointed as follows:—Manager, E. H. Anderson; Traffic Manager, A. A. Andrew; Ticket Agent, E. B. Price; Freight Agent, G. McRae; Chief Engineer, D. W. Brown.

SCULLY STEEL & IRON CO. DEPT. 22 CHICAGO, ILL.

C.E.; Mechanical Superintendent, C. C. Johnson. Offices, Campbellton, N.B.

The Irondale, Bancroft and Ottawa Ry., control of which was secured by Mackenzie, Mann & Co., is being operated under lease by the Central Ontario Ry., of which G. Collins is General Manager.

New York Central Lines.—L. Drago, who has been telegraph operating for the G.T.R. at Niagara Falls, Ont., since the Clifton Hotel, there, closed for the winter, will resume his former position as N.Y.C. ticket agent at the hotel, when it reopens in May.

Orders by the Railway Commissioners.

The following orders have been passed in addition to those on p.p. 363 and 365:—

10117. Apr. 12.—Adding Montreal St. Ry., Bell Telephone Co., G.N.W. Telegraph Co., C.P.R. Telegraphs, and others as parties to resolution of Montreal Chamber of Commerce, respecting level crossings, and fixing Apr. 28 for hearing at Montreal.

10118 to 10122. Apr. 7.—Relieving G.T.R. from providing further protection at crossings at first highway south of Henfryn; at second highway south of Hawkesbury, and at Saugeen Road, two miles south of Kincardine, Ont.; and similarly relieving C.P.R., regarding crossings at second highway west of The Brook, between lots 18 and 19, cons. 6 and 7, Russell Co., and at mileage 21.5, Osgoode tp., Ont.

10123, 10124. Apr. 6.—Declaring that C.P.R. Daniel St. and John St. crossings, Arnprior, Ont., are protected to the Board's satisfaction.

10125. Mar. 24.—Dismissing P. S. Seager's application for order directing P.M.R. to provide undercrossing on lot 6, Moore tp., Ont.

10126 to 10128. Apr. 9.—Authorizing Ontario Hydro-Electric Power Commission to erect telephone and relay wires across G.T.R. at three points.

10129. Apr. 13.—Approving agreement of Norfolk County Telephone Co. with Bell Telephone Co. respecting connections at Waterford, Scotland, Delhi, Simcoe, Otterville, and Port Dover, Ont.

10130. Apr. 13.—Approving C.P.R. plan showing interchange track with G.T.R. at Galt, Ont.

10131. Apr. 12.—Approving plan of proposed bridge over highway at mileage 24.2, C.P.R. Port Burwell Branch, near Straffordville, Ont.

10132. Apr. 12.—Authorizing C.P.R. to use bridge at mileage 1 of its Napinka section, Man.

10133. Apr. 5.—Authorizing A. C. Beatty to place telephone wires across G.T.R. at Garden Hill, Ont.

10134 to 10141 inclusive. Apr. 11.—Authorizing Ontario Hydro-Electric Power Commission to place telephone and relay wires across various railways at eight points.

10142. Apr. 12.—Ordering C.P.R. within 60 days to install electric bell at Thomas St. crossing, mileage 20.67, London section, Ont.

10143, 10144. Apr. 12.—Authorizing C.N.O.R. to build across private roads between lots 32 and 33, con. 2, Pickering tp., and between lots 28 and 29, con. A, Hamilton tp.

10145 to 10147. Apr. 12.—Ordering G.T.R., within 60 days, to install electric bells at crossings 3½ miles east of Lennoxville station, Ont., and east of St. Madeleine station, Que.; similarly ordering C.P.R. respecting Queen St. crossing, Streetsville, Ont.

10148. Apr. 12.—Authorizing C.P.R. to build spurs to Superior Portland Cement Co.'s premises, Orangeville, Ont.

10149. Apr. 5.—Approving location plan of C.P.R. station at Clive, Alta.

10150. Apr. 12.—Approving location of C.P.R. Regina, Saskatoon and North Saskatchewan branch from mileage 95.8 to 132.

10151 to 10153. Apr. 12.—Authorizing C.P.R. to use bridges at mileages 147.5, Portal Section; 118.0 Estevan Section, and 34.5, over Badger Creek, Napinka Section, Man.

10154. Apr. 8.—Relieving G.T.R. from providing further protection at crossing at first public road north of Fultons, Ont.

10155, 10156. Apr. 12.—Ordering G.T.R. and C.P.R., within 60 days, to install electric bell at crossings at Main St., Mount Brydges, and Manvers Road, Pontypool, Ont.

10157, 10158. Apr. 8.—Relieving G.T.R. from providing further protection at crossings five miles west of Bright, and at St. George St., Fergus, Ont.

10159. Apr. 5.—Ordering C.N.Q.R. to maintain watchman between 7 a.m. and 7 p.m. daily, at LaSalle Ave. crossing, Maisonneuve, Que., to flag engines and cars.

10160. Apr. 12.—Releasing certain lands on Scotland and Bell Aves., Winnipeg, from the operation of plan showing G.T.P.R. location.

10161. Apr. 14.—Authorizing C.P.R. to build spur for Robert Bell Engine and Thresher Co., Winnipeg.

10162, 10163. Apr. 14-13.—Authorizing G.T.R. to build spurs to D. G. Cooper's premises and Bryan Mfg. Co.'s premises, Collingwood, Ont.

10164. Apr. 5.—Authorizing C.P.R. to take certain lands on the Columbia and Western Ry..

10165. Apr. 5.—Dismissing application of H. G. Hannan, of Kipp, Alta., for order directing C.P.R. to provide station and sidings on s.w. ¼ of sec. 29, tp. 9, r. 22, w. 4 m., Alta.

10166. April 5.—Adding city of Hull, Que., as party in R. Quain's complaint against alleged dangerous condition of C.P.R. crossing near Matthews' Pork Factory.

10167. Apr. 5.—Rescinding order 7931, Sept. 1, 1909, which approves of change C.P.R. location from its Crow's Nest Pass branch.

10168. Apr. 18.—Authorizing C.P.R. to build across private road between lots 6 and 7, con. 4, Darlington tp., Ont.

10169. Dec. 8, 1909.—Ordering that general plans and specifications of work called for by part 1 of Toronto grade separation, shall within two months be filed by G.T.R. for approval and copies furnished to city of Toronto and Etobicoke and York tps.; that subway at Queen St., Toronto, known as Sunnyside crossing, shall be 65 ft. wide; that G.T.R. shall commence the work before May 1, and shall complete the separation of grades at the several crossings within two years.

10170. Apr. 18.—Approving Nipissing Central Ry. Standard Passenger Tariff.

10171. Apr. 18.—Ordering C.P.R. to make approaches to crossing at mileage 47.31, between cons. 8 and 9, Puslinch tp., Ont., 20 ft. wide and re-fence approaches to conform to the Board requirements under its general regulations affecting highway crossings, Jan. 26, 1909.

10172. Apr. 18.—Authorizing city of Edmonton, Alta., to build highway across Edmonton, Yukon and Pacific Ry. within city limits.

The Canadian Society of Civil Engineers, Ottawa branch, has its headquarters at 177 Sparks St. A. A. Dion is acting chairman, owing to the illness of W. J. Stewart, S. J. Chapleau is Secretary. Meetings are held every Wednesday, except in June, July and August.

Locomotive Fuel Consumption.

The cost of fuel consumed by locomotives on the various Canadian railways during the year ended June 30, 1909, was $17,544,449. In volume the aggregate consumption was 6,832,108 tons, against 5,970,791 in 1906-07. Following are details, two cords of wood being calculated as one ton of fuel:

Class of Locomotive.	Coal		Wood		Total	Miles Run.	Fuel consumed per 100 miles
	Anthracite	Bituminous	Hard.	Soft.			
	Tons.	Tons	Cords.	Cords	Tons.		Tons.
Freight	4,534	3,816,810	1,138	21,809	3,833,010	43,280,549	8.85
Passenger	2,600	1,824,836	595	13,739	1,834,700	32,282,534	5.68
Mixed	2,314	406,963	364	2,566	410,800	7,237,422	5.67
Switching	227	740,944	91	5,492	743,977	14,832,834	5.01
Special		9,595		52	9,621	231,986	4.14
Total	9,675	6,799,148	2,188	43,658	6,832,108	97,865,325	

The average cost of fuel per 100 miles was: freight, $22.65; passenger, $14.54; mixed, $14.51; switching, $12.82; construction, $10.59.

Economy in Locomotive Repair Shops.

By W. R. Smith, General Foreman, Canadian Northern Ry. Shops, Winnipeg.

The subject upon which I have endeavored to compile this paper is a very broad one, in fact there are very few railway problems upon which there has been more comment and discussion than that of economy in locomotive repair shops. Possibly, on account of the mechanical department not being directly a revenue bearing department, greater attention has been paid to it as regards the organization in its various branches, than to any other department, in connection with railway work. To bring this matter before you in detail would occupy a very considerable length of time, therefore, I shall only mention points which are of the greatest importance in connection with shop practice.

The first of these which I wish to bring to your notice is the storing of material, particularly heavy material, such as tyres, boiler plate, tubes, bar iron, etc., etc. All these should be located as near as possible to the shop in which used, and stored in properly erected buildings or racks, suitable for the purpose required, thus reducing delay on the part of the shop staff to a minimum, and at the same time placing such material under cover that would otherwise be subjected to atmospheric conditions, causing the material to depreciate in value, on account of corroding and pitting, thus reducing the length of service and thereby increasing the cost of the manufactured article. The buildings referred to should be thoroughly equipped with small cranes or lifting devices, to eliminate hard labor and facilitate rapid handling. The use of magnetic power on locomotive cranes now in use in the majority of modern plants, has proved very effective, and has been found to be a labor saving device. It would not be an extensive plant that would not require at least 20 men to perform duties of this nature, without proper facilities, which could be handled by the use of a crane of this type with about five men, effecting an approximate estimate in wage economy of about $8,000 a year.

You will, therefore, see that the saving would aggregate a much higher figure than would be considered creditable by those not conversant with engine repairs. There is one other point on the material question, through which the mechanical department can be subjected to numerous inconveniences and disadvantages, detrimental to the working progress which necessity terminates in increased expense; I speak of the purchasing and supplying of the proper quantity and quality of material at the required time, it being a very essential feature in economy. In this particular line of railway business, it appears to me, after personal experience of several years with four different railway companies, that if those in authority in such matters, acted as far as consistent in supplying the make or quality of material specified by the head of the mechanical department, it would assist materially in economy. It can be readily understood that it is practically impossible for the latter to obtain the best results, in frugal efficiency, without the support of the purchasing department. The fact cannot be denied, however, that cases do occur, through some neglect or oversight on the part of the mechanical department, in not advising the stores or purchasing officials of the consumption of an unusual amount of a certain class of material, or the necessity on the part of the latter to place an order for a commodity which it has not previously been customary to carry in the ordinary stock, thus placing that department in an unfair position through not being allowed sufficient time to obtain delivery

HEAD OFFICES AND WORKS **SYDNEY, CAPE BRETON, CANADA**

One matter to which strict attention should be paid is the tracing of orders for material after being placed. I could relate instances where it would be impossible for a mechanical department to correctly account for excessive charges through failure on the part of a manufacturer to supply material within a reasonable time. As we know the manufacturer's tendency is to grasp all the business possible, with the result that it frequently takes double the necessary time to get deliveries made. I have known cases where six months has been taken where 30 days under ordinary circumstances should be ample time. This is an expensive proposition and one that should not be tolerated by a railway company, as the ultimate cost is perhaps 100% more than the actual value. This and other questions of a similar nature prompt me to state that the most improved business methods, possible to adopt, relative to these three departments, are in the best interest of the company.

In referring to what is conceded by many to be the principal cause of high figures in mechanical labor, being that of the present standard rates of wages, we are all aware that conditions in this particular have made a wonderful advance in the past ten years. Still, expensive locomotive repairs must not alwayss be solely attributed to this fact, as there are comparisons for consideration in what might be termed the ancient and modern methods in applied mechanics found in shop practice. The rapid strides accomplished in the mechanical sphere of late years, are more than equal to those which have taken place in any one particular in railway records. It is well said that time is money, and in this age of comparison, rapidity should be the point at issue in every performance in locomotive repairs, in order to keep pace with the records which are now being continually made in modern shop efficiency.

I do not propose entering upon a discussion of the numerous improved appliances, but by way of comparison I remember only a few years ago, in what was at that time one of the largest shops in Canada, where an employe welding boiler tubes after 10 hours of strenuous labor would have about 100 tubes welded. To-day it is possible by the use of certain machines, without any more exertion on the part of the operator, to weld 600 tubes in the same length of time. Take for instance the enormous amount of manufactured material produced by the use of the modern blacksmith shop machinery. Then consider the modern moulding department as compared with that of 10 years ago, and we find an increase in the output ranging from 100% up, and not only a higher grade of casting, but more accurate, requiring less machine work thereby reducing the cost of manufacturing in every particular, due to the use of moulding machine. The same progress may be applied in speaking of the boiler shop, as 75% of the operations which were manual labor, a few years ago, are now minor details, through the use of hydraulics and compressed air.

The tool and machine shops have, with high speed steel and high grade improved machinery, shown no small display in the advanced superiority of shop efficiency, and in view of the existence of such conditions, the fact, beyond a doubt is clearly demonstrated, that the adopting of modern methods and such machinery, is of vital importance to a mechanical staff who are expected to compete with the competitors of this decade, for never in the history of railroading has there been such efficiency developed in railway mechanics as in that of the past 10 years, which goes to prove that all companies to-day occupying an important position in the handling of freight and passenger traffic, must of necessity keep their motive power in first class condition, there being nothing that will reflect discredit upon a company quicker, than neglect in this department. By this it is understood that shop equipment for locomotive repairs, is an essential question and should warrant due consideration, in order that economy is brought to prevail, which necessitates close inspection of all details in daily shop practice, as the small matters count in the question of time and labor, which is money, and in the performance of such duties, system is required to be observed in every particular governing the delivering of material to the respective departments, also the disposing of scrap materials, and the various relations between the foremen, in order that the work in each and every department, be advanced to the best interests of all concerned.

Another important item in this connection, is the checking of the costs of work performed each day. In order to have correct information with reference to the cost of locomotive repairs, it is necessary to obtain a daily check, to prevent any mistakes being made by the employes on their time distribution slips, which are commonly used in time-keeping in locomotive repair shops. This places the foreman directly in charge of engine erecting or machine work in a position to explain why certain repairs on any particular engine should cost more than the same repairs on another engine of the same type. To obviate such difficulties I am convinced that a system adopted about a year ago by A. Shields, Master Mechanic Canadian Northern Ry., which is known as the "engine repair account" and is only used in general repair shops, or what is generally termed "back" shop, is one of the most convenient methods to be found in checking cost of engine repairs, i.e. from a mechanical department's point of view. It must be admitted that it entails extra time in stores accountant's office. It is a system of itemized charges against repairs by the use of consecutive numbers, which are used to specify every piece of work on an engine, and is as follows:—

ACCOUNT—REPAIRS TO ENGINES.

1. Stripping.
2. Repair rods.
3. Take off Frame, r. or l.
4. Repair Frame, r. or l.
5. Put on Frame, r. or l.
6. Remove cylinders no.....
7. Apply cylinders no. .....
8. Boring cylinders no.....
9. Bush cylinders no.....
10. Repairing cylinders no.....
11. Firebox—new or repairing.
12. New front flue sheet.
13. New back.
14. New inside sheets, r. or l.
15. New outside sheets, r. or l.
16. New door sheet.
17. New wagon top.
18. New face plate.
19. New throat sheet.
20. New crown sheet.
21. Boiler.
22. Smoke Box—new or repairs.
23. Washout plugs and holes.
24. Tank repairs.
25. Remove flues.
26. Repair flues.
27. Replacing flues.
28. Front end arrangement and netting.
29. Ashpan and rigging.
30. Air pump, air signal and steam heat.
31. Driving brake and rigging.
32. Driving boxes, hub liners and eccentric straps.
33. Repairs to shoes, wedges and horn blocks.
34. Deck casting.
35. Deck beam brackets and wind sheets.
36. Hanging motion and setting valves.
37. Repairs to engine trucks.
38. Steam and exhaust pipes.
39. Dry pipe and throttle rigging.
40. Valve seats, bushes and chests.
41. Pistons and crossheads.
42. Guide bars and blocks.
43. Spectacle plate.
44. Repairing valve gear and motion.
45. Driving tires, wheels, crank pins.
46. Boiler mountings, injectors, pops and lubricators.
47. Lagging.
48. Jackets.
49. Piping.
50. Engine bell.
51. Headlight.
52. Smoke stack and base.
53. Front end ring and door.
54. Expansion and running board brackets.
55. Springs and spring riggings.
56. Wheeling and putting-up binders.
57. Pilot, buffer beam brackets and front coupler.
58. Cab running boards and deck floor.
59. Sand box, dome casting and hand rails.
60. Painting engine and tender.
61. Tank frame repairs and draft gear.
62. Trucks and Brake rigging.
63. Miscellaneous.

Stripping an engine is account no. 1, repairing rods account no. 2, and so on; the highest number is 63, it being a miscellaneous account which covers all extra or unusual charges. It is worked in this way:—Presuming a machinist has worked all day on boiler mountings (account 46). On his time slip he writes the date, engine number and 9 hours account 46, which is all that is necessary. Each morning all slips are collected from ticket boxes, and charges recorded by the mechanical department, previous to sending slips to the timekeeper. The form used for this purpose has the dates printed on the top line and the account numbers on the right side, so that all that is necessary is to place the amount charged under the date and opposite the account number. There is one form for each engine in the shop for each month. By this you will understand that at a glance, the cost of labor on every piece of work in the shop can be obtained daily. Charges for material, of course, can only be got at the end of each month, when accounts are closed by the stores department. It is understood of course, that due credit is received for scrap material. Some companies use the shop order system. In this every piece of work has a different number, being confusing on account of high figures, which would run into the thousands every month. With the account system, a certain piece of work on every engine is always the same number, with which the employes become familiar and thus avoid mistakes on their time slips. It may be possible to improve on this system, but I must say, if properly carried out, it is the best arrangement in the interest of the mechanical department that I have used.

The foregoing paper was read before the Western Canada Railway Club recently.

Canadian Freight Association.

At the annual meeting in Montreal Apr. 14, the following officers were elected:—President, M. H. Brown, General Freight Agent, C.P.R., Toronto; 1st Vice President, C. A. Hayes, General Freight Agent, G.T.R., Montreal; 2nd Vice President, B. R. Hepburn, General Manager Ontario & Quebec Navigation Co., Picton, Ont.

Advisory Committee:—J. Pullen, Assistant Freight Traffic Manager, G.T.R., Montreal, Chairman; W. B. Bulling, Assistant Freight Traffic Manager, C.P.R., Montreal; G. C. Ransom, Division Freight Agent, M.C.R., Buffalo, N.Y.

Executive Committee:—C. A. Hayes, F. F. Backus, G.T. & P.A., Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., and S. P. Howard, General Freight Agent C.P.R., Montreal.

Classification Committee:—W. B. Bulling, C. A. Hayes, Wm. Phillips, F. J. Watson, S. P. Howard, W. M. Kirkpatrick, L. Macdonald, A. E. Rosevear, H. E. Macdonell and R. E. Perry.

Inspection Committee:—R. W. Long, G. Tombs, F. Conway, R. W. Youngs, J. Paul, G. T Pettigrew, B. R. Hepburn, S.P. Howard, W. B. Bamford and F. J. Balch.

The next quarterly meeting will be held at Penetanguishene, Ont., July 14.

The Hudson's Bay Company

THE COMPANY OFFERS FOR SALE

Farming and Grazing Lands in Manitoba and the Northwest Territories

ON EASY TERMS OF PAYMENT

Town Lots for Sale at Winnipeg, Ft. William, Edmonton, Prince Albert, etc.

The Company has General Stores at Winnipeg, Vancouver, Calgary, Edmonton, and other places where purchasers will find the best of goods at moderate prices.

Transportation by the Company's Steamers, brigades of boats and canoes throughout the Territories not traversed by railways.

Full information at the Company's Offices, Winnipeg, or 1 Lime St., London, E.C.

G.T.R. Semi-Annual Meeting.

The semi-annual meeting was held in London, Eng., Apr. 14, when the report for the half-year ended Dec. 31, 1909, was presented. The following summary shows a comparison of the revenue for that period, with that for the corresponding period 1908:—

1908.		1909.
£3,326,158	Gross receipts	£3,632,902 18 1
	Deduct—	
2,407,631	Working expenses, being at the rate of 75.79%, as compared with 72.38% in 1908.	2,753,142 17 0
918,527	Net traffic receipts ...	879,760 1 1
41,901	Balance of income from rentals, outside operations, and car mileage.	39,953 3 10
£960,428	Total net revenue.	£919,713 4 11
	Add—	
16,013	Amount received from International Bridge Co.	16,012 16 7
6,507	Interest on bonds of Central Vermont Ry.	6,506 143
68,739	Interest on securities of controlled lines and on St. Clair Tunnel bonds acquired by issue of G.T.R. 4% debenture stock ...	68,743 9 5
42,626	Balance of general interest account .	27,630 17 3
£1,094,313	Net revenue receipts ..	£1,038,607 2 5

The following are the net revenue charges compared with the corresponding period, 1909:

1908.		1909.
£ 77,603	Rents, leased lines. £	77,603 0 9
498,624	Interest on debenture stocks and bonds	508,571 9 9
36,395	Interest on debenture stock and bonds of consolidated lines	36,589 4 5
43,378	Canada Atlantic Ry. deficit	17,367 16 9
£656,000		£640,131 11 8
3,139	Deduct Detroit, Grand Haven, and Milwaukee Ry. surplus	12,066 19 1
£652,861		£628,064 12 7
441,452	Leaving a surplus of	410,542 9 10
£1,094,313		£1,038,607 2 5

Following is a comparison of receipts for half-years ended Dec. 31, 1909 and 1908:

TRAFFIC STATISTICS

Description of receipts.	1909.	1908	Increase.
	£	£	£
Passengers	1,091,426	1,041,423	50,003
Mails and express	182,855	169,302	13,553
Freight and live stock ..	2,252,106	2,014,205	237,901
Other receipts	106,516	101,228	5,288
	£3,632,903	£3,326,158	£806,745
Passengers carried	6,212,275	6,017,560	194,715
Average fare per passenger	42.17d	41.53d	0.64d
Tons of freight and live stock	9,265,763	8,086,716	1,179,047
Average rate per ton ..	58.33d	59.77d	.....
Tons carried one mile.	1,462,599,284	1,435,357,181	187,242,103
Earnings per train mile.	87.61d	81.51d	6.10d

Adding balance of £9,938 1s. 7d. at credit net revenue account on June 30, 1909, the amount available for dividend is £420,480 11s. 5d., from which the directors recommend the payment of the following dividends:

Half-year on 4% guaranteed stock	£196,800	4	3
Half-year on first preference stock	85,420	15	0
5% on second preference stock.	126,420	0	8
	£408,640	19	11

leaving a balance of £11,839 11s. 6d. to be carried forward to next half-year's account.

The average rate per ton per mile on the entire freight business was 0.68c., being the same as in the corresponding half-year.

The working expenses, excluding taxes, were £2,675,662 or 73.65% of receipts, as compared with £2,335,285, or 70.21%, in the corresponding half-year; an increase of 3.44% in the proportion to the gross receipts.

Following is a comparison of the revenue expenditure, including taxes, for half-years ended Dec. 31, 1909 and 1908; and

The train mileage of the half-year compares with that for the half-year ended Dec. 31, 1908, as follows:

Description of expenditure	1909.	1908.	Increase	Decrease
	£	£	£	£
Maintenance of way and structures	568,396	569,299	59,399	.....
Maintenance of equipment.....	669,889	408,772	261,117	.....
Traffic expenses.....	97,935	95,600	2,333	.....
Conducting transportation.....	1,198,661	1,172,996	25,615	.....
General expenses.....	80,529	88,618	.....	8,089
Taxes	77,481	72,346	5,135	.....
Total	£2,753,143	£2,407,631	345,512	.....
Percentage of gross receipts..	75.78	72.38	3.40	.....
Expenditure per train mile.....	66.40d.	59.00d.	7.40d.	.....

Description of Mileage.	1909	1908	Increase	Decrease
Passenger	4,399,734	4,440,222	.....	40,488
Freight.....	5,284,643	5,102,507	182,136	.....
Mixed Trains	267,110	250,497	16,613	.....
Total	9,951,487	9,793,226	158,261	.....

The gross receipts show an increase of £306,745, or 9.22%; the working expenses, including taxes, £345,512, or 14.35%; and the train mileage 158,261 or 1.62%.

The equipment was increased during the half-year by the purchase of 1,000 steel coal cars, the cost of which, £183,204 16s., has been charged to capital account. During the half-year, £259,512 18s. 8d. has been charged to revenue in reduction of engine and car renewal suspense account, leaving the balance, £197,695 6s. 5d., of which £81,031 11s. was in respect of engines, and £116,663 15s. 5d. of cars.

The gross receipts of the Canada Atlantic Ry., for the half-year were £230,104, against £206,097 for the corresponding half-year, and the working expenses £188,480, against £188,525, leaving a net revenue balance of £41,624, against £17,572, which with the balance of income from rentals, outside operation and car mileage, makes a total net revenue of £42,746, against £19,723. The number of passengers carried was 290,729, against 275,871, an increase of 5.38%; and the passenger receipts, including mails and express receipts, were £49,006, against £47,298, an increase of 3.61%. The quantity of freight moved was 1,258,375 tons, against 1,192,452 tons in 1908, an increase of 5.53%; and the receipts from freight traffic were £171,079, against £147,443, an increase of 16.03%.

The gross receipts of the Grand Trunk Western Ry., were £637,166, against £588,971 for the corresponding half-year, and working expenses, £468,976, against £424,985, leaving net receipts of £168,190 against £163,986, which with balance of income from rentals, outside operations and car mileage makes a total net revenue of £119,096 against £123,510. The net revenue charges were £93,307, against £99,187, so that there was on Dec. 31, 1909, a net revenue credit of £25,789, which is carried forward, as compared with £24,323 for the corresponding half-year 1908. The number of passengers carried was 1,052,197, against 919,597, an increase of 14.42%; and the passenger train receipts, including mails and express were £230,519, against £212,431, an increase of 8.51%. The quantity of freight moved was 1,740,216 tons, against 1,555,695, an increase of 11.86%, and the receipts from this traffic were £391,015, against £365,132, an increase of 7.09%.

The gross receipts for the Detroit, Grand Haven and Milwaukee Ry., were £219,978, against £188,969, and the working expenses £159,486, against £138,905, leaving net receipts of £60,492, against £50,064, which with balance of income from rentals, outside operations and car mileage, makes a total net revenue of £49,048, against £40,972. The net revenue charges were £36,981, against £37,833, so that there was a net revenue surplus of £12,067, as compared with £3,139 for the corresponding period of 1908. The number of passengers carried was 487,122, against 446,936, an increase of 8.99%; and the passenger receipts, including mails and express, were £75,032, against £68,167, an increase of 10.07%. The quantity of freight moved was 1,116,699 tons, against 925,289 tons in 1908, an increase of 20.69%; and the receipts from freight traffic were £125,074, against £100,659 in 1908, an increase of 24.26%.

Grand Trunk Pacific Railway.

The comparatively open winter has enabled favorable progress to be made with preparations for the early commencement of construction in the coming season, and the grading on the portions of the line for which contracts have recently been let,—from Wolf Creek westerly to Tete Jaune Cache, 179 miles, and from Copper River easterly to Aldermere, 135 miles—will, it is expected, be completed by the end of the current year. There still remains about 425 miles between Tete Jaune Cache and Aldermere for which contracts have not been let. Tracklaying has been commenced from Prince Rupert east to the Copper River, 130 miles, and should be completed by July 1. It is expected that the portion of the Government line from Winnipeg to Lake Superior Jct., 245 miles, will be in readiness for traffic by Sept. 1, so that this year's crops may be taken all the way from the West to the Great Lakes. The company's new terminal elevator at Fort William, with a capacity of 3,500,000 bush. will also be available for the handling of this year's crop. Satisfactory progress is also being made with the construction of branch lines in Saskatchewan and Alberta, under guarantees already given by those Provinces. The branches from Melville to Regina, Melville to Canora, in Saskatchewan, and Tofield to Calgary, in Alberta will, it is hoped, be completed by the end of 1910. Additional guarantees by Saskatchewan for further branch lines were obtained at the last session of the Legislature, for lines: from Regina south-easterly to the International boundary between the eastern limit of r. 32, w. p. m. and the western limit of r. 8, w. 2 m.—about 155 miles; from the G.T.P.R. within r. 26, 27, or 28 w. 2 m. northerly to Prince Albert—about 110 miles; from at or near Regina westerly to Moose Jaw, thence north-westerly about 110 miles to the south branch of the South Saskatchewan River; from the G.T.P.R. between the eastern limit of r. 11 and the western limit of r. 16 w. 3 m. south-

125 RAILROADS In the United States, Canada, Mexico, Cuba, China and Japan, overcome their bad water troubles with

DEARBORN WATER TREATMENT

Dearborn Methods are thus universally successful because they are scientific, and thorough. Complete Mineral Analyses are made in the Dearborn Laboratories, of the waters causing trouble, and treatment prepared to conform with the conditions found. Scale formation, Leaking, Corrosion, and Foaming troubles all successfully prevented, and great savings in fuel and other operating expenses effected, as well as vast improvement in service.

westerly and westerly, 50 miles; from the line near tps. 41, 42 or 43, westerly and north-westerly, 50 miles. The company is under obligation to complete 150 miles of these five branches during 1910, the balance to be completed by Dec. 31, 1912.

Reports of Officers.

The Chief Engineer, H. G. Kelley, states that the length of the G.T.R. maintained and operated during 1909 was as in 1908, 3,536 miles. The bridges over the Richelieu River at Beloeil, and the Yamaska River just east of St. Hyacinthe station, have been completed, and there is in operation, continuous double track from Montreal, east to Ste. Rosalie Jct., 38.01 miles. The Ottawa terminal improvements are in progress. The baggage and express annex has been finished, and is being used for temporary station accommodation. Work has been started on both the new central union passenger station and the new hotel Chateau Laurier, and the contractors for these buildings are making satisfactory progress. The expenditure during 1909, for maintenance of way and structures, was $4,384,252.58, against $3,941,845.10 in 1908, an increase of a little over 11.22%. The outlay on track and permanent way, including ballast and ballasting, clearing snow, renewals of rails and ties, and also including their proportion of superintendence, was $2,788,421.14 in 1908, or at the rate of $788.58 per mile. In 1909, the amount was $3,186,471.96, or at the rate of $901.15 per mile, an increase of 14.27%. For renewal and repair of bridges, trestles, and culverts, the expenditure during 1909 shows an increase of $164,241.33, or 97%, compared with the outlap during 1908, the figures being $333,417.53 and $169,176.20 respectively. The cost of repairs and renewals of buildings and fixtures amounted to $549,246.49 in 1909, compared with $640,340.55 in 1908, a decrease of nearly 14.23%. New stations have been built at Cumberland, South Indian, Ottawa (freight), Bluevale, Palmerston, Corinth, Omemee, Bay City, Halstead and Ashland Avenue stations, Chicago, Windiate Park, Milwaukee Jct., Ionia, Muskegon, Hickey, and South Lyon—16 in all

The comparative cost of repairs per train, engine and car mile was:

Cost per mile.	Repairs and renewals of locomotives		All repairing charges, including Shop, machinery, tools and marine equipment, etc.	
	1909.	1908.	1909.	1908.
	Cents	Cents.	Cents.	Cents.
Train	15.47	10.05	17.17	13.37
Engine	12.17	7.85	13.53	10.46
Car	0.94	0.62	1.04	0.82

J. Coleman, Superintendent Car Department, reports expenditure, mileage, etc., as follows:

Half-year of repairs and renewals.	Total cost	Total miles run by cars.			Cost per mile.	
		Passenger.	Freight.	Total.	Car.	Train.
	£				Cents.	Cents.
Dec., 1909	1,605,676	22,529,586	141,494,586	164,024,154	0.979	16.14
Dec., 1908	1,240,039	22,053,210	136,051,798	158,110,008	7.22	7.22

An increase in expenditure of $898,465, or 127.04%, with an increase in car miles of 5,914,146, or 3.74%.

The Superintendent of Motive Power, W. D. Robb, reports expenditure, mileage, etc., as follows:

Half-year ended	Total expenditure.	Train mileage.	Rate of Expense per mile.		
			Train	Engine	Car
			Cents	Cents	Cents
Dec., 1909	$4,849,724	9,951,487	48.73	38.33	2.96
" 1908..	4,361,936	9,793,226	44.54	34.84	2.76

An increase in expenditure of 11.18% compared with an increase in train miles of 158,261 or 1.62%.

During the half-year one engine was sold and 20 were scrapped, leaving at the end of the half-year 29 old light capacity engines set aside to be scrapped. The actual stock at Dec. 31, was 874 engines.

The revenue account for the half-year is as follows:

RECEIPTS.

Grain Elevator Notes.

The Scott elevator at Dalny, Man., was burned Apr. 4, with about 12,000 bush. of wheat. The loss has been estimated at $8,000, covered by insurance.

The Dominion Elevator Co.'s elevator at Moosoomin, Sask., was burned recently, together with its contents, of about 14,000 bush. of grain.

The Globe Elevator Co., which built a 500,000 bulk elevator at Calgary, Alta., last year, is reported to have decided to double its capacity during the summer.

The Scott Elevator Co.'s elevator at Dalny, Man., was burned, with about 12,000 bush. of wheat, Apr. 4. The loss, estimated at $8,000, is covered by insurance.

The Edmonton Elevator Co., which has recently completed the foundation of an elevator at Monarch, Alta., is preparing the site for the erection of another at New Dayton.

The Alberta Pacific Co., will, it is stated, build elevators this year at Maple Creek, Walsh, Sask., and Tees, Alta., and will remove its elevator at Chigwell, to Clyve, Alta.

The Calgary Milling Co.'s elevator B at Calgary, Alta., with about 100,000 bush. of grain, was burned, Apr. 14. The elevator, which had a capacity of 250,000 bush., was built in 1905. The loss is quoted at $300,000.

A privately owned elevator, one of three at that point, was destroyed by fire, at Eyebrow, Sask., Apr. 14, together with a C.P.R. box car and a quantity of grain. The elevator was to have been sold shortly to the Moose Jaw Milling Co.

The Farmers' Elevator and Trading Co., Ltd., of Craik, Sask., received tenders, Apr. 23, for the construction of a 60,000 bush. farmers' elevator, with 30 ins. 1,200 bush. bins, 6 ins. 2,300 bush. bins, balance in three bins, two dumps, two scales, large cleaner, gasolene engine and car puller.

A winding-up order has been made in respect of the Parkin Elevator Co., Ltd., of Hespeler, Ont., on the petition of N. A. Kribs, a creditor for $868. The town of Hespeler holds a mortgage on the plant for about $14,000, and there is about $20,000 owing to the Merchants Bank of Toronto. The company's nominal capital is $48,000.

The Prairie Elevator Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000 and office at Winnipeg, to erect, own and operate grain elevators, and to carry on a general elevator business. The provisional directors are: R. Hume, Fort William, Ont., A. E. Choate, E. B. Eadie, R. Siderfin, C. S. Scott, A. G. Rattray, J. H. Sanders, Winnipeg.

The Maple Leaf Milling Co., Ltd., has been incorporated under the Ontario Companies Act, with a Capital of $5,000,000 and head office in Toronto, to carry on a general business as grain millers, dealers, forwarding agents, etc., and to conduct a general elevator and warehouse business. The provisional directors are: H. Shaw, C. W. Band, C. Mulock, C. Wurtele, J. Carrick, S. H. Foster and C. S. Band, Toronto.

Press reports from Lethbridge, Alta., of Apr. 18, state that C. G. Bell, Secretary-Treasurer of the Western Farmers' Elevator and Milling Co., has absconded, after having issued a check for $5,000, with only $4 in the bank to meet it. It is stated that he has ordered $15,000 worth of lumber for a number of elevators, which it is the company's intention to erect at various points on the Crows Nest Pass line, and at Bow Island.

The report of the Warehouse Commissioner at Winnipeg with regard to interior, terminal and eastern transfer elevator capacity, states that there are, in Manitoba, 312 stations having elevators with 21,624,500 bush. capacity, an increase in capacity of 772,000 bush. during the past year. In Saskatchewan, there are 330 stations having elevators with 24,279,000 bush. capacity, an increase of 76 stations. In Alberta, there are 121 stations having elevators with 8,050,400 bush. capacity. The number of stations and the capacity was practically doubled during the past year. In the west, there are 769 stations having 1,763 elevators in active operation, with a total storage capacity of 54,234,900 bush.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

Determination of Train Resistance.

By E. I. Wenger, B. Sc., Stud. Can. Soc. C.E.

The rapid development of the use of electricity as a motive power for railway trains has led to the consideration of problems, which were relatively unimportant a few years ago.

The tractive resistance of electric cars being the foundation upon which is based the calculations leading to the selection of motive power, equipment has of late claimed considerable attention. Numerous formulæ have been developed, and a number of tests have been made to determine the train resistance of electric cars and trains. Amongst these may be mentioned the Buffalo and Lockport Ry. tests in 1900 by W. J. Davis, the Zossen high-speed tests in 1902-3, tests made by the Electric Railway Test Commission on the test car, Louisiana, in 1904-5, the New York subway tests in 1905, and tests on the New York Central locomotives in 1905-6. The majority of these tests were made under somewhat unusual conditions of track and equipment, and consequently the results obtained are not generally applicable to traction problems met with in the ordinary inter-urban railway. It was, therefore, with the object in view of obtaining information which would be useful in the selection of motive power equipment for inter-urban railways operating single car trains that a series of experiments was undertaken by the University of Illinois Railway Engineering Department.

The car used in making the tests to determine train resistance was a standard interurban car and formed part of the laboratory equipment of the Railway Engineering Department. The principal dimensions are as follows:

Length over all	45 ft.
Width over all	8 ft. 4 in.
Distance between truck centres	22 ft. 4 in.
Height from under side of sill to top of roof,	9 ft. 6 in.

The car is divided into two compartments, the smaller of which contains the recording instruments as well as part of the motor control apparatus. In the larger compartment are a motor generator for supplying low voltage current for bond testing, a water rheostat for regulating the voltage on the motors, and several other pieces of apparatus for work of a special nature. The trucks are of the C60 type. The wheels on one truck are rolled steel and on the other chilled iron. The wheel base is 6 ft. 4 ins., and the wheels are 33 ins. in diameter and have the M. C. B. tread and flange. The motive power equipment consists of four 101D Westinghouse motors, with a nominal rating of 50 h.p. The gear ratio is 22.62, thus giving the car a maximum speed of 45 miles an hour, with a pressure of 500 volts on the trolley-wire. The motor control is the Westinghouse unit switch system of multiple unit control. The switch group, circuit breaker, reverser, limit switch, and line relay are installed in the interior of the car for the purpose of inspection under operating conditions and instruction of students. The straight air brake system was used, hand brakes being installed for use in emergencies.

Car used in making tests.

The instrument equipment consists of two integrating wattmeters, a recording ammeter, a recording voltmeter, two speed-recorders, an air pressure recorder, and a portable wind vane and anemometer. One integrating wattmeter was used to measure the total power supplied to the motors, and the other one measured the power supplied to the air compressor motor. The recording ammeter and voltmeter were of the graphic recording type, and gave continuous records of the current supplied to the motors and the voltage across the motor terminals. The speed recorders were of two different types, the first one installed consisting of a recording ammeter of low range connected to a small generator, which was driven from the axle and separately excited from a storage battery carried on the car. The other speed recorder was the well-known Boyer recorder, which was installed for the purpose of checking the speed record obtained by means of the electric speed recorder. The air pressure recorder was connected with the brake cylinder, and was used in making braking tests as well as serving to show whether or not the brakes were fully released during any tests. The portable anemometer and wind vane were mounted on a tripod and set up in the field adjacent to the track, and were used to determine the direction and velocity of the wind for each individual test. The record sheet or chart was 40 ins. wide, and was arranged to be operated on either a time base or a distance base. In operating on a time base the paper rolls were driven by a small electric motor, while for operation on a distance base the rolls were driven from the axle by means of a system of gears. A record of distance was obtained by means of a magnetically operated pin, which made an offset in the distance line every 50 ft. The magnet circuit was completed by a contact-maker driven from the axle. The location of the car at any instant was obtained by a pen operated by a magnet, the circuit of which was closed by means of a telegraph key operated manually as the car passed the poles. The time record (fig. 5) consisted of two lines operated by magnets, which had their circuits closed every five seconds by a time-marker clock, thus producing offsets in the time lines at five seconds' intervals. In addition to these recording instruments, indicating instruments were also connected in the circuits, and the records were frequently checked with the readings on the indicating instruments. Attempts have been made from time to time to develop an instrument for recording acceleration. The best results have been obtained by using a one-kilowatt transformer having the low tension winding connected in series with the ammeter used for recording speed and the high tension winding connected to a millivoltmeter. The jump spark method of recording was used with partial success, but owing to the pressure of more important work, this accelerometer was never fully developed.

Interior of Car used in making tests

In making the tests the car was operated on the Illinois Traction System's track between Champaign and Danville. This track was of the ordinary interurban construction, the rails 30 ft. long and 70 lbs. to the yard, being supported by sleepers spaced two ft., centre to centre, and the ballast was mostly gravel. A very accurate survey of the track was made and the exact location of each pole determined.

The scheme of operation followed in making the tests was to select a section of track free from grades and curves and of as great a length as possible. Owing to the fact that the kinetic energy of the car at high speeds was relatively large, and reading the speed record to

the second decimal place rather difficult, no sections under 1,000 ft. in length were used, and as this division of the railway system contained a large number of curves, it was impossible to obtain suitable sections much more than 2,000 ft. long. A certain section of track was selected as the scene of operations for a certain day, and the car was run in both directions over this section as many times as possible. The regular service on this division being frequent it was unusual to obtain more than 40 individual tests in any one day, and the number of tests fell on some days to 10 or 12. The car was run to a point about 1,000 ft. from the end of the selected section, and brought up to the required speed some time before entering this section. While making the tests to determine the increase of train resistance due to curves, various curves of different radii, ranging from 1 to 15 degrees, were selected, and accurate surveys made of the curves and sections of tangent track at both ends of the curves. The car was operated at a uniform speed over the section of tangent track before entering the curve, the curve, and the section of tangent track after leaving the curve.

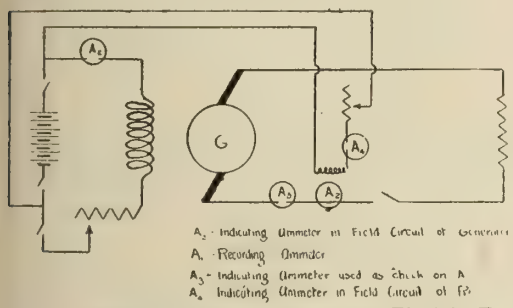

Fig. 3. Speed Recording Apparatus, Electric Test Car.

The method followed in working up the data recorded on the charts was as follows: At each end of the sections selected a perpendicular to the base lines was drawn across the chart, and, using a templet to correct for the arc described by the recording pens, the exact locations of each of the pens at the times of entering and leaving the sections were obtained. Perpendiculars were then drawn from these points to the various base lines, and the area enclosed by the base line, the record, and the two perpendiculars were obtained by using a planimeter. The mean height was then obtained by dividing the area by the distance between the perpendiculars, and the mean values of current voltage and speed were read on the calibration curves. The time taken to pass over the section was obtained by measuring the time line from the last five second offsets to the perpendiculars at the ends of the section. Knowing the current, voltage, and time, the energy delivered to the motors were calculated. From the speed record the speeds at the entrance and exit of the section were obtained, and the kinetic energy of these speeds calculated. From the profile the elevations were obtained, and the energy input or output due to grade was calculated. Thus energy delivered to the motors plus or minus the change in kinetic energy plus or minus the energy due to grade divided by the length of the section gave the tractive effort over the section. This divided by the weight of the car in tons gave the true train resistance in pounds per ton, the various values of which were then plotted against speed and an average curve drawn which showed the value of train resistance for all of the various speeds. In determining the increase of resistance due to curves the same method was followed, except that the tangential section at each end of the curve section was worked up to avoid any possible error due to change in the relative direction of the wind with respect to the car. The superelevations of all curves were carefully ascertained and made a part of the records.

A total of about 400 tests was made in the determination of train resistance for straight, level track, and the values obtained in these tests were plotted. As is to be expected in work of this nature, all of the points did not lie on a curve, so an average curve was drawn such that the sum of the moments of the points lying on one side of the curve was equal to the sum of the moments of the points on the other side of the curve. In this way a curve was obtained which was held to represent the average values of train resistance for ordinary interurban cars on a track of this type. At the same time the fact that a considerable number of points lay further from the curve than any possible error could account for would indicate that the train resistance varies over a considerable range, and shows the necessity of experiments to determine the values of individual elements of train resistance. The results of the tests to determine the increase of train resistance due to curvature were plotted in a series of curves showing the increase for curvature of 1, 2, 3, 5, and 10 and 15 degrees.

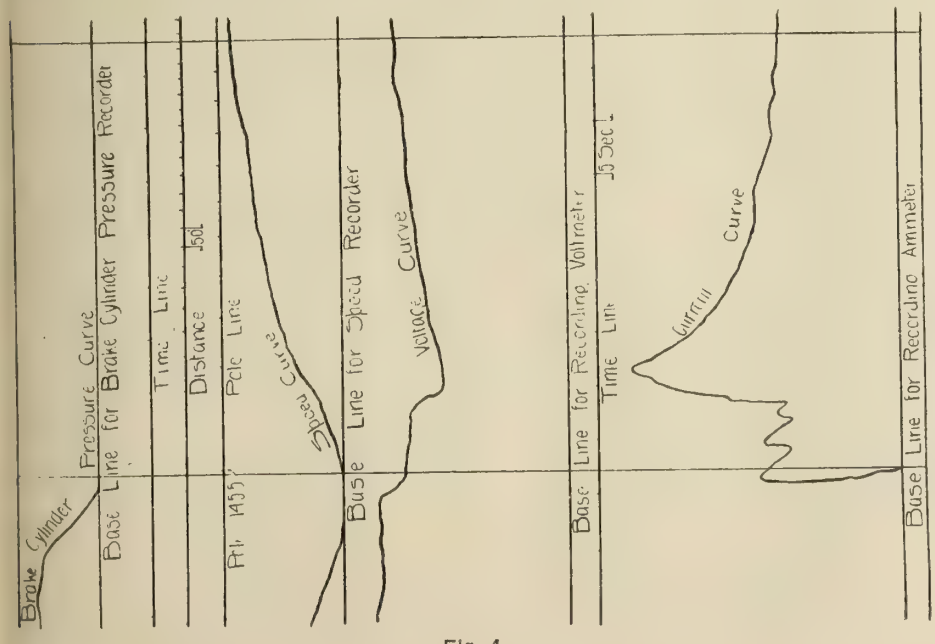

Fig. 4.

The foregoing paper was read before the Canadian Society of Civil Engineers recently.

Electrical Energy Inspection in B.C.—An act was passed last session of the British Columbia Legislature providing for the appointment of an officer whose duty it shall be to inspect the premises and plant used for the generation, transmission and supply of electrical energy for power, lighting, heating or other purposes. The powers of the Inspector are extensive, as he is authorized to require the attendance of any person he may desire to examine, and the production of all books, in connection with the plant under inspection, and a penalty of $50 may be enforced for obstructing the Inspector in the discharge of his duties. The Inspector may make an order directing the remedying of any defects, such order to become operative on confirmation by the Government; and if it is not complied with a penalty of $50 a day may be enforced until the defects are remedied. The inspectors under the act, it is provided by sec. 17, shall in no wise relieve any company from any liability or responsibility resting upon it by law.

Alberta and Saskatchewan Central Ry.—The Alberta Legislature has incorporated a company with this title to build a railway through the centre of the province east and west, with branch lines, connecting up the principal towns.

The 100,000 tons of steel rails ordered by the C.P.R. from the Algoma Steel Co., as mentioned on page 361, include various orders placed within the last four months.

New Ways To The Woods

The six railways of the Canadian Northern Railway system offer the widest choice of new territories for the fisherman, canoeist, camper and hunter.

IN NOVA SCOTIA the Halifax and Southwestern Railway, from Halifax to Yarmouth, serves seven hundred miles of ocean shore; two score generous trout streams and the famous Rossignol lake system.

IN CAPE BRETON, sixty miles of the Gulf of St. Lawrence shore is skirted by the Inverness Railway, which gives easy access to the Margaree valley—far-famed for its salmon fishing.

IN QUEBEC, the Canadian Northern, Quebec and Quebec, and Lake St. John Railways give easy access to the Saguenay, Upper St. Maurice, the Batiscan, the La Tuque game and fish preserve, and the valleys of the St. Lawrence and Ottawa. All good fishing waters, abounding with ouananiche, trout and bass.

IN ONTARIO, the entire range of the Muskokas, the Georgian Bay hinterland, the French, Pickerel, Still and Maganetawan rivers—well stocked with bass, mascalonge, and pickerel, are best reached by the Canadian Northern Ontario Railway.

IN WESTERN ONTARIO and the prairie provinces, the Canadian Northern Railway serves over three thousand miles of splendid territory. The Rainy River section follows the old Dawson fur trail, which is the finest canoe trip on the continent. There is an amplitude of sporting opportunities for the camera hunter, the fisherman and canoeist.

For literature and general or special information inquire of the information Bureau, Canadian Northern Railway System, Toronto.

Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—The British Columbia Legislature has confirmed an agreement made between the company and the city of Victoria. The agreement provides that within three years the company will expend $1,500,000 in the construction of an electric plant near Victoria, having a capacity of not less than 10,000 h.p., such power to be used in extensions to the company's electric railway, lighting and power undertakings. The company also agrees to expend $250,000 upon extensions of its existing power plant in Victoria. The corporation agrees to take for lighting purposes, but not for sale an amount of electricity equal to that now generated by the existing plant of the corporation at a price which shall not exceed one-half of the present cost to the corporation of generation. The charge made for the electric light and power in the city shall not exceed that charged in Vancouver. The corporation agrees not to become a competitor of the company in the sale of electric light or power.

A contract is reported to have been let to J. W. Pike, Vancouver, for the completion of the prairie section of the line to Chilliwack, about five miles. The contract was originally let to the Seattle and Puget Sound Dredging Co., but was later on taken over by the company. The section is a difficult one to build owing to the swampy character of the ground. (April, pg. 310).

Calgary, Alta.—An offer has been made to the Calgary, Alta., City Council, by a local syndicate, that it will build under the City Engineer's supervision, a line of 1.5 miles, through a building site owned by it, as soon as the city builds the proposed Crescent Heights loop line. The syndicate proposes to make over the line to the city when completed, on condition that it is maintained and operated as a part of the city system. (Mar., pg. 231).

Buffalo and Fort Erie Ferry and Ry. Co.—See Fort Erie Ferry Ry. Co.

The Couteau Power Co., we are advised has been incorporated in British Columbia to develop some 5,000 h.p. at Shuswap Falls, and part of its plan of operations is the construction of standard gauge electric railways through the orchard districts. The first line, proposed to be constructed, will be from Lumby to Vernon, 17 miles. Later as the orchards come into full bearing a line will be constructed from Vernon to Kelowna, 30 miles, with spurs and branches at Kelowna, Summerland, Penticton, etc. The present idea of the company is to use the standard freight cars of the steam railways, load them at the various packing houses and ship straight through to the eastern markets. The report that a mono-rail or gyroscope railway is to be built through the district is, we are advised, a canard, and it is surprising that such a wide circulation was given to it. The company's officers did receive a letter from the inventor of the gyroscope plan. (Mar., pg. 231).

The Fort Erie Ferry Ry. Co.'s application for an act increasing its capital stock, and changing its name to the Buffalo and Fort Erie Ferry and Ry. Co., has been passed by the Ontario Legislature.

Frank, Alta.—A project is reported to be under consideration for the construction of an electric railway from Frank, to connect up the mining towns and villages in the Grassy Mountain district. The Canadian-American Coal and Coke Co., is the principal company interested in the development of the district which is estimated to have a population of about 9,000.

Halifax Electric Tramway.—A special committee, appointed by the Halifax, N.S., City Council, is considering the question of double tracking certain portions of the Tramway Co.'s lines, and of securing their extension northerly. The company is desirous of building a second track on certain streets, but the Council before giving permission for the work to be gone on with is anxious to secure the building of some additional lines. (July, 1908, pg. 509).

London and Lake Erie Ry. and Transportation Co.—At the organization meeting in London, Ont., April 7, the proposal to extend the old South Western Traction Co.'s line from London to Ingersoll was discussed. It is said that this work will be gone on with this year. At Ingersoll a connection will be made with the Woodstock, Thames Valley and Ingersoll Ry. The following elections and appointments were made: President, M. A. Verner; directors, W. F. Dinnick, S. C. Smoke, W. K. George, G. B. Woods, Toronto; T. H. Purdom, J. Milne, London, Ont. A special meeting of shareholders will be held in London, May 10, to authorize the issue of $700,000 of 1st mortgage bonds to be used in connection with the purchase of the South-Western Traction Co.'s line and franchises.

Montreal and Southern Counties Ry.—The Dominion Parliament has extended the time within which the company may complete the building of its authorized lines. (Feb., pg. 147).

Montreal East Boulevard Co.—Application is being made for the incorporation of a company with this title to construct a boulevard from Montreal to the northeast extremity of Montreal Island, and to construct a tramway thereon. The provisional directors are:—M. J. A. Prendergast, J. T. R. Laurendeau, G. Harbruboise, Montreal; Joseph and Jean Versailles, Pointe-aux-Trembles, Que.

Nelson Electric Street Ry.—The British Columbia Legislature has ratified a by-law of the city of Nelson guaranteeing the bonds of the Electric street railway in that city to the amount of $25,000, and interest thereon at the rate of 6%. The corporation leases the existing tramway lines to the company for 10 years at a rental of $1 a year, and thereafter for a further 10 years at an annual rental equal to 6% on the cost of the lines to the city. Power is supplied for the present by the city at a nominal charge. The lines, which came into the possession of the city on the failure of the old company to operate them, had not been in operation for a considerable time when the present company was organized in Sept., 1909, to take them over and operate them.

Under the by-law guaranteeing the company's bonds which has recently been confirmed by the B.C. Legislature, it is provided that no extensions shall be built unless plans have been approved by the City Engineer and City Council, and such extensions must be completed and in operation within 12 months after approval has been given. The overhead or trolley system is to be used entirely, and the company is permitted to use the electric light poles owned by the city, for street railway purposes. The by-law provides for the construction of the following extensions of the present lines:—

Four blocks across Gore St. to Hendry St., down Hendry St., to Mill St., up Mill St. to Park St., down Park St. to Silica St., down Silica St. to Ward St., down Ward St. to the present existing line on Baker St., such lines to be constructed within six months after the by-law becomes operative. The company has authority under the by-law to erect car barns and a power plant. For the present power is supplied by the city at a nominal charge.

A contract has been let to L. G. Brandt for the construction of some new track complete, to be built immediately. The rails, poles and other supplies are on the ground. A new car barn has been completed. (Mar., pg. 231).

Niagara Falls, Welland and Dunnville Electric Ry.—At the organization meeting recently held the following were elected officers for the current year:—President, F. R. Lalor, Dunnville, Ont.; Vice President, G. Arnold, Ridgeville, Ont.; Secretary, F. E. Misener, Marshville, Ont.; Treasurer, P. H. Burger; Solicitor. H. A. Rose, Welland, Ont. It is reported that survey work will be started by J. C. Gardiner, of Niagara Falls, Ont., at once, from Dunnville. (April, pg. 311).

Niagara, St. Catharines and Toronto Ry.—A Niagara Falls, Ont., press report states that it is proposed to build a line during the summer to Fort Erie. (Mar., pg. 231).

Nipissing Central Ry.—The engineering inspector of the Department of Railways, April 12, approved of the operation of cars over the line between Haileybury and Cobalt, Ont., at a maximum speed of 15 miles an hour. At that time about a mile of ballasting had to be completed. It is expected that the line will be opened for traffic May 1.

An extension of 1.5 miles to Port Cobalt will it is said be constructed immediately, and the proposed extension to New Liskeard, will be gone on with as soon as the financial arrangements have been concluded. (April, pg. 311).

Ontario West Shore Ry.—It is reported that grading has been completed on about 25 miles between Goderich and Kincardine, Ont. Rails are lying at Goderich, and tracklaying will it is said be started at an early date. It is expected that the line will be ready for operation by the end of the summer. Power is to be obtained from the Maitland River Power Co., which is developing 15,000 h.p. from a head of 105 ft. (Nov., 1909, pg. 848).

Ottawa Electric Ry.—A meeting between officers of the company and the civic street railway extension committee was held April 13, when the various routes proposed for extensions to the south, and also to the cemeteries were considered. A report will be presented to the city council. (Mar., pg. 233).

Peoples Ry.—A by-law was passed at Berlin, Ont., Mar. 31, favoring the taking of $60,000 of stock in this company, on condition that the projected line be extended from New Hamburg through Berlin to Guelph. It has been decided by the Wilmot tp. council to submit to vote a by-law to take $30,000 stock in the company to aid in the construction of an electric railway through the municipality. (Mar., pg. 233).

Port Arthur-Fort William St. Ry.—The Joint Street Ry. Board is considering the advisability of laying 80 lb. rails all over the lines in Port Arthur, Ont., and of carrying out a number of improvements on the other lines. (April, pg. 311).

2 GRAND PRIZES AND
5 GOLD MEDALS

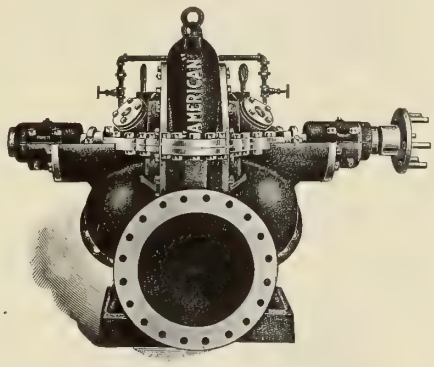
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

BURNETT, ORMSBY & CLAPP, LTD.

38 Wellington St., E. TORONTO.

Quebec Ry., Light and Power Co.—A by-law has been passed increasing the directors from three to 15.

Quebec Ry., Light, Heat and Power Co.—It is reported to have been decided to erect an eight story building for station and office purposes on the site of one of the Jacques Cartier market halls recently purchased by the company.

The directors at a meeting held April 11, decided to proceed with the building of a double track extension of six miles from Maple Ave., to Quebec Bridge site, and a double track from the Montmorency Falls to Ste. Anne de Beaupre. Some extensions are to be made at the Kent House, and park during the summer.

There has been deposited in the Registry office at Quebec plans of the proposed extension of the line to St. Colomb de Sillery, for which the approval of the Board of Railway Commissioners is to be asked. (Dec., 1909, pg. 931).

Regina, Sask.—A press report states that the City Council has granted a 20 year franchise for the building and operation of an electric railway in the city to J. W. D. O'Grady, J. A. Anderson and J. Geddes of Winnipeg. The agreement provides that the city can take over the lines on the expiration of the franchise. (April, pg. 311).

The St. George Electric Co. is applying to change its name to the Bearice Electric and Power Co., with power to construct an electric tramway from St. George station, on the Quebec Central Ry., through St. George and the Valley of La Rivieri du Loup, to the International boundary between Quebec and Maine. Campbell and Gendron, Sherbrooke, Que., are solicitors for applicants.

St. Thomas St. Ry.—The city council is preparing to give the ratepayers another opportunity of passing a by-law (the one submitted in Jan. being defeated) authorizing the raising of money to put the municipal street railway in proper condition. The City Engineer reported to the Council April 1, that unless the line was improved very soon its operation would have to be suspended. (Jan., pg. 59).

Sherbrooke Ry. and Power Co.—A franchise for 28 yaers has been granted to the company, a condition being that $500,000 will be spent upon improvements and extensions at once. C. J. McCuaig, Montreal, is President of the new company, which has taken over the nine year old line of the Sherbrooke St. Ry. Co. He, with others interested, was in the city April 4, and in an interview said the work of reconstruction and extension will be carried out under the direction of Ross and Holgate, Consulting Engineers, Montreal. The company proposes to develop a water power on the Magog River and to supply power for manufacturing purposes. C. B. Hibbard is Vice President and General Manager. (See Sherbrooke St. Ry., Mar., pg. 233).

Simcoe Ry. and Power Co.—An extension of time for the construction of this company's projected electric railway near Midland, Ont., was granted at the last session of the Ontario Legislature. The act also contains a section confirming by-laws passed by the County of Simcoe, and the townships of Ting and Matchedash, granting right of way for a pole transmission line. (Feb., pg. 147.)

Suburban Tramway and Power Co.—Application is being made for an act authorizing the company to change its name; to exercise throughout Montreal Island and Soulanges and Terribonne counties all the rights and privileges conferred upon it by law; to construct underground railways and terminal stations, and to put the company under the control of the Quebec Public Utilities' Commission in respect of such powers. The company is a subsidiary of the Montreal Street Ry. Co.

Toronto and York Radial Ry.—A press report states that the company has under consideration plans for the extension of its Scarboro division northerly from the Kingston Road to Markham, Ont. The company has purchased about 92 acres of land south of the Kingston Road, 6½ miles from the Woodbine, for use as a picnic park; a line will be run into the park. (April, pg. 311).

Toronto Ry.—The City Engineer, April 15, received a letter from the General Manager Toronto Ry., stating that it had been decided to lay a double line of tracks on five new routes, and single tracks on two other new routes. Girder rails are to be laid on the down-town streets, and 70 lb. T rails on the other streets.

The City Engineer reported to the Works Committee as to certain routes upon which the Council should request the company to extend its lines. (April, pg. 311).

Toronto Tube Railways.—The committee of the Toronto City Council having in charge the proposals for the construction of a system of tube railways in the city, recommends the appointment of a special legal adviser, and an engineer.

Sandwich, Windsor & Amherstburg Ry.

This company does not issue a separate report, its operations being included with those of the Detroit United Ry., of which system it is a part. The following particulars of the S.,W. & A. Ry. are extracted from the D.U.R. report for the year 1909. Mileage on Jan. 1. 1909. 35,813 miles, to which .247 miles were added during the year. Interest on funded and floating debt and taxes, $26,-803.57. Revenue passengers, 3,018,413; transfer passengers, 356,665; employe passengers 20,920; total, 3,395,998. Receipts revenue passengers, .0541; receipts per passenger, .0480. Car mileage, 854,-641; earnings car mile, .1991; expenses car mile, .1078; net earnings car mile, .0913. An extension of lighting plants and addition to power house was built at a cost of $26,644.34. In the D.U.R. assets the S.,W. & A.R. is included as an investment at $253,134.91, and under accounts current at $193,075.92.

C.P.R. LANDS

The Canadian Pacific Railway Company have 3,000,000 acres of selected lands for sale in Manitoba, and Saskatchewan.

Maps, as enumerated below, showing these lands in detail, will be sent free on application.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre.
Map No. 2—South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre.
Map No. 3—Main Line, 3rd and 4th Meridians (generally)	8.00 to 10.00 per acre.
Map No. 4—Part of Western Saskatchewan, 3rd to 4th Meridians	10.00 to 25.00 per acre.
Map No. 5 South-Western Alberta	8.00 to 25.00 per acre.

All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160	Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$ 65.28	and nine instalments of	$160.00
"	"	9.00	"	"	215.70	" " "	73.46	" "	180.00
"	"	10.00	"	"	239.70	" " "	81 62	" "	200.00
"	"	11.00	"	"	263.60	" " "	89.78	" "	220.00

Electric Railway Notes.

The Montreal St. Ry., has received two summer cars from the Preston Car and Coach Co., Preston, Ont.

City Engineer Bell has been appointed Manager, and L. D. Gillett, Superintendent of the municipal electric street railway at St. Thomas, Ont.

Three actions have been entered against the British Columbia Electric Ry., for damages in connection with the accident at Lakeview last Nov., when 14 were killed.

The Nipissing Central Ry., has received two fully equipped cars from the Preston Car and Coach Co., Preston, Ont., exactly similar to those delivered in Feb., and described in our Mar. issue.

The Toronto Ry., is reported to be contemplating a scheme for the use of creosote blocks under rails instead of concrete as at present, with a view to lessening noise.

It was reported to the Montreal City Council, April 12, that the Montreal St. Ry. was hauling C.P.R. freight cars over certain of its tracks at night. It was decided to investigate the report.

A map showing the electric lines in Toronto on a very large scale is being prepared for the Ontario Railway and Municipal Board, by K. L. Aiken, Electrical Engineer to the city council.

The London St. Ry. has granted an increase of pay to its employes, which works out to an additional 10c. a day, with a 9½ hour instead of a 10 hour day.

The Hull Electric Co., has received from the Preston Car and Coach Co., Preston, Ont., three cars, 38 ft. over body, 5 ft. 2 ins. length of vestibule, 49 ft. 4 ins. length overall, equipped with S.M.E. Westinghouse air brakes.

The Quebec Public Utilities Commission held its first meeting, April 5, to consider rules of procedure. It has been decided to meet for the transaction of business on the first Tuesday in each month.

W. H. Elson, who has been in the C.P.R. employ for about 23 years, as conductor and trainmaster, has been appointed Trainmaster British Columbia Electric Ry., in charge of all matters connected with the rolling stock on the New Westminster, Lulu Island and North Arm interurban lines. This is a

There has been discovered in a vault in a lawyer's office in Windsor, Ont., an agreement between the town of Sandwich, Ont., and the Sandwich, Windsor and Amherstburg Ry., granting the company a perpetual franchise. This agreement has been missing for some time.

The Brantford St. Ry. has adopted a new system of collecting fares and registering the number of passengers on its cars. The passenger puts the amount of fare into a slot machine (weight, 20 oz.) carried by the conductor, in which it is registered. No money for fares is handled by the conductor until after it is registered. Tickets are dealt with in the ordinary way.

The B.C. Electric Ry. is building at its own car shops 22 city passenger cars and four box cars, during the year purposes constructing there, in addition to the foregoing:—12 city passenger cars, six suburban passenger cars, two line cars, one express car, three box cars and three cabooses, and orders will be placed for 75 flat cars, one locomotive for shunting purposes and two electric locomotives. The estimated cost of this additional equipment is $435,000.

For the second time within two years the Montreal St. Ry. Co. has announced a voluntary increase in the scale of wages of motormen and conductors. The motormen and conductors receive the same pay, but are divided into three classes. Those of one and two years' standing will now receive 19c. an hour instead of 18c. Those of from two to five years' standing will receive 20c. instead of 19c., and those of more than five years' standing will receive 21c. an hour.

The Nova Scotia Legislature is considering a bill amending the act passed in 1909 appointing a Board of Public Utility Commissioners. It is proposed to add two new sections, the first providing that no public utility shall place wires "upon, along, under or across" any street in a city or town without first obtaining the consent of the council; and the second, that no similar work shall be done in any municipality other than a city or town, unless one month's notice shall have been given to the Warden and the councillors, who can make an agreement. In either case, the Public Utilities Commission can approve in the event of a disagreement.

Telegraph and Cable Matters.

The twenty-ninth annual meeting of the Association of Railway Telegraph Superintendents, is announced to be held at Los Angeles, Cal., May 16 to 20.

The recent trouble between the Winnipeg Grain Exchange and the telegraph companies operating there has been got over, and ample space has been allotted to the C.P.R., Canadian Northern and G.N.W. Telegraph Cos., in the Exchange for handling the business.

A wireless telegraph installation has been placed on board a tug at Port Arthur, so that communciation can be made with all vessels on the lakes similarly equipped. This is a temporary arrangement to serve until the erection of a Government station at the port.

The bills to control ocean cable rates and to amend the Telegraph Act, were dealt with in the Senate, Apr. 15, and, on the second reading, Sir Richard Cartwright stated that persons interested had asked to be heard and the usual practice would therefore be departed from, and the bills sent to the Railway Committee.

Press reports state that the C.P.R. commercial telegraph operators in the west have appointed a committee to deal with the question of increases of pay. It is stated that they are asking that the maximum wage be increased from $90 to $110 a month. C.P.R. operators on the Ontario Division are also reported to have asked for an increase of 10% over the present schedule.

The C.P.R., and G.N.W. Telegraph companies inaugurated a night lettergram service Apr. 13, the charge for 50 words or less, being at the regular day rate for 10 words, and one-fifth of that rate will be charged for each additional 10 words, or part thereof. These rates apply to all points reached by the companies' lines, and also to connecting offices in the U.S.

The Marconi wireless telegraph station at Glace Bay, N.S., which was burned last year, has been reconstructed, and was opened for business Apr. 20. Offices have been opened at Montreal, where a system will be exhibited showing the positions of the various Atlantic liners, which are equipped with Marconi apparatus. The rate for trans-Atlantic messages has been fixed at 12c. a word.

On the passing of the bill in the House of Commons, to control the rates and facilities of ocean cable companies, and to bring them under the jurisdiction of the Board of Railway Commissioners, the Postmaster General recently stated that concurrent legislation would be passed in the British Parliament to make the law operative. On Apr. 12, the British Postmaster General stated in the House of Commons, in reply to questions, that he was unable, at present, to make a statement regarding the course the British Government would take.

Among the Express Companies.

It is not anticipated that the Board of Railway Commissioners' judgment in connection with the enquiry into express rates, will be delivered before about the middle of May.

The Dominion Ex. Co. is erecting a transfer building at Galt, Ont., for handling express matter between the C.P.R., and the Galt, Preston and Hespeler St. Ry. It will be of red pressed brick, and its dimensions, 20 by 40 ft.

H. J. Parr, Travelling Auditor Canadian Ex. Co., met with a rather peculiar accident recently. A loaded revolver was being returned to one of the safes in the St. John office, when it was dropped and discharged, the bullet entering his left leg. The wound, though painful, is not serious.

The Board of Railway Commissioners, which commenced an enquiry into the rates of express companies operating in Canada, Apr. 6, has approved a draft form of contract, whereby the companies' liability for loss or damage, is limited to $50. Provision for greater liability in special cases is also made, when higher rates are charged. The amount of the liability is to be placed in red at the top of each receipt, and is to remain at that figure unless otherwise stated.

The Canadian Expressmen's Mutual Benefit Association's accounts for 1909 show receipts of $5,148.77, including $2,364.95 brought forward from 1908, and disbursements of $1,679.51, leaving a balance of $3,469.26 to be carried forward to the current year's accounts. The Death Benefit Fund has been taken over and a balance of $76.75 transferred to the above, making the amount carried forward $3,546.01. The officers for the current year are:—Hon. President, J. Bryce; President, E. Allan; Vice President, B. S. Murray; Secretary-Treasurer, W. T. Murphy, Toronto.

The express companies in dealing with the question of rates on corrugated paper, shipping cases and crated paper boxes, used especially by millinery manufacturers, propose, in view of the light weight of parcels, as compared with their size, that all cases, exceeding total height, length and width combined, of 50 ins., should be accepted only at minimum rates, and that the maximum measurement of such cases should be 110 ins. For cases measuring over 50 ins., and under 60 ins., the minimum weight proposed as a basis is 30 lbs., and a corresponding scale is proposed for larger packages.

Tramway Inspection in British Columbia.—By an act passed last session of the British Columbia Legislature, the Lieut.-Governor in council is authorized to appoint an officer whose duty it shall be from time to time, to inspect all tramways constructed, in course of construction, or that may hereafter be constructed within the province; and to make rules and regulations for enforcing the provisions of the act, especially for regulating the speed at which cars may run, and providing penalties for infractions of the rules. All the provisions of sections 51 to 76, both inclusive (sections 52 to 56, both inclusive excepted) of the B. C. Railway Act are to apply to tramways, and to the inspectors and inspections thereof, the word "tramway" being substituted for "railway," and "Attorney General" for "Chief Commissioner of Lands and Works." Tramway is interpreted as including street railway.

LOCOMOTIVE
AND
SHIP REPAIRS

The THERMIT Process permits of all heavy wrought iron and steel sections being welded without removing them from their position. Locomotive frames are welded without dismantling the engine. In the same way sternposts of steamships, rudder frames, crank shafts, etc., are repaired.

THERMIT enables you to place locomotives and steamships in commission with least possible delay. Process sanctioned by the British Corporation for the Survey and Registry of Shipping.

The Merchants Mutual Line Limited.

The Merchants Mutual Line, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $750,000 and office at Toronto, to own and operate steam and other vessels, wharves, docks, elevators, etc., and to carry on a general shipbuilding, elevator, navigation and transportation business; to enter into any arrangement for sharing of profits, union of interests or co-operation with any company which it may consider of benefit, and for other purposes. The provisional directors are J. S. Lovell, W. Bain, R. Gowans, H. Chambers and R. M Coates, Toronto. Mackenzie, Mann & Co., are the controlling interest in this new company.

The Merchants Mutual Line, Ltd., has taken over the steamships Plummer, Pellatt and Ames from the Canadian Lake and Ocean Navigation Co., and has bought the Beaverton and Mapleton from the Merchants Steamship Co., and the Saskatchewan from the Colonial Transportation Co. The Saskatoon was described in our March issue, the order for her having been placed in Scotland by J. W. Norcross and R. M. Wolvin. All these six vessels will be run in the Merchants Mutual Line, which must not be confounded with the Merchants Mutual Line, Ltd., the former being simply a line and the latter an owning company. The steamships Acadian and Canadian, owned by the Merchants Mutual Steamship Co. will also continue in the Merchants Mutual Line.

The steamships Turret Court, Turret Cape, Turret Chief and Scottish Hero remain under the Canadian Lake and Ocean Navigation Co.'s ownership.

J. W. Norcross, Toronto, has been appointed General Manager Merchants Mutual Line, Ltd., and he will probably also manage the Canadian Lake and Ocean Navigation Co., which is also controlled by Mackenzie, Mann & Co. interests. J. W Norcross & Co., are the General Western Agents of the Merchants Mutual Line.

Inland Marine Insurance.

F. King, Counsel Dominion Marine Association, in a recent interview dealt with the work of the advisory committee of the Great Lakes Protective Association. It appears to be a foregone conclusion he stated, that an addition of 1% will be made this year to the rate of 5% now in force on the lakes above Lake Ontario, and the fact that it is also practically decided by underwriters to restrict the sailing dates to Nov. 30, indicates that recent heavy losses in the last days of the season are responsible for the increased charge. A proposition has now been made that the vessel which makes no claim for damages under her policy should be entitled to a refund of this extra premium.

Prominent underwriters are interested in favor of the proposal, on one condition—namely that a substantial proportion, say 25%, of the refund should go to the master or executive officers of the ship by way of bonus, thus not only rewarding those directly responsible for the safety of the vessel, but also affording a positive incentive to all masters to navigate with caution, and so decrease the risk of loss on all boats, even in cases where the bonus is not actually earned. The underwriters apparently refuse to trust individual owners to administer the bonus properly, and feel that this stipulation should be part of a general scheme.

Mr. King says that while the Protective Association will continue to protest against any extra premium, it will, if forced to submit to the increase, support the above proposition, on a counter condition that while 75% of the refund shall go to the owner, the 25% shall be administered by the committee of the Protective Association subject to certain settled

C. H. NICHOLSON,
Manager G.T.P.R. Pacific Coast Steamship Lines.

rules; for, granting that the underwriters are correct in requiring a disinterested trustee for this 25%, cases will frequently arise where a master whose vessel has not had any claims under her policy will still have been grossly negligent and possibly responsible for a considerable number of minor troubles less than the amount of the deductible average, the amount of loss which the owner himself bears in all cases. It is proposed that funds not used for bonuses be devoted towards navigation.

The Insurance Institute, which will meet at a very early date in London, Eng., will be largely guided by representations from New York, and the Protective Association is negotiating with underwriters in New York hoping to have matters settled without delay. Mr. King states that all his colleagues on the committee are in favor of the bonus principle and that the results of a similar system in force in the big Pittsburg Steamship Co., show conclusively that a plausible theory has in that case worked well in practice.

In addition to the 5% mentioned, vessels which trade down Lake Ontario pay 1% more and trading all the way to Montreal pay still another premium of 1% additional. The rate this year from Montreal would thus be 8%. A strong effort is being made to have these two additional premiums on lower waters reduced at least one-half, and the proposed reduction is being considered in connection with the present revision. Vessel owners complain that losses on the lower waters do not by any means justify the present additional premiums. Data of the Protective Association to the present time support this contention.

Coast, Lake and River Officers for 1910.

The following appointments have been made by the principal navigation companies for their various steam vessels and tugs for the current year, in addition to those given in our last issue. In the first column is given the name of the vessel, in the second that of the captain, and in the third that of the chief engineer:—

Notices to Mariners.

The Department of Marine has issued the following:—

23. Mar. 18. 49.—Nova Scotia, south coast, Liverpool, range light established on bridge. 50.—Nova Scotia, Cnaso harbor, Arichat, lights to be improved.

24. Mar. 18. 51.—Quebec, Ottawa River, Ste. Anne lock range, color of daymarks. 52.—Ontario, River St. Lawrence, gas buoy to be established southward of Renshaw island. 53.—Ontario, River St. Lawrence, gas buoy to be established at shoal below Glengarry point. 54.—Ontario, River St. Lawrence, Colquhoun island, gas buoy withdraw. 55.—Ontario, Lake Erie, Port Maitland, Port Burwell, lights improved.

25. Mar. 18. 56.—Quebec, Gulf of St. Lawrence, Magdalen islands, Sandy Hook channel, color of buoy. 57.—Quebec, River St. Lawrence, Bersimis River, range lights discontinued. 58.—Quebec, Saguenay River, Chicoutimi, character of light. 59.—Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Montreal harbor, character of Bellerive park and Hochelaga range lights.

26. Mar. 29. 60.—Canada, Arctic waters, Hudson Strait, and Melville Sound, hydrographic notes.

27. Apr. 4. 61.—Ontario, Lake Huron, Goderich, gas buoy withdrawn. 62.—Ontario, River St. Mary, Sault Ste. Marie Canal, lower entrance, boat light no longer maintained. 63.—Ontario, Rosseau Lake, Ditchburn shoal, light improved.

28. Apr. 6. 64.—Nova Scotia, Bay of Fundy, Minas basin entrance, Cape Sharp, change in character of light. 65.—Prince Edward Island, south coast, Northumberland Strait, Hillsborough Bay, Charlottetown harbor, Blockhouse point, hand fog horn at light station. 66.—Prince Edward Island, south coast, Bedeque harbor, Indian point, hand fog horn at light station. 67.—Newfoundland, south-east coast, Cape Race, old tower removed. 68.—Newfoundland, Labrador, Belle Isle, north end, fog alarm, direction in which horn points.

29. Apr. 6. 69.—British Columbia, Kootenay Lake, Lardo, light established. 70.—British Columbia, Malaspina Inlet, Theodosia Arm, hydrographic information. 71.—British Columbia, Grenville channel, Lowe Inlet, position of day beacon.

30. Apr. 8. 72.—Quebec, Gulf of St. Lawrence, Gaspe coast, Grand River, character of light on wharf. 73.—Quebec, River St. Lawrence, ship channel between Quebec and Montreal, St. Antoine range lights, arcs of invisibility 74.—Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Lake St. Peter, Pointe du Lac range, new front range light house.

Montreal Harbor Improvements.

Resolutions have been passed by the Dominion Parliament authorizing the Government to advance from time to time to the Montreal Harbor Commissioners, such sums not exceeding in the whole $6,000,000, as may be necessary to pay off debentures amounting to $100,000 maturing during the current year; to enable the Commissioners to complete the construction of terminal facilities for the port for which plans have been approved; and such other facilities as may be necessary to properly equip the port. The principal and interest of these advances are to be repaid out of the Commission's revenues. The Commissioners propose to add to the wharf accommodations, to deepen the harbor adjacent to the wharves, to lessen St. Mary's current by dredging, to construct sheds on the wharves, to extend the present harbor system of railway tracks, to provide proper unloading facilities, and improved methods of handling cargoes. The plans for all these works had not been prepared, but the works were in line with a very comprehensive scheme which the Commissioners had adopted after having made a very careful examination of harbor improvements and terminal facilities in England, the continent of Europe and the U.S. The amount of the outstanding debentures of the Commission is $13,142,000, of which $1,972,000 is due to the public; and the Government loans, represented by debentures deposited by way of security amount to $11,170,000, to which this $6,000,000 will now be added.

The plans of the proposed improvements were submitted to the representatives of the ocean and inland marine interests, and to the municipal authorities. The chief features of the plans include wharf and pier extension, basin development, the construction of a 2,000,000 bush. elevator, elevation of wharf tracks, floating drydock with a capacity to carry the largest ship entering the St. Lawrence and a complete ship-repairing plant; five new modern steel sheds; elevated tracks from the Jacques Cartier pier to the Racine River, about 22 miles, with connections to the wharves and railways; a new and enlarged Victoria pier; a new pier extending from opposite the offices of the Harbor Commission; 74 acres of new quays; extensions of about 300 ft. to each of the three quays above Victoria pier; an addition to the Bickerdike pier; deepening of the channel on the far side of St. Helen's Island to 35 ft.; extending of the ship channel along the entire harbor to the canal; building of a channel 10,000 ft. long south of St. Helen's Island; the erection of about 40 islets or mounds above Victoria bridge to hold the ice in the spring; the raising of the wharves below the Victoria pier to high-water level and covering them with sheds. The works proposed it is estimated will cost about $18,000,000, and their construction will be spread out over 12 years. The plans have been prepared by the Commissioners' Chief Engineer, F. W. Cowie.

The Navigator or Mariners' Guide, by Capt. R. M. Pugsley, late Master of the U.S. Transport Cervice, has been issued in a new and revised edition by the New Jersey Paint Works, Jersey City, N.J. Of the first edition, 15,000 copies were issued, and the second edition, of which a similar number has been issued, is enlarged and revised. The work is intended to provide in a handy and comprehensive form, for the general use of navigators, yachtsmen and others interested in marine matters, a large amount of valuable information, nautical tables, calculations, etc., not usually available in a sufficiently handy form. All the subjects treated of in the different sections of the volume, are of practical value, and are dealt with by a practical navigator, in a manner easily understood, by even those who are only studying navigation. The text is illustrated with cuts of vessels, signals, etc., and 18 charts have been prepared for distribution with the volume, nine for U.S. ports on the Atlantic coast, and nine for U.S. ports on the Pacific coast. The price of the volume is $2.

Use of United States Canals.

If Canadian vessels have the right to navigate U. S. canals, they have shown a great lack of appreciation of that privilege. It is said that for 40 years no boat of Canadian register has passed through a State canal. By the Treaty of Washington, passed in 1871, the boundary waterways were made free to both nations, as were also the canals forming a part of the Great Lakes and St. Lawrence waterway. It was further provided that the U.S. Government would urge on the individual States the desirability of granting similar freedom in the canals owned by them. For the satisfactory fulfillment of the treaty it was necessary for the Federal Government at Washington to take over the canal at Sault Ste Marie from the State of Michigan.

The only record of a Canadian boat being stopped on a State canal is told by Denis Murphy of Ottawa as follows:

"About 1870 or 1871 the late firm of J. W. McRae & Company built six small barges called the A. B. C. D. E. and F. with the intention of running them through to New York with lumber, and having them returned with cargoes of coal. The first trip they were stopped at Whitehall, and after considerable correspondence and much delay to the barges, they were allowed to proceed with the understanding that in the future they would not be allowed further than Whitehall. These barges loaded coal in New York and came back to Ottawa and were kept in the trade here. About this time the forwarders here found this class of barge too small for the trade, and the larger barges were built. These barges were too large to go through the Champlain Canal, so that there was never any further trouble from that source. This one occasion is the only time I know of Canadian vessels being stopped at any of the U. S. canals."

It now seems probable that on account of this one incident a tradition has grown up in Canada that the New York State canals are not open to Canadian vessels. G. H. Perley, M.P., is responsible for investigations which put a new face on the matter. He has discussed the question with the U.S. Consul-General in Canada, and has received from him the following assurance: "The present constitution of the State of New York was adopted Nov. 6, 1904, and went into force Jan. 1, 1895. Since the adoption of this constitution it is my understanding that the canals have been absolutely free to vessels of all nations."

"It is provided by article 97 of this same constitution that: 'No person shall hereafter be imposed on persons or property transported on the canals, but all boats navigating the canals and the owners and masters thereof shall be subject to such laws and regulations as have been, or may hereafter be enacted, concerning the navigation of canals.'

"By the constitution of the State of New York the control and operation of the canals rests with the Superintendent of Public Works. This officer, who should be thoroughly conversant with the conditions and restrictions enforced by the Government, has written in part as follows: 'I beg to say that there has never been any discrimination either by the rules for the management of the canal, or by statutes, against Canadian owned boats, nor is there at the present time.'"

"Sec. 172 of chap. 13, laws of 1909, known as the Canal Law, prescribes rules for the registration of canal boats. This section, after providing that the owner of boats navigating the canals shall deliver to properly designated officials a certificate of registry, containing the name of the boat and the hailing point, provides that such registry shall be signed by the owner, if a resident of the State; if not, by the master of the boat as owner thereof."

It would appear, therefore, beyond question of doubt, that the State owned canals in New York are open to Canadian shipping.—Industrial Canada.

Dominion Canals Traffic.

The aggregate of business through the Dominion canals during the sason of navigation of 1909 was 33,720,748 tons, against 17,502,820 tons in 1908. The tonnage for the year was distributed as follows:—Sault Ste. Marie, 27,861,245 tons; St. Lawrence, 2,410,629 tons; Welland, 2,025,951 tons; Chambly, 752,117 tions; Ottawa, 336,939 tons; Murray, 102,291 tons; Rideau, 91,774 tons; St. Peters, 79,850 tons; Trent, 59,952 tons. The largest increase was on the Sault Ste. Marie Canal, where the tonnage showed an increase of 15,102,029 tons during the year. In 1900 the aggregate of business through the canals was 5,013,693 tons. The total number of Canadian vessels passing up and down was 22,507, their aggregate tonnage being 7,811,578 tons; and the total number of U.S. vessels using the canals was 9,996, with an aggregate of 16,459,322 tons. The explanation of this disproportion is found in the fact that the business of U.S. vessels is confined almost wholly to the upper lakes, where large cargoes prevail, while many Canadian craft of small capacity pass through the canals east of the Welland. The record of trade for the past five years, however, would seem to warrant the conclusion that an increase is steadily taking place in the tonnage of Canadian vessels. In 1900, the records showed that the number of passages of Canadian vessels was 5,502 with an aggregate of 2,408,985 tons, and the total number of passages of U.S. vessels was 21,755 with an aggregate of 4,129,250 tons.

Canadian Steamboat Inspection.

An order in council has been passed repealing the order in council of Dec. 29, 1904, imposing the provisions of the Canadian Steamboat Inspection Act on steamboats registered elsewhere than in Canada when plying in Canadian waters and engaged in the carriage of freight, and substituting the following:—"Steamboats registered elsewhere than in Canada and trading or plying from one port or place in Canada to another port or place in Canada (but not engaged in the carriage of passengers) shall, if holding a certificate of inspection from any of the following classification societies, namely:—Committee of Lloyd's Register of British and Foreign Shipping, British Corporation for the Survey and Registry of Shipping, or Bureau Veritas, be exempt during the currency of such certificate from the annual steamboat inspection imposed under part VII of the Canada Shipping Act; provided, (a) such inspection is made annually in the United Kingdom, and (b) such certificate is produced on demand to either the Collector of Customs or the steamboat inspector for the district in which such steamboat is trading or plying in Canada."

The Ontario and Ohio Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $150,000 and office at London, Ont., to acquire and operate steamships on Lake Erie between Port Stanley and Rond Eau, and between Port Stanley and Cleveland and other ports. The provisional directors are:—A. McKay, Ingersoll; P. Pocock, F. G. Rumball, S. W. Mower, London, Ont., and G. W. Parker, Detroit, Mich. The incorporators named are interested in the London and Lake Erie Ry. and Transportation Co., which took over the assets of the South Western Traction Co.

Atlantic and Pacific Ocean Marine.

The C.P.R. s.s. Empress of Ireland in arriving at Halifax, N.S., at noon, Apl. 14, created a record in her trip from Liverpool, Eng.

Announcement has been made that Canadian Northern Steamships, Ltd., has joined the Canadian North Atlantic Westbound Freight Conference.

The St. Lawrence navigation was opened by the arrival at Montreal, Apr. 11, of the s.s. Kronprinz Olav, from Sydney, N.S., with coal.

The Quebec Steamship Co., Ltd., has declared a dividend of 3% for the half year ended Dec. 31, 1909, making 6% for the year. This is the company's 64th dividend.

Sir Thos. G. Shaughnessy is reported to have stated to the President of the Halifax Board of Trade, that the C.P.R. will have two more Empress steamships, 630 ft. long, on the Atlantic within two years.

Allan Line officials are reported to have stated recently, that in order to relieve the congestion of passenger traffic between Great Britain and Canada this season, a number of extra vessels may be operated across the Atlantic.

Sir H. Montagu Allan, who returned from England, Apr. 10, is reported to have said that the Allan Line was prepared to take up the question of a faster steamship service as soon as the Government was ready to move in the matter.

The Canada Line, operating between Canada and Germany, which was inaugurated last year in the freight and third class passenger trade, has announced that it will cater for first class passengers this year, and has established accommodation for such on its steamships Prinz Oskar and Prinz Adalbert.

Capt. J. B. Foote, who, it was recently announced, had been appointed Marine Superintendent at Montreal of Canadian Northern Steamships Ltd., has resigned and has been succeeded by —. Jones who will be sent out from Great Britain and who will report to the Marine Superintendent at Bristol, Capt. Geo. Gregory.

With reference to the reports in the press regarding an explosion and fire which took place on the s.s. Cairnrona, off Dover, Eng., early in April, R. W. Reford & Co., Agents, Montreal, announced, Apr. 8, that they were grossly exaggerated. The vessel returned to London, where her bunkers were refilled, her passengers re-embarked, and sailed again Apr. 16.

A. Piers, Manager C.P.R. Atlantic Steamship Lines, Liverpool, Eng., was in Montreal in the early part of April, in consultation with the President and Fourth Vice President, in regard to the season's sailings, and other matters. Sir Thos. G. Shaughnessy is reported to have stated, subsequently, that no decision had been reached regarding the construction of new vessels for the Atlantic service.

J. B. Foote, who has been appointed Superintendent Canadian Northern Steamships, Ltd., at Montreal, was born at Owen Sound, Ont., Dec., 1874, and has been connected with navigation nearly all his life. From 1900 to 1903, he was shore captain of the Algoma Central Steamship Line, Sault Ste. Marie, Ont.; and from 1903 to the date of his present appointment has been Superintendent Canadian Lake and Ocean Navigation Co., Toronto.

Canadian Northern Steamships, Ltd., has not as reported in some daily papers obtained two more vessels for its Atlantic service, which for the present is being performed by the Royal Edward and the Royal George. The s.s. Volturno, which was bought from the builders at the

same time is still leased to the Northwest Transportation Co. and is running between New York and Rotterdam via Halifax. She may be placed in the C.N.S. service later this season.

A company has been formed to take over all the shipping interests of the late Sir Alfred Jones, which include the Elder Dempster Co., which operates between Canada and South Africa and Canada and Mexico. The whole of the interests have been purchased by Lord Pirrie, Chairman of Harland and Wolff Ltd., Belfast, Ireland, who is also one of the incorporators of the recently chartered Dominion Dry Dock and Shipbuilding Co., Ltd., which purposes constructing dry docks and other plant at Levis, Que., and St. John, N.B.

The Donaldson Line s.s. Saturnia, which was launched at Scotstoun, Scotland, Mar. 29, is a twin screw vessel, with accommodation for 1,250 passengers. The second and third class accommodation is all arranged as two and four berth cabins, and special attention has been paid to the deck accommodation. The vessel has been constructed to the highest class at Lloyds, and to the Board of Trade requirements. There is ample space for freight, and the most modern equipment for expeditious handling of cargo has been adopted, in addition to the latest type of refrigerating machinery, and a Marconi wireless telegraph installation. The engines are of the triple expansion type, supplied with steam by six boilers. It is reported that another similar vessel will be built shortly, so that the company can maintain a regular weekly service between Canada and Scotland.

Maritime Provinces and Newfoundland.

Capt. S. R. Hill, Inspector of steamboat hulls at Halifax, and formerly captain of the Plant Line s.s Halifax, died there Apr. 10, aged 58.

The assets of the Newfoundland Steam Whaling Co., Ltd., in liquidation, which were offered for sale towards the end of April, included the steamships Puma and Lynx.

The s.s. Kamfjord, which arrived at North Sydney, N.S., Apr. 12, with manganese ore from Antwerp, for the Nova Scotia Steel and Coal Co., has been chartered by that company for the season.

The Government has despatched a party of wreckers to Sable Island, to break up the hull of the s.s. Skidby which was wrecked there some years ago, and which is considered a danger to navigation.

The liquidators of the Anglo-Newfoundland Fish Exporting Co , Ltd., St. John's, Nfld., recently sold, by tender, the company's fishing fleet, consisting of 12 schooners and a gasolene launch.

The Newfoundland Colonial Secretary received tenders recently for the conveyance of mails and passengers by steamer between Kelligrews and Bell Island, calling at Portugal Cove and Broad Cove, for five years from May 1.

The Newfoundland sealing steamboat Iceland was caught in the ice on the north-west of the island, Mar. 30, and with her cargo of about 2,500 seals, was lost, the crew escaping over the ice. She was a wooden vessel and was built in 1870.

The St. John's, Nfld., Pilot Commissioners have chartered the steamboat Margerie F., to act as a pilot boat there. She was given a trial spin, Apr. 8, when she was pronounced quite able to perform the work for which she was engaged.

An order in council has been passed, with reference to the order in council of Apr. 9, 1907, which authorized the establishment of a pilotage district for Minas Basin, N.S., by which the payment of pilotage dues within the limits of the district is made compulsory.

Tenders have been asked for the construction of a steel steamboat and a wooden side-wheel vessel for use in Halifax harbor, and it is stated that for the same purpose, an offer of $25,000 has been made for the ferry steamer Englewood, which is plying on the Hudson River.

The total value of the winter season's trade at St John, N.B., was reported Apr. 9, as being $19,805,280. Cattle shipments, which were lighter than in previous years, totalled 4,341 head; grain 6,821,279 bush.; flour 743,760 sacks. Both of the latter are a distinct advance on the figures of 1908-9.

The Shipmasters' Association of Canada has been formed in Halifax, N.S., consisting of masters and mates of Canada and Newfoundland. The object of the association is to secure the protection of its members in case of legal difficulty. Following are the officers for the current year: President, C. Hunter; Vice President, —. Norris; Secretary, J. Murphy; Treasurer, D. A. Scott.

Press reports state that J. Doran of Quebec, is about to inaugurate a ferry service between Sydney and North Sydney, N.S., and also that another scheme is in process of organization, to purchase and operate a double ended ferry transfer between Sydney and Westmount on an hourly schedule. It is stated that tenders have been received for the construction of a suitable vessel, and as soon as the business is financed it will be put through.

A bill, which was introduced into the House of Commons, Apr. 13, by the Minister of Public Works, authorizes the city of St. John, N.B., to convey land, bounded on the north by the prolongation westerly of the south line of Sheffield St., on the east by the westerly line of Charlotte St., on the south by the Government ballast wharf property and on the west by the city harbor line, for a site for the erection of buildings, wharves, docks and other necessary improvements. F. C. Durant of Philadelphia, Pa., is chiefly interested in the development.

The Dominion Government steam tug Canso, which was launched recently at Yarmouth, N.S., is built of steel to class 100 A1 at Lloyds, her dimensions being, length overall, 97.6 ft., beam 22 ft., mean draught 8.6 ft. She is built on the frame and reverse system, spaced 21" throughout, with five steel water tight bulkheads. The decks are of steel sheathed with hard wood, and the fore and aft peak tanks have a water carrying capacity of 20 tons. The deckhouse, 47' 6" by 14' 6" accommodates the captain's and chief engineer's quarters, bathroom, and there are lamp and refrigerator rooms fore and aft of the deckhouse. Dining room and other accommodation is provided below, adjoining the engine room, with crew's accommodation forward. The engines are of the triple expansion type, with cylinders 12, 19 and 30 ins. diar., by 20 ins. stroke, developing about 400 h.p. Other machinery includes centrifugal pump, direct steam windlass, steam steering gear, hydraulic ash ejector, etc. The boiler is 9' 6" long by 11 ft. diar., for a working pressure of 180 lbs.

Province of Quebec Marine.

The Quebec Steam Whaling Co., Ltd. Montreal, is to be wound up. S. R. Gauthier has been appointed liquidator.

J. A. Smith, assistant engineer Department of Marine agency at Quebec, has been appointed measuring surveyor of shipping for the port.

The Montreal Board of Trade has decided to ask the Department of Railways and Canals, that, in future, the St. Lawrence canals be opened for traffic much earlier than hitherto.

The Levis Ferries, Ltd., is reported to have placed orders in Levis, for the construction of ice-breaking ferry steamboats for the winter service between Quebec and Levis.

The act amending the Richelieu and Ontario Navigation Co.'s charter powers details of which were given in our April issue, has been passed by the Dominion Parliament.

The Quebec Steamship Co., which recently purchased the s.s. Fastnet from the Clyde Shipping Co. of Glasgow, Scotland, has decided to change its name to Cascapedia. She sailed from Glasgow Apr 8, for Montreal, where she was placed on the Gaspe route, her first sailing taking place from Montreal, Apr. 25.

The Dominion Fish and Fruit Co., Ltd., has been incorporated under the Quebec Companies Act, with a capital of $375,000 and office at Quebec, to carry on a general business of staple commodities, fish, vegetables and fruit, and in connection therewith to own and operate steam and other vessels, wharves, docks, warehouses, etc., and to transport freight and passengers.

The Department of Agriculture is calling for tenders for the construction of a steel steamer for the quarantine service for fresh water at Grosse Isle, Que., of the following dimensions: length, extreme, 113' 3"; beam, 23 ft.; depth, 12' 6". The vessel, with the exception of the dimensions, will be similar to the one at present building at Dartmouth, Eng., description of which was given in our March issue.

The Montreal Coaling and Salvage Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $40,000 and office at Montreal, to carry on a general stevedoring business, including the loading and discharging of all kinds of vessels, coaling, bunkering and cleaning, etc.; to operate salvage and wrecking plants, steam and other vessels. The provisional directors are H. St. G. Lindsay, E. H. Howard, H. U. P. Aylmer, J. deWitt and H. C. McNeill, Montreal.

Work on the extension and betterment of the facilities in Montreal harbor, was commenced Apr. 18. G. W. Stephens, Chairman of the Commission, stated on his return from Europe, Apr. 16, that the work to be done during this year included the conversion of Victoria into a high level wharf, thus increasing the port accommodation from 20 to 25 ocean-going vessels; the construction of a high level double track railway from Victoria pier eastward for seven miles and also a considerable amount of dredging.

The Dominion Dry Dock Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000 and office at Quebec, to carry on the business of shipbuilding, repairing, salving, etc., to construct and operate dry and wet docks, harbors, wharves, elevators, vessels of all descriptions, and for other purposes. The provisional directors are, Sir Thomas G. Shaughnessy, H. A. Allan, Montreal; G. D. Davie, W. M. Dobell, Quebec; W. E. Foster, St. John, N.B.; Rt. Hon. W. James, Lord Pirrie, Belfast, Ireland; Sir Robert W Perks and A. M. Grenfell, London, Eng.

The board appointed under the Industrial Disputes Act to report on the rate of wages and the bonus system in use on the Montreal wharves, has reported to the Minister of Labor against the bonus system. The wage scale is left unchanged at 30c. per hour for day rate and 35c. for night rate. In place of the bonus system, under which 2½c.

per hour was retained from each man's wages until the end of the season, it is provided that the steamship federation and the syndicated longshoremen shall each deposit $2,000 with a trust company, and that each man shall sign an individual contract with the federation. In case he fails to carry out his agreement the $2,000 may be levied upon for non-fulfilment of contract. The report was unanimous and states that the assurance was given that the recommendations would be carried out by both parties. The agreement stands for five years.

Ontario and the Great Lakes.

A steam tug, for use in the harbor, was launched at Owen Sound, Apr. 13, and named George H. Jones.

The Welland canal was officially opened for traffic Apr. 15, but no vessels were on hand to make the passage.

The car ferry Marquette and Bessemer No. 2, which sank in Lake Erie about Dec. 7, 1909, with all on board, has been located near Port Bouce, Ont.

The name of the barge Sandy Hook, no. 126094, registered at St. Catharines, has been changed by order in council to Geraldine Battle.

Press reports state that a car ferry service between Sodus Point, N.Y., and Cobourg, Ont., in connection with the Pennsylvania Rd., is under consideration.

Press reports state the Dominion Government intends constructing an additional pier for the accommodation of vessels at Port Colborne.

The first vessel of the season to pass the Sault Ste. Marie Canadian canal, was the W H. Mack, on Apr. 12, on which date the canal was officially opened.

The Western Navigation Co.'s officers for the current year, elected at a recent meeting, are, President, J. Murphy; Vice President, E. R. Wayland; Secretary, H. W. Robinson.

The Canadian Northern Ry. is reported to have decided to make extensions at its coal and ore docks at Port Arthur, which will increase the storage capacity by 50,000 tons.

The Department of Railways and Canals received tenders, Apr. 28, for the removal of the range beacon and for the widening of the channel at the upper entrance to the Sault Ste. Marie canal.

The Imperial Oil Co., Sarnia, recently ordered in England an additional tank steamboat for its oil trade. It is expected that the vessel will arrive on the lakes about July 1.

The Northern Navigation Co.'s s.s. Hamonic is undergoing repair at Lorain, O., after having been somewhat damaged last fall at Point Edward when a large barge broke loose among the shipping there.

The Northern Navigation Co.'s steamboat City of Midland, after having her boilers overhauled at Owen Sound during the past winter, has been docked at Collingwood for minor repairs before being placed on her summer route.

The Department of Railways and Canals received tenders, Apr. 26, for the construction of section 6 of the Ontario-Rice Lake division of the Trent canal, and is asking for tenders for similar work regarding section 4.

Capt. Argue, of Parry Sound, is reported to have purchased a small passenger steamboat, which has been recently constructed at Kingston, on behalf of the C.P.R., for operation between Parry Sound and Little Current.

The C.P.R. s.s. Athabasca, which was damaged at the close of last season on Flower Pot Island, near Owen Sound, has been thoroughly overhauled during the winter, and in addition has been lengthened 36 ft., making her 291 ft. over all.

The Toronto Board of Trade and the Toronto branch of the Canadian Manufacturers' Association each sent telegrams to the Government, Apr. 15, calling attention to the urgency of the need for the enlarging and deepening of the Welland canal.

The Canada Shipping Co.'s steamboat D. A. Gordon, which was recently built at Glasgow, Scotland, sailed from Newport, Eng., Apr. 16. She is a full sized canal boat, and will be utilized in the grain trade between Montreal and the Upper Lakes.

Supplementary letters patent have been issued under the Ontario Companies Act, increasing the number of directors of the Western Dry Dock and Shipbuilding Co., Ltd., from three to five; authorizing the company to hold meetings outside Ontario, and changing the head office from Toronto to Port Arthur.

The dues collected at the Government dry dock at Kingston, during 1909, were $14,488.84, and expenditure $6,603.03, leaving a surplus of $7,884.81. There were 59 vessels docked having a total tonnage of 37,295. The dock has been leased to the Kingston Shipbuilding Co., Ltd., for 21 years.

The Keystone Transportation Co.'s steamboat Keystorm was launched at Wallsend-on-Tyne, Eng., recently She is of full canal size, with capacity of 100,000 bush. on a 14 ft. draught, but for 150,000 bush. in lake service only. She is similar to the company's steamboats Key West and Keyport, descriptions of which we have already published.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above tide water for March, as follows:—Superior, 601.54; Michigan and Huron, 580; Erie, 571.68; Ontario, 245.75. Compared with the average March levels for 10 years, Superior was 0.45 ft. below; Michigan and Huron, 0.15 ft. below; Erie, 0.11 ft. below, and Ontario 0.32 ft. above.

The interests controlled by J. Playfair, Midland, which have acquired the Inland Navigation Co., Hamilton, the Midland Navigation Co., and the Empress Transportation Co., of Midland, have, it is reported, awarded a contract for the construction of a steel hulk freighter, 525 ft. long by 56 ft. beam, delivery to be made in time for the fall trade.

With reference to the recent reports that the Richelieu and Ontario Navigation Co. was negotiating for the purchase of the Hamilton Steamboat Co. and the Turbine Steamship Co., press reports state that the matter came up for discussion at the R. and O. N. Co.'s board meeting Apr. 14, but that nothing definite was accomplished.

Press reports state that the Upper Ontario Steamboat Co., and the Montreal River Navigation Co., are negotiating for an amalgamation of their interests. Both companies operate on the Montreal River, and the chief object of the proposed arrangement is to secure a more efficient service, by dividing the passenger and freight service.

Press reports from Haileybury state that the Temiskaming Navigation Co. has acquired control of the Haileybury Navigation Co., and that in future the two concerns will be managed by one board of directors. It is said that an agreement has been effected whereby the rates which were in force prior to the amalgamation shall be maintained

The Ogdensburg Coal and Towing Co. is reported to have purchased the steamboat A. McVittie from the Rutland Transit Co., for operation in the Lake Ontario and St. Lawrence coal trade. She was built in 1890, her dimensions being: length, 240 ft.; breadth, 42 ft.; tonnage, 2,046 gross, 1,552 net. She is equipped with fore and aft engines, with cylinders 28 and 52" diar., by 40" stroke.

The Brockville Navigation Co. has sold the steamboat Victoria to Capt. Davis, of Smith's Falls, Ont., who, it is stated, will use the vessel on the Rideau Lakes. The Victoria was built at Kingston, Ont., in 1900, her dimensions being: length, 72.6 ft.; breadth, 15.5 ft.; depth, 5 ft.; tonnage, 58 gross, 40 register. She is equipped with engine of 3 n.h.p., driving a screw.

The steam barge D. D. Calvin, which was recently sold by the Calvin Co., Garden Island, Ont., to Carlot and Smith, Belleville, was badly damaged by fire at Garden Island, April 11. She was built at Garden Island in 1883, her dimensions being: length, 166 ft.; breadth, 32 ft.; depth, 15.1 ft.; tonnage, 750 gross, 483 register. She is equipped with engine of 300 n.h.p. driving a screw.

The Canada Shipping Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $20,000 and office at Montreal, to carry on a general shipping business; and to own and operate steam and other vessels. The provisional directors are:—H. Munderloh, C. Byrd, W. T. S. Burns, C. Rinfret and R. Ball, Montreal.

The Dredging and Drainage Co., of Ontario, Ltd., has been incorporated under the Ontario Companies Act, with a capital of $50,000 and office at Toronto, to contract for the construction of public works, and in connection therewith to own and operate steam and other vessels. The provisional directors are, J. E. Russell, E. W. Wright and H. T. Hunter, Toronto.

Canadian Northern Steamships, Ltd., announces an all water route from Great Britain to Port Arthur, with one transshipment only, instead of two as heretofore Freight will be trans-shipped at Montreal from the company's trans-Atlantic vessels to the lake vessels operated by the Canadian Lake and Ocean Navigation Co., which will proceed direct to Port Arthur.

Replying to questions in the House of Commons recently on the appropriation of $250,000 for Toronto harbor improvements, the Minister of Public Works stated that it would be useless to make the new entrance deeper than 18 ft., until the Welland Canal was deepened. The matter could be taken up later, if necessary, the ultimate cost of the work not being greater than if done now.

J. W. Norcross & Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $25,000 and office at Toronto, to act as managers, agents and brokers for transportation companies; to own and operate steam and other vessels, docks, harbors and other facilities. The provisional directors are:—J. W. Norcross, R. M. Wolvin and W. E. Burke, Toronto.

The Dominion Government has guaranteed the bonds of the Western Drydock and Shipbuilding Co., Port Arthur, Ont., to the extent of $1,200,000. The contract for the construction of the works has been let, and it is said that by the summer of 1911, the first two vessels to be built by the company will be launched. These vessels, it is said, will be 524 ft. long, with a capacity of 10,000 tons.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat Garden City arrived at Toronto Apr. 11, from St. Catharines, which is about a month earlier than in previous years. She will be operated between these points daily until June, when the regular summer service will commence. It is reported that the company's steamboat Lakeside will probably be sold for other less exacting service, and another vessel purchased.

Americanite, Magnet, Office and Annunciator Wires,
Cables for Aerial and Underground Use.

NOTICE.—Application will be made on behalf of the Saskatchewan Midland Railway Company and the Canadian Northern Railway Company to the Board of Railway Commissioners for Canada at the Board's Office, Ottawa, on 10th May, 1910, at 10 o'clock in the forenoon, or as soon thereafter as the said application can be heard, for a recommendation to the Governor General in Council for the sanction of an agreement amalgamating the said companies.

Dated at Toronto this 24th day of March, 1910.

R. H. M. TEMPLE,
Assistant Solicitor.

The Algoma Central Steamship Line's steamboat T. J. Drummond, which has been built at Dumbarton, Scotland, especially for the rail trade, is expected to reach the lakes early in May. Her dimensions are, length overall, 257 ft.; length, between perpendiculars, 247 ft. 9 ins.; beam, 43 ft. 8 ins.; depth, 26 ft. The machinery consists of engines with cylinders 20½, 33 and 54 ins. diar., by 36 ins. stroke, supplied with steam by two Scotch boilers, 10½ by 14 ft., at a pressure of 190 lbs.

A vessel will be launched at Glasgow, Scotland, May 1, for the Point Anne Quarries Ltd., of which M. J. Haney, Toronto, is the principal owner. The vessel will be used for grain between Montreal and Fort William, and is the first of a number of freight vessels which it is proposed will be put on this route by the company. The vessel, which will be named Renvoyle, has a steel hull, and her dimensions are, length 250 ft., breadth 42½ ft., depth 18½ ft., with a capacity of 100,000 bush. The cost has been quoted at $125,000.

The Dominion Parliament has amended the Navigable Waters Protection Act, repealing secs. 4 and 5, and substituting others, which provide that no bridge, dam, wharf or other structure shall be built in or across any navigable water, unless the site has been approved by the Governor in Council, such provisions not, however, applying to small wharves, not costing more than $1,000, nor to beach protection works, boathouses, etc., which do not interfere with navigation; and any buildings built on any site not so approved, nor in accordance with plans so approved they may be removed and destroyed under the authority of the Governor in Council.

In pursuance of the U. S. statute approved March 10, entitled "An Act concerning tonnage duties on vessels entering otherwise than by sea," and as the result of negotiations since carried on, harbor masters in Ontario ports affected by the order in council of Dec. 1909, have been notified from Ottawa to waive the collection of fees from U. S. vessels entering on and after April 1, 1910; and collectors of Customs in U. S. ports on the lakes have also been officially notified from Washington under that vessels entering from Ontario on and after Apr. 1, will be exempt from the tonnage duty imposed by the U. S. Statute of Aug., 1909. This completes the restoration of the reciprocal arrangement between the U S. and Ontario existing prior to last summer.

The Porcupine Trading and Transportation Co., the incorporation of which we announced in a recent issue, will operate chiefly on Frederickhouse River and Lake and Night Hawk Lake. It was originally intended to build a number of stern wheel boats for this trade, but subsequent examination led to the conclusion that it was doubtful if they could, at present, be successfully operated there. The management considers that the only kind advisable to operate for the immediate future are large pointers equipped with gasolene engines, and gasolene launches. It is intended to build eight of these with capacity varying from two to 10 tons each, some of which will be equipped with gasolene engines, of suitable size and strength. This year's experience will enable the company to judge better of the kind of boat which can be operated with advantage.

CANADA SOUTHERN RAILWAY COMPANY.

The annual general meeting of the Canada Southern Railway Company for the election of directors and other general purposes will be held on Wednesday, the 1st day of June, 1910, at the hour of eleven o'clock in the forenoon, at the offices of the Company, in the city of St. Thomas.

The Northern Fish Co.'s steamboat Wolverine was considerably damaged by fire while in the dry dock at Selkirk, Man., undergoing repairs prior to going on her summer route. The damage was almost confined to the fittings, the machinery and hull not having suffered much. Repairs are being made at once, and it is expected that the vessel will be ready for service early in June. She was built at Selkirk, Man., in 1903.

The Railway Committee of the House of Commons, April 13, by a vote of 53 to 51, refused to pass the bill for the incorporation of the International Waterways Canal and Construction Co. The Company proposed to construct an 8 ft. canal from the mouth of Pigeon River, Lake Superior, to the Lake of the Woods, thence to Red River and Lake Winnipeg; or from the Lake of the Woods by the Winnipeg River to Lake Winnipeg. The primary object of the company was to generate electrical energy and to dispose of it in Canada and the United States. L. Coste, of the Canadian Section of the International Waterways Commission, stated that there were no engineering difficulties in the way of construction, and it was possible that it would not cost over $20,000,000. By its construction it would be possible to develop 1,000,000 h.p. within the district served.

B.C. and Pacific Coast Marine.

The Union Steamship Co.'s new vessel, which is to be named Cheslakee, is expected to reach Vancouver in July.

The Alaska Steamship Co. has purchased the s.s. Leelanaw from R. Dunsmuir and Sons, for operation between Seattle, Wash., and Nome, Alaska. The price paid is stated to have been $80,000.

It is reported that the G.T.P.R. Pacific Coast Service will operate a vessel between Prince Rupert and San Pedro, Cal., in order to deal with the anticipated movement northwards during the coming season.

The Michigan Towing Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $25,000, to own and operate steam and other vessels, and in connection with such operation to acquire any postal subsidies.

The West Vancouver Transportation Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $50,000, to own and operate steam and other vessels, and to carry on a general transportation business on B.C. waters.

Ship Poltalloch, Ltd., has been incorporated under the B.C. Companies Act with a capital of $24,000, to purchase the ship Poltalloch, owned in Portland, Ore., and to carry on a general freight-

ing business with same or any substituted vessel.

Press reports from London, Eng., state that arrangements have been practically completed for financial aid for the necessary increases proposed to be made at Esquimalt yards, in anticipation of the construction of vessels for the proposed Canadian navy.

The steamboat Victorian, a U.S. vessel, which at different times has been operating between Victoria and Seattle, and also in the neighborhood of Vancouver, and which is said to have cost $125,000 to build, was offered for sale recently, when $11,300 was the highest bid.

British Columbia press reports state that the Dominion Government is making a plan of the inner harbor at Victoria, between the entrance at Hospital Point and the Esquimalt and Nanaimo bridge. It is said that this work is being carried out in preparation for a general scheme of harbor improvement.

Press reports from Vancouver state that the G.T.P.R. will build an additional wharf there during the summer. It will be about 1,000 ft. long, running in the direction of the harbor mouth. The Government wharf, which it is stated will be constructed at the same time, will be 600 ft. long by 60 ft. wide, and will cost $70,000.

The Otis Staples Lumber Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $750,000, to carry on the general business of sawmill proprietors, lumbermen, etc., and in connection therewith to own and operate steam and other vessels, and to carry on a general business of transportation of passengers and freight, by land and water.

The Pacific Whaling Co. is adding two steam whaling vessels to its fleet, these being now on their way to Victoria. One of them was purchased at St. John's, Newfoundland, and the other has been constructed in sections at Christiania, Norway, and shipped to Victoria, where it will be built. Press reports state that two similar vessels are also being constructed in like manner in Norway, for the Queen Charlotte Whaling Co.

Canadian Ports and Harbors.—The Department of Marine has issued a directory to the principal ports and harbors of Canada, to which is added a description of new types of aids to navigation introduced in all Canadian waterways. The directory is confined to ports where the tonnage of vessels entered in 1908 was upwards of 50,000. Details are given of wharf and shed areas, depth of water, anchorage, facilities for loading, unloading, pilot charges, and a variety of other information useful to shipowners, mariners, importers, exporters, traders, insurance corporations, and others interested in the navigation of Canadian waters. Views showing a number of the harbors are given, as well as a number of plans, but the most important of the insets is a map showing the quick flashing lights on the Atlantic coast, and the St. Lawrence Gulf and River. The sign given at each point where there is a light shows not only whether it is a first, second or third order light, but also the number and interval of the flashes; and the new lights which are being installed. The directory, which is arranged in the form of a report, was compiled by G. J. Desbarats, Deputy Minister of Marine and Fisheries.

Vessels Removed from the Register.—The following vessels were removed from the register during March for the reasons assigned:—Steam—Ida, Port Arthur, 13 tons, out of existence; Lady of the Lake, Toronto, 7 tons, broken up; Maud S., Collingwood, 11 tons, broken up; Odessa, Collingwood, 8 tons, broken up; Picnis, Vancouver, 3 tons, burnt; Reliever, Midland, 366 tons, burnt. Sailing—Beulah Benton, Weymouth, 36 tons, broken up; Emma F., Lunenburg, 13 tons, broken up; Mindoro, Lunenburg, 80 tons, burnt; Minnow, Lunenburg, 35 tons, broken up; Norwood, Maitland, 1,597 tons, stranded; Squid, Vancouver, 51 tons, broken up; Twilight, Barrington, 37 tons, broken up.

The Delaware and Hudson Co. has constructed at Lake George, N.Y., a marine railway to facilitate the unloading of launches from railway cars direct into the water. A submarine track extends from the shore into deep water, permitting a boat having 6 ft. draught to be floated clear of the cars. This avoids all possibility of damage by handling in the old way, and the tariffs filed by the traffic department concerning the service indicate that in addition to the great improvement in service, boat owners will find it more economical.

Present Status and Tendencies of Railway Electrification.

By F. Darlington.

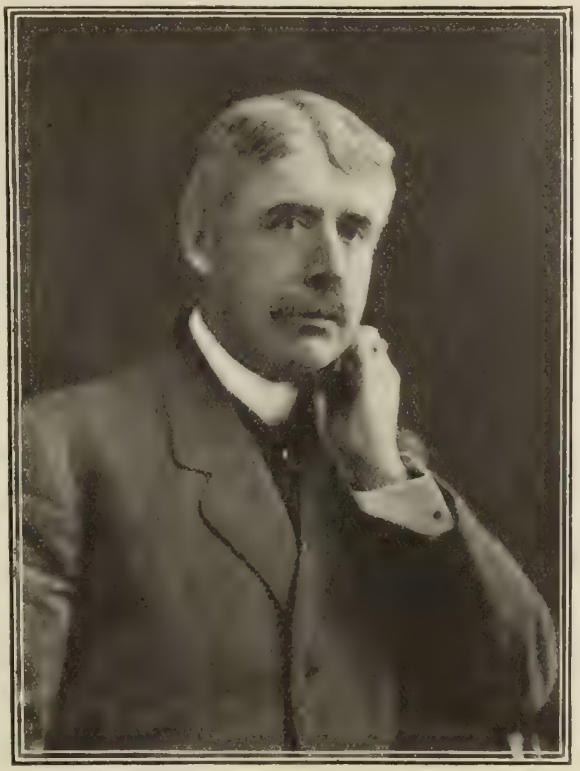
In the opening paragraph of a paper on railway electrification, recently read before the Engineering Society of Columbia University, L. R. Pomeroy wrote: "From a physical and mechanical view point, electric traction can meet all of the demands and requirements of railway service" and he added, "Whether electricity will replace steam traction or not, is entirely a commercial problem."

These two statements exactly describe the present situation regarding railway electrification. Electric power is capable of doing all of the work of railways. Will it pay to adopt it? We all appreciate that there can be no complete and comprehensive answer to this question at present; although during the recent period of financial depression, when no large improvements and extensions were undertaken by railways, splendid progress was made in the development of electric railway appliances, so that in many places where the application of electric power to railways would have been unprofitable a few years ago, it will now show a profit because of these improvements.

With the return of prosperity when business increases we have a right to expect that these improvements which have been both in the direction of reducing the cost of construction, and of increasing the power and efficiency of electric railway apparatus, will lead to new and extended applications of electric power to railways. Meanwhile independent interurban electric roads have grown extensively in the same territory with steam roads and often parallel to them, where the logical and economical course would have been for the steam railways to extend and increase their facilities and use electric power where it was advantageous. But electric motive power apparatus as it was first developed and used by trolley roads was not advantageous for steam railway work. It was excellent for single car operation, as is proven by its success, but it was too costly to install and was too inefficient for operating heavy railway trains. For steam railways to have adopted it under such circumstances would have meant electrical equipment for light local work only, while steam locomotives would have remained in use for heavy work, but today economical and efficient electrical apparatus is available for all railway requirements.

Improvements in the power and efficiency of electric railway appliances are making electric roads more and more on a par with steam roads for heavy transportation business, and it is more true every day that the best economy in any locality can be secured by a single line of railways rather than by separating the work and management. The separation of railways therefore into two classes, steam and electric, according to the kind of motive power they use, will soon become impossible, because modern electric railway apparatus is suitable for heavy as well as for light work and the advantages of combined management and operation of heavy railways and interurban roads, will be secured by utilizing improved electrical appliances for heavy traffic as well as for light traffic, and by combining both classes of work on one system and under one management. To whatever extent the conditions have been improved by the development of more economical and effective electric railway apparatus, to just that extent is the tendency of present times towards electrification of steam railways, since in the long run electrification will be carried as far as it will pay.

A short review of the various old and new electric railway systems comparing their first cost and efficiency will indicate the probable future course of electric railroads better than any opinion of mine would do. The first use of electric motors on railways was on city street cars where electric power replaced horses. The motors were of small size and the total power used per car was in the neighborhood of 15 h.p. and the motors were necessarily all of the direct current type, because in the early days of electric traction alternating current motors had not been developed. As a result of improvements in electric motive power appliances, street car lines were extended and the weight of their cars and the power of their motors were so increased that they became profitable for long runs, and interurban trolley roads resulted. At the same time direct current electric locomotives were developed chiefly for use where smoke from steam locomotives was objectionable, and, direct current motors have been improved and increased in power and are now thoroughly reliable for all classes of railway operation.



J. E. Quick
General Baggage Agent Grand Trunk Ry., and Grand Trunk Pacific Railway.

Complete direct current railway electrifications include an electric power generating plant, and trolleys or third rails and sub-stations, etc., for transmitting and distributing the electric power from the generating plant to moving trains, and motive power apparatus on the trains for converting the electric power into mechanical power for train propulsion. Improvements in the power and efficiency of electric generating plants kept pace with the advancement in direct current motor construction, and the apparatus for conducting electric power from the power house and distributing it by direct currents to moving trains was also improved.

The introduction of the so-called commutating poles or inter-poles is the most valuable improvement that was made in the last few years in direct current railway apparatus, because it enables the use of higher voltages on the motors and consequently on direct current distribution systems than were formerly possible; but with all that has been done to improve direct current appliances the minimum cost of direct current railway electrification prevents the general substitution of electric power for steam when large units of power are used per train and it does not seem possible with direct current apparatus to further materially reduce the cost of electric equipment. With the increasing power of electric trains third rails were substituted for overhead trolley wires and were increased in size and weight and supplemented by copper feeder cables, and protected by insulated covers, and the capacity of sub-

stations was increased until appliances for the transmission and distribution of electric power by direct currents has become so costly that extensive use of direct current electric motive power for heavy railway service is unprofitable. Furthermore, sub-stations for changing high tension alternating current to direct current require a high labor cost for their operation.

Large powers can be more cheaply transmitted and distributed with alternating currents than with direct currents and this early led to a general effort among engineers to substitute alternating currents for direct currents for train propulsion and these efforts were effectively seconded by the practical development of two types of alternating current motors which you all know as single phase and three phase motors. Single phase motors are operated on single phase alternating current which requires two conductors for its transmission. In the case of electric railways, the conductors for distributing current to trains, consist of one overhead trolley wire and the track. Three conductors are required for three phase alternating current so that three phase electric railways require two separately insulated trolley wires in combination with the track.

Complete systems for the transmission and distribution of electric power from the power house to moving trains are much more simple with alternating current than with direct, since where alternating current motors are used on the trains it is not necessary to change from alternating to direct current, and also alternating current is readily transformed on the trains from high potential used on the trolleys to low potential used on the motors. Furthermore, three phase motors can be worked with fairly high potential alternating current so that on many three phase roads the current from the trolley wires is not even transformed to low potential for the motors. To complete the comparison of the direct current and alternating current distribution systems used in railway work, it must be remembered that under the conditions met with in railroading the efficiency of power distribution by direct current systems is very inferior to the efficiency with alternating current systems. In existing direct current installations between 25 and 50% of the power generated is lost in transmission from the power house and distribution to the trains, and with direct current systems 35% is probably about the average loss, while with single phase alternating current transmission and distribution the average loss under similar service conditions would ordinarily be about one-third as great. Three phase transmission and distribution is not so efficient as single phase but would ordinarily be far more so than direct current.

There is some difference in the cost of the locomotives employed in the different electric railway systems and it is generally in favor of direct current and three phase locomotives as compared with single phase locomotives, but for ordinary steam railway train weights and distances and density of traffic this difference in the cost of locomotives is several times offset by the difference in the cost of the electric power transmission and distribution apparatus, especially in the case of direct current distribution, even though at the present time direct current locomotives usually cost between 25 and 35% less than single phase locomotives for the same service. This difference in cost will be somewhat reduced as experience in single phase manufacture increases. Generally the electric power taken from the trolley by single phase locomotives is from 0 to 6% more than the power taken from the trolley or third rail by direct current or three phase locomotives doing the same work, but there are some conditions under which single phase locomotives take less electric power than direct current or three phase locomotives because the control apparatus for single phase motors is more efficient than direct current and three phase motor control. But in any event the superior efficiency of power transmission and distribution by single phase currents several times more than offsets the slightly superior efficiency of direct current motors, especially where power is used in large units for moving heavy trains as on ordinary steam railroads.

More Practical Testimony.

James Oborne, General Superintendent Ontario Division, Canadian Pacific Ry., has had a varied experience in railway work. Starting in 1861 with the G.T.R. in Montreal, as an office boy he became chief clerk to the Works Manager. He entered the C.P.R. service and served as chief clerk to Mechanical Superintendent, and chief clerk to Vice President. Then he became Car Accountant, Superintendent Car Service, in charge of fuel department, Assistant to the President; and then General Superintendent, first at Winnipeg, then at St. John, N.B., and afterwards at Toronto. He has thus had a most valuable experience in the mechanical, operating, maintenance and executive departments and is noted for his thoroughness in the work of every position he has filled. As the chief officer of one of the most important and busiest grand divisions of the C.P.R., he has little spare time but he makes a practice of reading the Railway and Marine World, to which he has been a subscriber from its inception. What he thinks of it is stated in the following letter:—

Canadian Pacific Railway Co.
General Superintendent's Office.
Toronto, March 21, 1910.

Dear Mr. Burrows.—I read the Railway & Marine World with a great deal of interest and profit. Its general make up, its newsy and reliable information, and its completeness of detail make it one of the leading railway periodicals on the continent. It is always most favorably commented on by railway officials and other subscribers.

Yours sincerely,
JAMES OBORNE.

The approval which our efforts to provide a first class transportation periodical have met with is most encouraging, and it is gratifying to be able to show that it is thoroughly read, a fact which advertisers should not overlook. Our circulation, covering every province in the Dominion and also Newfoundland, has been secured, not by spectacular circulation methods, but by systematic canvassing, and by a large percentage of unsolicited subscriptions. During the past twelve months it has increased more than during any previous year. One of the most satisfactory features of our subscription list is the fact that only an infinitesimal percentage of subscribers fail to renew from year to year, and every month shows a gratifying list of additional names.

Estimates recently prepared for the electrification of about 100 miles of single track railroad with about 25 miles of side tracks and with heavy grades to be climbed and very heavy and frequent trains to be handled, show the total cost of direct current transmission and distribution apparatus including sub-stations, $2,381,000.00 and for single phase alternating current with transformer stations $1,011,000.00. This was figured for 1,500 volts on a third rail for direct current and 11,000 volts on an overhead trolley for single phase current. The difference in cost of the two power distribution systems is $1,370,000.00. However, the single phase locomotives for the same railway would be more costly than direct locomotives by about $374,500, but this amount is only about one-quarter of the difference in the cost of the transmission and distribution appliances. Seven direct current sub-stations were required in the distribution system for the direct current equipment, and the attendance on these stations would cost between $15,000 and $20,000 a year, against which the attendance on the single phase transformer stations would be practically nothing.

All of this detail regarding electric power transmission and distribution for the various electric railway systems may seem unnecessary in view of the general knowledge of the subject, but it has a most important bearing on electric railways because it is in this work, that is, in the transmission and distribution of electric power that the greatest expense and difficulty has been encountered. Cheapening the cost and improving the efficiency of electric equipment for the operation of railways moving heavy trains over long distances is the most important result accomplished by alternating current railway apparatus. It is for moving heavy trains long distances that the superiority of alternating current apparatus is most pronounced and it is in this class of work, which includes the work of the majority of steam railways, that we must anticipate the greatest future advancement in electric railroading due to changed conditions.

As already stated, the last two or three years have not been favorable for heavy railway improvements, so the possibilities of alternating current machinery on railways have not been generally realized by practical application, although the reduction in construction cost, and the improvement and efficiency of electric railway appliances, especially for heavy motive power work fully justifies the expectation that in the future electric power will be applied to much work now being done with steam power, and to the hope that electric and steam railways will eventually be united in doing a common business, and that the advantages of a single railway and single organization for serving any given territory will be realized by extending the application of electric power to steam railways for all kinds of service both freight and passenger whenever electricity is profitable for any class of work.

The foregoing paper was read before the Central Railway Club in Buffalo, N.Y., recently.

The International Railway Fuel Association's second annual meeting was held May 23 to 26, at Chicago, Ill. A number of papers and subjects were read and discussed, those on the methods of supervision, instruction and encouragement in locomotive operation to secure the greatest efficiency in fuel consumption, being in charge of a committee, of which D. Meadows, Assistant Division Master Mechanic M.C.R., St. Thomas, Ont., is chairman.

Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending the skidding sheaves. They are hung from a vertically hinged jib or triangle the outer end of which is guyed by two lines, one on each side, which are power tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading.

The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from the tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines with stiff or swinging boom. Constructed entirely of steel, except loading boom.

IS WITHOUT QUESTION THE STRONGEST AND FASTEST MACHINE OF THE DAY

LOGGING CARS AND DUMP CARS

RUSSEL WHEEL & FOUNDRY CO.

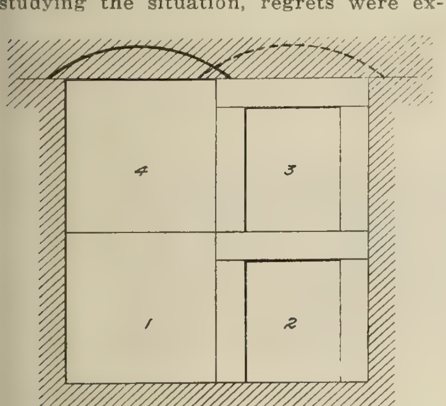
Detroit, Mich., U.S.A.

Engineering Features of the Detroit River Tunnel.

The method pursued in the construction of the Michigan Central Rd.'s tunnel under the Detroit River between Windsor, Ont., and Detroit, Mich., is the novel one of constructing tubes in the form of steel shells; sinking them into a trench dug in the bottom of the river; uniting them end to end; embedding them in a concrete casing and finally giving them a concrete lining. No compressed air was used in the subaqueous portion of the work except for the divers by whom the bolts, fastening the ends of the tube sections together, were placed.

In considering this plan it must not be confused with that of sinking independent caissons that were joined end to end, as in the case of the Metropolitan Ry. under the Seine at Paris. There the regular caisson method of sinking was followed, using compressed air in the usual manner. The caissons were independent sections to be sure and were afterwards joined together to form the tunnel. The Detroit tunnel, on the other hand, was formed by excavating a ditch across the bed of the river, setting a core in it and filling around with concrete, no caisson work being done at all.

The evolution of the idea is interesting and direct. The water in the river is 50 ft. deep in places and it was the natural desire of the engineers to keep as high as possible so as to avoid long or heavy approach grades; and so, when studying the situation, regrets were expressed that the bottom was not of rock so that the minimum of cover could be used. This suggested the excavation of a trench and filling it with an artificial rock (concrete) and then tunneling through that. But why tunnel? Why not sink a core and form the concrete around it? That was the birth of the idea and the completed tunnel is the result.



Order of excavation for centre wall of approach tunnel.

The scheme, simple as it appears in outline, was novel and daring in the magnitude of the undertaking and the depths of water to be encountered, but the results have fully justified it, for the completed work is dry and considered by its engineers to be one of the strongest subaqueous tunnels in existence. While the general scheme was one of simplicity itself, it is evident to anyone versed in such matters that, in its execution for the first time, problems of novel character would be constantly arising, the solution of which would tax the resourcefulness of the engineers to the utmost in order to reach a successful consummation. These problems cropped up from the very start. They began by presenting unexpected difficulties in the excavation of the trench in the bottom of the river in which the tubes were to be laid. The greatest depth of water at the point of crossing is about 50 ft. and the excavation was carried some 22 or 23 ft. below this, or 74 ft. from the surface. A bucket dredge was equipped to work to 40 ft. and did excellent work, taking out 1,500 cu. yds. per day. It was the intention to let this dredge lead and follow with a clamshell for the balance, but when the latter was set to work it was found to be unsuited to the task and that, at the rate which it could dig, the time required would be so long as to place it outside the pale of consideration. The first step, then, was to reconstruct the bucket dredge and adapt it for working to depths of 60 ft. But, although braces and strengthenings were added, breakages occurred to such an extent that the idea had to be abandoned. This was especially caused by the breakage of the spuds and the great expense attending the same. The solution was found in the designing of a special clamshell capable of removing 700 cu. yds. per day of 12 hours on an average with a maximum output of 1,200 cu. yds.

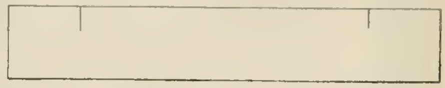
The material to be removed from the river bed and from the approach tunnels was a stiff blue clay, and the total net quantity was about 700,000 cu. yds. The method of removal were dredging from the river bottom and tunneling both with and without a shield in the approaches. It was thought at first that the drifts could be driven without using compressed air and some of the work was done in that manner for the centre wall. A drift was first carried forward for one of the lower quarters and that section of wall built, then the next lower quarter was removed, after which the two upper quarters in succession. A part of this, as already stated, could be done without air, but for much of the work air under pressure of from 10 to 20 lbs. or even more was required.

One of the points brought out in this work was the action of this stiff clay in its production of pressures. Stated in a general way, it was found that these pressures closely followed what would have been produced by a liquid having the specific gravity of the clay. With the depth of cover beneath which the workings were carried this created an enormous pressure; a pressure which, it was found, followed the law of liquids and increased to the bottom. Taking this broadly some of the physical difficulties of the work may be appreciated.

Surface indications of the flow of this material were followed closely and some interesting manifestations and conclusions therefrom were obtained. For example, the present M.C.R. line approaches the river through a cut, and the tunnel line passes beneath it on a slightly divergent line. At one point the centre of one of the tunnels is directly beneath one of the main tracks, while the other is beneath the slope of the cut on one side. The increased weight due to the height of the bank above the track caused it to settle very noticeably, but to a varying degree to a vanishing point out on one side, while there was no settling at all of the track on the lower level. In fact, it was not resurfaced during the whole of the work. It seemed as though the settling of the bank had raised the track enough to compensate for its own settling and held it to grade.

That this is so appears to have been proven by the behavior of a bank upon which a four-story brick building was standing and near which the tunnel passed. The conditions were identical with those previously cited, as the bank on which the building stood was one side of a cut. Adjacent to the brick building was a low shed of no great value. When the tunnel was carried beneath the shed the bank settled about 6 in. Before driving the heading along the building a pile of gravel whose weight was nearly equal to that of the bank was heaped upon the tracks immediately over the line of the tunnel. This load confined settlement to a small area, caused the breaking away of the section loaded from that underlying the building and checked the flow of the material, with the result that the maximum settling of the building was less than ½ in. and no cracks were formed in the walls. After the tunnel had been completed the gravel was removed.

So, in the excavation for the centre wall. The work was done in the order indicated on the diagram. After the two lower quarters had been removed and the wall built one of the upper quarters was taken out and timbered. The work was heavily done and stood all right until the other quarter was removed,



Sketch of longitudinal section, showing partial diaphragms used in sinking tubes.

when the timbering was crushed by the pressure. The suggested explanation of what happened is shown by the illustration. When the timbering was put in, the clay arched over and the two ends rested as indicated by the full line on the remaining quarter and the side. But, when the fourth quarter was removed, the arching took the form indicated by the dotted line, so greatly increasing the load on the timbering that it was crushed.

A final instance of this earth pressure may be cited as shown by the behavior of the timbering in the shafts. When they were first put down they were timbered far more heavily than the contractors considered to be necessary; but, as the work proceeded, even this proved to be insufficient and had to be increased. No measurements of the pressures actually obtaining were made, so that the work leaves no record other than that of the experience. But this is of such a character as to demonstrate that the usual formulas for earthwork pressures were sadly awry in this instance.

In carrying out the excavation on the land sections to the union with the subaqueous portion two distinct methods were employed. On the Detroit side of the river a shaft was sunk at a distance back from the shore, from which the land end of the approach was driven. Outside of this a heavy coffer-dam was built and the excavations carried in the open back to the shaft. The dam was formed of 8 by 16 in. piling, built to tongue and groove and filled in with clay between walls. At the Windsor end, the tunnel was carried out to the point of union with the subaqueous section, and then the trench excavated up to the

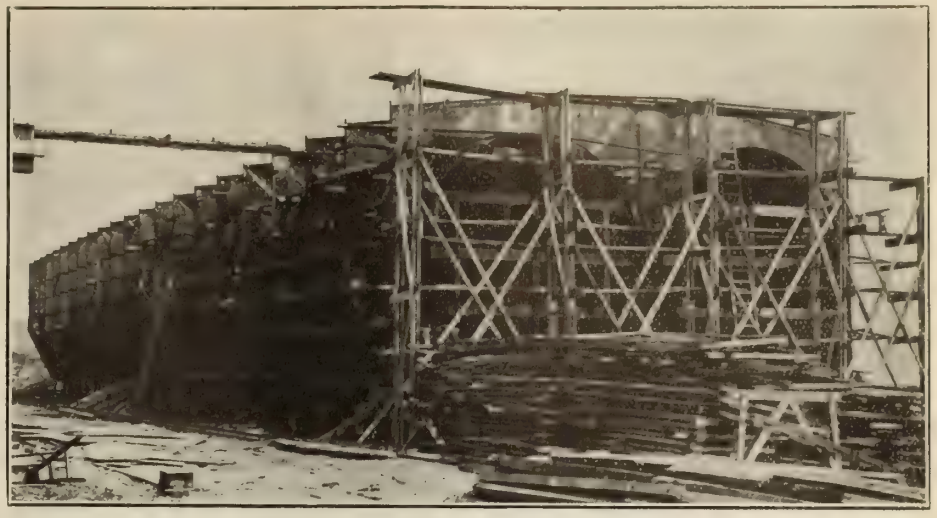
face of the work, and the tubular section attached when sunk.

In all of the approach tunnel work there was nothing novel in the methods of procedure. The work was along lines that had been tried before, and was subject only to such changes as local conditions set up; so that, aside from the special problems that had to be solved it is about the subaqueous section that the real interest centres. The details of these sections had, of course, to be carefully worked out and all conditions were provided for as far as possible. They were designed to be built on the shore, launched like a ship and towed to their location. According to this plan they were built upon the regular ways in the regular manner. The method of launching on the great lakes differs from that of the coast. It is customary to launch ocean-going ships stern foremost, but all lake vessels are launched sideways or broadside on, for good and sufficient constructional reasons. Hence these tubes were built parallel to the shore and launched in the usual manner. With the sheathing up the sides, as shown in the photograph, they offered a much greater resistance to the movement of the whole into and through the water than a ship with its partially rounded hull and greater buoyancy. It was because of this and especially because of the latter deficiency that trouble was experienced, by sticking on the ways and not getting into the water. This trouble was overcome by carrying the sheathing back beneath the tube in the form of a flooring for a distance of 15 ft. from the outer edge, as indicated on the engraving. With this flooring an air space was formed at the outer edge and the buoyancy correspondingly increased. This not only decreased the angle at which the tubes left the ways, but the increased buoyancy lifted them out of the water and so brought about a material lessening of the resistance to movement through the water. It was a matter of no moment whatever, whether this flooring was water-tight at the joints or no, for the movement was so rapid that, under the worst of conditions, sufficient water could not leak in to do any harm either by lowering the buoyancy or increasing the resistance to the motion. Before this precaution was taken some of the tubes were slightly damaged in the launching and had to be sent to drydock. Afterwards there was no trouble whatever.

After the tubes had been launched they were towed about 50 miles down the river to location and there sunk. In the towing there were no difficulties encountered other than those that would naturally arise in the handling of so large and unwieldly a vessel. The sinking, too, was easily accomplished, though it involved the exercise of great care and skill. In this the river currents played an important part.



Tubes on ways before sheathing.

It has been found that, in all streams, where accurate current measurements have been made, that the greatest velocity is not at the surface, but a short distance below it, showing that the resistance of the air and the wind sets up a frictional opposition to the flow that modifies it. This was found to be true in a general way in the Detroit River. The current velocities varied from point to point, according to the distances from the bottom and the shore, as well as according to the direction and strength of the wind. The figures given, herewith, can, therefore, only be regarded as approximations. The average surface velocity may be taken at 2.3 ft. per second, increasing to about 2.33 ft. a short distance below the surface and then gradually decreasing to about 1.61 ft. per second at the bottom. It was in this current then of approximately two miles an hour that the tubes had to be sunk. They had to be sunk to a true vertical and horizontal bearing. Their alignment with each other must be exact, and they had to be held accurately in position during the whole process of lowering. No definite measurements were taken of the strain on the holding cables imposed by the current impinging against the exposed sides of the tubes. They were located broadside to the current and the upstream side measured 260 ft. by 29 ft. As velocities of 3.4 ft. per second were observed, this will be taken as the maximum which, if distributed evenly over the whole surface, would produce a pressure of 62,275 lbs., which, with the swaying of the tubes, might well run the load up to from 35 to even 40 tons. As the tubes approached the bottom, the load decreased until at the low velocity of 1.17 ft. per second found in some places it fell to about 7,775 lbs. With these stresses to be carried it is evident that a firm holding was necessary. The ordinary heavy ship anchors were found to be quite inadequate. They were dragged along the bottom by the pull and had to be abandoned. In their place, slabs of concrete from 10 ft. to 12 ft. square and 18 in. thick were formed, fixed in the bottom of the river, and the anchor lines built into them. An ordinary snatch block in these lines with winch engines on anchored and stayed scows was found to be sufficient to hold the tubes in place.

Before starting to sink the tubes grillages were sunk into the trench, and spaced so as to form a bearing and support for the adjacent ends of the tubes. These grillages were formed of 12-in. beams, and were carried on spuds or spurs that were driven into the bottom. They were lowered into place and then tapped with a pile driver until they were slightly below the level that the bottom of the tubes was to occupy.

These preparations made, everything was in readiness for the sinking of the tubes. For floating down the river bulkheads had been built into each end, and every alternate tube was fitted with pressure bulkheads capable of sustaining the pressure due to the head of water. They were towed to location and valves in the two ends were opened and water admitted. As they filled the water naturally accumulated at one end more than at the other and that end settled the faster. The tubes were prevented from up-ending by semi-bulkheads built down from the tops of the tubes into the interior, as indicated on the sketch. Then, as the tubes tilted air pockets were formed in the lower ends, adding to the buoyancy at that point and maintaining an equilibrium. Independent air cylinders were placed on top, so as to keep the whole system on the surface when the tubes had been entirely filled. The balance was very even and the whole was so slightly lighter than the water that it would have floated with only these auxiliary air cylinders just above the surface. The second sinking was

done by lowering a grillage of beams or counterweights down on top of the tubes by means of a floating derrick. As the supporting ropes for this were eased off the weight depressed the tubes, and as they were tautened they came up. The weight so supported was about seven tons, so that by carrying a portion of this seven tons on the hoisting ropes, the whole 550 tons in water or 975 tons in air of tubes were fully controlled. The leveling and alignment of the tubes was done by means of masts rising above the surface and by transits and levels on the shore.

As already stated, the supporting grillage at the bottom was driven down to a level slightly below that of the bottom of the tubes. When the latter were lowered to place, a diver was sent down, who placed wedges on the grillage, by which a proper footing for the tubes was formed. The latter were supported at or near the ends only, and so accurate was the leveling of this whole piece of work done that there was no perceptible variation from true from one end of the tunnel to the other.

The alignment was, if anything, an even simpler matter than the leveling. Four heavy projecting pins were fastened into one end of the tubes. At the other end corresponding holes were formed. Then a line was led out from the tube already down and into the one being sunk. As the tube went down this line was overhauled, drawing the tubes together, until the pins on one entered the dowel holes on the other, when the two were drawn forcibly together. This set one end of the new tube in true and perfect alignment, and it was merely necessary to shift the easily-handled outer end of the fresh one into line and the work was done. A curious incident, illustrative of the ease and at the same time the difficulty with which these tubes were adjusted occurred in connection with the sinking of the first one at the Detroit end. It had been brought to a firm abutment with the approach, at the shore end, but the outer end had swung nearly 2 ft. out of line. Tugs were attached and every effort made to drag it along the grillage into place, but to no avail. The next morning the steamboat from Cleveland came up the river at full speed without slowing down and raised such a swell that the tube was lifted from the grillage and, strange to relate, was dropped in exactly true alignment, so that it did not have to be moved, adding another to the unexpected freaks of inanimate things.

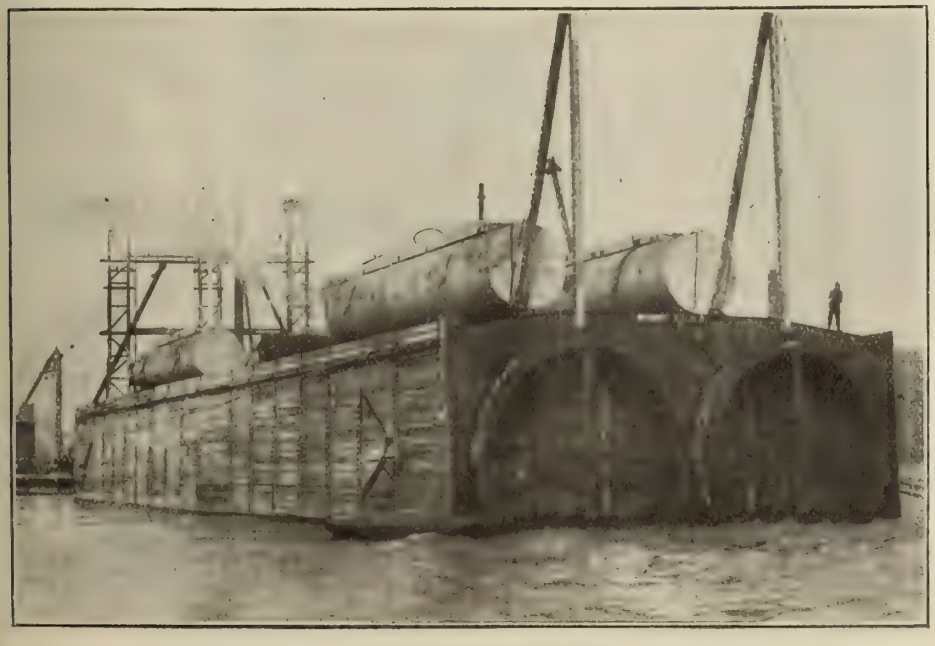
Launching the tubes.

With the tubes down, the first step was to place the connecting bolts through the flanges, and this was done by divers, and involved the only use of compressed air in the subaqueous section. This was easy and quick work, although the men were working in deep water. With the tubes down and bolted, it was necessary to imbed them in their shell of concrete before removing the water for the inside lining. The tubes were carried on the grillage at the ends only; they were clear of the bottom of the trench throughout the central portion, and there was a clear space below them at the grillage at the ends. The concrete was deposited through a long chute from a tremie scow. As a matter of fact, the pressure of the superincumbent water was such that the concrete was very well compacted, and cores taken at a distance from the point of delivery showed that it was fully as dense and strong as that formed in the air, while in the immediate vicinity of the delivery chute, where it was subjected to the direct head of the mixture reaching to above the surface of the water, it was exceedingly hard and was some 50% stronger than the air-formed concrete. Owing to the depth of water and the improbability of interfering with navigation, coupled to the desirability of keeping the approach grades down as low as possible, the top of the tunnel is in some places above the natural bottom of the river. It is protected at such points by rip-rap, so that no anchor grappling it could possibly do any damage.

The forming of the concrete about the tunnels was controlled by the tremie scows above. In the first place a concrete floor of 1-4-7½ mixture was spread beneath the tubes. The excavation had sloping sides and the bottom was readily accessible. The floor A was thus formed up to the bottom of the tubes This firmly supported the tubes from end to end. Three tremies were then set to work to fill in and build up the concrete around the steel tubes. The sheathing at the sides served as the outer forms and the steel tubes as the core. One chute came down just inside the sheathing and one between the tubes, or at the points B, C and D. The concrete was sent down very wet so that it would flow and find its own level, and the chutes were raised as the space filled up. This formed a block of concrete of practically rectangular section with the two tubes running through it. The space between the sheathing and the slope of the banks was then refilled with clay, so that the tunnel stands embedded in the bottom.

With the concrete laid there was, thus, a column of concrete laid out into the river, abutting against the approach walls and capable of withstanding any end thrust to which it might be subjected. It was lined by the steel tubes and cut up into compartments by the diaphragms in the latter. Then, as the work advanced, a section of the tubing would be freed from water, the temporary bulkheads cut away and the workmen would advance into it and put up the inner lining, or tunnel proper, working in the usual manner with wooden forms and without using any compressed air. When the internal lining was placed a concrete mixing plant was erected on the shore at the head of the shaft, and the concrete sent down through a chute to cars on a temporary track in the tunnel. These cars were then hauled out to the point where the work was in progress. The mixture used was a 1-2-4 and was formed of Portland cement with sand and fine gravel. The leveling of the tunnel was true, while the alignment was out but a fraction of an inch. The last tube dropped into place with exactly the calculated clearance between its end and the Windsor approach walls, which was about 18 in.

As it stands the tunnel is very dry.



Tubes ready for sinking.

Labour-Saving Machine Tools

MANUFACTURED BY **ALFRED HERBERT, LTD.**, COVENTRY ENG.

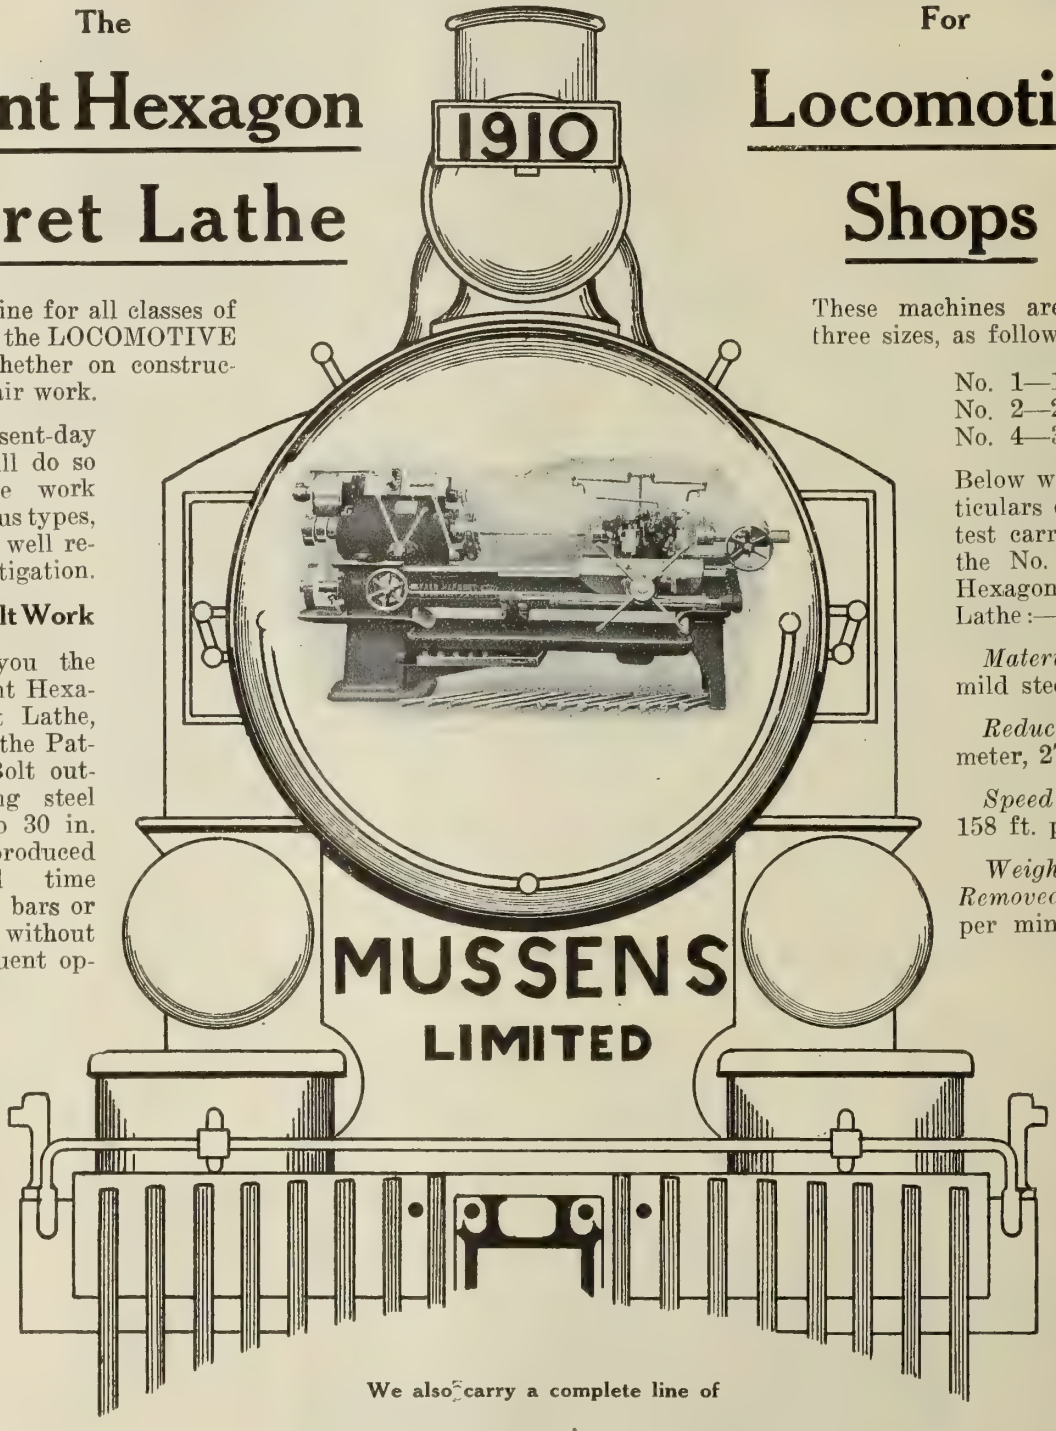
The **Patent Hexagon Turret Lathe**

is the machine for all classes of bar work in the LOCOMOTIVE SHOPS, whether on construction or repair work.

The present-day machine will do so much more work than previous types, that it will well repay investigation.

On Stay Bolt Work

we offer you the No. 2 Patent Hexagon Turret Lathe, fitted with the Patent Stay Bolt outfit, enabling steel stays up to 30 in. long to be produced in record time either from bars or forgings without any subsequent operations.



For **Locomotive Shops**

These machines are built in three sizes, as follows:

No. 1—1½" x 21"
No. 2—2¼" x 30"
No. 4—3½" x 42"

Below we give particulars of a recent test carried out on the No. 2 Patent Hexagon Turret Lathe:—

Material—30-ton mild steel.

Reduction in diameter, 2" to ¾".

Speed of Work—158 ft. per minute.

Weight of Metal Removed—7¾ lbs. per minute.

FULL PARTICULARS FREE ON REQUEST

We will be pleased to give a guarantee of output on receipt of samples or sketches

We also carry a complete line of

Machine Tools and High-Speed Steel

MUSSENS LIMITED MONTREAL

The steel tubes have served as a waterproofing and are tight. In the approach tunnels the minor leakages are drying of themselves, and in but one or two places will any attention be needed from the contractors. The novel method is, therefore, a success, and a similar plan is being used for one of the tunnels under the Chicago river, where a single section will be sunk. Its success, too, is not limited to its engineering features, but touches the financial side of the question, for not only has the cost been more than $2,000,000 less to the railway company than any other type of construction would have been, but it has been a profitable undertaking to the contractors. In finish the section is one of the largest, if not the largest, subaqueous tunnels in existence. The conduit bench is large, roomy and with ample headroom. There is one upon each side and access is obtained by ladders set staggering at 50 ft. intervals, so that the trackmen have an opportunity to seek refuge every 25 ft.

The track construction is permanent and has been tested in service and under observation for more than two years in the open and has been found to be satisfactory in every particular. It is formed by embedding short wooden ties measuring 36 by 11 by 8 in. in the concrete flooring and spiking the rails to them with the intervention of tie plates. The rail used will be of 100-lb. section.

Outside on the Detroit approach the value of the ground is such that the natural slope could not be used, so that vertical concrete retaining walls are resorted to. But in Windsor the work in the approach cut resembles more the finished product of an old and prosperous road than what we are accustomed, in this country, to associate with a newly constructed line. The tendency of the clay to flow and the probability of trouble with a natural bank led to a complete drainage of the slopes. Drains are carried up at right angles to the track, and the whole slope has been sodded; then, at the bottom, there are the tile drains to carry off the water so that no trouble is anticipated, and when the tunnel is opened to the public it will present the finished appearance, in whole and in detail, of an old and well-established line.

In the preparation of this article great assistance was rendered by W. J. Wilgus, the advisory engineer; W. S. Kinnear, the chief engineer, and B. Douglas, the tunnel engineer, by whom the facts and data were contributed. All unite, however, in laying the burden of the credit for the successful completion of the work upon the shoulders of W. Butler, of the Butler Bros. Construction Co., who were the contractors. As the contract was let, the work became a mutual affair. Instead of offering plans for a hard and fast design upon which bids were to be made and in accordance with which the work was to be done, four alternative plans were presented for competition. The contractors were asked to choose the one from among them that they preferred, or to bid on any other plan of their own; the condition only being that a strong watertight tunnel should be delivered to the tunnel company. The Butler Co. chose the one that has been used, and after having made their selection and submitted plans that were approved they were given a free hand to work out the details as they pleased. On them devolved the detail of the construction of the tubes, their sinking into position, the placing of the concrete and the meeting of the thousands of emergencies that were sure to arise, and that did arise with daily and hourly frequency, with all imaginable variations and inconceivable persistency. And it is in the meeting of these unexpected conditions and the resourcefulness shown in overcoming them that the engineers unite in giving the credit to Mr. Butler. —Railway Age Gazette.

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

A Railway to Hudson Bay.

The Dominion Parliament May 3, voted $500,000 upon construction account for a railway to Hudson Bay. The Minister of Railways, referring to the vote, said the work as proposed will start at Le Pas, on the south side of the river. It is proposed to utilize this vote, or a portion of it, immediately, to ask for tenders for the erection of a bridge across the river at that point. It was intended to do that specific construction at once. It is a little difficult to say what will be the terminus of the line, but whether it be at Nelson or Churchill, the route for the first 160 miles will be the same. The votes passed for the Marine Department provide for sending a steamer round to Hudson Bay by the straits for the purpose of gaining more information in regard to the two ports. From the railway standpoint the route to Nelson would be the shorter, and would afford the easier construction. There is some difference of opinion as to which is the better harbor. The engineer's report that Nelson has the foundation for a safe and larger harbor, while on the other hand, Churchill has a harbor ready made, but not so large. A further sum of $180,000 has also been voted for surveys. (May, pg. 373.)

Recent Dominion Legislation.

The Dominion Parliament at its recent session passed the following acts affecting transportation interests, in addition to those named in our May issue, which were assented to some time prior to the prorogation ceremonies:—

Alberta and British Columbia Ry.—Amending act.

Alberta, Peace River and Eastern Ry.—Incorporation.

Brandon, Saskatchewan and Hudson's Bay Ry.—Extending time for construction.

Buctouche Ry. and Transportation Co.—Respecting company's powers.

Burrard Inlet Tunnel and Bridge Co.—Defining company's powers.

Cables and Telegraphs.—To control rates and facilities of ocean cables, and to amend Railway Act with respect of telegraphs and jurisdiction of Board of Railway Commissioners in regard thereto.

Canadian Northern Alberta Ry.—Incorporation, and providing aid for construction of railway.

Canadian Northern Ontario Ry.—Respecting company's powers.

Canadian Northern Ry.—Extending time for constructing certain branch lines; authorizing construction of additional lines, and otherwise amending powers.

Dry Docks.—To encourage construction of dry docks.

Essex Terminal Ry.—Extending time for construction, etc.

Gatineau and Ungava Ry.—Incorporation.

Government Railways.—(1) Authorizing Government to acquire by lease railways connecting with Government railways; (2) Providing for adjudication of small claims arising in respect to the operation of Government Railways; (3) Amending Government Railways' Act.

Guelph Junction Ry.—Authorizing City of Guelph to acquire interests of stockholders who are alleged to hold shares in trust for the city.

Hamilton, Waterloo and Guelph Ry.—Authorizing extension into Toronto, and extending time for construction.

James Bay and Eastern Ry.—Incorporation.

Kingston, Smiths Falls and Ottawa Ry.—Extending time for construction.

Montreal Harbor Commission.—Providing for further advances by Government for improvements and additional facilities.

Montreal, Kapitachuan and Rupert's Bay Ry.—Incorporation.

Morrisburg Ferry and Dock Co.—Incorporation.

Naval Service.—Respecting Canadian naval service.

Navigable Waters Protection Act.—Amending existing acts.

Nelson River Ry.—Incorporation.

Northern Quebec Colonization Ry.—Incorporation.

Ontario and Ottawa Ry.—Incorporation.

Ottawa and Montreal Transmission Co.—Incorporation.

Ottawa, Rideau Valley and Brockville Ry.—Incorporation.

Prince Albert and Hudson Bay Ry.—Authorizing extension of time for construction, and extension of line.

Railway Act.—Amending provisions.

Rainy River Radial Ry.—Incorporation.

St. John.—Authorizing erection of wharves and buildings in St. John, N.B., harbor.

St. Lawrence Power Transmission Co.—Incorporation.

Subsidies to Railways.—Granting subsidies in aid of construction of certain railways.

Telegraphs Act.—(1) Amending Telegraphs Act; (2) Correcting error in same.

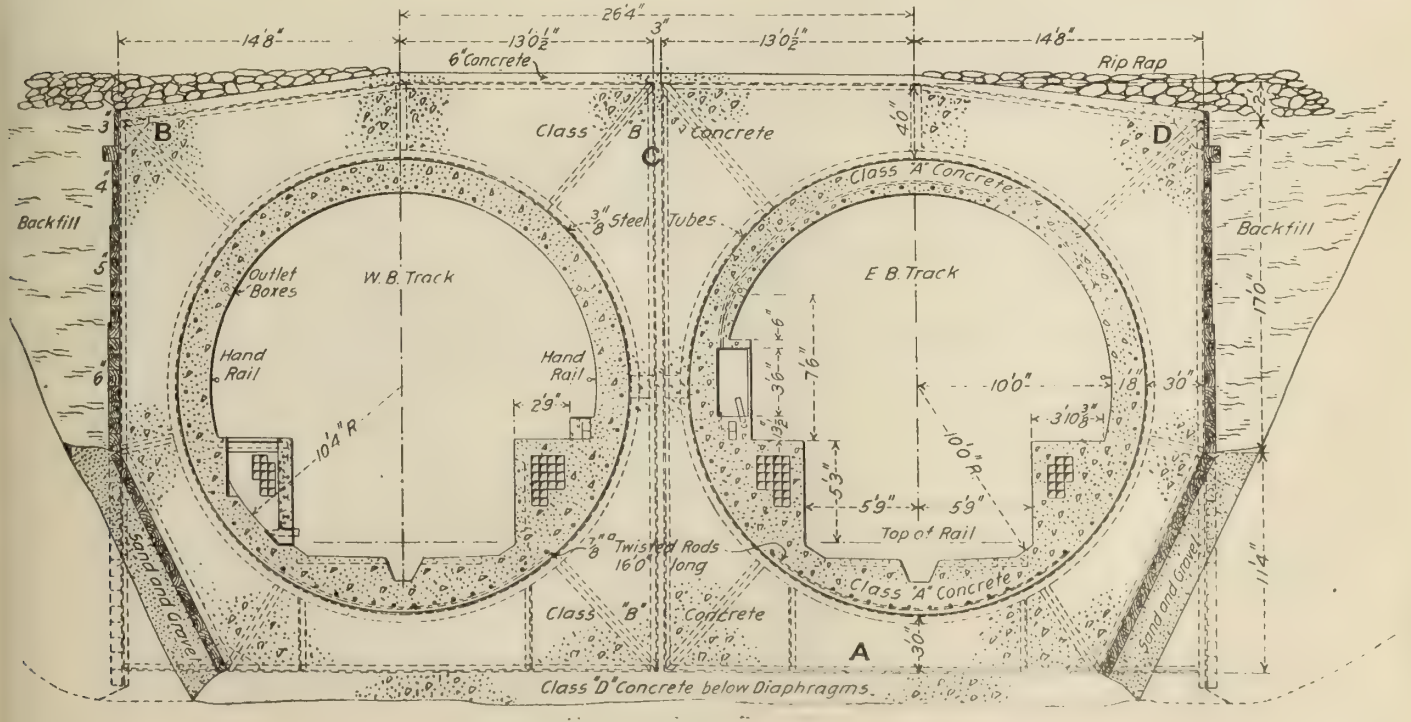
Toronto Eastern Ry.—Incorporation.

Vancouver Island and Eastern Ry.—Extending time for construction.

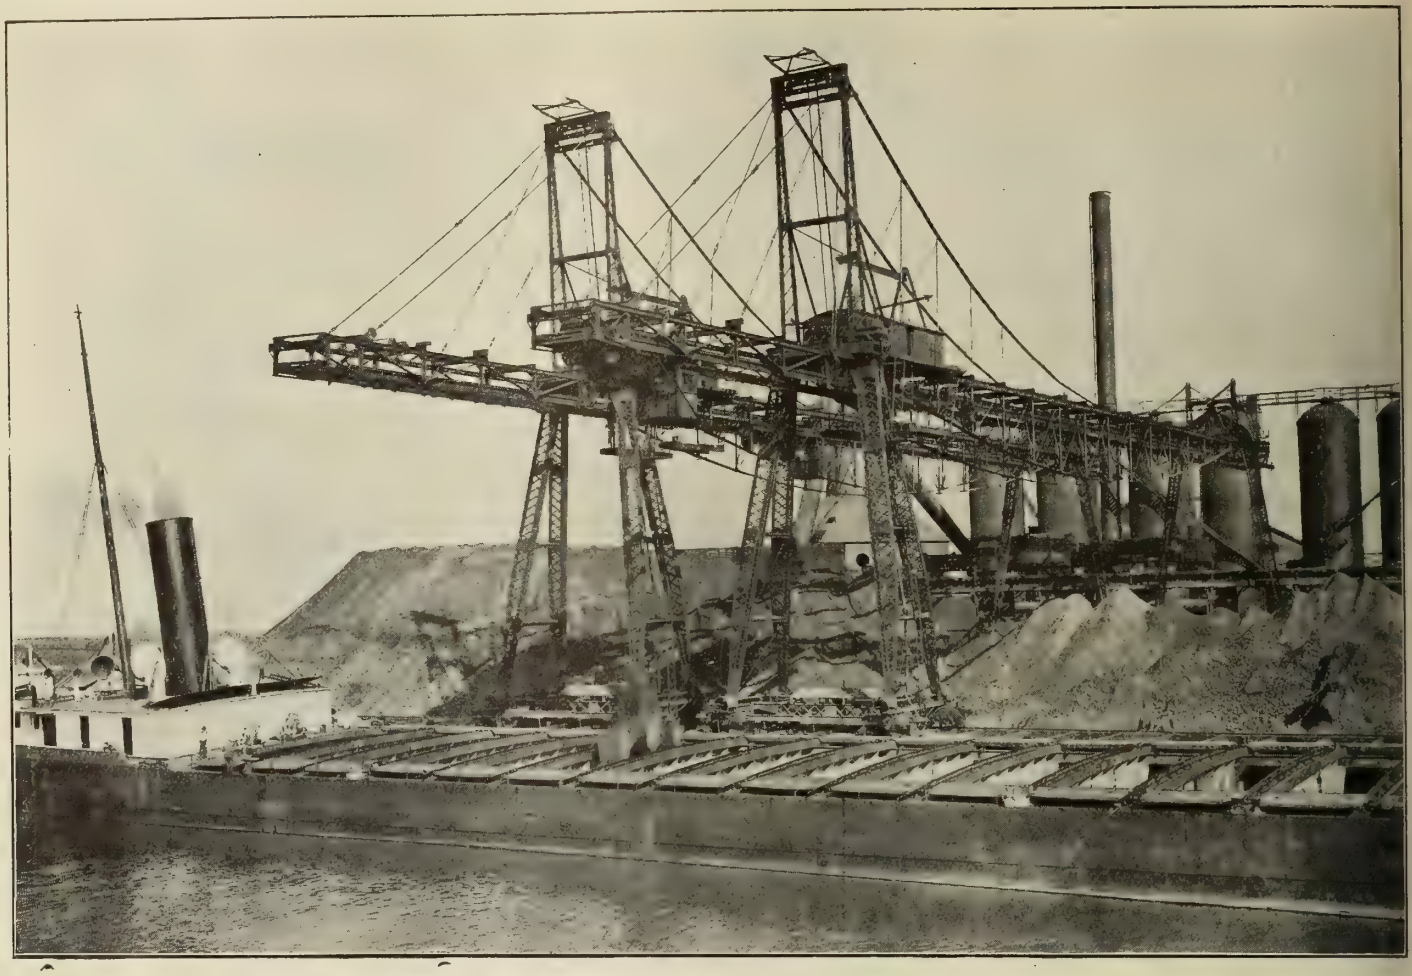
Vancouver, Victoria and Eastern Ry. and Navigation Co.—Extending time for construction.

Water Carriage of Goods.—Act respecting.

Canadian Railway Club.—The annual meeting was held at Montreal, May 3. The report for the past year showed that there were 650 members, and that there was a balance in hand of $2,905 against $2,287 for the previous year. Some discussion took place as to the advisability of utilizing this surplus, and it was decided to appoint a committee to enquire into the question of establishing a reference railway library, and to report to the next general meeting. H. H. Vaughan, Assistant to the Vice President C.P.R., on retiring from the presidency, was presented with an engraved gold ornament, and the formal proceedings were concluded by an address by Grant Hall, Superintendent of Motive Power C.P.R., Winnipeg, President of the Western Canada Railway Club. The following were elected for the current year:—President, A. A. Maver, Master Mechanic Motive Power G.T.R., Montreal; Vice President, A. A. Goodchild, Auditor of Stores and Mechanical Accounts, C.P.R.; Second Vice President, J. Coleman, Superintendent Car Department G.T.R.; Secretary, J. Powell; Treasurer, S. S. Underwood; Executive Committee, A. L. Grayburn, R. W. Burnett, H. C. Butler, C. Kyle, W. McNab and F. Ditchfield; Auditors, H. A. White, J. S. Johnstone and G. I. Evans.



Section of completed Detroit River tunnel.



FEDERAL FURNACE CO.'S TWO BRIDGE TRAMWAY.

THE BROWN HOISTING MACHINERY CO.

Engineers, designers and builders of hoisting machinery of all descriptions.

PITTSBURG AND NEW YORK

The G. T. R. Apprentice System.

The problem of effectually supplying the ever-increasing demand for skilled and thoroughly trained mechanics has been constantly in the foreground and for some years past has caused a great deal of anxiety to the heads of all large industrial corporations, and everywhere was heard sighs of regret that the ranks of the good mechanics were being rapidly depleted. Realizing that this was in part correct, the G.T.R. some years ago endeavored to fill the breach and pioneered a movement for the technical training of its apprentices. The average boy, who from force of circumstances had to leave school in the early stages of his education and take up his life work, had little to look forward to in the matter of education, except by years of unremitting toil, unassisted, unrewarded, and finally arriving at a smattering of a few primary subjects imperfectly learned. Night schools filled in part some of the requirements, but attendance whilst beneficial was mostly drudgery, owing to the subjects taught not bearing directly on their daily work. With this problem before it, the G.T.R. several years ago started a class for its apprentice boys, who were eager to learn; commenced to teach subjects which at once aroused interest among the boys, bearing as it did on the everyday needs of mechanics. In a surprisingly short time, the desire for knowledge being whetted, it was found necessary to increase the scope of the teaching, as the apprentice boy of the day saw within his grasp the very highest position of responsibility in the management and operation of the road. He realized that here was an opportunity to obtain an education little short of a college course, with a minimum exertion on his part and at the same time be independent and self-supporting. From the commencement on a small scale, the system has grown until at present these technical schools are spread at all important centres throughout the entire G.T. system and hundreds of scholars are enrolled, whilst every large railway system of this continent boasts several graduates of the G.T. training schools as their chief mechanical engineers, and more than one of Canada's largest industrial concerns have graduates as their chief draughtsmen.

The subjects taught are graded to suit the student's ability and in dozens of cases boys who left school when in the second book can now do problems which would tax the powers of a high school graduate to the utmost. The subjects taught comprise everything from simple arithmetic to higher mathematics, mechanics, machine design and mechanical drawing, and so well has the course been graded that numerous requests from mechanics' institutes and even the largest technical colleges have been received for complete sets of instruction boks. The entire cost of education at these training schools is borne by the G.T.R., which furnishes all the equipments and engages the instructors, who must themselves have had a thorough technical and practical training, so as to enable them to anticipate the needs of the apprentices. Further encouragement is given the boys to learn by the large number of prizes donated annually, open to competition to all classes on the system, and include free scholarships in engineering at McGill University, as well as handsome cash prizes. These prize competitions are held at different centres to which the best students at the several centres are invited, free transportation, entertainment and all expenses being borne by the company. The appreciation of individual promotions forms one of the strongest features in the system and serves to keep alive the keenest interest in the classes, as the boys realize that as soon as they arrive at a certain standard of excellence, increased pay is their reward, and many of our foremost students of political economy, see in this system, as it is being carried out, the future supply of skilled mechanics, master mechanics, superintendents, etc., being carefully husbanded, and an effective solution to the labor problem, namely, the prompt recognition of individual merit.

Pattern maker apprentice, G.T.R. Pattern Shop, Montreal.

For two evenings a week during the fall and winter months the apprentice must attend mechanical drawing classes, study of practical mechanics and elementary electricity, the most competent instructors procurable being provided. On the staff are two graduates of Canadian and U.S. engineering colleges, McGill and Purdue. The work in the drawing class is outlined in a special text book written by the company's Chief Draughtsman at Montreal, who is also the author of the book used on practical mechanics. During the term frequent examinations are held, and the points gained by each boy are posted so that they may all keep advised as to just what progress they are making, and thereby be able to brush up the weak spots that the examinations have disclosed. The Master Mechanic is constantly in touch with each boy's progress and standing, and if necessary he frequently calls a boy up, and in a kindly manner points out to him the necessity of applying himself more consistently to bring his rating up to the required standard.

PRIZES FOR BEST WORK.

The annual Competitive Examination is always conducted by the Company's Chief Draughtsman from Montreal. Prizes are awarded to the apprentices obtaining the highest average in their respective years. These prizes amount to $40 for each shop, and are distributed over the different years of apprenticeship, thus: the apprentice obtaining the highest average for his first year in mechanical drawing gets $4 and the one obtaining the highest in practical mechanics gets $4 also. Therefore, it is quite possible for one apprentice to obtain both prizes. A keen interest is taken in this examination, which takes the form of a contest between the var-

ious shops. In addition to the prizes as stated above there is a capital prize offered of $25 for each subject. This is competed for by the apprentices obtaining the highest averages in drawing and practical mechanics at their respective stations. These apprentices are given a trip to some point on the system where the final examinations are held, and the one receiving the highest number of points in each subject receives the amount stated. This, in addition to what he has already received at his station, will make a total of $29, $33 or $58, if he has been successful in all subjects. After the season has closed, the boys at some of the large shops hold what is termed "Apprentice Night." This is the social event of the season. Each one makes a drawing, which is neatly got up and inked in. This is placed on exhibition, and the prizes are awarded for each year of apprenticeship. These prizes are $2.50 for the first, and $1.50 for the second. There are also prizes offered for special colored drawings, $3 for first, and $1.50 for second. This may be competed for by any apprentice, irrespectively of his year, and considerable interest is manifested by those of artistic ability.

The form of apprenticeship which has been adopted by the G.T.R. has been in successful operation for a number of years and has been the means of supplying that company with skilled mechanics in the most satisfactory manner. All apprentices are indentured to machinist's trade for five years, and to blacksmith's, boilermaker's, or other trades for four years. Five cents per day is deducted from the wages of each apprentice, and the total amount is returned to him at the expiration of his apprenticeship with an addition of $25 as a bonus if services have been entirely satisfactory. The first requisite in employing an apprentice is to know that he is morally, physically and mentally capable of filling the requirements of a mechanic. To ascertain this the apprentice is required to make his application direct to the Master Mechanic or the General Foreman, and to be not under 15 or over 18 years. He is required to undergo a medical examination so as to assure the head of the department that he is healthy and likely to be able to follow up the trade after he has completed the term of apprenticeship.

This information being satisfactory, he has to pass an examination in the Master Mechanic's or General Foreman's office. This is usually conducted by the chief clerk or some person specially appointed for that purpose, as follows:—

Boiler maker apprentices, G.T.R. Erecting Shop, Montreal.

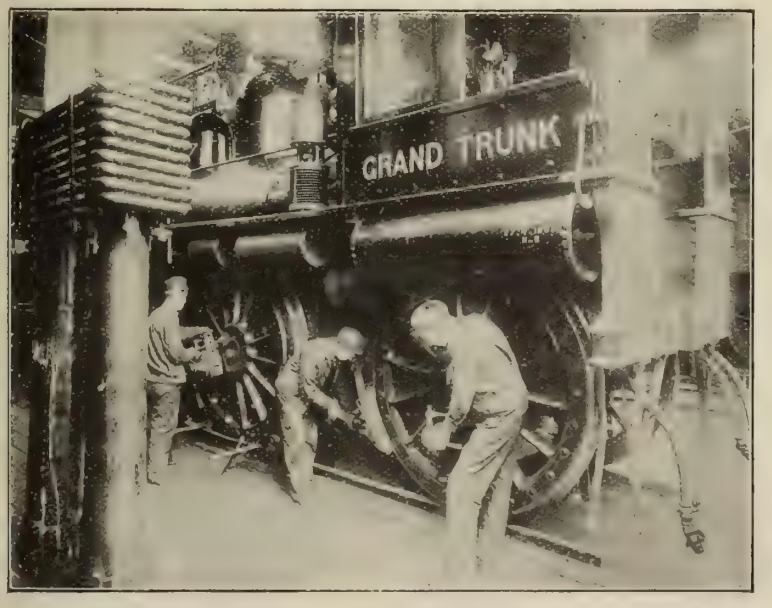
To be able to read extracts from instructions from end of employes' train time-table, standing 30 inches from same; to be able to hear the ticking of an ordinary open-face watch at a distance of 4 ft.; by writing a letter, from dictation, applying for employment in the shops; to be able to work out correctly similar examples in arithemetic, to the following:—

Multiply 122,983,672 by 527,001.

Divide 723,643,978 by 365.

The applicant is required to write this examination out on foolscap paper, and if satisfactory it is copied by him into the record book kept in the Master Mechanic's or General Foreman's office, so that a complete record of the boy's ability is on file from the day he first enters the service. The apprentice after having passed a successful examination is provided with a text-book for his instruction and guidance. This book contains examinations for the apprentice for each promotion he takes while serving his apprenticeship, and if he fails in any of these examinations he is set back to his old position for another term and the next apprentice in turn is promoted ahead of him, provided the next apprentice passes a satisfactory examination. When another promotion is necessary the apprentice who failed is given another opportunity to qualify. If he fails the second time he is either dismissed from the service or given some minor position he is capable of filling outside of the trade, as it is concluded that he is either not sufficiently intelligent or too indifferent to make a mechanic.

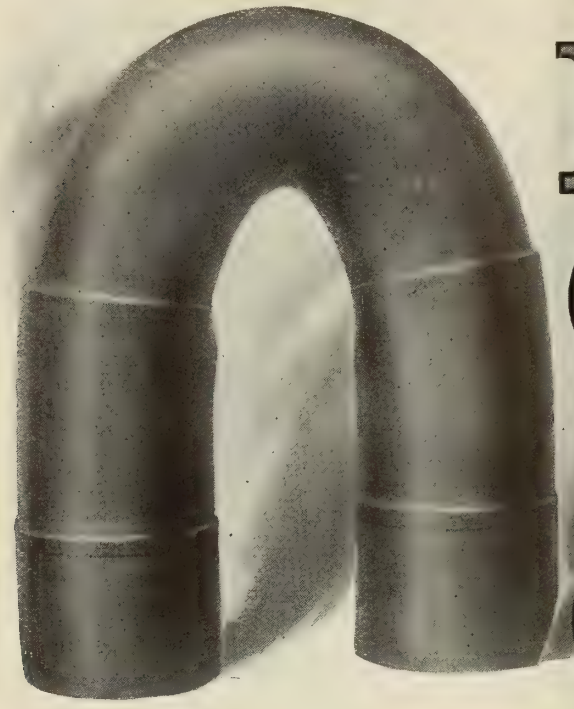
After passing the first or entrance examination in the Master Mechanic's or General Foreman's office the apprentice is sent out to the boiler, blacksmith or coppersmith shops, or other shop as may be required. He stays there from six to nine months, and is taught to be active and obedient, and to prepare himself for future promotions. When a boy is to learn one branch of the business only, for instance, boilermaking, blacksmithing, steam-fitting, etc., he is only required to serve four years, but if he is to learn the machine work and fitting, he is required to serve five years and all the machinists' apprentices are indentured for five years. In the case of any apprentice learning the boilermaking, or blacksmithing he is required to pass an examination in the Master Mechanic's office and the first examination in the apprentices' rule book, as it is deemed necessary to have the information contained therein for any branch of the service, and in the case of these four-year apprentices being few in number after the first examination, in comparison to the machinist's apprentices, they are instructed in their business by the foreman in charge, and each year they are required to pass an examination in drawing before receiving their advance in wages, the same as machinists' apprentices.



Machinist apprentices, G.T.R. Erecting Shop, Montreal.

MAKE THE APPRENTICE THINK.

The object of the text book is to have the boy theoretically conversant with the work that is going to be done by him after his next promotion. For instance, a boy going from the blacksmith to machine shop has to pass his examinations before he is accepted in the machine shop, which is called "Examination for promotion of apprentices from other shops to the machine shop." As he is usually put on a drill to commence with, by studying his text book, he learns considerable about it, and also the tools he is to use in connection with



BENT COLD *Without a* CRACK

THIS VANADIUM STEEL LOCOMOTIVE DRIVING AXLE

is ten inches in diameter and was bent cold without a fracture or a crack under a 14,000 ton press. Its tensile strength is 100,000 pounds per square inch; elastic limit, 75,000 pounds, and it gave an alternation test of 850.

Visible arguments like this have made the largest railroads in the world specify Vanadium iron and steel in the high duty parts of all locomotives.

Vanadium Steel Castings for frames are as strong and elastic as Carbon Steel Forgings; Vanadium Cast Iron Cylinders run five times as long as ordinary iron without reboring; Vanadium Steel Forgings properly made and properly treated combine the greatest strength and ductility with the properties of resisting fatigue and crystallization.

Complete information showing how and why you should use Vanadium on request.

VANADIUM

it. The same practice is followed throughout the whole term of apprenticeship, and while the apprentice is working at one machine he is studying as much as possible about the machine he is to go on next. One of the great advantages of this system is that it gets the apprentice thinking, and leads him to reading up in line with his work.

The indenture system has been found of great advantage both to the company and the apprentice. It has a tendency to keep the apprentice satisfied, and steady his energies along the required lines. It also prevents him from being tampered with by outside firms or corporations who desire to obtain the services of the boy as soon as he has become useful to the company who has instructed him. At the completion of his term each apprentice receives a certificate showing that he has served as an apprentice and as a mechanic in the branch of trade that he was apprenticed to. An apprentice is required to serve five years at the following rates: 8c, 10c, 12c, 15c and 17c per hour. Before he is granted each years' advance he is required to pass a written examination on shop work, also make a drawing of some detail part of a locomotive, as specified in the apprenticeship book, which examination and drawing must have the approval of the Master Mechanic, and the Superintendent of Motive Power before his advance is allowed.

This system insures thorough education in all details of the trade, and while some of the work may be specialized it is not done by the apprentice until he becomes a journeyman. For instance, the apprentice comes from the boiler shop to the machine shop, from the machine shop to motion bench, to the side rod bench, to the axlebox gang, to the steam pipe gang, to the valve gang, and finally to the erecting gang, so that after an apprentice is out of his time he is a specialist in any one of these branches.

This system of apprenticeship on the G.T.R. has also been found to be the means of parents giving their sons who desire to enter the service, a better education than formerly. Before its adoption the only requirement was that the boy had to be 15 years of age. It was found that parents took their boys away from school at 12 or 13 years of age, and put them at some other work until old enough to enter the G.T.R. shops. When the examinations were first inaugurated quite a number of the boys were rejected, and had to go back to school again before they could qualify to enter the service. This has not only resulted in prospective applicants getting a better education, but has elevated the moral standing of the apprentices' work, and made the system attractive to boys who have passed the high school entrance examination, and who, although well advanced along the lines of school education, adopt the mechanic's trade in preference to other pursuits. The success of the apprenticeship system is imperatively dependent upon the careful management of the examinations, and the compulsory attendance at the classes provided by the company.

An apprenticeship record is kept. This is filled out by the chargeman under whom the apprentice is working, is scrutinized by the foreman, and then forwarded to the master mechanic.

Great Northern Ry. Lines in Canada.

Midland Ry. of Manitoba.—After several meetings between representatives of the company and the Winnipeg City Council, a comprise was reached in regard to the route which the company will follow in entering the city, and an agreement is being drawn up for signature. The arrangement was concluded by the Assistant to the President of the G.N.R., and the agreement is being prepared by J. Fisher, K.C., the company's legal representative in Winnipeg. The line proposed to be constructed will start from the terminus of a G.N.R. branch south of the International boundary near Emerson and makes an over line into Winnipeg. It is stated that construction will be started immediately after the agreement is signed. It is also stated that work will be started immediately building a second track on the company's line from Gretna, at the International boundary to Portage la Prairie.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Construction is being proceeded with on the section between Abbotsford and Hope, B.C., the contractors being J. W. Stewart & Co. A sub-contract for 20 miles from Abbotsford to Chilliwack has been let to M. Welch & Co. and sub-contracts will, it is said, be let at an early date for the mileage between Chilliwack and Hope. It is expected that the work will be completed in about a year and a half. East of Hope Mountain construction gangs are at work between Princeton and Otter Tail, 18 miles. The route between Otter Tail and Hope has not been decided on, the question of tunnel or open construction being still under consideration.

A large force of men is engaged ballasting the line between New Westminster and Port Guichon, New Westminster and Cloverdale, and Port Guichon and Cloverdale.

Negotiations are being carried on with a view of bringing about a sett'ement of the differences between the B.C. Government, the company and the New Westminster City Council, as to the new station at the Fraser River bridge.

Speaking at Vancouver, April 30, J. J. Hill, who was accompanied by his son, L. J. Hill, President G.N.R., said it would be only a few years before his company would have a direct Canadian line between Vancouver and Winnipeg, tapping Calgary and other centres. (May, pg. 361).

Decision re Pullman Car Charges.

The Interstate Commerce Commission decision in the case of G. S. Loftus v. Pullman Co., et al, is of sufficient importance to warrant its publication in full. Commissioner Lane delivered the Commission's judgment as follows:—

In view of the similarity between the issues involved in these cases, it seems proper to dispose of them in a single report. In number 1084 the complainant challenges the lawfulness of the standard charge of $2 exacted by the Pullman Co. for the use of a berth in a first class sleeping car from St. Paul, Minn., to Chicago, Ill., via the Chicago, St. Paul, Minneapolis & Omaha and the Chicago & North-Western Ry. Request is made that the rate for the lower berth be fixed at $1.50 and the rate for the upper berth at 75c.

In number 1085 the petition puts in issue the lawfulness of the standard charge of $1.50 exacted by the defendants for the use of a berth in a first class sleeping car from St. Paul, Minn., to Superior, Wis. Request is made that the rate for the lower berth be fixed at $1 and the rate for the upper at 50c. It appearing that sleeping cars are not operated over the Chicago, St. Paul, Minneapolis & Omaha Ry. between St. Paul and Superior, as to that carrier the case will be dismissed.

In number 1086 the lawfulness of the first class sleeping car rates from St. Paul, Minn., to Seattle, Wash., and from St. Paul to Fargo and Grand Forks, N. Dak., is called in question. Request is made that the rate for the lower berth from St. Paul to Seattle be reduced from $12 to $8 and the rate for the upper berth from $12 to $4, the rate for the lower berth from St. Paul to Fargo from $2 to $1.25, and for the upper berth from $2 to 75c, the rate for the lower berth from St. Paul to Grand Forks from $2 to $1.50, and for the upper from $2 to 75c.

All the rates of which complaint is made are alleged to be unreasonable, and the exaction of the same charge for the use of an upper berth as is made for the use of a lower berth is alleged to be unduly discriminatory. The defendants answer generally, denying that the rates which are the subject of attack are unreasonable or discriminatory or otherwise in violation of the act.

The Pullman Co. is engaged primarily in the business of operating sleeping cars over various lines of railway throughout the United States, Canada, and Mexico. It is also a large manufacturer of cars, but this phase of its business need not be considered at this time. According to figures submitted by the Pullman Co. the initial cost of the standard sleepers built within the last four years ranges approximately from $17,500 to $19,500 per car. The title to most of this rolling stock is vested absolutely in the Pullman Co., but there are one or two exceptions to the rule. The sleeping cars which are operated over the Northern Pacific Ry. are owned by the railway company and the Pullman Co. jointly, through the medium of a so-called "Association," the revenues being shared upon an agreed basis. The sleeping cars running over the Atlantic Coast Line Rd. have a similar status. The Great Northern Ry. Co., a co-defendant with the Pullman Co. in cases 1085 and 1086, owns and operates its own sleeping cars. The cost of the Great Northern standard sleepers ranges from $13,500 to $16,500.

The Pullman Co. has contracts for the operation of its cars over virtually every important railway system in the country, with the exception of the Great Northern Ry., the Chicago, Milwaukee & St. Paul Ry., and the New York, New Haven & Hartford Rd. The contracts originally entered into by the Pullman Co. and the various railways were so-called "scaled mileage" contracts—that is, they provided that a certain mileage payment should be made to the Pullman Co., the rate varying with the amount of the earnings. The revenue from the sale of seats and berths accrued of course to the Pullman Co. In some of these earlier contracts the mileage payment was at the rate of 3c per mile. A representative modern contract provides that if the average earnings of the sleeping cars operated are less than $5,000 per car-year the railway shall pay mileage at the rate of 2c per mile. If the car earnings average more than $5,000 but less than $6,000 per car-year the mileage payment is at the rate of 1c per mile. If the earnings are in excess of $7,000 per car-year, the railway is exempt from the payment of mileage. It is provided further that if the earnings per car-year fall short of the stipulated amount the railway company may at its election make up the difference in lieu of paying mileage. Other contracts exempt the railways altogether from the payment of mileage, and still others provide that the Pullman Co. shall share with the railway company the earnings from the sale of seats and berths in excess of a certain figure.

For the purposes of this report an extended review of the results of our investigation into the lawfulness of the rates complained of is unnecessary. Suffice it to say that our enquiry has been thorough and that it has led to the following conclusions:—

The present rate of $2 exacted by the Pullman Co. for the use of a lower berth in a first class standard sleeper from St. Paul to Chicago over the Chicago, St. Paul, Minneapolis & Omaha Ry. and the Chicago & North Western Ry. is not found unreasonable, but the rate for the use of an upper berth is unjust and unreasonable to the extent that it exceeds $1.50.

The present rate of $1.50 exacted by the Pullman Co. and the Great Northern Ry. for the use of a lower berth in a first class standard sleeper from St. Paul to Superior, Wis., is not found unreasonable, but the rate charged for the use of an upper berth is unjust and un-

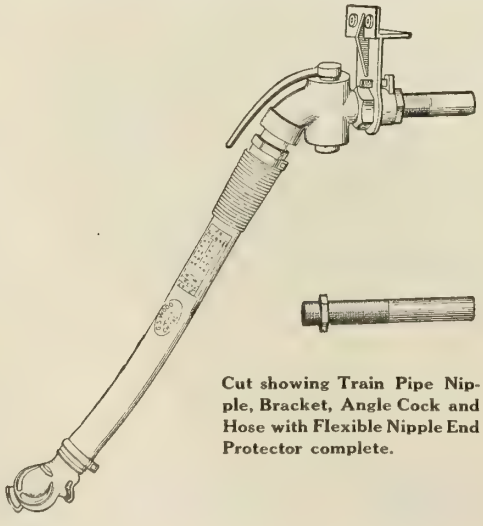
Easily applied, Expense of covering 100 lengths of 1 3-8 inch Standard size Air Brake Hose with P. & W. material including labor, one dollar.



Cut showing Train Pipe Nipple, Bracket, Angle Cock and Hose with Flexible Nipple End Protector complete.

THE MONOGRAM BRACKET

For Air Brake Train Pipes

(illustrated) makes shifting impossible. All of the M.C.B. requirements are obtained and MAINTAINED. The bracket is designed for strength with a liberal factor for safety, and once applied it reduces the cost of maintenance to the minimum.

The hose angle cock is threaded into the end of the train pipe, which is held in the Monogram Bracket located 13½ inches from the center line of the coupler and 13½ inches from the face line of the knuckle and when the angle cock is set at the required angle of 30 degrees, the locking key in the bracket engages the hexagon on the angle cock, holding it in position. The lock nut is tightened with a wrench, holding the key in position locking it into one solid piece of metal, namely the angle cock, bracket and train pipe, all parts in a positive position in a substantial manner, so that pipe shifting is positively prevented.

Correspondence Solicited

reasonable to the extent that it exceeds $1.10.

The present rate of $12 exacted by the Pullman Co. and the Great Northern Ry. Co. for the use of a lower berth in a first class standard sleeper from St. Paul to Seattle is unjust and unreasonable to the extent that it exceeds $10. The rate for the use of an upper berth is unjust and unreasonable to the extent that it exceeds $8.50.

The present rate of $2 exacted by the Pullman Co. and the Great Northern Ry. for the use of a lower berth in a first class standard sleeper from St. Paul to Fargo, N. Dak., is unjust and unreasonable to the extent that it exceeds $1.50. The rate for the use of an upper berth is unjust and unreasonable to the extent that it exceeds $1.10.

The present rate of $2 exacted by the Pullman Co. and the Great Northern Ry. for the use of a lower berth in a first class standard sleeper from St. Paul to Grand Forks, N. Dak., is not found unreasonable. The rate for the use of an upper berth is unjust and unreasonable to the extent that it exceeds $1.50.

An order will be issued in accordance with these findings.

Chairman Knapp delivered the following dissenting judgment:—

I am unable to concur in the foregoing report and will briefly indicate my reasons for dissenting. Without discussing whether the profits of the Pullman Co. have heretofore been excessive, but expressing my serious disbelief that its current earnings yield more than a reasonable return upon the present value of its property, especially in view of the risks and uncertainties of its business future, I base my objections to the majority report upon altogether different grounds.

The fact that sleeping-car accommodations are furnished by an independent company, which has had an extremely profitable career and may continue prosperous for an indefinite period, seems to me wholly immaterial, except as sleeping-car earnings may properly be taken into account in determining whether the entire revenue from passenger transportation is excessive. In other words, the question presented in these cases is precisely the same, in my judgment, and should be determined by the same considerations as would govern if sleeping cars were provided in all cases by the railroads themselves and not, as is the general rule, by an outside company. Nor does it matter, save to the same extent, that the few roads which operate their own sleeping cars, as do the Great Northern and the Milwaukee, realize handsome profits from this branch of their business. It is of no appreciable concern to the passenger, either in sleeper or day coach, whether the car he rides in belongs to the road over which he is traveling or to some other company, and he is equally unconcerned as to which of them gets the money paid for his passage. The real question in all cases is whether unreasonable charges are exacted from the public for any service or facility which a railway is bound to provide or undertake to provide; and this question, as applied to sleeping-car rates, must be determined almost wholly by comparison, because there is no other helpful or even available test. What sleeping cars cost, or how much they earn, or what profits are derived from their operation, seems to me of little bearing upon the reasonableness of the charges in question. The facts of controlling weight and the only fair basis of judgment, as I think, are found by comparing sleeping-car accommodations with day-coach accommodations and what it costs to travel in sleeping cars with what it costs to travel in day coaches. When this comparison is made it becomes evident, to my mind at least, that the transportation charges now paid by passengers in sleeping cars are relatively lower than the charges paid by other passengers. The difference in the value of the service is greater than the difference in charge.

The railways in effect furnish two kinds of passenger cars, differing very materially in comfort, convenience, and safety, and passengers may take one kind or the other, as they choose, at the different rates provided. Now, what ought to be paid by passengers who elect

to take the superior car in comparison with what must be paid by passengers who take the inferior car because, for the most part, they feel obliged to travel as cheaply as possible? Holding, as I do, that the relation between sleeping-car and day-coach rates is the vital matter of concern to the public, and believing that the present differences are of doubtful justice to the day-coach passenger, I cannot vote to reduce sleeping-car charges, particularly lower-berth charges, and thereby increase the relative advantages now enjoyed by sleeping-car passengers.

A concrete case from the record, which is typical of conditions generally, may serve to illustrate my point of view. The first class fare from St. Paul to Seattle is $48.90. For this sum the passenger can make the journey in a standard day coach and have such conveniences as are ordinarily found in passenger cars of that class. By paying $12 more, or slightly less than 25%, he may travel in a sleeping car so much superior to the day coach as hardly to permit comparison. This car may fairly be called a hotel on wheels, and a hotel of attractive and even luxurious appointments. It is much heavier than the day coach and easier to ride in; its greater strength makes it very much safer. It carries comparatively few passengers, less than half the number that may be crowded into an ordinary car, and its occupants are usually persons of good appearance and unobjectionable manners. In addition to its sleeping accommodations, which are generally excellent in point of comfort and cleanliness, it has commodious toilet and smoking rooms, with other features of convenience and desirability, including the more or less attentive porter. In such a car the journey is made with little fatigue and often with positive enjoyment. Surely all this is cheap by comparison at the cost of only 25% above the day-coach rate. Is not the discrimination in fact against the day-coach passenger?

On many roads there are trains composed exclusively of sleeping cars and parlor cars, which fall in the same category. Such trains often include observation and buffet cars, supplied with books, magazines, and papers, to say nothing of bodily refreshments, and not infrequently carry a stenographer, lady's maid, and barber to wait upon the passengers. For all these conveniences and satisfactions the additional charge appears to me extremely moderate in comparison with the accommodations provided for and rates paid by day-coach passengers, and I fail to see upon what ground these additional charges can be found unreasonable.

If the undisputed facts of comparison and the argument based thereon are given due weight, and they seem to me peculiarly applicable and convincing in these cases, they lead to the conclusion that the sleeping-car charges in question, certainly the lower-berth charges, are not shown to be unreasonable. To reject these facts and their legitimate inferences is, in my opinion, to ignore the element of the value of the service and to leave the conclusions of the majority with little support, except the fact that the Pullman Co. has made a great deal of money, and that the defendant roads which operate their own sleeping cars have found the business profitable, or at least have so kept their books as to indicate that result. In my judgment, the deduction is wholly unwarranted.

It is a matter of common knowledge that the number of sleeping-car passengers compared with the number of day-coach passengers is relatively small. Leaving out all short-distance travel and taking into account only journeys of, say, 100 miles and upward, much the greater number of travelers ride in ordinary coaches. The remaining minority patronize sleeping and parlor cars, paying the additional charge therefor, as most of them are well able to do. It does not accord with my sense of justice or my understanding of the law which the Commission is appointed to administer to reduce the charges voluntarily paid by the limited number of persons who travel in sleeping cars, and I regret a decision which, as I view the matter, will operate unjustly, not perhaps to the Pullman Co., but to the public at large.

On broad grounds of social welfare I have long believed in low passenger fares for everybody, and I shall welcome a material reduction from present rates as soon as it can be made without injustice to the railways. But I would bring this about, if I could, before reducing the extra cost of sleeping-car accommodations for the benefit of a comparatively few persons who, in my estimation, are now distinctly favored.

It is evident that the upper berth is less desirable to a substantial degree than the lower berth, and I would agree to some reduction of the upper-berth charges, not because there is any evidence that they are unreasonable per se, but because the same charge for both may be fairly regarded as an unjust discrimination against the upper-berth passenger. I am of the opinion, however, that the difference fixed by the majority report is in some cases too great. For example, when the lower-berth rate is not more than $1.50, I think a charge of $1.25 for the upper berth should be allowed.

Commissioner Harlan also dissented, and said:—

I am unable to assent to the conclusions announced in this proceeding in the report of the majority. While concurring in some of the views expressed by the Chairman in his dissenting report, I place my own dissent upon the general ground that the order directed to be entered is not justified by the record.

Canadian Collieries (Dunsmuir), Ltd., has been incorporated under the Dominion Companies Act, with a capital of $20,000,000 and office at Victoria, B.C., to acquire and operate coal, mineral and other lands, and in connection therewith to own and operate steam and other vessels, wharves, dry docks, bridges, yards and tracks of every description for the storing and handling of the company's products. The main object is to take over the coal mining, railway and other properties, recently purchased from J. Dunsmuir and Sons, owners of the Wellington Collieries. The provisional directors are:—F. H. Phippen, K.C., G. G. Ruel, G. F Macdonnell, R. H. M. Temple and J. H. Phippen, Toronto, all of whom are connected with the Canadian Northern Ry.

The Board of Railway Commissioners' Secretary has issued a circular requesting that railway equipment reports heretofore addressed to J. Ogilvie, Inspector of Railway Equipment, be in future sent to A. J. Nixon, Chief Operating Officer at Ottawa.

Exterior view, G.T.P. Locomotive Shops, Stratford.

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and British Columbia Ry.—The Dominion Parliament has extended the time for building the projected line. (April, pg. 271.)

Alberta Central Ry.—We are officially advised that the route of this projected railway from Red Deer to Rocky Mountain House, Alta., approximately 63 miles, has been approved by the Board of Railway Commissioners. The route, as laid out across the Red Deer River, about six miles southwest of Red Deer, by a steel viaduct approximately 2,000 ft. long and 130 ft. above low water. Proceeding north-westerly from the Red Deer River, it crosses the summit of the valley at Burnt Lake passes in the vicinity of Sylvan Lake, about 20 miles from Red Deer. The line crosses the valley of the Medicine River between Evarts and Eckville, and emerges from the Medicine and Horseguard Valleys about 10 miles further on, after which it traverses the plateau which extends from this point to the east bank of the Saskatchewan River. It will cross this river by a steel viaduct 800 ft. long and 75 ft. above low water. The line has been projected with low gradients, the maximum for both east and westbound traffic being not more than 0.40%, and the sharpest curve not more than 3 degrees. The character of the country through which the line will run is, generally speaking, open park prairie country, almost entirely settled. It is expected that construction will be started some time this year. J. G. MacGregor, Red Deer, Alta., is chief engineer. (May, pg. 349.)

Alberta, Peace River and Eastern Ry.—The Dominion Parliament has incorporated a company with this title to build the lines mentioned in the notice of application. The provisional directors are:—A. J. Miller, Pembroke, Ont.; E. Hutton, Montreal; R. L. Snowball, O. E. Culbert, J. O. Carss, Ottawa. (April, pg. 271.)

Algoma Central and Hudson Bay Ry.—We are officially advised that a contract has been let to O'Boyle Brothers, Ltd., Sault Ste. Marie, Ont., to build a spur line, of nine miles, between mileage 7.5 on the Josephine branch and the Magpie Iron Mining location. Work has been commenced and will be pushed forward as rapidly as possible, the contract calling for the completion of the line by Sept. 13. A contract has also been let to O'Boyle Brothers, Ltd., to build the line from Hawk Lake Jct., to Hobon, about midway between White River and Dalton stations on the C.P.R. Transcontinental line, 36 miles. Tenders were received to May 16 for clearing right of way, construction of bridges, cleaning of cuts, and making up of embankments on the portion of the company's line already graded, between the present end of steel, mileage 69, from Sault Ste. Marie and Hawk Lake Jct., approximately 100 miles. The grading on this part of the line which will connect Sault Ste. Marie with the Michipicoten branch, was done in 1902-03.

The company's construction programme involves the expenditure of over $3,000,000 and arrangements for financing this work were completed at a meeting of the shareholders of the Lake Superior Corporation at Camden, N.J., May 6. A meeting of the A.C. and H.B. shareholders was held May 14, to authorize the issue of 5% 50 year gold bonds on mileage constructed, and authorized to be constructed to the amount of $30,000 a mile, the bonds to be secured by a first mortgage of the lines constructed, to be built, or hereafter to be acquired.

The Dominion Parliament has granted subsidies to aid in building the following lines:—From Sault Ste. Marie to C.P.R. between White River and Dalton stations, Ont., not exceeding 200 miles; from Michipicoten harbor towards C.P.R., not exceeding 25 miles; from C.P.R. Transcontinental line northerly towards the National Transcontinental Ry., not to exceed 50 miles.

In connection with press reports to the effect that it was proposed to extend the line across the St. Mary's River into Michigan, we are officially advised that there has not been any discussion among the company's officials on the subject, other than the comment frequently made that there should be a connection with the lines to the south of the International boundary. (May, pg. 349).

Atlantic, Quebec and Western Ry.—The Dominion Parliament has voted a subsidy to aid in building a line from Paspebrae, as near the shore as practicable, to Gaspe, Que., not to exceed 102 miles.

An inspection of the line between Port Daniel and Pabos, has been made by the inspecting engineer of the Department of Railways and Canals, and the section passed for traffic. A regular train service will be put on, and it is expected that a further section between Pabos and Grand River will be ready for traffic by the end of July. Instructions have been received from the director of the company in England to push forward the completion of the line to Gaspe, as fast as possible. (April, pg. 271).

Bracebridge and Trading Lake Ry.—A subsidy has been voted by the Dominion Parliament to aid in building a line from Bracebridge to Baysville, Ont., 16 miles. (May, 1908, pg. 329.)

Buctouche Ry. and Transportation Co.—The provisional directors named in the Act passed by the Dominion Parliament incorporating a company with this title are:—C. T. Roe, New York; A. P. Barnhill, W. A. Ewing, C. F. Sanford, and J. J. Porter, St. John, N.B. The railway authorized to be constructed is as described in the notice of application. The company is authorized to enter into agreements with the Kent Northern Ry., the Buctouche and Rexton Ry., the Buctouche and Moncton Ry., and the Dominion Government in respect of the Prince Edward Island Ry. (April, pg. 271.)

Burrard Inlet Tunnel and Bridge Co.—The Dominion Parliament has incorporated a company with this title, with the powers mentioned in the notice of application. (Mar., pg. 185.)

Canadian Western Ry.—We are advised that it is very doubtful whether any construction will be done on this projected line this season. The company thought there would be no difficulty in the way of obtaining aid by way of a guarantee of bonds from the province of Alberta, but the Government decided not to do anything, and as a result all work in the way of preparing for building was stopped. So far as the company is concerned the matter of construction is in abeyance. This line is projected in the Chicago, Milwaukee and St. Paul Ry.'s interest, to connect with a branch of that line at the International boundary and give access to Alberta coal fields as a source of supply for the C.M. & St. P. R.'s western lines. (Nov., 1909, pg. 829).

The Canadian Western Lumber Co. is the title taken by the Fraser River Co. on its reorganization. Among the properties taken over are the Comox Ry. and Logging Co.'s line. The officers and directors are:—President, A. D. Davidson; Vice President and General Manager, A. D. McRae; other directors, W. Mackenzie, D. D. Mann, R. M. Horne-Payne, D. B. Hanna, P. Jansen; Secretary, J. D. McCormick. (May, pg. 349, see also Fraser River Lumber Co., same page.)

Comox Ry. and Logging Co.—We are officially advised that the railway which is being built in Vancouver by this company, under the authority of an Act passed by the B.C. Legislature, is for the Canadian Western Lumber Co., heretofore the Fraser River Lumber Co. The line as projected will be about 60 miles long, but at present only 17 miles is under construction, which it is expected to have in operation by Sept. 1. The maximum gradient is 0.6%, and the maximum curvature 6 degrees. The line will be used for bringing out logs from the company's timber limits to Comox, at which point boomage facilities capable of holding 10,000,000 of logs are being provided. It is expected that 150,000,000 of lumber will be handled over the line annually. No further extension of the line is contemplated for at least two years.

Connors to Beau Lake, N.B.—The Dominion Parliament has voted a subsidy for a line from Connors, at the terminus of the Temiscouata Ry., to the foot of Beau Lake, on the boundary line between Quebec and New Brunswick.

Dominion Atlantic Ry.—The Nova Scotia Legislature has passed three Acts having reference to the D.A. Ry., two of them having dealings with the company's powers generally, and the third referring to the building of the North Mountain branch. Of the two general Acts the more important is the one authorizing the provincial guarantee to be placed on certain unsold debenture stock of the company, which it is proposed to dispose of in the British market, the control of the money so raised to be in that Government's hands.

The company proposes to carry out a number of betterments on the existing line, to improve the bridges near Digby, and to increase the efficiency of its steamship service, as well as to go on with the building of new lines. The North Mountain branch, starting from Centreville, is one of the lines proposed to be constructed, and the Act passed granted an extension of time for building it.

The Dominion Parliament has voted subsidies as follows:—For a line to the Government pier or wharf at Canning, N.S., not exceeding one mile; for a line from Brazil Lake to Kemptville, N.S., not exceeding 11 miles, and for a line from Centreville, westerly to Weston, N.S., not exceeding 15 miles. (May, pg. 349.)

Eastern Townships Ry.—The Dominion Parliament has voted a subsidy to aid in building a line from the Intercolonial Ry. at St. Leonard's Jct., to Dudswell, Que., 36 miles. Dudswell is the terminal of the Hereford Ry. (operated by the Maine Central Rd.), and is a station on the Quebec Central Ry. (May, pg. 349.)

Erie, London and Tillsonburg Ry.—A subsidy has been voted by the Dominion Parliament to aid in building a line from Port Burwell to London, Ont., not to exceed 35 miles. (May, pg. 349.)

Essex Terminal Ry.—The by-law passed by the taxpayers of Windsor, Ont., May 2, authorized the raising of $20,000 by debentures to purchase 40 acres of land along MacDougall St., on the southwesterly side of the city, for factory sites. The E.T.R. proposes to build a spur 1.25 miles from its main line, either along MacDougall St. or further west, to tap this site and furnish railway connections with the trunk lines running into Windsor. The company's line is at present in operation from the G.T.R., east of Walkerville, to the C.P.R., three miles, and crosses the Pere Marquette Rd. at Walkerville. The right-of-way is all purchased, grading completed, and material on the ground for the exten-

sion of the line from the C.P.R. to the Michigan Central Rd. tunnel, about 1.25 miles. This portion of the line will be put in running order as soon as the point of connection with the M.C.R. track has been decided on. The company has begun the construction of an interlocking plant at the crossing of the P.M.R. at Walkerville, and another near the crossing of the C.P.R. and the Windsor, Essex and Lake Shore Rapid Ry.

The Dominion Parliament has passed an Act amending the company's Act in several details. The capital is increased to $400,000, the date of the annual meeting is altered to the third Tuesday in Jan.; it is authorized to issue bonds to the amount of $40,000 a mile, and to an additional $10,000 a mile in case of double track line. A new section authorizes the company to acquire steam and other vessels, and to operate the same, and to carry on business as forwarding agents, wharfingers and warehousemen.

The Board of Railway Commissioners has issued an order authorizing the company to open for traffic the portion of its line from the junction with the G.T.R. in Sandwich East tp., to its junction with the C.P.R. in Sandwich West tp. (July, 1909, pg. 477.)

Gatineau and Ungava Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from the National Transcontinental Ry. at the crossing of the northwest branch of the Gatineau River to Lake Chibougamau, 140 miles, thence to Lake Mistassini, 60 miles, thence to Homani or Summit Lake on the Quebec-Ungava boundary, 450 miles from the starting point, thence round the sources of Big River to Lake Kaniapiskan and on by either of two routes to Leaf Lake, on Ungava Bay, a total distance of 900 miles, with a branch from Lake Minto to Payne Lake, Ungava, about 200 miles. The provisional directors are:—A. T. Genest, E. B. Devlin, Ottawa; R. B. Masson, Terrebonne, Que.; S. T. Green, Quebec; F. W. Rous, Montreal. (Jan., pg. 19.)

Great Northern Mining Co.—The Nova Scotia Legislature has authorized this company to build from its mill at Chéticamp to Eastern Harbor, on Cape Breton Island. (May, pg. 351.)

Ha Ha Bay Ry.—The Dominion Parliament has voted a subsidy to aid in building a line from Jonquieres, via Laterriere, to Baie des Ha Ha, 24 miles. (Feb., pg. 109.)

Halifax and Eastern Ry.—Subsidies have been voted as follows by the Dominion Parliament:—For a line from the Intercolonial Ry., near Dartmouth, to Dean's Settlement, N.S., not exceeding 80 miles; for a line from Dean's Settlement to Melrose, not exceeding 52 miles, and for a line from New Glasgow to Melrose, thence to Guysborough, with a branch to Country Harbor, not exceeding 116 miles. These subsidies are voted to any company which will build the lines. The H. and E. Ry. Co. had been in negotiation with the N.S. Government in reference to them, as had also the Halifax North Eastern Ry. and its predecessor, the Musquodoboit Valley Ry. (April, 1909, pg. 247.)

Halifax and South Western Ry.—We are officially advised that it is expected to have the branch line from Nictaux to the Torbrook Iron Mines, and the ore shipping plant at Port Wade, N.S., completed early in June. The grading and tracklaying on the branch line was completed last fall, and the ballasting was done this spring. The Canada Iron Corporation has a large ore crushing plant, capable of crushing over 1,000 tons of ore a day, in operation at the mines, and as soon as the branch is opened it will begin shipping the ore to Port Wade, where it will be passed through the ore bins and loading plant to special steamers, which will carry it to the furnaces. As soon as the ballasting on the branch from Nictaux has been completed the ballasting gang will start work on adding additional ballast to the Middleton and Victoria Beach section.

A subsidy has been voted by the Dominion Parliament in aid of the building of a branch railway from Lunenburg to Upper La Have, N.S., not to exceed 12 miles. (Oct., 1909, pg. 743.)

Howe Sound and Northern Ry.—A press report from Vancouver, May 10, states that it is expected to have the first section of this railway completed and ready for operation in about six weeks. The report says:—With the bridging of the south fork of the Squamish river, a little more than a mile from Newport, the southern terminus of the line, and the grading of the gap between that place and the bridge the road will be practically completed. (May, pg. 351).

Hudson Bay and Pacific Ry.—Press reports state that L. Taylor has started work on the north side of the Saskatchewan River, and is proceeding with the work of making a survey in the direction of Fort Churchill, and that L. T. Grice, in charge of a second party, has left to take up the work at another point. The object of these surveys is to find a better route than the one previously surveyed by J. B. Tyrrell, which was via Pas Mission. The route to be followed by the first party will be southeast of Candle Lake, thence to Goose Lake, and will touch the survey for the Government line to Hudson Bay, about 150 miles north of the Pas. The second party will work round the north east of Candle Lake, and thence by an air line to Frog Portage and on to Fort Churchill. H. Spicer, who is stated to be the managing director of the company, is quoted as having stated in an interview at Prince Albert, May 3, that the building of the line will be started this summer, and that there are no financial difficulties in the way of the work being gone on with. He also stated that the headquarters and terminus of the line would be at Prince Albert, and that it was possible the line would be operated in connection with the Government line to Hudson Bay.

We are advised from an independent source that the surveys made during last winter by Mr. May were of a preliminary character, and that the present surveys are for the location of the line northerly. The intention is to obtain a route away from the muskegs in the vicinity of Pas Mission. The company is an English one, its object being stated by a representative of the company to build the road, and that it is not seeking favors from any source. (May, pg. 351.)

Intercolonial Ry.—We are officially advised that the contract with D. G. Kirk for building the division between George's River and Sydney Mines, N.S., calls for its completion by Nov. 30. The construction is light, the maximum gradient 1% and the maximum curvature 5 degrees. There is only one bridge of any size on the line, viz., that across George's River, which will consist of four spans, through plate girders of 86 ft. over all, on masonry abutments and piers. Local press reports state that Wm. McDonald, New Glasgow, has a subcontract on the line.

A new survey has been made for the proposed extension from North Sydney to Leitche's Creek, about seven miles. The first survey was along the shore road, but it was feared that the land damages would be heavy, consequently a new survey at the back of the town has been made.

The Dominion Parliament has voted $1,800 to divert a highway in order to eliminate a crossing at rail level between St. Cyrille and Drummondville, Que.

The Government Railways Managing Board is making an inspection of several of the branch lines in Nova Scotia and New Brunswick, which it is proposed to acquire and operate under lease as I.C.R. branches.

A contract is reported let to F. A. Ronnan & Co., for building a siding from near Rocky Lake, N.S., to the Acadia Powder Co.'s dynamite works, about one mile. (May, pg. 351).

International Ry. of New Brunswick.—The Dominion Parliament has granted a subsidy for 3.5 miles of line between Campbellton and St. Leonards, this being the difference between the mileage actually constructed, and the mileage previously subsidized. A subsidy of $9,375 was also granted towards building a bridge across the St. John River between St. Leonards, N.B., and Van Buren, Me., the State of Maine contributing an equal amount. This bridge will form the connecting link between the I.R. of N.B. and the Bangor & Avoostook Ry. terminating at Van Buren. The press reports state that construction will be started on the bridge at an early date.

The Dominion Parliament also voted $12,500 towards the construction of a railway bridge across the Restigouche River at Metapedia, the provinces of Quebec and New Brunswick to contribute $5,000 each; and $6,250 to pay the Department of Railways and Canals for original superstructure of Restigouche railway bridge. This bridge when constructed will give connection between the I.M. of N.B.'s line at Campbellton, and the Atlantic and Lake Superior, what will in future be known as the Atlantic, Quebec and Western Ry. (May, pg. 351).

Inverness Ry. and Coal Co.—The Dominion Parliament has voted a subsidy for an extension of the company's existing railway from Broad Cove to Chéticamp, N.S., 37 miles. (Sept., 1908, pg. 617.)

Joliette to Lake Manuan.—A subsidy has been voted by the Dominion Parliament to aid in building a line from Joliette to Lake Manuan, Que., 60 miles. Press reports states that the Joliette and Lake Manuan Ry. Co. has opened an office in Joliette, Que., and that—Patton, its Chief Engineer, is making surveys for a route between that town and Lake Manuan. The line, as projected will, it is said, start from L'Assumption River, run to St. Jean de Matha, thence through the mountainous country north of St. Emilie de l'Energie, along the Black River to St. Michel de Saints. The reports state that the necessary capital for the line is being found in England. (July, 1908, pg. 403).

Kettle Valley Lines.—Subsidies have been voted by the Dominion Parliament to aid the Kettle River Valley Ry. to build the following lines:—From Midway to a junction near Merritt, B.C., with the Nicola, Kamloops and Similkameen Ry., 250 miles; from near Coldwater River to the Fraser River, not exceeding 50 miles.

W. P. Tierney stated in Phoenix, B.C., April 28, that his firm had a contract to build a 10-mile extension of the line up the north fork of the Kettle River to the Franklyn camp; to complete certain work along the west fork of the Kettle River, to extend the line a further distance of 10 miles up the valley to Beaverdell, and beginning at the other end to build 30 miles from Merritt up the Coldwater Valley. He expected that work would be started on these lines May 15. (May, pg. 351.)

Lac Seul, Rat Portage and Keewatin Ry.—The Dominion Parliament has voted a subsidy to aid in building a line from Kenora, Ont., to the National Transcontinental Ry., 22 miles. The subsidy voted in 1908 was for 18 miles only. (April, pg. 271.)

minion Parliament has granted a subsidy to aid in building a line from Melbourne to Drummondville, Que., 28 miles. A press report states that preparations are in progress for beginning construction, and that as soon as the line is completed the G.T.R. will take it over. (June, 1908, pg. 403).

Little Nation Ry.—A subsidy has been voted by the Dominion Parliament to aid in building a line from Papineauville on the C.P.R., Montreal-Ottawa line, northerly towards Lake Nomininge, Que., about 30 miles. (Mar., pg. 211.)

Lotbiniere and Megantic Ry.—A subsidy has been voted by the Dominion Parliament to aid in building an extension of this line southerly from near Lyster to Lime Ridge, Que., 50 miles. Lime Ridge is the terminus of the Dudswell-Lime Ridge branch of the Hereford Ry. (constructed by the Dominion Lime Co.) which is operated by the Maine Central Rd. A subsidy has also been voted to aid in building a line from some point on the existing line in Inverness tp. to the Quebec Bridge, not to exceed 30 miles. (See Quebec Eastern Ry., Oct., 1909, pg. 745.)

Mabou Coal and Ry. Co.—The Nova Scotia Legislature has extended the time within which the company may complete its projected line. (June, 1908, pg. 405.)

Manitoulin and North Shore Ry.—Subsidies have been voted by the Dominion Parliament in aid of the following lines:—From the line between Little Current and Sudbury, westerly towards the Algoma Central and Hudson Bay Ry., not exceeding 76 miles; from Little Current, crossing the C.P.R. at Stanley, to Sudbury, not exceeding 88 miles; from Sudbury northerly, 30 miles. (May, pg. 351.)

Margaree Coal and Ry. Co.—Subsidies in aid of the building of 50 miles of the projected lines of this company have been voted by the Dominion Parliament, as follows:—From near Orangedale, on the Intercolonial Ry., by the east side of Lake Ainslie, and St. Rosa to Chimney Corner Cove, 46 miles; and from the I.C. Ry. between Orangedale and Point Tupper to Caribou Cove, on Inhabitants River or Bay, N.S., four miles.

The Nova Scotia Legislature has extended the time, and otherwise amended the conditions of the agreement under which the Government was to aid in the construction of lines, for which the Dominion Parliament has revoted the subsidies mentioned above. (Jan., pg. 21.)

Maritime Coal and Ry. Co.—The Nova Scotia Legislature has granted an extension of time for the construction of the lines authorized to be built.

New ties are being put in along the company's line between Maccan and Joggins Mines. Other betterments will be done during the summer. (Dec., 1909, pg. 883.)

Michigan Central Rd.—Two train loads of 100 lb. steel rails have been delivered, one at Essex and the other at Courtright, Ont., for use in relaying the tracks between Essex and Tilbury, 23 miles. The track is being raised several inches in connection with the laying of this heavier track. The 80 lb. rails taken up are being relaid on other portions of the company's lines. (April, pg. 271).

Montreal, Kapitachuan and Ruperts Bay Ry.—The Dominion Parliament has incorporated a company with this title. The projected route of the line, as laid out, on paper, from the Back River to Lake Kapitachuan, on the National Transcontinental Ry., is 194 miles long. Surveys are being made by E. J. Reambooth, and it is stated that so far as the route has been examined there are no difficulties in the way of construction, although several large bridges will have to be built. The point of junction with the N.P. Ry. is 140 miles west of that proposed for the Joliette-Lake Manuan Ry., and 63 miles east of the route said to be preferred by the G.T.R. (Mar., pg. 187; see also Montreal northerly; and Joliette and Lake Manuan Ry.)

Montreal Northerly.—The Dominion Parliament has voted a subsidy to aid the building of a line from Montreal to the National Transcontinental Ry., not to exceed 200 miles.

A Montreal dispatch states that the granting of this subsidy was arranged for after an interview between the Minister of Railways and C. M. Hays, President G.T.R. and G.T. Pacific Ry. It is stated that three routes have been considered by the company and submitted to the Department. The first is via Joliette and St. Gabriel to join the National Transcontinental Ry. at Ribbon River, a tributary of the St. Maurice. Another goes directly north-westerly parallel with the C.P.R. Nomininge branch, continuing north-east from Nomininge to the N.T.R. about midway between Lake Abitibi and La Tuque. The third route would give Montreal connection via Ottawa to the N.T. Ry., a little to the west of Obaska Lake. The first of these lines, from Joliette, is that being surveyed by the Joliette and Lake Manuan Ry., and its total length from Montreal would be about 157 miles. The second route is 225 miles long and is the one favored by the G.T.P.R., its point of junction with the N.T.R. being 203 miles west, which would be of advantage in bringing grain into Montreal for ocean shipment. (See also Joliette and Lake Manuan Ry.; and Montreal, Kapitachuan and Ruperts Bay Ry.)

Nelson River Ry.—The Dominion Parliament has incorporated a company with this title in the terms of the notice of application. (Jan., pg. 21.)

New York and Canadian Pacific Rd.—The people who are endeavoring to keep alive this company incorporated under the laws of the State of New York, are working on a new tack. For some years the Governor has refused to sign the acts passed by the Legislature permitting the company an extension of time for completing the line. On May 11, a resolution was referred to the Senate Judiciary Committee, authorizing the company to take any and all steps necessary for the completion of its railroad and approaches and connections, and the public service commissions are directed to issue such certificates as shall facilitate the construction of the road. Power and authority is given the Supreme Court to hear orders upon the application of the railroad company to enforce this resolution of the Legislature.

Ontario, Northern and Temagami Ry.—A subsidy has been voted by the Dominion Parliament for a line from Sturgeon Falls north-westerly to the westerly shore of Lake Timagami, not to exceed 50 miles. (Sept., 1908, pg. 617.)

Owen Sound and Meaford Ry.—An unconfirmed local press report states that Cleveland, Ohio, capitalists are looking over the district with a view of financing the construction of this projected railway. It is stated that if they take up the project the line will be extended from Meaford, via Collingwood to Orillia, there making a connection with the C.P.R., the G.T.R., and the Canadian Northern Ry. (Nov., 1909, pg. 829).

Port Hood-Richmond Ry.—The Nova Scotia Legislature has extended the time within which the company's authorized lines of railway may be built. (April, 1908, pg. 245.)

Prince Edward Island Ry.—A statement was recently made in the House of Commons by the Minister of Railways that a survey was made in 1908 for a branch line from Montague to the Murray Harbour branch in Queen's county, and plans and estimates for the line are under the consideration of the Department. Surveys were made over two routes, one direct, the other by way of Kinross.

A return made to the House of Commons as to surveys made for the proposed branch line between London and north shore point, shows that the estimates for the various routes and sections were as follows:—West side of Stanley River to main line, at or near Bedford, 31.4 miles, $1,257,618.14; Royalty Jct. to junction with last mentioned route at Brackley Point road, $210,003.95. (This may be made part of the main loop line which would then be from the west side of Stanley River to Royalty Jct.) West side of Stanley to Kensington, via French River, 19.48 miles, $713,281.75; west side of Stanley River to Kensington, via Long River, 16.88 miles, $601,645.54; west side of Stanley River to Kensington, via Malpeque, 28.34 miles, $976,496.78; Emerald Jct., via Clinton and Clinton, 13.5 miles, $446,787.78; Emerald Jct., via Granville and Stanley Bridge to Clifton and Clinton, 13 miles, $490,000. (April, pg. 273).

Quebec and New Brunswick Ry.—A subsidy has been voted by the Dominion Parliament to aid in building a line from Chaudiere Jct., on the Intercolonial Ry. for 62 miles to the international boundary between Quebec and Maine. (July, 1909, pg. 481.)

Queen's Central Ry.—The Nova Scotia Legislature has incorporated a company with this title to build a line through the centre of Queen's County.

Reid Newfoundland Co.—Construction has been started on the 70 mile branch from Shoal Harbor to Bonavista, Nfld., several gangs having been sent out from St. John's at the beginning of May. H. Burton, Perth, Ont., who was with the late Sir Robt. Reid on his C.P.R. and other contracts, is in charge of construction. (May, pg. 359).

Roberval, towards James Bay.—A subsidy has been voted by the Dominion Parliament for a line not to exceed 100 miles, from Roberval, Que., the present terminus of the Quebec and Lake St. John Ry., westward for 100 miles in the direction of James Bay.

St. Agathe, Que., Southerly.—A subsidy has been voted by the Dominion Parliament in aid of the construction of a line from St. Agathe des Montes station, on the Laurentian branch of the C.P.R., passing Lake St. Joseph and St. Mary, not exceeding 15 miles.

St. Joachim to Seven Islands.—The Dominion Parliament has granted a subsidy to aid in building a line from St. Joachim towards Seven Islands, with branches to Murray Bay and Baie St. Paul, Que., not to exceed in all 170 miles.

St. John River Valley Ry.—A subsidy has been voted by the Dominion Parliament for a line from Grand Falls to St. John, N.B., not exceeding 228 miles. The New Brunswick Legislature has authorized a guarantee of bonds to aid in the building of a line between the same points, and the Premier recently stated that surveys will be proceeded with at once. Two survey parties are being equipped for the field, one to work from Fredericton to Welsford, and the other between Woodstock and Andover. All the necessary data are available for the route between Fredericton and Woodstock. It is expected that the surveys will be completed during the summer, and that a decision will be reached as to building the line—either by the Provincial Government, or by a private company—in the fall. (May, pg. 353).

WIRE ROPE

Why experiment continually with wire rope you know is not up to "**Dominion**" quality—quality that means better material, better construction and better service?

Material—All our ropes are made from the best quality of wire, specially drawn to our rigid specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

Construction—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years' experience in manufacturing wire ropes enables us to offer the best to be had anywhere.

Service—Every length of "Dominion" Rope gives satisfaction, because it is serviceable and dependable.

All Lengths and Sizes Carried in Stock for Immediate Shipment

The Dominion WIRE ROPE Company Ltd., MONTREAL

with this title did not pass. It was sought to obtain power to build a railway from the St. Lawrence River, in Berthier County, north-easterly to Ungava Bay, the persons named as provisional directors in the application being G. D., W. M. and J. K. Condie, R. Bickerdike, and F. Munro, Montreal.

Sharbot Lake to Carleton Place.—The Dominion Parliament has voted a subsidy to any railway company building a line from Sharbot Lake or Bathurst station, on the C.P.R. Toronto-Montreal line, via Lanark Village, to Carleton Place, Ont., on the C.P.R. transcontinental line, 41 miles.

Southern Central Pacific Ry.—Subsidies have been voted by the Dominion Parliament to aid in building the following lines:—From two miles west of Pincher station on the C.P.R. Crow's Nest Pass branch, north-easterly for 10 miles, and for another line from the same point south-westerly for 40 miles. (July, 1909, pg. 481.)

Sydney and Louisburg Ry.—The Nova Scotia Legislature has incorporated a company with this title with power to build lines on Cape Breton Island. We are advised that the line known as the Sydney and Louisburg Ry., now owned and operated by the Dominion Coal Co., will still continue to be an integral part of the enterprise, which now also includes the Dominion Iron and Steel Co., but will be operated separately under this new charter.

The company has under consideration the building of a spur line from the proposed North Sydney-Leitches Creek line of the Intercolonial Ry. to new collieries at Point Aconi. (Feb., 1909, pg. 105.)

Temiskaming and Northern Ontario Ry.—Tenders are under consideration for the erection of three standard houses for section men at Gillies' Depot, Uno Park and Charlton, Ont.; and for additional sectionmen's houses "for bachelors" at various points on the line.

Tenders are to be asked at an early date for the building of a permanent general traffic road from Charlton to Elk Lake. The settlers and prospectors in the Gowganda districts are petitioning for a railway into the country, but at present the Commissioners will not undertake anything more than an ordinary roadway, as far as Elk Lake. Plans are being prepared for the general improvement of the yard and station at Cobalt.

Replying to a question in the House of Commons, April 30, the Minister of Railways said there was at present no intention of granting a subsidy in aid of this railway. If the Dominion Parliament voted a subsidy, he would be inclined to say that the line should come under Dominion jurisdiction—under the Board of Railway Commissioners—and the Ontario Government would not care to permit that. (May, pg. 353).

Toronto, Lindsay and Pembroke Ry.—A subsidy has been voted by the Dominion Parliament to aid in building a line from Golden Lake to Bancroft, Ont., not exceeding 51 miles. (Jan., 1904, pg. 9.)

Tusket Wedge to Riverdale, N.S.—The Dominion Parliament has revoted a subsidy to aid in building a railway from Tusket Wedge to Riverdale station, on the Halifax and South Western Ry., not exceeding eight miles.

The Halifax and South Western Ry. has power to construct branch lines, and the Nova Scotia Legislature has incorporated the Tusket Wedge Ry. Co. to build a line between the points named.

Vancouver, Fraser Valley and Southern Ry.—The location plans of this projected railway have been approved by the Board of Railway Commissioners for the portion of the line from the east boundary of Vancouver to the northwest boundary of New Westminster, B.C. (July, 1909, pg. 481).

York and Carleton Ry.—The Dominion Parliament has voted a subsidy for a line from its present terminus to the National Transcontinental Ry., not exceeding nine miles. (Mar., 1909, pg. 177.)

Western Canada Power Co.—The Board of Railway Commissioners has approved location plans for the company's projected railway from Ruskin station on the C.P.R., to Stave Falls, B.C. (Mar., pg. 187).

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases from 1908-09, from July 1, 1909:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.
July	$ 843,500	$613,900	$229,600	$26,700+
Aug.	807,100	602,700	204,400	18,300+
Sept.	1,076,800	765,300	311,500	60,400+
Oct.	1,384,200	903,500	480,700	60,600+
Nov.	1,517,600	970,100	547,500	134,000+
Dec.	1,160,300	825,900	334,400	49,300+
Jan.	792,200	669,700	122,500	22,200+
Feb.	698,900	567,400	131,500	35,100+
Mar.	934,100	661,800	272,300	67,800+
	$9,214,600	$6,580,300	$2,634,300	$478,200+
Inc.	$ 1,812,000	$1,333,800	$478,200	.....

Approximate earnings for Apr. $1,153,100, and for two weeks ended May 14, $579,000, against $741,200 and $335,300 for same periods 1909.

C.P.R. Earnings, Expenses, Etc.

Gross earnings, working expenses, net profits, increases or decreases over 1908-9, from July 1, 1909:

	Earnings.	Expenses.	Net Profits.	Net Increase or Decrease
July	7,140,029.93	4,660,159.20	2,479,870.73	205,297.48+

Inc.	$12,859,839.08	$4,271,954.15	$8,587,884.93	.....

Approximate earnings for Apr., $7,830,000, and for two weeks ended May. 14, $3,649,000, against $6,260,000 and $2,702,000 for same periods 1909. Mileage operated increased to 10,276.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for March, $276,893.18; operating expenses, $175,047.59; net revenue, $101,845.59, against $217,138.07 operating revenue; $153,169.32 operating expenses; $63,968.75 net revenue for March, 1909. Aggregate operating revenue for nine months ended Mar. 31, $2,421,665.56; operating expenses, $1,648,929.79; net revenue, $772,735.77, against $1,993,583.83 aggregate operating revenue; $1,456,795.24 operating expenses; $536,788.59 net revenue for same period 1908-09. Approximate earnings for April, $276,763, and for two weeks ended May 14, $134,889, against $224,968 and $109,312 for same periods, 1909.

MINERAL RANGE RD.—Operating revenue for March, $68,453.92; operating expenses, $64,115.66; net revenue, $4,338.26, against $70,918.16 operating revenue; $60,183.23 operating expenses; $10,734.93 net revenue for March, 1909. Aggregate operating revenue for nine months ended Mar. 31, $640,124.27; operating expenses, $553,409.98; net revenue, $86,714.29, against $622,173.17 aggregate operating revenue; $518,758.08 operating expenses; $103,415.09 net revenue for same period, 1908-09. Approximate earnings for April, $60,816, and for two weeks ended May 14, $28,279, against $67,785 and $31,247 for same periods, 1909.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RY.—Operating revenue for March, $1,132,994.49; expenses and taxes, $725,914.01; net operating income, $407,080.48, against $1,022,015.65 operating revenue; $643,168.89 expenses and taxes; $378,846.76 net operating income for March, 1909. Aggregate operating revenue for nine months ended Mar. 31, $11,781,611.73; expenses and taxes, $6,635,588.88; net operating income, $5,146,022.85, against $9,600,109.53 aggregate operating revenue; $5,690,139.49; expenses and taxes, $3,639,970.04 net operating income for same period, 1908-09. Approximate earnings for April, $1,827,945, and for two weeks ended May 14, $838,168, against $1,521,236 and $701,066 for same periods, 1909.

CHICAGO DIVISION.—Operating revenue for March, $868,915.81; expenses and taxes, $554,764.04; net operating income, $314,151.77, against $666,544.69 operating revenue; $482,395.79 expenses and taxes; $184,148.90 net operating income for March, 1909. Aggregate operating revenue for nine months ended Mar. 31, $6,522,178.89; expenses and taxes, $4,554,449.90; net operating income, $1,967,228.99, against $5,669,430.00 aggregate operating revenue; $4,088,326.34 expenses and taxes; $1,581,103.66 net operating income for same period, 1908-09.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. and M. Ry., separately, for March, as compared with March, 1909:—

GRAND TRUNK RAILWAY.

	1910.	1909.
Earnings	$2,887,400	$2,423,200
Expenses	2,088,200	1,743,100
Net earnings	$ 799,200	$ 680,100

CANADA ATLANTIC RAILWAY.

	1910.	1909.
Earnings	$165,000	$129,200
Expenses	125,000	127,600
Net earnings	$ 40,000	$ 1,600

GRAND TRUNK WESTERN RAILWAY.

	1910.	1909.
Earnings	$582,650	$528,882
Expenses	399,400	364,500
Net earnings	$183,250	$124,500

DETROIT, GRAND HAVEN AND MILWAUKEE RY.

	1910.	1909.
Earnings	$158,100	$126,000
Expenses	122,600	109,200
Net earnings	$ 35,500	$ 16,800

Approximate earnings for April, $3,570,367, and for two weeks ended May 14, $1,672,673, against $3,142,748 and $1,456,700 for same periods, 1909.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to Apr. 30:—

	1910.	1909.	Incr.
Grand Trunk	£2,097,064	£1,799,139	£297,925
Can. Atlantic	119,710	100,252	19,458
G.T. Western	427,198	360,114	67,084
D.G.H. & M.	125,756	99,416	26,340
Totals	£2,769,728	£2,358,921	£410,807

Requirements for Dominion Railway Legislation.—A sub-committee of the Railway Committee of the House of Commons prepared a report, April 8, recommending a number of changes in the procedure to be observed by promoters of bills. The report recommends that hereafter all private bills proposing to amend an Act of Parliament shall not merely refer to but recite in full any section or clause to be amended. All bills introduced for time extensions must be so framed as to recite not only the powers existing but shall also define the route, mention the terminal points and branches and indicate the principal places through or near to which the line is to pass. When it is proposed to repeal any section or clause of an act such section or clause must be recited. The same rule is to apply to any bill proposing to empower a corporation to give effect to powers contained in any provincial statute, letters patent or municipal ordinance. Where it is proposed to extend or renew an Act of Parliament of ten years' standing an absolutely new bill will be required, setting forth all the privileges sought except in cases where substantial progress has been made in the exercise of the original powers.

G.T.R. locomotive drivers and firemen have been conferring with the company's officials, with a view to rearranging the wage schedule, on the expiry of the existing one in July.

The G.T.R. building and exhibit at the International Exposition at Brussels, Belgium, contains a number of things chiefly relating to the G.T.P.R., including oil paintings of scenes in the Yellowhead Pass and along the Skeena River, with a cinematograph of western scenes.

C. P. R. Mallet Articulated Locomotive.

In our March issue we published a very important paper by G. I. Evans, describing the experimental Mallet articulated locomotive built by the C.P.R. In the discussion which followed the reading of the paper before the Canadian Railway Club, H. H. Vaughan, Assistant to the Vice President C.P.R., said in part:—

On the C.P.R. our bridge strengths do not admit of our running a heavy engine, such as those recently introduced into the U.S., of from 200 to 225 tons. Our engineering department is exceedingly particular about the weights of locomotives running over the bridges, and holds the mechanical department to the limits set. Of course, there is nothing novel about the arrangement of these cylinders, but when the arrangement was gone into, it was found that the long wheel-base allowed the engine had a total weight about 5% larger than the regular American Locomotive Co.'s Mallet design. Whether the feeling we had 5% made us want 10%., I don't know, but the engine was that much heavier than estimated, and this was the reason of some unpleasant remarks in the papers at that time. Another thing was, a Mallet engine could be made of the six-wheeled coupled type, and yet be turned on a 70 ft. turntable and housed in an 80 ft. roundhouse. The other arrangement was about 77 ft. over all, which was larger than could be handled in our present roundhouses and as this meant extra expense, it was decided to try and avoid this, hence the alteration referred to. In regard to the spreading of trucks, we went into this question carefully as to the action of the flange stress on a curve with a given amount of pressure between boiler and front of engine, or with a given action of centrifugal force tending to throw the boiler outwards, and we found in either case the pressure is exactly the same whether the trucks are 10 or 15 ft. apart. The pressure on the rail, of the boiler has a tendency to lurch, is also independent of the distance between the trucks. As Mr. Evans has described, the location of the cylinders in the centre certainly reduced the amount of movement in each of the pipe joints, and practically reduced the number on account of the small movement allowing the telescopic joint to be done away with. The objections evident were that, in this engine, the weight of the boiler is transmitted to the front truck at a point between the first and second pair of wheels, whereas in the usual design of Mallet it is transferred between the second and third pair of wheels, which means that the friction caused by the weight of boiler resting on the truck is acting on a longer bow arm than the ordinary type. This difficulty was overcome by the arrangement described in the paper, in which only a part of the weight of the boiler rests on the friction plates on the front truck, the remaining part being carried by the roller, which is designed to act as a centering arrangement, and practical experience shows that this device is satisfactory. Another possible disadvantage is the effect that might be caused on entering a curve. Evidently, when an engine of this type enters a curve, there is one point at which the pivot pin is at the junction of the tangent of the curve, and at this point the effect of any separation of the trucks is most objectionable. In other words, a consideration of the action of the engine at this point shows that the effective rigid wheel-base is practically from the end driver to the pivot pin in place of being a driving wheel-base on either truck. We find that what we may call the rigid wheel-base was not increased on this engine over that which has been used in other Mallet engines having four drivers coupled together. As a matter of fact, the action is entirely different. The driving wheel entering the curve is displaced about the pivot point as a centre, and not about the driver and other end of the truck. This accounts for the way in which this engine will take comparatively sharp curves with ease. Consideration will show that, when regarded in the light of this explanation, the more equally the centre of the boiler is over the pivot pin the easier the engine curves. Another point that came up was the fact that this design of engine throws the boiler forward. The action of the Mallet engine entering a curve is looked upon as similar to that of a switching engine. There does not, therefore, seem to be any real disadvantages connected with this arrangement other than the question of appearance. I did not much care for the appearance of this engine, but, outside of this, I do not see any reason for going back to the arrangement with the cylinders at the end. One point is the use of the sectional boiler, that is, cutting it into two parts. The front end is really more than a feed-water heater in this type of boiler, as, although the temperature of the water in it averages probably lower than in the back section, it must evaporate a portion of the steam. It is questionable what effect the centre chamber is going to have on the draft. The cards are taken at very low speeds, but one of them, test no. 1, shows considerable pressure in the low press cylinder, which is a common trouble with the Mallet engines. I saw some cards from a large Mallet the other day at a speed between 15 and 20 miles an hour, which did not give any greater tractive power than a large consolidation engine. The engine gave excellent results at low speeds, but in the higher speeds it was different. I think the speeds given ran from 4 to 6 miles per hour. I see in Mr. Evans' report on the Field Hill he shows a speed of 25 miles per hour coming into Stephen, and I would be glad if he would tell us whether he has noticed if the engine showed any sign of choking.

Jas. Powell, Chief Draughtsman, Locomotive Department G.T.R., said: It certainly required a great deal of courage and confidence to depart from the generally accepted forms and designs of this class of locomotive, and Mr. Vaughan and those associated with him in the construction of this engine are to be congratulated for the courage of their convictions. Whether the results will be borne out by experience remains to be seen, but, I sincerely hope so. I note the engine has been designed to be able to be turned on the turntables at present in use, and that it will be possible to house the engine in the present roundhouses. This is a good feature. It seems to me that, with the arrangement of cylinders as shown, the weight would not be equally distributed. Perhaps Mr. Evans could enlighten us on this point. In the description of the flues and superheater between, I would imagine that this would be a receptacle for cinders, but the writer states that this is not the case, otherwise there must be an excessive wear on the tube sheets and a difficulty in keeping the flues tight. The engine, of course, has not yet been in service long enough to demonstrate this. I presume it is not the company's intention to build any more of this type until such time as it has been proved that the engine is a success for the service it is intended for. Has a comparison been made of the cost of operating this type with the increased return for the haulage?

J. W. Harkom, said: I certainly approve of the departure from the ordinary type in so far as the distance of the drawbar from the centre of the truck is concerned. No doubt the Mallet compound generally is very defective in this respect. Any of us who have had an opportunity of seeing locomotives in service can realize what is meant by an overhang of this description, as it affects the cars badly, and whenever I have been asked what I thought of the Mallet locomotive, I have pointed out that feature as being objectionable. I do not see any reason why the cylinders should not be brought together. I would refer particularly to the diminuition of the number of packed joints as proving the benefit of this arrangement, as also the packing arrangement, which in itself, to any man who has to take care of a locomotive, means a great deal. The behavior of the boiler is too deep a subject and too complex to form a matter for discussion offhand, and I really do not feel in a position to discuss it tonight. One point about it which appeals to me is the feed-water feature. The utilization of some such method as that must result in improved steaming, as the heat is carried into the boiler and a certain amount of steam in the shape of latent heat must be generated in the front section, and, if I understand aright as to the behavior in service, the principle is justified by the results, the boiler being quite capable of furnishing steam to the cylinders. The reduction in weight is a serious matter, and, to some, may be considered an objection in comparison with other locomotives of that type, but I like the reduction in the packed joints, vibration, facilities for maintenance, and reduction in the overhang. I believe that the effect of the flange friction is rather reduced than increased by the arrangement, and flange friction is the biggest factor we have in reduction of the effective power of the locomotive. When the whole truck is able to accommodate itself to the curves, as these are, there certainly is, to my mind, very much to commend it. I think the Fairlie locomotive was certainly the precursor of the Mallet type. The former had, I know, many defects, but it seems to me that the Mallet compound is a development of the Fairlie, although the Mallet is a great advance on it.

H. Tandy, Canadian Locomotive Co., said: I do not profess to know very much about this Mallet engine, as I have not given it the amount of study I might have done, but I certainly think that the departure which you have made in that engine will fully pay for all your trouble. Mr. Vaughan said that the only thing he could see to find fault with was its appearance. I think its appearance is really the better with the cylinders bunched together, and, even if it is not, it is so much more pleasing in service that that alone should recommend it. To my mind, the additional truck placed on some Mallet engines is absolutely unnecessary.

A. A. Maver, Master Mechanic G.T.R., said: We have heard a good deal about this engine from time to time, but this is the first opportunity we have had of getting a proper understanding as to its construction. It differs in a number of respects from the Mallet engine as generally constructed, and the departures from the general method of construction appear to me to be well founded. The general details also seem to have been worked out with skill and ingenuity. It seems to me the chief features are the location of the superheater and the turning around of the front engine, thereby bringing the cylinders closer together, reducing the length of the exposed pipes, and thereby lessening the tendency to condensation. The decrease of joints in these pipes is a commendable feature, and the shortening up of the engine over all by the cylinder arrangement is also another good point gained, enabling the engine to be housed in the different roundhouses without trouble.

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED

BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY

THROUGH TRAINS between BOSTON (via Boston & Maine R.R. and Cent. Vermont Ry.) MONTREAL, TORONTO and CHICAGO.
THROUGH TRAINS between NEW YORK, TORONTO and CHICAGO via Lehigh Valley R. R. and Niagara Falls.

Dining and Parlor-Library-Cafe Cars on Day Trains. Pullman Sleeping Cars on Night Trains.

THE "INTERNATIONAL LIMITED"

The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario

G. I. Evans in reply, said: A speed of 20 miles an hour has often been reached, due to downgrade or a light train. On fig. 12 (see Railway and Marine World, March) this speed is reached between Hector and Stephen, where the grade is small, and, as there was a consolidation assisting, 20 miles an hour was easily attained. It is rather difficult to say whether there was any excessive back pressure on the l.p. pistons or not. The train was handled so easily by the two engines that the throttle was opened only slightly. Regarding Mr. Powell's remarks about the cinders cutting the tube ends, of course we cannot say definitely what will happen in the superheater compartment in future, but up to the present no trouble of this kind has developed. The superheater pipes will, to a certain extent, protect the tubes by taking the wear themselves, but, as they are easily removed for repair, it will not be a very serious matter if they do wear out occasionally. The steaming capacity of the boiler, as Mr. Harkom says, is entirely satisfactory, and no difficulty is experienced in maintaining full boiler pressure. When the locomotive was first put into service some adjustment was necessary in the smokebox on account of the change in coal.

The Railways and Forest Fires.

The Forestry Committee of the Conservation Commission has made the following recommendations to be added to the Railway Act, regarding the provisions relating to forest fires along railway routes:—

For each and every case in which a fire is started by sparks from a locomotive, and either begins outside the right-of-way or spreads therefrom to adjoining land, the company operating the railway when the fire is started, shall be liable to a fine of $1,000, to be recovered by summary prosecution before a stipendiary magistrate or two justices of the peace, provided that it shall be a sufficient defence if it be shown (1) that the company has used upon the locomotive the best available modern appliance for preventing sparks spreading; (2) that no negligence has been shown by the engineer or fireman of the locomotive, or any other servant of the company, conducing to the starting or spreading of the fires; and (3) that the company has maintained an efficient staff of fire rangers properly equipped with suitable appliances for fighting fires and proper and efficient means of traveling along the line, and that the staff has been prompt and diligent in taking all possible means to prevent the fire from spreading. The committee further recommended that the act respecting Government railways be amended to provide (1) that the Government railways maintain an efficient staff of fire rangers properly equipped with all suitable appliances for fighting fires and proper and efficient means of traveling along the line, and (2) that the Government railways, shall provide free transportation for all provincial fire guardians properly certified while traveling in the discharge of their official duties.

The Dominion Parliament has voted $2,500 to the Montreal Polytechnic School for the advancement of learning in connection with railway engineering and transportation in general, on condition that the railway companies contribute an equal amount. The C.P.R. and the G.T.R., prior to the passing of the vote, had promised to contribute to the funds, and the Quebec Legislature has promised to increase its contribution to an amount equal to that contributed by the Dominion Government and the railway companies.

Dominion Railway Subsidies for 1910.

The Dominion Parliament at its recent session voted subsidies in aid of railways at the rate of $3,200 a mile when the cost does not exceed $15,000 a mile, and increasing to $6,400 in proportion as the cost of construction increases. It is provided that all the lines for the construction of which subsidies are voted, unless already commenced, shall be begun within two years from Aug. 1, 1910, and completed within a reasonable time, not to exceed four years from Aug. 1. Other railways than the one securing the subsidy, may secure running powers over the lines to be constructed upon terms and conditions laid down by the Board of Railway Commissioners. In any contract entered into the Government may make it a condition that the line to be built shall be laid with new steel rails, made in Canada, and that the construction material, rolling stock and other equipment shall, as far as possible be of Canadian manufacture. The cost of the line includes all bridges not exceeding $25,000, but does not include right of way in cities, cost of terminals, or rolling stock. The subsidies granted are revotes of those granted in 1906 and 1908, which have not been earned, or in respect to which contracts have not been entered into between the Government and a company. In some instances, however, there has been a change in one or other of the terminal points, and in others there is a difference in the mileage, as compared with the votes of 1908. Following is a list of the lines to be aided arranged in provinces:—

NOVA SCOTIA.

DOMINION ATLANTIC RY.—To Government pier or wharf at Canning, one mile; from Brazil Lake, to Kemptville, 11 miles; from Centreville to Weston, 15 miles.

HALIFAX AND SOUTH WESTERN RY.—Lunenburg to Bridgewater, via Upper La Have, 12 miles.

INVERNESS RY. AND COAL CO.—From Broad Cove to Cheticamp, 37 miles.

MARGAREE COAL AND RY. CO.—From Orangedale to Chimney Corner Cove, 46 miles, and from Orangedale to Caribou Cove, four miles.

DARTMOUTH TO DEAN'S SETTLEMENT.—Not exceeding 80 miles.

DEAN'S SETTLEMENT TO MELROSE.—Not exceeding 52 miles.

MELROSE, ETC.—From New Glasgow to Melrose, Melrose to Guysborough, and a branch to Country Harbour, not exceeding 116 miles.

TUSKET WEDGE TO RIVERDALE.—Not exceeding eight miles.

NEW BRUNSWICK.

INTERNATIONAL RY. OF N.B.—To cover difference in mileage between Campbellton and St. Leonard's, as subsidized in 1908, and as actually constructed, 3.5 miles.

YORK AND CARLETON RY.—From present terminus to National Transcontinental Ry., nine miles.

CONNORS TO BEAU LAKE.—Not exceeding 18 miles.

GRAND FALL TO ST. JOHN.—Not exceeding 228 miles.

PLASTER ROCK TO RILEY'S BROOK.—Not exceeding 28 miles.

QUEBEC.

ATLANTIC, QUEBEC AND WESTERN RY.—From Paspebiac to Gaspe, along the shore, not exceeding 102 miles.

CANADIAN NORTHERN QUEBEC RY.—From Arundel to Preston-Hartwell tp., not exceeding 30 miles, and from Montreal to Hawkesbury, Ont., not exceeding 65 miles.

EASTERN TOWNSHIPS RY.—From St. Leonard's Jct., on the Intercolonial Ry., to Dudswell, 36 miles.

HA HA BAY RY.—From Jonquieres to Baie des Ha Ha, not exceeding 24 miles.

L'AVENIR AND MELBOURNE RY.—From Melbourne to Drummondville, not exceeding 28 miles.

LITTLE NATION RY.—From Papineauville towards Nominique, not exceeding 30 miles.

LOTBINIERE AND MEGANTIC RY.—From Lyster to Dudswell, 50 miles, and from Inverness tp. to the Quebec Bridge, 30 miles.

QUEBEC AND LAKE ST. JOHN RY.—From Valcartier station to St. Catherine, not exceeding 3.8 miles; from Valcartier station towards Gosford, 5.50 miles; from the end of the 35th mile of the branch to La Tuque on the St. Maurice River, to La Tuque Falls, 5 miles; from La Tuque Falls to the mouth of the River Croche, 5 miles; from the La Tuque branch to the steamboat landing near La Tuque, not exceeding 1.6 miles; from Chicoutimi, south, or southeast, not exceeding 5 miles; from Herbertville to St. Joseph d'Alma, not exceeding 10 miles.

QUEBEC AND NEW BRUNSWICK RY.—From Chaudiere Jct. to the international boundary between Quebec and Maine, not exceeding 62 miles.

JOLIETTE TO LAKE MANUAN.—Not exceeding 160 miles.

MONTREAL NORTHERLY.—From Montreal to the National Transcontinental Ry., not exceeding 200 miles.

ROBERVAL TOWARDS JAMES BAY.—Not exceeding 100 miles.

ST. JOACHIM TOWARDS SEVEN ISLANDS.—Not exceeding 170 miles, including branches to Murray Bay and Bari St. Paul.

STE. AGATHE DES MONTS TO HOWARD TP.—Not exceeding 15 miles.

ONTARIO.

ALGOMA CENTRAL AND HUDSON BAY RY.—From Sault Ste. Marie to White River or Dalton, 200 miles; from Michipicoten Harbor towards C.P.R., not exceeding 25 miles; from White River or Dalton towards the National Transcontinental Ry., 50 miles.

BRACEBRIDGE AND TRADING LAKE RY.—For a line from Bracebridge to a point near Baysville, not exceeding 16 miles.

ERIE, LONDON AND TILLSONBURG RY.—From Port Burwell to London, not exceeding 35 miles.

KINGSTON, SMITH'S FALLS AND OTTAWA RY.—From Kingston to Ottawa, not exceeding 101 miles.

LAC SEUL, RAT PORTAGE AND KEEWATIN RY.—From Kenora to the National Transcontinental Ry., not exceeding 22 miles.

MANITOULIN AND NORTH SHORE RY.—For lines from the M. and N.S.R., between Little Current and Sudbury, westerly towards the Algoma Central and Hudson Bay Ry., not exceeding 76 miles; from Little Current, thence crossing the C.P.R. near Stanley, thence to Sudbury, not exceeding 88 miles; from Sudbury, northerly, not exceeding 30 miles.

NIPIGON RY.—From near Nipigon station on C.P.R., to Nipigon Lake, not exceeding 30 miles; from Nipigon Bay to the west side of Lake Helen, on line of Nipigon Ry., not exceeding 3½ miles; from the Nipigon Ry., near crossing of Fraser River to Lake Jesse, by Cameron Falls, not exceeding 1½ miles; from north shore of Lake Nipigon, northerly, not exceeding 45 miles.

ONTARIO, NORTHERN AND TIMAGAMI RY.—From Sturgeon Falls, northwesterly, to the westerly shore of Lake Timagami, not exceeding 50 miles.

ST. MARY'S AND WESTERN ONTARIO RY.—From Embro to Exeter, not exceeding 36 miles.

TORONTO, LINDSAY AND PEMBROKE RY.—From Golden Lake to Bancroft, not exceeding 51 miles.

SHARBOT LAKE TO CARLETON PLACE.—From Sharbot Lake or Bathurst, via Lanark, to Carleton Place, not exceeding 41 miles.

ALBERTA.

PACIFIC NORTHERN AND OMINECA RY.—

ADDITIONAL SAFETY AND ECONOMY IN

TRACK MAINTENANCE

has been proved by the use of Continuous, Weber and Wolhaupter base-supported rail joints—after fourteen (14) years' service, having a record of over **50,000 miles in use**—the extent of which is evidence of their excellence.

BOWSER

SYSTEMS FOR RAILWAY OIL STORAGE

are backed up by twenty-five years of experience in the manufacture of Self-measuring Pumps and Tanks.

The Tanks are made of any capacity, either cylindrical or rectangular, may be buried underground and connected with the pumps which are placed any distance away, wherever most convenient. No danger from FIRE.

The Pumps measure accurately, and by means of a Gallon Meter, keep an accurate record of all oil drawn. ABOUT ONE HUNDRED AND FIFTY RAILROADS ARE USING BOWSER EQUIPMENT. Drop a card for BULLETIN 18.

S. F. BOWSER & COMPANY, LTD.

TORONTO, ONT.

From Edmonton to or towards Peace River, not exceeding 110 miles.

SOUTHERN CENTRAL PACIFIC RY.—From two miles west of Pincher northwesterly for 10 miles, and southwesterly for 40 miles.

BRITISH COLUMBIA.

ESQUIMALT AND NANAIMO RY.—From near Duncans to Cowichan Lake, not exceeding 24 miles.

KETTLE RIVER VALLEY RY.—From Midway to Merritt, not exceeding 250 miles, and from Coldwater River to the Fraser River, not exceeding 50 miles.

KOOTENAY CENTRAL RY.—From Golden, via Windermere, Fort Steele and Ellis, towards the international boundary, not exceeding 186 miles.

The Minister of Railways stated that the total mileage for which the Act provided subsidies was 3,277.4. At a subsidy of $3,200 a mile that mileage would call for $10,487,680, while if the total amount of $6,400 was necessary, an expenditure of $20,975,360 would be involved.

Recent Nova Scotia Legislation.

The Nova Scotia Legislature last session passed Acts affecting transportation interests as follows:—

ACADIA COAL CO.—Amending acts of incorporation.

DOMINION ATLANTIC RY.—Two Acts amending company's powers, and one with respect to building North Mountain division.

DOMINION IRON AND STEEL CO.—Amending chap. 139, statutes of 1899.

DRYDOCK, ETC.—To enable city of Sydney to furnish free site for drydock, shipbuilding plant and ship repair shop.

EGERTON TRAMWAY CO.—Amending chap. 137 of statutes of 1902. (The E. T. Co. is now operated as the Pictou County Electric Co.)

GREAT NORTHERN MINING CO.—Respecting company's powers.

INTERCOLONIAL RY.—Amending chap. 98 of statutes of 1909 respecting cost incurred by North Sydney for extension of I.C.R. to that town.

INVERNESS.—Amending chap. 93, statutes of 1909, respecting construction of a railway in Inverness county.

LIVERPOOL AND MILTON TRAMWAY CO.—Two Acts amending chap. 88 of statutes of 1896.

MABOU COAL AND RY. CO.—Amending chap. 135 of statutes of 1908.

MARGAREE COAL AND RY. CO.—Amending Act of 1909 confirming agreement between N.S. Government and company.

MARITIME COAL AND RY. CO.—Amending chap. 153, statutes of 1903-04.

MARITIME TELEGRAPH AND TELEPHONE CO.—Incorporation.

NOVA SCOTIA IRON AND STEEL CO.—Amending chap. 137, statutes of 1898.

PACIFIC WHALING CO.—Amending and consolidating acts relating to company.

PORT HOOD-RICHMOND RY. COAL CO.—Respecting company's powers.

QUEEN'S CENTRAL RY.—Incorporation.

SYDNEY AND LOUISBURG RY.—Incorporation.

SYDNEY SHIP CHANDLERY CO.—Incorporation.

Manitoba's First Locomotive.—The first locomotive ever seen in Manitoba, returned to Winnipeg, April 27, from Golden, B.C., on a flat car. It is proposed to give the locomotive an overhauling, and then place it on exhibition as a relic in the park facing the C.P.R. station on Higgins Ave. The story of the bringing of this locomotive to Winnipeg in 1877, together with an illustration, and details of its subsequent history will be found in our issue of Feb. and April, 1904.

How to Improve the Roadbed.

Our last issue contained a paper bby E. Desharnais, Roadmaster C.P.R. in Medicine Hat, Alta., on this subject. Following are the main points of its discussion by the Western Canada Railway Club:—

H. Rindal, Assistant Engineer C.P.R.: The construction department has certain rules for increasing the height of a dump so as to allow for settling, and these rules are followed on all new lines. I think, however, that even a dump widened in accordance with this, will be found in after years to be too narrow at the subgrade, as the rain will wash a certain amount of material off the shoulder, especially if the dump is made of material, which will not allow the grass to grow readily. Mr. Desharnais' remarks about trimming ballast are in my opinion correct. There is no doubt that trimming ballast down to three inches below top of ties has a tendency to destroy the ties, by letting the sun get at too much of the ends, and splitting them. I was out with Mr. Dixon on his inspection trip last summer and think that his recommendation regarding a tie inspector was justified. We found a certain piece of track that had just been re-tied, where quite a number of the ties taken out had enough life left in them to last another year. If there had been a tie inspector on the particular section, this would not have happened. From Mr. Desharnais' paper I take it that he thinks the inspector is supposed to be "A little tin god on wheels." This is not the intention, for the inspector will always confer with the section foreman and roadmaster, and I think that we would have a more uniform rate of tie renewals through this system, as two section foremen will hardly ever have the same idea about the remaining life of a tie. As far as discovering bad ties when lifting is concerned, the foreman is just as badly handicapped as the inspector would be. The proposed guard rail over muskegs will be too expensive. It will cost about $17 per 30 ft. rail length, and this is too much even for the C.P.R. East of here, on the double track, the creeping is stopped by using anti-creepers, about eight to 10 per rail length, at a cost of about $1.75 per rail length. These, in addition to 12 ft. ties will make as good a track as can be obtained over a muskeg. Mr. Desharnais ends up with a dig at the engineers. An engineer who will put in a centre stake in the morning and pull it up in the afternoon, to adjust the height, is hardly worthy of the name. I think Mr. Desharnais will find that the trouble is with his extra gangmen. If a man walking on the track sees a stake sticking up, he must kick it to see if it is loose. The next man will do the same, and the stake gets pretty loose after a few such attempts. My idea of placing centre stakes is that they should be left at a height which brings the top a couple of inches below the top of the finished ballast.

J. G. Legrand, Bridge Engineer G.T.P.R.: I think that the engineer who puts stakes down and then pulls them up again, can hardly call himself an engineer. He may have to drive them down again after taking them up to cut them and tried to put them into the same hole. This is the only way I can explain it.

H. Patten: Our company, at Fort William, is accumulating a lot of hard coal screenings, which is of no use for making steam. Would this be any good for ballast purposes, say yard-ballast?

E. Desharnais: Anything coming from coal, such as slack from the mines, is no use for track purposes. It does not bind, and on that account is not suitable. Coal dust, slack or cinders moves under weight, forming dust and the centre under the ties gives way. It is no good on the main line as a ballast, for the ties continually work loose.

H. Patten: Would it not be of any use for yard purposes?

E. Desharnais: Twenty years ago we used all kinds of ballast, because the trains were much lighter and ran a great deal slower than they do to-day. The rails were also much lighter, and consequently the heavier ballast was not required. I approve of cinders for yards and sidings, because there is no fast running on these rails, and the grass and weeds will not grow in the cinders, which is a saving on the ties.

T. Duff Smith: Regarding the life of ties being nine years. I think that is somewhat higher than the average. It appears to me that seven years on the main line is nearer the average?

E. Desharnais: Five years ago we were very much discouraged with the quality of the ties supplied, but now we get good ties which last on an average of nine years. Tamarac, especially black tamarac ties from swamps, are the best. There are many complaints about the changing too many ties, but it is due to the higher speed, also heavier power and rails. I allow 18 to 19 ties to a rail, or 270 to 280 to the mile.

J. Hillis: Have you had any experience with creosote or preservative being used on ties, and has the same been successful?

E. Desharnais: None at all. There is no doubt that something of this kind will have to come, as ties are getting scarcer all the time.

W. S. Fallis: How will creosoted ties wear after they have been treated in this manner? I think creosoting is one of the coming innovations in ties, that will tend to lengthen their life. This is exemplified in the process of creosoting shingles for roofs. Creosoted shingles will last three or four times as long as those not so treated. The procedure is to dip about 6 ins. of the butt of the shingle in creosote, which quickly penetrates the tissue of the wood, making it absolutely impervious to moisture and decay, rendering the life of the shingle very much longer. The process of creosoting ties is much the same. They are dipped in creosote liquid, which penetrates all parts of the tie to about half an inch. I have recently heard of a new method, by which the ties are placed in some kind of a retort containing creosote, and the liquid is forced into the very heart of the tie, rendering it almost beyond decay. As timber becomes scarcer in the future, which is not by any means improbable, no doubt some method such as this will be adopted to lengthen the life of ties.

A. E. Cox, General Storekeeper C.N.R.: An eminent professor from England gave a series of lectures, in U.S., on this subject. He stated that some creosoted ties on one of the railways in the United Kingdom had been lifted up after 23 years service, and were afterwards used for fences. It is claimed that it doubles the life of the tie, but it also doubles its cost.

W. E. Skinner: In Hawaii, on 70 miles of coast railway track, one of the superintendents has been experimenting on the ties by boring holes for driving spikes, and pouring a certain amount of creosote into them. I learn that he is having very good results. I think he has had some ties in use for about 11 years.

E. Fisher: We have been talking about the life of the tie, but nothing has been said about the life of the locomotive in this discussion. For example, take a locomotive running through sand hills and cuts. We all know that sand is very detrimental to the working parts of the locomotive, cutting and wearing them out before their time. Why could not something be done to keep the sand and dust from flying? Why could not some

kind of a creeper be planted on the face of the cuts? It would of course take a few years to do it, but it is done in other parts of the country. I was, at one time, in a part of the country composed of red loam where stones and earth were continually falling down on the track. The company kept planting creepers until they got one to grow, with the result that eventually they stopped the earth from falling on the track and dust from flying. I think it would be a good idea to have this tried in this western country.

A. E. Cox: What percentage of new spikes do you figure on in re-laying new steel, especially where steel has been laid for ten or fifteen years?

E. Desharnais: Ten boxes of spikes to the mile, providing you have good men to pick up on the line, but I find that where tie plates are used they cut into the spikes, and in that case it will take about 16 boxes to the mile.

CANADA'S RAILWAY BUILDING.

A Vast Construction Programme Decided On.

A careful consideration of contracts let, and engagements entered into with the Dominion and Provincial Governments, shows that the various Canadian railway companies expect to complete and bring into operation about 7,000 miles of new lines within the next five years. This estimate is made on the basis of contracts already entered into and construction work immediately in sight, and does not include various projects which may reach the active construction stage within that time, neither does it include the mileage of yard and terminal lines, and the second track work in progress or contemplated by the C.P.R.

From the contracts already in hand it would appear that track will be laid this year on not less than 1,500 miles, about the same as last year; and from the engagements entered into with the different governments, it appears as if there will be very little diminution of that rate of railway building for the following three or four years. British Columbia will probably show the heaviest increase in mileage during the next few years, for it has contracted with the Canadian Northern Pacific Railway to build 600 miles, and with the Kettle Valley Ry. to build about 230 miles by the end of 1914. The C.P.R. has either under contract on Vancouver Island or in contemplation about 200 miles of line, the G. T. Pacific Ry. has under contract 200 miles, and will place under contract the remaining 500 miles of its system within a year; and the Great Northern Ry., through its subsidiary company, the Vancouver, Victoria and Eastern Ry., has a considerable mileage under contract and survey. In Alberta and Saskatchewan the Canadian Northern Ry., and the G. T. Pacific Ry., are under agreement with the Dominion and Provincial Governments to build over 1500 miles of main and branch lines, and of these, some 600 miles have been placed under contract. In these new provinces, the next few years will see a large mileage constructed of the Alberta and Great Waterways Ry., on which work is at present temporarily suspended; the line to Hudson Bay, for which the Dominion Parliament has granted a first construction vote, and the Hudson Bay and Pacific Ry., for which surveys are at present in progress in view of, as the Managing Director says, a start this summer. Next to these provinces, Ontario will show the largest increase in mileage for the next few years, principally in connection with the Canadian Northern Ontario Ry., and the National Transcontinental Ry.

The National Transcontinental Ry., when completed, will extend from Moncton, N. B., to Price Rupert, B. C., 3,550 miles. The first portion of this line, which is being constructed by the Dominion Government, through a Commission, extends from Moncton to Winnipeg. Contracts have been let for the grading, etc., for the whole distance of 1804 miles, and upon this mileage there are 742 miles of grading and 1,183 miles of track laying to be completed within the next two or three years, in this part of the line is situated the Quebec Bridge, for which the Dominion Government is preparing to receive tenders. The western division of the line which is being constructed by the G. T. Pacific Ry. Co., extends from Winnipeg to Prince Rupert, 1746 miles. Of this mileage track has been laid on 915 miles from Winnipeg to Wolfe Creek, west of Edmonton, Alta., and a train service is being operated to Edmonton. A contract has been let for over 200 miles of the line easterly from Prince Rupert, and track is being laid on the first 100 miles, while contracts are expected to be let during the year for the remaining 500 miles, situated almost entirely in British Columbia. A subsidiary company, known as the G. T. Pacific Branch Lines Co., has just placed on the British market an issue of £1,270,500 of 4 per cent. bonds, guaranteed by the province, for the construction of branch lines in Saskatchewan as follows:—Regina to the International boundary near Portal, 155 miles; Regina to Moose Jaw, 110 miles; from Biggar, in a south-westerly direction, 50 miles; Prince Albert branch, 110 miles; Cut Knife branch, 50 miles. These lines are to be built in addition to others previously arranged for, upon which 55 miles of track was laid in 1909. Contracts have been let for an extension of 30 miles on the Melville-Yorkton line; 60 miles on the Melville-Balcarres line, and it is expected that work will be gone on with on the projection of this line southerly from Regina to the International boundary this year, for the grading of about 50 miles from Biggar to Battleford. Under an agreement with the Alberta Government, the company has undertaken to build about 600 miles of line in that province, and has started construction on one line, viz., from Tofield to Calgary, upon which track was laid to Cambrose, 26 miles, in 1909. A contract has been let for the extension of the line into Calgary this year.

The Canadian Northern Ontario Ry. has under construction 100 miles from Toronto to Trenton, as the first section of its line to Ottawa. It is expected that contracts will be placed during the year for the balance of the line, and also for the grading of the line from Toronto to Buffalo, along the Toronto-Niagara Power Co.'s right-of-way. The extension of the line from north of Sudbury to Port Arthur is projected, but it is not likely that any extensive work will be done on it for a year or two. In a recent interview, President Mackenzie stated that the C.N.R. expected to add some 600 miles to its lines on the western prairies this year. There were about 200 miles of grading done in 1909, upon which track was not laid, and contracts have been let for 230 miles of new work in Manitoba, Saskatchewan and Alberta. Other contracts will be let in the near future. It is however, in British Columbia, that the C. N. R. will, through the C. N. Pacific Ry., be most active during the next few years. The company has undertaken to build 600 miles by 1914, of which 50 miles are to be constructed on the mainland, and 20 miles on Vancouver Island during the current year. So far as other Mackenzie, Mann & Co. lines are concerned, the only one upon which construction will be gone on with this year is the Portland Canal Short Line, from Stewart along the valley of the Bear River, B. C., for 15 miles.

The C. P. R. construction programme for the current year, includes in addition to the laying of track and the completion of lines graded in 1909, the building of a second track between Winnipeg and Portage La Prairie, and the construction of 459 miles on six different lines, in Manitoba, Saskatchewan, Alberta and British Columbia, for which contracts have been let for completion this season. The extension of other lines has been decided upon, but it is uncertain what further contracts will be let this season.

The Kettle Valley Ry., which has a small mileage in Canada, has entered into an agreement with the British Columbia Government to build 230 miles of line of which 25 miles is to be completed this year, 50 miles in 1911, and the remaining mileage by the end of 1914. Contracts have been let for 50 miles upon which work has been started.

The Alberta and Great Waterways Ry. let a contract for the first section of its 350 mile line from Edmonton to Fort McMurray, Alta., but construction has been suspended for the present. The Dominion Government has provided funds for making a start on the 600 mile line from Pas Mission to Hudson Bay, and the Hudson Bay and Pacific Ry. promises a start on its projected line between Prince Albert and Fort Churchill this year.

The Great Northern Ry., through various subsidiary companies has a large programme in Canada, but the only point at which active construction is going on is between Abbotsford and Hope, B.C., pending decision upon the question of tunneling the Hope Mountains or constructing a round about line over them. The probabilities of construction on G.N.R. lines is always an unknown quantity, and it is impossible to conjecture what is likely to be done.

Of the lines outside the above the Dominion Government has under construction a 10 mile branch of the Prince Edward Island Ry.; a diversion of 9 miles at Sydney Mines, N.S., and a 10 mile cut-off at Chatham, N.B., on the Intercolonial Ry.; the Dominion Atlantic Ry. has in contemplation the construction of a 35 mile branch from Centreville, of which 10 miles will, it is said, be placed under contract at an early date. Construction is being proceeded with on the Ha Ha Bay Ry., from St. Alphonse, Que., about 24 miles; the Central Ontario Ry. is building a 10 mile extension northerly from Maynooth, and the Algoma Central and Hudson Bay Ry., will connect up its Michipicoten branch with the C.P.R., and complete its main line, these two sections representing about 150 miles of work, while the Manitoulin and North Shore Ry. has a 12 mile extension under contract.

In Newfoundland the Reid Newfoundland Co. has agreed with the Government to construct 280 miles of branch lines of which at least 50 miles has to be completed annually. For the purposes of construction rails and fastenings are to be admitted duty free, as also will be the material necessary for the construction of rolling stock, which has to be manufactured on the Island.

The immense amount of railway construction which is being done in Canada, in proportion to its population will be more fully realized by pointing out that in 1909, according to official returns made by the various steam railway companies to the Railway and Marine World, 1,588.47 miles of new line were laid with track. In the same period only 3,748 miles of new track were laid in the whole of the United States. Second track, etc., is not included in the figures given for either country.

Efficiency in Transportation.

In our May issue we published a paper on this subject by D. Crombie, Assistant to the General Transportation Manager G.T.R. Following are the main points of the discussion on it by the Canadian Railway Club:—

H. H. Vaughan, Assistant to the Vice President C.P.R.: I am rather doubtful whether the comparison of the English and German operating ratios is entirely fair. Mr. Crombie assumes that a greater density of traffic leads to a lower ratio. I do not think that is quite right. It seems to me that greater density has led to an increased ratio. I have noticed this, while the traffic on the C.P.R. has increased about 50 to 60%, as the traffic got congested the expenses would tend to increase. If you bear in mind the staff that English roads have to maintain to manage their traffic, and that in addition their length of haul is very much less than ours, you can understand that their terminal expenses are exceedingly high and terminal expenses are an important factor in operating costs. I would like to supplement Mr. Crombie's statement as to the cheapness of transportation by another remark, and that is, that whether coal is used efficiently or not, still, a shovelful of coal will now carry 200 tons one mile. This seems remarkable, and certainly we are not so very inefficient when a shovelful will do that.

It seems to me that, in connection with the service obtained from cars, Mr. Crombie has left himself very little room for improvement. In the paper I read myself recently about the efficiency of coal consumption, I was very careful to leave myself room for about 25% improvement, but in Mr. Crombie's statement he has shown that the time the cars are handled by railroads is only about 10% of the total, so that no amount of speed could reduce the total average days per load of less than 90% of the figure he has given. When you take Mr. Crombie's statement and one or two other cases he has mentioned later, it seems to me that the traffic department is responsible for all the trouble, as apparently, only about 2% improvement is possible by the car and transportation departments.

I think that Mr. Crombie must have thought that this was a club of almost entirely mechanical men from the easy way he has dealt with the troubles caused by locomotive and car equipment. There is a certain amount of truth in this, however, and I am beginning to think that the question of coal economy is just as much a transportation as a mechanical matter. The engine may be all that it should be, and the handling of it as good as possible, and then the big difference between economical and uneconomical operation is largely in the hands of the transportation department.

I feel hardly able to discuss Mr. Crombie's proposed reorganization. Personally, I agree with him that the Hines system is not likely to be extended. It looks very well in the concentration of officers into one office, instead of being scattered, and I see no objection to calling each officer a superintendent, but the advisability of allowing each one to handle each other's work is very questionable, and the only way it seems to me the system could be run is by each man keeping to his own work pretty well. There is very little difficulty about various men on a division learning each other's work. In fact, it always seems to me that when one speaks to a man he is generally liable to know all about the other fellow's work and exactly how it ought to be run. I do not quite know the idea of the proposed organization. It seems to me we should get the same thing by splitting up a district so that the superintendent would get in touch with the public and his men in the same way as a divisional agent is supposed to do, and that the only way in which this can be effected would be by getting a division small enough for the superintendent himself to do this work.

J. Pullen, Freight Traffic Manager G.T.R.: Mr. Crombie has pointed out that, although the capacity of cars has increased very considerably in late years, the average loading of cars has not increased in the same proportion, and suggests that the freight traffic department should adjust the minimums, following closely the increase in car capacity. This is a question to which the railways have given, and are giving, a good deal of consideration. Within the last few years the minimum weight for standard box cars in the territory in the U.S. covered by the Official Classification, that is to say, east of the Mississippi River and north of the Ohio, has been increased from 30,000 lbs. to 36,000 lbs. In Canada, with the exception of some heavy commodities, the classification minimum has remained at 24,000 lbs. It is largely a matter of education of the public to the needs of transportation companies, and much good work is being done by the freight officers in this direction. The Canadian Freight Association has now under consideration a proposal to increase the minimum weights wherever possible to do so. Generally speaking, the railway commissions hold to the view that the minimum weight for any article should not be in excess of the quantity that can be loaded in a standard box car. The public, well content with this view, would resist any efforts of the carriers to go beyond that point because it means an increase in freight charges. Then there are the commercial conditions to be considered. Frequently the consignee has not warehouse accommodation sufficient to take in a large car, and therefore insists on buying only a small car. For example, 60,000 lbs. of salt could readily be carried in one of our modern 36 ft. box cars, but only 100 barrels of 300 lbs. each, or 30,000 lbs. in all, could be loaded on end on the floor of the car. Shippers object to tiering the barrels up, partly on account of the labor involved and partly by reason of the damage to the lower tiers. Furthermore, the small country dealer does not want to buy more than 100 barrels at a time.

Mr. Crombie has suggested that the reasons for the continued existence of demurrage bureaus are not apparent. Possibly, from the standpoint of a transportation officer, this may be true, but I am sure all freight officers will agree with me that we do not want to go back where we were before the car service associations were organized. Car service has been legalized both in Canada and the U.S., nevertheless there are amongst the shipping public a good many who would not hesitate to evade the car service rules if they could get a willing station agent who would help them to do it. The car service associations have removed from the sympathetic station agent and the freight officer, who are expected to cultivate the goodwill of the public, all opportunity for evasion of the rules. We are getting better use of our equipment becase shippers are delaying cars at terminals less than formerly. Still, as Mr. Crombie says, there is room for much improvement, but we do not think the time has come for doing away with the the car service associations until the public have been more thoroughly educated as to the advantage of the rules both in their interests and that of the carriers.

Mr. Crombie has suggested the transfer from the freight to the transportation department of the freight claim agent's forces in order that the department at fault may promptly and fully be put in a position to correct the fault. I am sorry not to be able to agree with him on this point. Personally, the freight officers would only be too glad to be relieved of one of their most disagreeable duties, namely, the investigation and settlement of loss and damage claims. One of the most abused officers of the staff is the freight claim agent. He may do his work ever so well and be ever so conscientious in his duties, and treat everyone with the fullest possible consideration, but it is always impossible to fully satisfy an unreasoning, to say nothing of a dishonest claimant. From that point of view we should not object to transferring this work to the transportation department, but I fear that the interests of the patrons of the company would not be as carefully cared for as is now done by the freight department. This is not intended to be any reflection upon the transportation department. The officers of the freight department especially are expected to cultivate the goodwill of the shipping public, and in dealing with loss and damage claims the use of tact is necessary. I should not want to be responsible for the relations between the public and the railway company if the settlement of loss and damage claims had to be entrusted to some of the transportation officers I have known.

I am much pleased to note the consideration Mr. Crombie has given to the question of systematic loading of less than carload freight. I suppose nowhere on the face of the globe has there been evolved a more complete and successful system of handling carload movements than in the U.S. and in Canada, but when it comes to the handling of merchandise in less than carload quantities we seem to be woefully behind the times, and I hope the transportation officers will continue to give this important subject more attention. The less-than-carload traffic represents the high-class freight, upon which higher rates and greater revenues are secured. It is of the utmost importance, both to the shipper and the consignee, that he should know approximately when he is likely to receive his goods, so that he can arrange for his sales accordingly. Any failure of the transportation companies to handle such goods with regularity is the cause of much annoyance and disturbance to commercial men. If some arrangement could be made whereby the merchandise could be depended upon to arrive at destination without transfer en route, the public would get a very much better service and the railways be relieved of much adverse criticism.

G. T. Bell, Passenger Traffic Manager G.T.R.: Mr. Crombie was very careful, in opening his paper, to announce that he was dealing more particularly with the freight department—car and fast freight service, train loading, fuel, and station service. In his different headings, perhaps station service appeals to me more than anything else. I think the quantity and quality of help is very frequently criticised, and sometimes with good cause. The men at stations often have too much to do, and better pay and prospects encourage them to enter other fields. Of course, I am speaking of passenger service entirely.

As far as the district agent is concerned, I think Mr. Crombie probably misunderstands the nature of the work now done by district and other passenger agents. There are many things that the poor district agent would find it quite out of the question to give his attention to at all, although he would find some of them very enticing. I have no doubt, for example, it would be very pleasing to him to go regularly to the local theatres to see that the chorus girls travel by the right route.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

10173. Apr. 18.—Approving C.P.R. Standard Freight Tariffs Supplement 3 to C.R.C., w. 2; Supplement 3 to C.R.C., w. 3, and Supplement 2 to C.R.C., 7, adding stations on new lines.

10174. Apr. 19.—Authorizing C.P.R. to build spur for the Okanagan Lumber Co., Okanagan Landing, B.C.

10175, 10176. Apr. 18.—Authorizing C.N.O.R. to build across road overhead, on lot 24, con. 3, Pickering tp., at station 2761, and similarly to cross Dawes' Road, York tp.

10177. Apr. 15.—Authorizing Manitoba Government Telephones to place wires across C.N.R. near Oakburn station.

10178. Apr. 15.—Authorizing G. E. Higginson, to place wires across C.P.R. near Calumet station, Que.

10179. Apr. 15.—Authorizing Waterloo Water and Light Commission to place wires across G.T.R. on Queen St., Waterloo, Ont.

10180. Apr. 19.—Authorizing Western Counties Electric Co. to place wires across T.H. & B. Ry. at Mohawk St., Brantford, Ont.

10181. Apr. 19.—Authorizing Dominion Light, Heat and Power Co. to place wires across C.P.R. at its Hochelaga yards, Que.

10182. Apr. 18.—Authorizing Seymour Power and Electric Co. to place wires across Bell Telephone Co. wires at Campbellford, Ont.

10183. Apr. 18.—Authorizing Uxbridge and Scott Telephone Co. to place wires across G.T.R. on Brook St., Uxbridge, Ont.

10184, 10185. Apr. 18.—Authorizing Ottawa Electric Co. to place wires across C.P.R. at two points.

10186 to 10189. Apr. 18.—Authorizing Wahnapitae Power Co., Dominion Nickel-Copper Co. and Moose Mountain, Ltd., to place wires across C.N.R., C.P.R., at four points in Ontario.

10190 to 10197. Apr. 19.—Authorizing Ontario Hydro-Electric Power Commission to place wires across various railways at eight points.

10198 to 10201. Apr. 19.—Authorizing Bell Telephone Co. to place wires across various railways at four points in Ontario.

10202 to 10212. Apr. 19.—Authorizing Saskatchewan Government Telephones to place wires across C.P.R. at 11 points.

10213. Apr. 14.—Authorizing Water and Light Commission of Waterloo, Ont., to relay gas main across G.T.R. on Queen St.

10214 to 10217. Apr. 18.—Authorizing C.P.R. to open for traffic its Weyburn-Lethbridge Branch from mileage 0 to 26; Kipp-Aldersyde Branch from mileage 0 to 28.2; Wynyard section from mileage 88.3 to 125.3, between Wynyard and Lanigan, and Pheasant Hills Branch from mileage 430.39 to 561.63 between Wilkie, Sask., and Hardisty, Alta.

10218. Apr. 18.—Authorizing C.N.O.R. to build across Division St., Colborne.

10219. Apr. 18.—Approving C.N.R. plan of standard masonry abutments for highway crossings.

10220. Apr. 19.—Authorizing C.N.O.R. to build across public road between lot 32, con. 1, and lot 33, con. 2, Cramahe tp.

10221, 10222. Apr. 18-19.—Approving C.N.R. location from mileage 28.54 to 58.27, through tps. 10-13, r. 21-23, w. 2 m.; and mileage 0 to 28.54, through tps. 6-10, r. 18-20, w. 2 m., Sask.

10223. Apr. 18.—Approving M.C.R. plan of bridge at Cataract St., Niagara Falls, Ont.

10224. Apr. 12.—Authorizing C.P.R. to build spur across Tweed St. and lot 37 in D.G.S. 65 and 66, St. Boniface, Man.

10225. Apr. 19.—Authorizing C.P.R. to use bridges 83.0, 85.2, 99.88, 114.1, and 119.7 on its Smith's Falls Section, Ont.

10226. Apr. 19.—Approving G.T.R. plan of proposed additions to masonry at each end of bridge 21, at m. p. 76.02, District 20, Ont.

10227. Apr. 19.—Relieving G.T.R. from providing further protection at crossing of first public road south of Drew station, Ont.

10228, 10229. Apr. 19.—Ordering G.T.R. within 60 days to install electric bell at crossing just west of Ridgeway station, Ont., and ordering C.N.R., similarly respecting crossing at Gore St., Fort William, Ont.

10230. Apr. 20.—Authorizing C.N.O.R. to build across public road between lots 24 and 25, con. 1, Scarboro tp.

10231. Apr. 19.—Relieving G.T.R. from providing further protection at crossing of Haggerty St., Newbury, Ont.

10232. Apr. 20.—Approving location of G.T.R. proposed station at Waterloo, Ont.

10233. Apr. 12.—Authorizing G.T.R. to build spur to Stratford Manufacturing Co.'s premises, Stratford, Ont.

10234. Apr. 19.—Authorizing Galt, Preston and Hespeler Ry. to operate interlocking plant at Hespeler, Ont.

10235, 10236. Apr. 18-20. — Authorizing P.M.R. to reconstruct bridges over Canard River, in Colchester North tp., near New Canaan station, and over Whitebread drain, Sombra tp., Ont.

10237. Apr. 19.—Approving M.C.R. plans of proposed station at Tecumseh Road, Ont.

10238. Apr. 19.—Approving M.C.R. plan of proposed changes in bridge at Park St., Niagara Falls, Ont.

10239. Apr. 19.—Authorizing M.C.R. to reconstruct overhead bridge at Murray St., Niagara Falls, Ont.

10240. Apr. 20.—Approving M.C.R. plan of proposed changes in bridge at Clifton Ave., Niagara Falls, Ont.

10241. Apr. 19. — Approving proposed changes in Canadian Classification 14, viz.: Elimination of item 23, page 57, covering ratings on evaporated potatoes; elimination of item 8, page 65, covering ratings on evaporated vegetables; and addition of an item under heading of Groceries, reading: vegetables, desiccated or evaporated, in bags, boxes or barrels, L.C.L. 3, C.L. 5.

10242. Apr. 19.—Approving location of proposed C.P.R. station at Carlstadt, Alta.

10243. Apr. 19.—Authorizing Abernethy village, Sask., to place wires across C.P.R., and to install a telephone in station there.

10244. Apr. 20.—Authorizing Manitoba Government Telephones to place wires across C.P.R. at Archibald St., St. Boniface.

10245 to 10255. Apr. 19.—Authorizing Saskatchewan Government Telephones to place wires across various railways at 11 points.

10256 to 10260. Apr. 19.—Authorizing Ontario Hydro-Electric Power Commission to place wires across various railways at five points.

10261, 10262. Apr. 18.—Authorizing city of Winnipeg to lay water mains under C.P.R. West Selkirk branch, at Manitoba and Selkirk Aves.

10263. Apr. 18.—Authorizing town of Dunnville, Ont., to place sewer under G.T.R. at Tamarac St.

10264 to 10268. Apr. 18.—Authorizing Weston village, Ont., to lay pipe across G.T.R. and C.P.R., at five points.

10269. Apr. 19.—Authorizing Saskatchewan Government Telephones to place wires across C.P.R., between secs. 27 and 22, tp. 17, r. 7, w. 3 m., at Ernfold.

10270. Apr. 18.—Authorizing city of Winnipeg to lay water pipe under C.P.R., West Selkirk branch, at Pritchard Ave.

10271. Apr. 19.—Rescinding order 3979, Nov. 19, 1907, which authorized a C.P.R. crossing at point marked A on plan filed with the Board; and authorizing a crossing at point marked C on said plan, and ordering C.P.R. to fence off crossing at point marked B.

10272. Apr. 19.—Ordering G.T.R. within 60 days to install electric bell at Beverley St., Galt, Ont.

10273. Apr. 21.—Ordering C.P.R. to install within 60 days, electric bell at crossing of Martin St., Milton, Ont.

10274 to 10299. Apr. 19 to 21.—Relieving G.T.R. from providing further protection at crossings at Murray St., Pembroke; second public highway west of Moose Creek; Hunter's Crossing, Galt; Talbot road, Middleton tp.; Barley side road, Middleton tp.; 2½ miles west of St. Mary's Jct.; Thomas St., Arnprior, Ont.; St. Liboire road, Quebec, Que.; three miles north of Port Dover, Ont.; second highway east of St. Mary's Jct.; near Wingham Jct.; 1½ miles south of Dunkfield; Waterloo road, 3½ miles north of Hespeler; ½ mile south of Paisley; 1½ miles north of Mildmay; three miles west of Fort Erie; ¾ mile west of Stoney Point; St. John's crossings, near Clinton; Ferguson's crossing, near Admaston, Ont.; and similarly relieving C.P.R. in respect of crossings at Turgeon St., Ste. Therese; Bridge St., Three Rivers; Cote des Perrons (Chemin de Base), Ste. Rose parish; Cassidy's crossing, Wakefield tp.; Canillon St., Sauveur, Quebec, Que.; one mile south of Claresholm, Alta.; Government road, Pembroke tp., Ont.

10300. Apr. 5.—Ordering that Guelph & Goderich Ry. (C.P.R.) remove mound on south-east side of highway at crossing between cons. 9 and 10, Morris tp., Ont.

10301. Apr. 19.—Extending for 30 days' time, within which interlocking plant required under order 8110, Sept. 14, 1909, be installed—made upon Vancouver Power Co.'s application, and authorizing it to cross with its railway the New Westminster & Southern Ry. at Cloverdale, B.C.

10302. Apr. 21.—Authorizing C.P.R. to build two additional tracks across Centre Ave., Claresholm, Alta.

10303. Apr. 21.—Authorizing Esquimalt & Nanaimo Ry. to build across highway at mileage 6.40 of its Comox extension, from mileage 0 at Parksville, on its Wellington-Alberni branch, to mileage 34.79 at Union Bay, Vancouver Island, B.C.

10304. Apr. 18.—Authorizing C.P.R. to build spur in Winnipeg across lot 1 and the lane in block 31, parish lot 35, St. John's.

10305. Apr. 20.—Authorizing C.P.R. to build spurs for Saskatchewan Flour Mills Co., and Rat Portage Lumber Co., Moose Jaw, Sask.

10306. Mar. 19.—Authorizing C.P.R. to build spur through blocks 10 and 7 and across 18th St., Saskatoon, Sask.

10307. Apr. 21.—Authorizing G.T.R. to substitute plan for plan approved by order 6980, May 10, 1909, which authorized building of spurs for Consumers' Gas Co., Toronto.

10308. Apr. 14.—Authorizing G.T.R. to build spurs to Gibson, McCormack, Irvin Co.'s premises, Weston, Ont.

10309. Apr. 19.—Authorizing G.T.R. to build spur lines, with sidings, to Laprairie Brick Co.'s premises, Laprairie, Que.

10310. Apr. 20.—Rescinding order 9648, Feb. 17, and ordering Niagara, St. Catharines & Toronto Ry. to install full interlocking plant at G.T.R. crossing between Clifton Jct. and Stamford, Ont.

10311. Apr. 21.—Extending for three months from date time within which G.T.R. shall build branch line in Humberstone tp., Ont., as provided in order 9398, Jan. 29.

10312. Apr. 20.—Approving Chatham, Wallaceburg & Lake Erie Ry. standard freight tariff, C.R.C. 116.

10313. Apr. 19.—Authorizing C.N.O.R. to divert and cross public road between lot 13, con. 3, and lot 13, con. 4, Clarke tp.

10314. Apr. 19.—Authorizing Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. to build spur line on Lauriston St., Saskatoon, Sask.

10315. Apr. 21.—Ordering C.N.O.R. to build subway across road through lot 3, con. 2, Hope tp., and pay all costs of closing Cavan rd., except land damages.

10316. Apr. 21.—Ordering G.T.R. to clean approaches at crossing of public road which forms boundary between Ops tp. and Lindsay, Ont.

10317. Apr. 21.—Refusing C.N.O.R. application for approval of site and side elevation of bridge over Port Hope Creek and G.T.R., lot 3, con. 2, Hope tp., and ordering that the opening in the embankment be at the other side.

10318. Apr. 22.—Approving C.N.R. plans of bridge over Assiniboine River at Winnipeg.

10319 to 10320. Apr. 21.—Authorizing the C.N.O.R. to build across public roads between cons. 1 and A, Hamilton tp., and between lots 10 and 11, con. 3, Hope tp.

10321. Apr. 12.—Ordering C.P.R. within 60 days to install electric bell with light attached at crossing at mileage 81.28, Toronto section, Markham tp., Ont.

10322. Apr. 22.—Approving strain sheet for 39 ft. girder span to be provided by Lincoln Mills Paper Co. for intake at Lybster Mills, Merriton, Ont.

10323. Apr. 23.—Approving revised location of Tillsonburg, Lake Erie & Pacific Ry. and highway crossings between Ingersoll and Code Jct., Ont.

10324. Apr. 22.—Approving C.N.O.R. strain sheets for bridge over Dixie Creek, Ont.

10325. Apr. 23.—Declaring that C.P.R. crossing at Maitland St., London, Ont., is protected to the Board's satisfaction.

10326 to 10337. Apr. 22.—Relieving G.T.R. from providing further protection at crossings at Garnet, in Walpole, 10th con. Haldimand tp.; second road west of Wainfleet; third road west of Dunville; 1½ miles east of Tillsonburg; one mile south of Palmerston; 1½ miles east of Walsh; two miles north of Rymal, Ont.; similarly relieving C.P.R. in respect of crossings at Chemin Frederick, between lots 466 and 504, St. Felix de Valois, Que.; mileage 40.66 east of Harrison, Ont.; Le Rang de Lacadie, Pointe du Lac Parish; 2½ miles east of St. Basile Station, Que., and similarly relieving M.C.R. in respect of crossing at first highway west of Appin Jct., Ont.

10338. Apr. 21.—Ordering form of protection to be provided by G.T.R. at Darcy St. crossing, Cobourg, Ont.

10339. Apr. 22.—Authorizing Canadian Niagara Power Co. to carry wires across M.C.R. at Gilmore St., Bridgeburg, Ont.

10340. Apr. 28.—Ordering that C.P.R., from May 1 to Oct. 1, in each year, operate all passenger trains, north and south on its Gatineau Branch, from and to Sapper's Bridge, Ottawa, and furnish suitable accommodation for passengers there.

10341. Apr. 26.—Ordering that G.T.R. crossing at St. Charles St., Belleville, Ont., be protected by electric bell.

10342. Apr. 21.—Ordering that highway at

The Quick Way of Issuing Orders

Intercommunicating telephones afford the quick way of doing things in transportation work—for both big and little companies. They keep all the departments in touch with each other—the passenger, freight, baggage and all other branches of the organization are welded together—and each and all are under the direct supervision of the executive. They save time—do away with running back and forth for information—and pay for their installation and maintenance in proportion to the size of the institution. The "Northern Electric" Intercommunicating Way is the Quick Way.

Why not look into this—why not know for yourself in exact dollars and cents just what such a system would cost and save you daily, monthly, yearly?

Do you know what lost time is costing you now? No? You can easily figure it out. Have a clerk keep a record of it for a day or two. Its dead load of expense will amaze you.

We will be glad to tell you our side of the story on request. Ask for Bulletin No. 713.

mileage 20 C.P.R. main line, about two miles south of Lindsay, Ont., remain where it is, ditches within right of way to be tiled and filled to widen road as suggested in petition of ratepayers of Ops tp.

10343. Apr. 23. Ordering that G.T.R. within 60 days install improved type of electric bell at crossing just west of Nellis Corners station, Ont.

10344. Apr. 21.—Ordering that G.T.R. build bridge at crossing between cons. 3 and 4, Ops tp., Ont.

10345, 10346. Apr. 23.—Ordering that C.P.R. be relieved from providing further protection at crossings between cons. 8 and 9, Euphemia tp., and at highway between cons. 4 and 5, Garafraxa tp., Ont.

10347. Apr. 25.—Authorizing Fingal Telephone Co. to place wires across P.M.R. between lots 33 and 34, Southwold tp., Ont.

10348. Apr. 26.—Authorizing Addison, Greenbush and Bookspring Telephone Co. to place wires across C.P.R. at Jelly's crossing, con. 10, Elizabethtown tp., Ont.

10349 to 10351. Apr. 25.—Authorizing Ontario Hydro-Electric Power Commission to place wires across various railways at three points.

10352, 10353. Apr. 26.—Authorizing Nipissing Power Co. to place wires across C.P.R. at two points in North Bay, Ont.

10354. Apr. 25.—Authorizing town of Palmerston, Ont., to lay sewer under G.T.R. at Henry St.

10355. Apr. 26.—Authorizing C.P.R. to build spur to Winnipeg Oil Co.'s premises, Moose Jaw, Sask.

10356. Apr. 26.—Re rates on petroleum and its products in Ontario. This order is given in full on another page.

10357, 10358. Apr. 21. — Ordering that C.N.O.R. build subways between cons. 3 and 4, and between lots 12 and 13, con. 3, Hope tp.

10359, 10360. Apr. 25.—Declaring that C.P.R. crossings of Laliberte St., Quebec, and Waterloo St., London, Ont., are protected to the Board's satisfaction.

10361. Apr. 25.—Ordering that C.P.R. within 30 days make approaches to highway crossing between cons. 8 and 9, Puslinch tp., Ont., 20 ft. wide and re-fence approaches to conform to Board's requirements under its General Regulations Affecting Highway Crossings.

10362. Apr. 27.—Authorizing Bell Telephone Co. to place wires under C.P.R. at Pall Mall and Waterloo Sts., London, Ont.

10363. Apr. 27.—Authorizing city of Revelstoke, B.C. to place wires across C.P.R.

10364 to 10366. Apr. 27.—Authorizing Saskatchewan Government Telephones to place wires across C.N.R. at three points.

10367. Apr. 27.—Authorizing Ontario Hydro-Electric Power Commission to place wires across G.T.R. at lot 5, con. 1, London tp., Ont.

10368. Apr. 26.—Authorizing Northern Navigation Co. to lay gas main under G.T.R. at Sarnia, Ont.

10369. Apr. 26.—Authorizing C.P.R. to build spur for Crow's Nest Pass Coal Co., near Crow's Nest station, B.C.

10370. Apr. 26.—Authorizing C.N.O.R. to build across public road between lots 24 and 25, con. B, Brighton tp.

10371. Apr. 26.—Authorizing C.N.O.R. to cross, overhead, road between lots 4 and 5, con. 4, Scarboro tp.

10372. Apr. 26.—Ordering that time within which the Vancouver, Victoria and Eastern Ry. and Navigation Co. build spur to Daly Reduction Co.'s works at Hedley, B.C., be extended for six months from date.

10373. Apr. 27.—Authorizing C.P.R. to build extension of spur to premises of Enterprise Hardware Co., A. Carruthers Co., and Gordon Ironsides and Fares, to extend across lot 12, block 15, registered plan Q. 10 of Saskatoon, Sask.

10374. Apr. 26.—Ordering that crossing of Perth St., Brockville, Ont., by C.P.R. and Brockville, Westport and Northwestern Ry. be protected by a flagman.

10375. Apr. 27.—Ordering that C.P.R. be relieved from providing protection at crossing eight poles north of mileage 2, Maniwaki Branch, Que.

10376, 10377. Apr. 28.—Ordering C.P.R. within 60 days to install improved electric bell at crossing first road west of Britannia station, Chalk River Section, Eastern Division, and at first road west of Stittsville station, Ont.

10378 to 10380. Apr. 28.—Ordering that G.T.R. be relieved from providing protection at crossing east of St. Mary's Jct., Ont., and that C.P.R. be similarly relieved respecting crossing at first road west of Leonard station, Ont., and at Dubuc, Sask.

10381. Apr. 27.—Authorizing G.T.R. to build extension of siding east of Greenwood Ave., Toronto.

10382. Apr. 29.—Temporarily approving, pending final determination by Board of tariffs of tolls which Bell Telephone Co. may charge, and form of agreement with other companies to be approved, also Bell Telephone Co.'s agreement with Burgessville Telephone Co.; providing it is not taken to authorize the Bell Telephone Co. to charge higher tolls than it was, immediately previous to May 13, 1906, authorized to charge.

10383. Apr. 27.—Approving plan of G.T.R. station at Vinelands, and authorizing G.T.R. to build siding across town line between Clinton and Louth tps., Ont.

10384. Apr. 28.—Authorizing Ontario Hydro-Electric Power Commission to place wires across Hamilton and Brantford Electric Ry. at lot 55, con. 2, Ancaster tp.

10385. Apr. 28.—Authorizing Mallorytown Independent Telephone Corporation to place wires across G.T.R. near Lyn station, Ont.

10386, 10387. Apr. 28.—Authorizing Bell Telephone Co. to place wires across G.T.R. near Georgetown station; and across Central Ontario Ry. near Wellington, Ont.

10388, 10389. Apr. 28.—Authorizing McTaggart Rural Telephone Co. to place wires across C.P.R. at two points, in Saskatchewan.

10390 to 10416. Apr. 28.—Authorizing Saskatchewan Government Telephones to place wires across C.P.R. at 27 points.

10417. Apr. 26.—Amending order 10237, Apr. 19, which approves location of M.C.R. station at Tecumseh Road.

10418. Apr. 26.—Amending order 6148, Jan. 21, 1909, fixing stop-over charge of 25c. per car a day for first 48 hours, and car service toll thereafter on lumber, shingles, timber and other forest products in carloads, originating in B.C. and consigned to Sarnia Tunnel, Ont., "for orders," by striking out "twenty-five cents" in line 9, of operative part and substituting "one dollar."

10419. May 2.—Approving location of Western Canada Power Co.'s line from Ruskin station on C.P.R., to Stave Falls, B.C.

10420. May 2.—Ordering G.T.R. within 60 days to install electric bell at crossing of William St., Cobourg, Ont.

10421 to 10424. May 2. — Authorizing C.N.O.R. to build across road between lots 16 and 17, con. 1; between lots 11 and 12, con. 1, Cramahe tp.; between lots 4 and 5, con. 1; and between lots 6 and 7, con. 1, Brighton tp.

10425. May 2.—Ordering that C.P.R. trains be flagged at crossing of Beverley St., Galt, Ont.

10426, 10427. May 2.—Ordering that G.T.R. be relieved from providing protection at crossing 2½ miles west of Burford; and that C.P.R. be similarly relieved respecting crossing at mileage 20, south of Lindsay, Ont.

10428. Apr. 28.—Authorizing Ontario Hydro-Electric Commission to place wires across G.T.R. at Allanburgh.

10429. May 3.—Authorizing Essex Terminal Ry. to open for traffic portion of its line from junction with G.T.R. in Sandwich East tp. to junction with C.P.R. in Sandwich West tp., Ont.

10430. May 3.—Approving location of G.T.P.R. Young-Prince Albert Branch from section 28, tp. 32, r. 27 to sec. 31, tp. 40, r. 26, w. 2 m., Saskatoon District, Sask., from mileage 0 to 55.148.

10431. May 3.—Approving plan of Great Northern Ry. shelter sheds.

10432. May 2.—Authorizing C.P.R. to build industrial spur for I. Desormeau, Cote St. Francois, Que.

10433. May 3.—Authorizing C.P.R. to build across 32 highways on its Langdon north Branch from mileage 0 to 39.45 Alta.

10434. May 2.—Authorizing C.P.R. to build spur for British Columbia Fir and Cedar Lumber Co., Vancouver, B.C.

10435. May 3.—Authorizing C.P.R. to cross road allowances and change its Pipestone Extension at Schwitzer Jct., Man.

10436 to 10438. May 3. — Authorizing C.N.O.R. to build between lots 26 and 27, con. 1; through lots 35, con. 2; and between lots 28 and 29, con. 1, Cramahe tp.

10439 to 10441. May 3. — Authorizing C.N.O.R. to build between lots 12 and 13, con. A; between lots 13 and 14, con. A; between lots 8 and 9, con. A, Haldimand tp.

10442. May 3.—Authorizing C.N.O.R. to build between lots 21 and 22, con. 1, Cramahe tp.

10443. May 3.—Authorizing city of Brantford to lay sewer under G.T.R. at Marlborough St.

10444. May 2.—Authorizing United Gas Companies, St. Catharines, to lay gas pipe under G.T.R. at lot 3, Wainfleet tp., Ont.

10445. Apr. 29.—Authorizing Citizens' Electric Co. to place wires across C.P.R. at Smith's Falls, Ont.

10446. May 3.—Authorizing G. E. Higginson to place wires across C.P.R. near Calumet station, Que.

10447. May 3.—Authorizing Montreal Light, Heat and Power Co. to place wires across C.P.R. at Hadley St., Cote St. Paul, Que.

10448. May 2.—Authorizing Walkerville, Light and Power Co. to place wires across Essex Terminal Ry.

10449. May 3.—Authorizing Bolton Telephone Co. to place wires across G.T.R. at lot 20, between cons. 1 and 2, Albion tp., Ont.

10450. Apr. 28.—Ordering C.P.R. within 60 days to erect gates at St. Louis St., Farnham, Que.

10451. Apr. 28.—Ordering G.T.R. within 60 days to erect gates at Bourdage St., St. Hyacinthe, Que.

10452. Apr. 28.—Ordering C.P.R. to put into proper condition crossings through St. Mathieu South, St. Jean Baptiste North, St. Leon South, St. Leon North, St. Mathieu North and St. Joseph, Que.

10453. May 3.—Ordering that all G.T.R. passenger cars shall, on or before June 1, 1911, be equipped with marker sockets in the lower position, and where passenger cars are so equipped markers shall be carried there.

10454, 10455. Apr. 28.—Dismissing application of town of St. Louis, Que., for order authorizing it to extend highway across C.P.R. where it intersects Park Ave., and authorizing it to cross by a subway instead.

10456. May 4.—Approving location of Vancouver, Fraser Valley and Southern Ry. from east boundary of Vancouver to north-west boundary of New Westminster, B.C.

10457. Apr. 28.—Ordering G.T.R. to build overhead bridge at Lachine Road crossing, Rockfield, Que.

10458. May 3.—Fixing compensation to be paid by C.P.R., G.T.R., city of Ottawa and Carleton county, in connection with the Richmond road viaduct, Ottawa.

10459. May 4.—Extending until June 1, time within which C.P.R. shall install electric bell at Merry St. crossing, Magog, Que.

10460. Apr. 28.—Adding city of Montreal and Montreal Turnpike Trust as parties to question of protection at C.P.R. crossings at Prud'homme and Decarie Aves.

10461. Apr. 28.—Ordering C.P.R. to continue watchman at Main St. crossing, Farnham, Que.

10462. May 3.—Respecting equipment of electric railway cars with power brakes. This order is given in full on another page.

10463. Apr. 28.—Ordering C.N.Q.R. to stop its trains inbound and outbound at Pointe Aux Trembles.

10464. May 4.—Amending order 10285, Apr. 21, respecting C.P.R. crossings at Cote des Perrons, Que.

10465. May 4.—Ordering G.T.R. within 60 days to install signal bell at Victoria St. crossing, Thamesville, Ont.

10466. Apr. 28.—Dismissing J. S. Buchan's application for order for the sale of Montreal Central Terminal Co.'s assets.

10467. May 4.—Extending until June 1, time within which C.P.R. shall install electric bell at crossing at lot 10, con. 10, Medonte tp., Ont.

10468. May 4.—Extending until Aug. 4, time within which G.T.R. may build branch to W. Knechtel & Son's premises, Hanover, Ont.

10469 to 10476. May 4.—Authorizing C.N.O.R. to build between lots 24 and 25; lots 16 and 17, con. A., Haldimand tp.; lots 31 and 32, con. 4, Darlington tp.; lots 22 and 23; lots 34 and 35; lots 31 and 32; lots 4 and 5; lots 18 and 19, con. A., Haldimand tp.

10477, 10478. May 3-4.—Authorizing C.P.R. to build bridges at 21 points.

10479. May 3.—Authorizing Bell Telephone Co. to place wires across G.T.R. near Walkerville station, Ont.

10480 to 10480. May 3.—Authorizing Farmers Telephone Co., Windsor, N.B., to erect wires across C.P.R. at seven points.

10487. May 4.—Authorizing C.N.O.R. to build between lots 16 and 17, con. B., Murray tp.

10488. May 4.—Authorizing C.P.R. to build spur for Crow's Nest Pass Coal Co., near Michel station, B.C.

10489 to 10491. May 6. — Authorizing C.N.O.R. to build between lots 4 and 5, con. A.; lots 18 and 19, con. B., Murray tp.; and between Murray and Brighton tps.

10492. May 3.—Dismissing C.N.O.R. application for approval of location through Lanark county, mileage 29 to 41.

10493, 10494. May 3.—Dismissing C.N.O.R. applications for authority to build across certain highways in Smith's Falls, and for approval of revised location through Smith's Falls, mileage 38.3 to 42.1.

10495. May 6.—Authorizing C.N.O.R. to build between lots 12 and 13, con. B., Murray tp.

10496. Apr. 28.—Authorizing town of St. Lambert, Que., to build highway crossing at intersection of Montreal and St. Lambert Terminal Development Co., St. Antoine de Longeuil parish.

10497. May 6.—Authorizing Nelson Telephone Co. to place wires across G.T.R. at Ash station, Ont.

10498. May 4. Authorizing Manitoba Government Telephones to place wires across C.N.R. at Stephenfield station.

10499. Apr. 21.—Authorizing Seymour Power

Triple Turbine Express Steamships

"ROYAL EDWARD"
and
"ROYAL GEORGE"

Triple Screws, 12,000 tons, Marconi Wireless, Deep Sea Telephones, Passenger Elevators, 6 Passenger Decks. :: :: ::

The twin ships, the "Royal Edward" and the "Royal George," are the fastest triple screw turbine boats in the Canadian service. The British port is Bristol (two hours nearer London than Liverpool). Special Royal Line Trains within 110 minutes of London. The steamers are driven by the newest type of turbine engines, insuring a maximum of speed and minimum of vibration. Their equipment is the finest ever seen in the St. Lawrence—large state-rooms, spacious social apartments, sheltered promenade decks, artistic furnishings, perfect service, and ventilation by thermo-tank system, the fresh air being warmed or cooled, as required.

(Continued from page 467.)

and Electric Co. to place wires across C.P.R. near Sulphide, Ont.

10500 to 10504. May 6.—Authorizing Bell Telephone Co. to place wires across various railways at five points.

10505. May 6.—Authorizing Ruby Lake Lumber Co. to place wires across C.N.R. Pas Mission branch, near mileage 6, Sask.

10506. Apr. 28.—Authorizing town of St. John's, Que., to open highway at Queen St. across G.T.R., and ordering G.T.R. to install within 60 days a signal bell there; also that G.T.R., within 30 days file plan showing location of gates at St. James St., St. John's, Que.

10507. May 3.—Ordering C.P.R. within 60 days to erect gates at crossing near Matthews Pork Factory, Hull, Que.

10508. May 6.—Ordering G.T.R. to install within 60 days, gates at William St. crossing, Brockville, Ont.

10509. Apr. 21.—Authorizing C.N.O.R. to build across Division St., Cobourg, and ordering G.T.R. to build subway and approaches to carry the street under both railways.

10510. May 7.—Ordering that G.T.R. be relieved from providing protection at the crossing 1¼ miles south of Hespeler, Ont.

10511. May 4.—Amending order 10036, Mar. 31, which authorizes J. A. Coleman to lay gas pipe under M.C.R., near Montague station, Ont.

10512, 10513. May 6.—Authorizing C.P.R. to build bridges over Alexandria River, on its White River sec., Ont., and at 4th crossing of Michel Creek on its Crambrook section, B.C.

10514. May 6.—Approving revised location of G.T.R. branch from mileage 90 from Colwell to Penetanguishene, and on south half of lot 13, con. 2, and north-easterly to lot 92, con. 1, Tiny tp., Ont.

10515. May 4.—Approving revised location of G.T.R. branch from near Tiffin, and on lot 16, con. 3, Tay tp., extending southwesterly through the township to lot 92, con. 1, Tiny tp., Ont.

10516. May 6.—Authorizing Toronto, Hamilton and Buffalo Ry. to build a spur for Sawyer-Massey Co., Hamilton, Ont.

10517. May 6.—Authorizing Bell Telephone Co. to place wires across C.P.R. near Guelph station, Ont.

10518. May 9.—Authorizing Ontario Hydro-Electric Power Commission to place wires across G.T.R. at lot 22, con. 1, West Flamboro tp.

10519, 10520. May 7.—Authorizing Montreal Light, Heat and Power Co. to place conduit and gas main under G.T.R. Lachine Canal bank siding, at Cote St. Paul, Que.

10521. May 6.—Authorizing town of Renfrew, Ont., to lay sewer under C.P.R. at Ann St.

10522. Apr. 27.—Authorizing C.P.R. to build across 24 highways on its Weyburn-Lethbridge Branch, from mileage 0 to 26.2.

10523-24. May 9.—Ordering C.P.R. to install within 60 days an electric bell at crossing of Colborne and William Sts., London, Ont.

10525. May 9.—Authorizing proposed drainage works of Tilbury East tp., across C.P.R. lands.

10526. May 9.—Authorizing C.P.R. to build bridge 91.7 over Snake River on its Chalk River section, Ont.

10527. Mar. 1.—Ordering that in terms in its tariff on file with the Board, the Bell Telephone Co. is entitled to compute extra mileage and charge only from Ottawa limits as at present existing, in connection with complaint of Dr. J. T. Nelson, of Westboro, Ont.

10528. Apr. 19.—Re rates on lumber. This order is given in full on another page.

10529. May 7.—Ordering that time within which interchange track at intersection of C.P.R. and G.T.R. at Brampton, Ont., was required by order 9877, Mar. 14, to be ready for operation, be extended to July 1.

10530. May 9.—Approving plans of G.T.R. station at Moose Creek, Ont.

10531. May 7.—Ordering that time within which G.T.R. branch to Davis and Doty premises, Oakville, Ont., as required by order 10048, Mar. 22, be removed, be extended for six weeks from May 22.

10532. May 9.—Authorizing Ontario Hydro-Electric Power Commission to placee wires across Bell Telephone Co.'s wires at lot 55, con. 1, Ancaster tp.

10533 to 10535. May 9.—Authorizing Bell Telephone Co. to place wires under G.T.R. at three points in Ontario.

10536, 10537. May 9.—Authorizing Bell Telephone Co. to place wires across G.T.R. at two points near Galt, Ont.

10538. May 9.—Authorizing Stiver Brothers, Stouffville, Ont., to lay drain under G.T.R.

10,539. May 12.—Approving revised location of C.P.R. Regina, Saskatoon and North Saskatchewan Branch, from s.w. ¼ sec. 29, tp. 17, r. 19, w. 2 m., mileage 0. to sec. 23, tp. 20, r. 21, w. 2 m., mileage 21.9, Sask.

10,540. May 12.—Authorizing C.N.O.R. to build across public road between lots 28 and 29, con. B, Brighton tp.

10,541. May 12.—Authorizing Wahnapitae Power Co., Dominion Nickel Copper Co., and Moose Mountain, Ltd., to erect wires across C.N.O.R. between Toronto and Sudbury, near mileage 255.8, north from Toronto.

10,542. May 12.—Ordering C.P.R. within 60 days to install an electric bell at Saskatchewan ave. crossing, Winnipeg.

10,543. May 12.—Authorizing G.T.P.R. to build across Aldboro and Westcana sts., West Winnipeg, Man.

10,544. May 12.—Authorizing P. F. Quinlan, Stratford, Ont., to place wires across G.T.R. between cons. 8 and 9, Ellice tp., Ont.

10,545, 10,546. May 12.—Authorizing Greenwood Telephone Association, Steelton, Ont., to place wires across Algoma Central and Hudson Bay Ry. at second and third people's crossings from Sault Ste. Marie.

10,547-48. May 12.—Authorizing Bell Telephone Co. to place wires across P.M. Rd. at two points in Ontario.

10,549. May 13.—Authorizing T.H. & B. Ry. to build spur to Union Draw Steel Co.'s premises, Hamilton, Ont.

Sleeping Car Reservations Limited.

The Eastern Canadian Passenger Agents Association's rule respecting sleeping and parlor car reservations has been amended as follows, the new rule having gone into effect May 16:—

"61. (a) Unless paid for in advance accommodation reserved on verbal or city telephone applications to city or station ticket offices where space is held in sleeping or parlor cars starting from such cities will not be held later than two hours prior to the departure of train for cars scheduled to leave such cities prior to 5 p.m.

"3 p.m. (instead of 5 p.m.) for cars scheduled to leave such cities between 5 p.m. and 10 a.m. next day."

Sleeping or parlor car tickets will be redeemed if presented to agent from whom purchased, or to station ticket agent at same place, prior to departure of train for which they were sold.

Railway Subsidy Contracts.

Contracts have been entered into by the Dominion Government, under the act granting aid to certain railways, for the construction of the following lines:

ALBERTA CENTRAL RY.—For a line from near Red Deer to the Rocky Mountain House, on the North Saskatchewan River, Alta., 70 miles. (April 25).

THESSALON AND NORTHERN RY.—For a line from Thessalon, Ont., northerly for four miles. (April 19).

During March, 72 employes were killed and 30 injured in the course of their work on Canadian railways. Of the fatalities, 60 were due to the avalanche at Rogers Pass, B.C., on Mar. 6, five to being run over, two each to falls, to derailments and to being caught between cars, and one to an explosion of dynamite, while of the other accidents, 11 were due to falls, six to falling material, five to being caught between cars, four to being run over, and one each to an assault by a passenger, to falling material, to being struck by an object in passing, to machinery, to flying material, to a derailment and to burns.

G.T.R. Betterments, Construction, Etc.

Line to Providence, R.I.—U.S. reports state that engineers are in the field locating lines to close all gaps in the Central Vermont Ry., so that it will be enabled to run trains over the G.T.R. and its own tracks all the way from Montreal to Providence, R.I. Some 50 miles will have to be built to cover these several gaps, and the new lines will parallel sections of the Boston and Maine Rd., over which C.P.R. trains now run.

Montreal Level Crossings.—The Board of Railway Commissioners has directed that plans for the elimination of the G.T.R. level crossings in Montreal be submitted in August. When the matter last came before the Commissioners the company's solicitor said it was intended to build a viaduct from Bonaventure station to St. Henri, so as to abolish all level crossings; the viaduct to have a capacity for four tracks. From St. Henri it would go to a point east of the Wellington St. subway and back in a westerly direction to beyond Cote St. Paul road. It would then gradually descend to the level of the present tracks at Turcot yards. The length of the viaduct would be about four miles, and the estimated cost would be $8,000,000. The city has power to raise $2,000,000 to be expended upon its share of the cost. Detailed plans and estimates are now being prepared.

St. Laurent to Maisonneuve.—W. Wainwright, Second Vice President, has announced that work will begin almost immediately on the building of a line from St. Laurent, round the Mount Royal, to Maisonneuve, and that the line will probably be completed this year.

Kingston, Smith's Falls and Ottawa Ry.—The Dominion Parliament has granted a subsidy to aid in building a line from Kingston to Ottawa, Ont., not exceeding 101 miles.

Bathurst St., Toronto, to the Humber.—The City Engineer reported to the Toronto City Council May 17, that the company had not made a start on the depression of tracks west of Bathurst St., on May 1, as required by the Board of Railway Commissioners' order, and he was instructed to act, with the City Solicitor, in seeing that the order was enforced. The plans are prepared and the company has been acquiring the land necessary in Parkdale, and is making various preliminary arrangements.

Guelph to Harrisburg.—The 65 lb. rails between these points are being replaced by 80 lb. steel, removed from sections of the Toronto-Montreal line.

Stratford to Goderich.—G. A. Mitchell, Master of Bridges and Buildings, was in Stratford, May 6, in connection with the renewing of bridges at Erie and Wellington streets. He said the whole of the bridges on the line to Goderich will be strengthened or renewed, in order to carry the heavier traffic now going over the line.

Track Elevation in London.—Speaking recently at London, Ont., C. M. Hays, President, said the heavy and expensive works in hand or contemplated in Montreal and Toronto claimed first attention. This is interpreted to mean that it will be some years before the question of track elevation and the complete rearrangement of yards and station in London will be finally considered.

Connection with Sault Ste. Marie.—Recent press reports stated that the G.T.R. had secured control of the Detroit and Mackinaw Rd., and that it was proposed to extend it to a junction with the Algoma Central Ry. at Sault Ste. Marie, Ont. We are officially advised by the G.T.R. management that there is no truth in the reported acquirement of the control of the line. The G.T.R. through one of the companies amalgamated with it in 1892, had power to build a line to Sault Ste. Marie, with a bridge over the St. Mary River, and a considerable portion of the right-of-way was secured. The company abandoned its project in favor of the C.P.R. Algoma branch, and an agreement was entered into between the two companies (G.T.R. and C.P.R.) as to right-of-way and rights over the bridge. (May, pg. 373.)

Portland Canal Short Line Railway.

T. F. Hopkins and M. Stewart, of Seattle, Wash., together with such persons as became shareholders, were incorporated by the British Columbia Legislature in 1909 as the Portland Canal Short Line Ry. Co., to build a standard gauge railway from or near the head of Portland Canal along Bear River for 30 miles, with branch lines not exceeding 10 miles. The capital was fixed at $1,000,000, and the head office at Victoria. The present officers of the P.C.S.L. Ry. Co. are:—President, D. D. Mann; Vice President, Z. A. Lash; Secretary, A. J. Mitchell; Manager of Construction, W H. Grant; Engineer, D. O. Lewis. A contract has been let to the Cassier Construction Co., the officers of which are identical with those of the P.C.S.L.R. Co., to build 15 miles of line from Stewart, B.C., at the head of Portland Canal, and about 125 miles north of Prince Rupert, northerly along Bear River Valley to the mining camp at the junction of Bear River and American Creek, in which D. D. Mann and his associates in Canada and the U.S. are largely interested. The camp is said to be rich in silver, copper, zinc and lead.

W. H. Grant, D. O. Lewis and staff, left Toronto April 12, and Vancouver April 26, for Stewart. Two survey parties were organized in Vancouver and location is being proceeded with. A wharf is being built at Stewart and it is expected to have the line completed this year. For construction purposes two locomotives have been bought in the United States and the Canadian Car and Foundry Co. is building a combination passenger car and caboose, and 23 flat cars. The company will probably be in the market for ore cars towards the end of the summer. (May, pg. 369.)

Index to The Railway and Marine World.

A complete index to the matter contained in the Railway and Marine World for 1909, Jan. to Dec. both inclusive, has been mailed to subscribers who applied for it. The indexes for 1907 and 1908 met with much favor, and we have no doubt the one for the past year will be equally appreciated. A large portion of the matter we publish from month to month is of great permanent value for reference, and of course this value is much enhanced by a complete classified index. We were much gratified when we issued our first index for 1907 to find that a large number of subscribers file and bind the paper.

We do not make a general distribution of the index, but a copy will be sent to each subscriber who desires one, and who will notify us to that effect. A letter or post card, simply stating that the index is desired, and giving the subscriber's name and address, will be sufficient. Any subscriber who wishes a copy and has not already applied should do so at once.

W. Stapleton, General Agent Passenger Department, Western Canada Division, Canadian Northern Steamships Limited, writes: "Having been a subscriber to the Railway and Marine World for some time, I am glad to say that I find it very useful in many ways. The very interesting articles it contains make it almost invaluable to a Canadian transportation official."

MORISON Suspension Furnaces

The Universally satisfactory record of "THE MORISON" proclaims it the best furnace made.

MAINLY ABOUT PEOPLE.

W. D. Matthews, director C.P.R., has returned to Toronto from Europe.

F. McCuaig, of the C.P.R. freight department at Ottawa, died there recently.

Sir Sandford Fleming has been elected President of the Ottawa Association for the Blind.

J. B. Spence, engineer Department of Railways and Canals, died in Ottawa May 20, aged 68.

W. H. Hunter, who died at Orangeville, Ont., May 24, was for many years a C.P.R. claims agent.

Sir Wm. L. Young, director G.T.R., London, Eng., was in Montreal, May 10, on his way home from Cuba.

W. R. Tiffin, Superintendent Northern Division G.T.R., Allandale, Ont., is reported to be seriously ill.

Jos. Hobson, Consulting Engineer, G. T. R., left Hamilton, Ont., early in May for a trip to Great Britain.

E. Fitzgerald, Montreal, Assistant General Purchasing Agent C.P.R., left Montreal May 19 for a trip to Europe.

A. H. Harris, Special Traffic Representative, C. P. R., sailed on the Empress of Ireland, from Quebec, May 20.

Sir Sandford Fleming has been re-elected Chancellor of Queen's University, Kingston, Ont., for a further three years.

M. V. Grandin, Managing Director of the Great Northern Mining Co., Cheticamp, N.S., has taken up his residence temporarily at Pictou, N.S.

G. Sharp, Superintendent Prince Edward Island Ry., returned recently to Charlottetown, P.E.I., from a holiday trip to Calgary, Alta.

Mrs. Scott Griffin, wife of the Manager Canadian Northern Express and Telegraph Companies, left Toronto for England at the end of May.

J. O. Smith, C.P.R. baggage master at Fredericton Jct., N.B., died May 1, from blood poisoning, said to have resulted from the bite of a pet dog.

Mrs. F. Balch, who died at Massena, N. Y., recently, was mother of F. J. Balch, General Freight Agent Ottawa and New York Ry., Ottawa, Ont.

The engagement is announced of Allan Keefer, son of C. H. Keefer, C. E., to Miss Clare Oliver, third daughter of the Minister of the Interior.

Dr. N. A. Macnab, son of E. A. Macnab, Managing Editor Montreal Star, has been appointed on the G.T.P.R. medical staff, west of Edmonton, Alta.

Jas. Dalrymple, who died in Montreal, May 14, aged 66 years, was father of J. E. Dalrymple, Assistant Freight Traffic Manager G. T. Pacific Ry., Winnipeg.

D. W. Hatch, Travelling Agent Atchison, Topeka and Santa Fe Ry., Montreal, has removed his office there, from 138 St. James Street to 83 St. James Street.

Miss R. Bosworth, daughter of G. M. Bosworth, Fourth Vice President C.P.R., was married recently at Montreal to D. Seely, son of D. J. Seely, St. John, N.B.

W. R. Tiffin, Superintendent Northern Division G.T.R., Allandale, Ont., completed 50 years' service with that company and its predecessors, May 24.

Lady Shaughnessy and Miss Shaughnessy arrived in Quebec from Europe, by the Empress of Ireland, May 13, and were met by Sir Thos. G. Shaughnessy.

Jno. Wilson, who some years ago retired from the position of yardmaster, G.T.R., Detroit, Mich., after 36 years' service, died there April 28, aged 88.

G. Swanson, railway contractor, Dryden, Ont., is erecting a $25,000 residence on his 50 acre fruit ranch near Creston, B.C.

Hon. L. P. Brodeur, Minister of Marine, has returned to Canada, from the South, where has has been recuperating after his recent serious illness.

E. N. Bender, General Purchasing Agent C.P.R., returned to Montreal May 19, after a months trip to the Pacific Coast and intermediate points.

J. T. Arundel, General Superintendent Central Division C.P.R., Winnipeg, sailed from Quebec on the ss. Empress of Ireland, May 20, for a trip to Great Britain.

W. P. Torrance, of Kingsmill, Saunders, Torrance and Kingsmill, Solicitors, M. C. Rd., Toronto, sailed from Montreal on the ss. Canada, May 20, for Liverpool, intending to return in August.

Mrs. A. D. MacTier, wife of the Assistant to the Second Vice President C.P.R., and two of her children, sailed from Quebec on the ss. Empress of Ireland May 20 for Liverpool.

M. J. Butler, formerly Deputy Minister of Railways and Canals, addressed the City Club, Boston, Mass., recently on "Transportation Problems in Canada."

M. P. Davis, of M. P. and J. T. Davis, contractors on the National Transcontinental Ry. and other works, was married in New York May 3, to Miss G. A. McGrady.

G. H. Hedge, Assistant Master Mechanic Canadian Northern Ry., has removed his family from Port Arthur to Winnipeg, as he has had his headquarters at the latter place for some time.

Gen. Thomas L. Rosser, who was the first Chief Engineer of the C.P.R., at Winnipeg, and who has been living for some years in Virginia, is reported to have died there recently.

Lady Reid, widow of the late Sir Robert G. Reid, President Reid Newfoundland Co., and Miss Reid returned to Montreal recently from a lengthened trip to the Mediterranean.

A. P. Walker, Assistant Engineer C. P. R., Toronto, who has been granted three months leave of absence, sailed from Montreal recently on the s.s. Lake Manitoba, for Great Britain.

J. G. Williams, who, died in Port Hope, Ont., recently, aged 92, was largely interested in the old Midland Ry., at the time of its construction, and during its operation as an independent line.

It is reported that Sir William Van Horne will leave shortly for Australia to advise the Government regarding the construction of a railway across the continent, with extensive irrigation works.

G. McL. Brown, European Manager C.P.R., has been elected President of the C.P.R. Swimming Club, which has just been formed in the company's London office.

Miss Ethel Jones, daughter of L. K. Jones, Secretary Department Railways and Canals, Ottawa, is to be married in September to Gordon Richardson, of the Bank of Montreal, Winnipeg.

N. Weatherstone, who was superannuated recently, after being I.C.R., agent at Toronto for many years, will spend the summer in Winnipeg with his daughters, Mrs. Bain and Mrs. Minty.

A. L. Gardiner, who died in New York City recently, after several years' service as Assistant Counsel of the Manhattan Ry. Co., and the Interborough Rapid Transit Co., was a native of Dundee, Ont.

The engagement is announced of F. S. Livingstone, Traffic Manager, Toronto and York Radial Ry., to Miss E. A. Bennett, daughter of B. H. Bennett, General Agent Chicago and North Western Ry., Toronto.

W. D. Reid, President Reid Newfoundland Co., is at present in Great Britain, where, it is stated, he is making arrangements for the organization of a company for the development of the mineral and timber lands owned by his company.

R. W. Dunsmuir, son of Jas. Dunsmuir, railway and steamship owner and colliery proprietor, Victoria, B.C., is reported to have married in Paris, France, Miss Dorothy Russell, daughter of Miss Lilian Russell, the actress.

Miss M. J. Blair, youngest daughter of the late Hon. A. G. Blair, at one time Minister of Railways and Canals, and subsequently first Chief Railway Commissioner, was married in Ottawa recently to S. C. Gilmour.

Jas. Leitch, K.C., Chairman Ontario Railway and Municipal Board, who has been absent for a short while, owing to a mishap which affected one of his eyes, has resumed duty, and presided at the hearing of the Toronto Ry. application early in May.

It is reported that A. Johnstone, formerly M.P. for Cape Breton county, N.S., is to be appointed Deputy Minister of Marine and Fisheries, in succession to G. J. Desbarats, to be appointed as Deputy Minister for the new naval department.

It is stated that E. de la Hooke, for many years city passenger and ticket agent at London, Ont., will retire in the near future, under the provisions of the company's pension regulations, and that he will be succeeded by R. E. Ruse, at present station ticket agent there.

J. G. Scott, formerly General Manager Quebec and Lake St. John Ry., has been appointed a member of the special committee appointed by the Quebec city council to consider the best means of promoting the interests of the port of Quebec.

W. Mackenzie, President Canadian Northern Ry., who was expected to return to Canada from England, on the ss. Royal Edward, did not do so, owing to business engagements. He intended, however, to sail from Avonmouth, May 26, on the ss. Royal George.

E. Force, C.E., who died at the Home for Incurables, Toronto, May 11, was well known as a railway engineer, having been on the Intercolonial Ry.'s first construction staff and afterwards in the C.P.R. service. He became incapacitated for work some eight years ago, owing to a paralytic stroke.

D. R. McBain, who has been appointed Superintendent Motive Power Lake Erie and Michigan Southern Ry., and a number of other New York Central lines, commenced his railway career at St. Thomas, Ont., as fireman, passing through all the grades to his present position.

M. P. Davis, railway and general contractor, presented Bishop Fallon with an episcopal ring on the occasion of his consecration as Roman Catholic Bishop of London, Ont. Bishop Fallon's brothers have carried out a number of contracts for the Dominion Government on the St. Lawrence canals.

Z. J. Fowler, who died in Ottawa recently, was a member of the firm of O'Brien, Fowler and McDougall Bros., which is at present carrying out contracts on the National Transcontinental Ry. and on the Canadian Northern Ry. He was a charter member of the Canadian Society of Civil Engineers.

Wm. Jenkins, who died at Madoc, Ont., May 14, aged 91, was the father of B. S. Jenkins, General Superintendent C.P.R. Telegraphs, Winnipeg. The late Mr. Jenkins was the sole surviving son of Rev. Wm. Jenkins, formerly of Markham and Richmond Hill, who was one of the pioneer Presbyterian ministers of Canada.

G. Lamb, accountant and cashier Gen-

HEAD OFFICES AND WORKS **SYDNEY, CAPE BRETON, CANADA**

eral Passenger office, C.P.R. Atlantic Steamship Service, Montreal, has retired from active service, and, with his family, will spend the summer in Great Britain. He has been connected with the Atlantic steamship business for a number of years, having transferred to the C.P.R. when it took over the Beaver Line from Elder, Dempster & Co.

The London, Eng., Gazette, of April 25, in addition to the official note conferring the Albert Medal of the first-class on T. Reynolds, C. P. R. Conductor, North Bay, Ont., for conspicuous gallantry in saving the lives of 11 persons in the accident at Webbwood, Ont., on Jan. 21, contains an extended account of the incidents of the rescues.

The Canadian Press Association on its recent trip over the G.T.R., the Temiskaming and Northern Ontario Ry., and a portion of the National Transcontinental Ry. gave J. D. McDonald, District Passenger Agent, G.T.R., a silver tea service and tray; J. H. Black, Superintendent T. and N.O.R., a grandfather's clock, and J. Gorman, Inspector Dining Car Service G.T.R., a mantel clock.

D. P. Cotter, who has been appointed ticket agent, Canadian Northern Quebec Ry., and Canadian Northern Steamships Ltd., at Quebec, has filled various position in the Quebec and Lake St. John Ry., freight and ticket offices in Quebec, and for the last two and a half years has been ticket agent for the C. P. R. at Chateau Frontenac, Quebec, and for the C.P.R. Atlantic Steamship Service in Quebec.

W. Stapleton, whose appointment as General Agent Pasenger Department Canadian Northern Steamships, Winnipeg, was announced in our last issue, was born at Bristol, Eng., May 20, 1884. He entered the Canadian Northern Ry. service in May, 1903, as stenographer in the Passenger Department, and worked through the various positions to that of chief clerk of that department. From 1906 to Jan. 8, 1910, he was Travelling Passenger Agent and from Jan. 8 to April 8, 1910, was City Ticket Agent, Winnipeg.

R. G. McNeillie, whose appointment as District Passenger Agent, C.P.R., Calgary, Alta., was announced in our last issue, was born at Lindsay, Ont., July 1, 1883, and entered railway service Oct. 1, 1901, in the C.P.R. Passenger Department, Winnipeg, since when he held various positions there, and was for three years prior to Oct. 20, 1909, chief clerk in the General Passenger Agent's office, and from Oct.. 20, 1909, to April, 1910, District Passenger Agent C.P.R., Nelson, B.C.

A. H. Davis, whose appointment as Passenger Agent Canadian Northern Steamships, Montreal, was announced in our last issue, was born Jan. 14, 1876, and entered the service of S. Cunard and Co., General Agents Allan Line, Halifax, N.S., Nov. 12, 1890, and transferred to the C.P.R. on the organization of that company's steamship service in Nov., 1901. He has been chief clerk at St. John, N.B., and Quebec, Que., for the past seven years, and is also secretary and treasurer of the Quebec Transportation Club.

O. C. Walker, who has been appointed Inspector Refrigerator Service, C. P. R. Western Lines, Winnipeg, was born Jan. 31, 1877, at Newport, England, and entered C. P. R. service May 1902, since when he has been, to May 1903, car checker at North Bay, Ont., May, 1903 to May 1904, freight clerk and cashier at Regina, Sask.; May, 1904, to March 1, 1907, clerk in General Superintendent's office, Winnipeg; March 1 to July 1, 1907, statistical clerk General Manager's office, Winnipeg; July 1, 1907, to Sept. 1, 1909, chief clerk to Superintendent District 3, Pacific Division, Nelson, B. C.; Sept. 1, 1909 to May 1, 1910, Travelling Car Service Agent, Winnipeg.

J. E. Proctor, whose appointment as District Passenger Agent, C. P. R., at Brandon, Man., was announced in our last issue, was born at Sarnia, Ont., Feb. 17, 1878, and entered C. P. R. service August 21, 1899, since when, he has been, to May, 1900, assistant agent at Fergus, Ont., May, 1900, to May 1901, assistant agent at Shelburne, Ont.; May 1901 to Dec., 1902, in ticket office, Union Station, Toronto; Dec. 1902, to 1903, City Ticket Agent, Nelson, B. C., during 1903, City Ticket Agent, Rossland, B. C., and on the closing of the office there, returned to Nelson and continued as City Ticket Agent to April 1906; April, 1906, to Nov. 1907, Travelling Passenger Agent, Calgary, Alta.; Nov., 1907, to April, 1910, District Passenger Agent. Calgary, Alta.

J. E. Quick, whose portrait appears on the first page of this issue, was born July 19, 1851, at Richmond, N. Y., and entered railway service in 1871, since when he has been, to 1874, baggage master and supply clerk, Port Huron and Lake Michigan Ry., now part of the G. T. R. system; 1874 to 1876, General Baggage Agent and Ticket Clerk, same road; 1876 to 1884, agent, Port Huron, Mich., and General Baggage Agent, Chicago and Grand Trunk Ry.; 1884 to April 15, 1896, General Baggage Agent, same road and Detroit, Grand Haven and Milwaukee Ry.; April, 15, 1896, he was appointed General Baggage Agent, G. T. R., and Aug. 1908, also General Baggage Agent, G. T. P. R., which positions he continues to hold. He was elected Secretary of the American Association of General Baggage Agents, July, 1885, and has been re-elected at each annual meeting since. He is one of the six surviving charter members of the association, which was formed in 1882.

S. P. Howard, General Freight Agent Eastern and Lake Superior Divisions C.P.R., Montreal, has resigned from transportation service, and has entered the real estate business with John Findlay, under the name of Findlay and Howard Co. He is the son of the late Capt. Thos. Howard, one-time harbor master at Montreal, was born there Dec. 30, 1866, and entered transportation service under the Montreal Harbor Commissioners, as clerk in the Wharfinger and Harbor Master's office, and subsequently became private secretary to the Chairman. He entered C.P.R. service Feb. 1, 1883, since when he has been, to 1886 stenographer to General Freight Agent; 1886 to 1888 chief clerk Foreign Freight Department; 1888 to 1891, Travelling Freight Agent; 1891 to 1898, City Freight Agent. Montreal; 1898 to July, 1901, Assistant General Freight Agent; July, 1901, to May 17, 1910, General Freight Agent Eastern and Lake Superior Divisions, Montreal. He was President Canadian Freight Association in 1907.

G. B. Reeve, who died at La Mirada, Cal., May 2, was born in Surrey, Eng., Oct. 23, 1840. He came to Canada in 1860, and in May of that year entered G.T.R. service, since when he was, to 1862, freight clerk at Belleville, Ont.; 1862 to 1863, telegraph operator; 1863 to 1865, train dispatcher; 1865 to 1866, relieving agent; 1866 to 1873, agent at Parkhill, Ont.; 1873 to 1874, Assistant General Freight Agent at Montreal; 1874 to 1876, in charge of the Western District, Toronto; 1876 to 1881, in charge of the Eastern District at Sherbrooke, and from 1878, at Montreal; 1881 to Feb. 1, 1896, Traffic Manager Chicago and Grand Trunk Ry., and from 1890 to Feb. 1, 1896, also Traffic Manager Cincinnati, Saginaw and Mackinaw Ry.; Feb. 1, 1896, to April 30, 1900, General Traffic Manager G.T.R., and from 1899 to April 20, 1900, also General Traffic Manager Central Vermont Ry.; Dec. 15, 1900, to Dec. 31, 1901, Second Vice President and General Manager, all service with the G.T.R. He retired from active service April 30, 1900, but on the resignation of C. M. Hays, then General Manager, he returned as Second Vice President and General Manager, and finally retired on the return of C. M. Hays, Dec. 31, 1900, since when he lived on his ranch at La Mirada, Cal., some views of which we published in our Aug., 1900, issue.

J. D. Morton, who has been appointed Assistant Comptroller Canadian Northern Steamships, Ltd., in addition to his other appointments, was born in London, Ont., June 15, 1857. His record is as follows: 1871 to Mar., 1873, messenger Montreal Telegraph Co.; Mar., 1873, to Nov., 1879, operator Great Western Ry. of Canada; Nov., 1879, to Feb., 1881, ticket agent, same road; Feb. to Nov., 1881, station agent, same road; Jan. to Nov., 1882, mechanical clerk Des Moines and Fort Dodge Ry.; Nov., 1882, to Aug., 1883, Stores Department C.P.R., Winnipeg; Aug., 1883, to Jan., 1885, General Storekeeper Manitoba and North Western Ry., Winnipeg; Jan., 1885, to Sept., 1886, Cashier and Paymaster same road; Sept. to Nov., 1886, Accountant same road; Nov., 1886, to Nov., 1893, chief clerk General Manager's office, same road; Nov., 1893, to June, 1899, in commercial accounting in Winnipeg; July, 1899, to Apr., 1902, accountant on construction Ontario and Rainy River Ry.; May, 1902, to Dec., 1906, accountant on construction Halifax and South Western Ry.; from Dec., 1906, Chief Accountant Canadian Northern Ry., also from Feb., 1909, General Auditor Canadian Northern Ontario Ry., Canadian Northern Quebec Ry., Halifax and South Western Ry., Duluth, Rainy Lake and Winnipeg Ry. He was also elected Vice President Niagara, St. Catharines and Toronto Ry., and Niagara, St. Catharines and Toronto Navigation Co., June 10, 1908.

Railway Lands Patented.—Letters patent were issued, during March, covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.....	2,083.00
Canadian Pacific Ry. grants....	773.09
Total	2,856.09

The Railway Storekeepers Association's annual convention was held in St. Louis, Mo., May 16 to 18, when several subjects relating to the general handling of railway stores were dealt with, the chief matter for discussion being the economy of the piecework system in the handling of supplies.

The Canadian Northern Ry. has increased the pay of its machinists to 42½c. an hour, its blacksmiths, moulders and pattern makers by 2c. an hour, and has refused increases to its boiler makers and helpers, carmen and steam fitters, who have applied for the appointment of a board of conciliation to enquire into the question.

The C.P.R., we are advised, will inaugurate a passenger service between Lenore, Brandon and Minnedosa, Man June 5, leaving Lenore at 6.30 a.m running to Brandon and thence to Minnedosa, returning to Brandon and thence to Lenore, in the evening, covering 2[illegible] miles daily, except Sundays. The steam motor car, which was operated in the vicinity of Montreal some time ago, and later out of Toronto, will be utilized for the service. The car which has seating capacity in the main compartment for 40, and in the smoking compartment for 16, in addition to accommodation for baggage, was fully described and illustrated in our Aug., Sept. and Oct., 1906, issues.

SCULLY STEEL & IRON CO. DEPT. 22 CHICAGO, ILL.

C.P.R. Betterments, Construction, Etc.

Tobique and Campbellton Ry.—The Dominion Parliament has granted a subsidy in aid of the construction of a line from Plaster Rock, the present terminus of the Tobique Valley Ry., to Riley Brook, N.B., not exceeding 28 miles.

Place Viger Improvements.—We are officially advised that the company has begun work on a complete revision of its present freight and passenger terminals at Place Viger, Montreal. A new station is to be built adjoining the present hotel-station, and the existing building will be devoted entirely to hotel purposes. The present viaduct on which Notre Dame St. is carried is to be extended eastward some 950 ft., and the passenger main lines will be carried under the east end of this viaduct, spreading immediately north of it into a stub end terminal yard. South of Notre Dame St. the entire freight yard will be remodelled, providing inbound and outbound freight sheds, each 1,000 ft. long, with suitable trackage and largely increased team track, and team roadway facilities, for unloading carload lots. Some 400,000 cubic yards of excavation is still necessary in connection with this work. It is intended to use the space underneath the viaducts not occupied by tracks, as a freight shed or warehouse, two stories high, similar to that at present used under the portion of this structure now in service.

Ottawa Entrance.—A plan was filed with the Department of Railways, May 6, for a new entrance into Ottawa. The proposal is divided into two sections: (1) The closing up of the Rideau canal between the Deep Cut and Sapper's Bridge, and the placing of the railway tracks on the bed of the canal. (2) The construction of an underground tunnel from the Central station across the city to the Union station on Broad street, where connection with existing lines would be made. The Dominion Government is asked to sanction the company's acquiring the canal bed, and the city is asked to authorize the use of the streets necessary. The matter was under discussion between D. McNicoll, Vice President, and the Mayor, May 11. The latter suggested an alternative proposal, which Mr. McNicoll said would be looked into by the company's engineers.

Toronto Plans.—Notices have been served on the tenants of properties near the crossing of Yonge St. in the north part of the city, recently purchased by the C.P.R., to deliver up possession immediately in order that certain improvements may be carried out. The company's plans are said to include enlarged yards, subways at Yonge St. and Avenue Road, and a station building. The company promised to submit plans for these works to the Board of Railway Commissioners by June 1, and nothing can be done until these have been approved.

Islington-Mimico Line.—Construction is well advanced on the line which the C.P.R. is building from a little west of Islington station, to the G.T.R. at Mimico, about three miles. A start was made at the Islington end, but work was stopped pending an arrangement being made for crossing the power line, which is owned by Mackenzie, Mann & Co. interests. With the exception of this crossing, grading is nearly completed, and ties are being laid. The completion of this line will enable the C.P.R. to run trains from its Toronto, Hamilton and Buffalo connection into Toronto without having to go over the whole of the G.T.R. line between Toronto and Hamilton. On the G.T.R. line some heavy and expensive works are about to be carried out from the Humber into Toronto, and an endeavor was made when the matter was before the Board of Railway Commissioners to place a portion of the cost of these on the C.P.R.

St. Mary's and Western Ontario Ry.—A subsidy has been voted by the Dominion Parliament to aid in building a line from Embro to Exeter, Ont., not exceeding 36 miles.

The application of W. Dale to have the by-law passed in Nov. last, granting $20,000 in aid of the construction of the line in Blanchard tp. quashed, has been refused.

London, Ont., Improvements.—Considerable property in the vicinity of the C.P.R. yards has been sold lately, and it is stated that the company is the purchaser. The report states that the land acquired is to be used for shops, roundhouse, station, office buildings, etc. General Superintendent Oborne and other officials of the company were in London May 14, looking over the yards and adjoining properties.

Line to Collingwood.—D. McNicoll, Vice President, told a deputation at Collingwood, Ont., recently that he would press upon the executive the desirability of building a line into Collingwood next year. The C.P.R. had made a survey and there was a charter available. The route of the proposed line is from Baxter, on the Toronto-Sudbury line, entering the town from the west, but east of the old North-Western Line, with a station between Hurontario and Beach streets.

Georgian Bay and Seaboard Ry.—A contract has been let to the Toronto Construction Co. for building a line from Coldwater Jct., on the Toronto-Sudbury line, easterly to Atherly Jct., via Orillia. The construction will be in charge of C. W. P. Ramsey, Assistant Engineer, under the direction of A. McCulloch, Division Engineer, Montreal. The section of the line from Atherly Jct. to Orillia is to be used by the Canadian Northern Ry.

Fort William Shops.—Tenders have been asked for erecting an addition 128 ft. by 70 ft. to the machine shops at Fort William, Ont.

Winnipeg-Portage la Prairie Second Track.—Six miles of grading for the second track between Winnipeg and Portage la Prairie, Man., were reported completed May 5. The contractors, J. Hargreave & Co., have 150 teams at work.

Brandon Freight Sheds.—Tenders have been received for building a new freight shed at Brandon, Man.

Central Division Bridges.—Contracts have been let to the Dominion Bridge Co. for steel bridges at Headingly and Souris, Man., to replace the existing wooden bridges. J. Findlay, from the Bridge Co.'s works at Montreal, was in Winnipeg, April 30, arranging for starting work, the contract calling for completion this summer.

Weyburn, Westerly.—Speaking at Forward, the present terminus of the line westerly from Weyburn, Sask., recently, Superintendent Uren said grading was in progress, and he expected that by the fall a further distance of 25 miles would be ready for traffic. The line was intended to be carried on to Lethbridge, and construction would be further pushed next year.

Western Division Roundhouses.—A contract has been let to the Dominion Bridge Co. for the steel work for additions to the roundhouses at Macleod, Crow's Nest, Coleridge, Calgary and Lethbridge, Alta. Six additional stalls are to be added at each place.

Monarch, Alta.—A new station, a siding, and a stockyard are being built.

Deviation of Crow's Nest Pass Line.—Plans for a deviation near Pincher Creek, Alta., have been prepared, and a public meeting was held there April 26 to protest against the same being approved. The plans received by the Mayor showed a revision of the route of the line between Macleod and Crow's Nest, which would carry the line about five miles north of Pincher Creek.

Pacific Division Contracts.—Contracts are reported to have been let as follows:—Engine sheds at Field, Rogers Pass, Kamloops, Smelter Jct., and Traill, B.C., to J. McDiarmid, Winnipeg; fruit packing house at Summerland, Nelson Bros., Summerland, B.C.; fruit packing house, Vernon, T. E. Crowell, Vernon, B.C.; freight shed, Kelowna, — Biggar, Kelowna, B.C.; bunk houses at various points on the division, Standard House Co., Vancouver, B.C.

Kootenay Central Ry.—The Dominion Parliament has voted a subsidy to aid in building a line from Golden, B.C., towards the International boundary, via Windermere and Fort Steele, crossing the Crow's Nest Pass branch of the C.P.R. near Elko, 186 miles.

Nelson to Grand Forks, B.C.—We are advised that although press reports stated that the company was doing a great deal of work in improving the line between these points, there is not very much being done; nothing of any large extent. The principal works done or in hand are the repairing and extending of the dock at Nelson; a 30 ft. addition to the station at Nelson, a five-stall engine house at Smelter Jct., and the replacing of several bridges on the Boundary section. The bridge near Cascade, referred to in the press reports as being under construction, is that across the Fraser River, generally known as the Cisco bridge. The present bridge—a cantilever one—which was erected during construction, is to be replaced, but the plans for this, we are advised, are not completed.

Arrowhead and Kootenay Ry.—A press report states that the C.P.R. proposes to make a start in the fall on the projected railway to connect the main line at Revelstoke, via Lardo, with the Crow's Nest Pass line.

Snow Sheds in Mountains.—A press report states that plans have been prepared for the erection of steel snow sheds at various points on the line through the Rockies and Selkirks to replace the present wooden ones. The report further states that the structures which were destroyed last winter by avalanches, will be the first to be replaced by steel snow sheds.

Esquimalt and Nanaimo Ry.—A subsidy has been voted by the Dominion Parliament to aid in building a line from near Duncans to Cowichan Lake, 24 miles.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—Contracts are reported let as follows:—Grading on a cut-off from New Richmond, Wis., to Withrow, Minn., 17 miles; grading on a branch from Medford to Drake, N.D., 13½ miles, to Foley, Welch and Stewart; for grading an ore line and yard between Mayline, south of Superior, and the dock site on St. Louis Bay, Wis., to Fort Baxter. (May, pg. 371.)

W. R. Tiffin's Fifty Year Service

W. R. Tiffin, Superintendent Northern Division G.T.R., Allandale, Ont., issued the following circular to the official staff and employes of the division, May 24:—"To-day completes my 50 years' service with the company, and I feel it fitting that I should take advantage of the occasion to express my appreciation of the loyal support which I have received from you all during my term of office as Superintendent of this division, and to thank you for the assistance rendered in furthering the company's interests."

Mr. Tiffin's health, we much regret to have to say, is not at all satisfactory, as he received a paralytic stroke recently

A HISTORY OF THE PAY-AS-YOU-ENTER CAR
AND ITS LESSON

The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550; International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. Co., Washington, D.C., ---; Capital Traction Co., Washington, D.C., 51; Municipal Traction Co., Cleveland, Ohio, 180; United Rys. Co. of St. Louis, Missouri, 310; Portland Ry., Lt. & Pwr. Co., Portland, Ore., 25; Columbus Ry. & Lt. Co., Columbus, Ohio, 10; Wichita R.R. & Lt. Co., Wichita, Kan., 14; Jacksonville Elec. Co., Jacksonville, Fla., 5; Dallas Elec. Co., Dallas, Texas, 20; Houston Elec. Co., Houston, Tex., 41; Northern Texas Trac. Co., Ft. Worth, Texas, 25; Ithaca Street Ry., Ithaca, N.Y., 2; Peoria Street Ry., Peoria, Ill., 13; Urbana & Champaign Ry., Champaign, Ill., 3; Mutual Lt. & Water Co., Brunswick, Ga., 4; Rochester Ry. Co., Rochester, N.Y., 25; Ft. Dodge, Des Moines & So. R.R. Co., 2; Muskogee Elec. Trac., Muskogee, Okla., 6; Union Traction Co., Dubuque, Ia., 4; Topeka Ry. Co., Topeka, Kas., 12; United Rys. & Elec. Co., Baltimore, Md., 32; Detroit United Ry., Detroit, Mich., 225; Cincinnati Traction Co., Ohio, 50; Montreal Street Railway, 400; British Columbia Elec. Ry., 30; Calgary Street Railway, 18; Metropolitan Street Ry., Kansas City, Mo., 50; Edmonton Radial Ry., 4; San Antonio Traction Co., San Antonio, Tex., 6; Rockford & Int. Ry., Rockford, Ill.; Cairo Street Ry. & Lt. System, 6; Des Moines City Railway, Iowa, 12; Macon Ry. & Lt. Co., Macon, Ga.; Virginia Ry. & Power Co.; Columbia Elec. St. Ry. & Lt. & Power Co., Columbia, S.C.; Aurora, Elgin & Chicago Ry., Chicago, Ill.; Wichita Falls Traction Co., Wichita Falls, Tex.; Ottawa Electric Ry. Co., Ottawa; Bloomington & Normal Ry. & Lt. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

THE PAY-AS-YOU-ENTER CAR CORPORATION, - 78 CRAIG STREET WEST, MONTREAL

Railway Rolling Stock Notes.

The Dominion Parliament voted $2,500 for alterations to the Governor-General's private car.

The Intercolonial Ry., has received one Pacific Locomotive from the Montreal Locomotive Works.

The G.T.P.R. has ordered two Superintendents' cars, to be numbered 4104 and 4105, from the Canadian Car and Foundry Co., Montreal.

The I.C.R. has received one locomotive from the Montreal Locomotive Works, details of which we have already published.

The Temiskaming and Northern Ontario Ry., has received 50 all-steel underframe box cars and 12 cinder cars from the Canadian Car and Foundry Co., Montreal.

The Willard Kitchen Co., has received one, the Eastern Construction Co., two, and M. P. and J. T. Davis, two mogul locomotives from the Montreal Locomotive Works.

The G. T. R. has received five mogul locomotives fro mthe Canadian Locomotive Co., Kingston, Ont., and eight 10-wheel locomotives from the Montreal Locomotive Works, Montreal.

Willard Kitchen Co., contractors on the National Transcontinental Ry., have ordered one standard Rodger double plow distributing car from the Hart-Otis Car Co., Ltd., Montreal.

The G.T.R. has ordered 1,000 steel underframe box cars of 60,000 lbs. capacity, and 500 steel underframe automobile cars of 60,000 lbs., capacity, in the U.S., for use on its Western Division.

The G.T.P.R. has received 200 flat cars, nos. 361100 to 361299; 292 box cars, nos. 311325 to 311316, and one official car, no. 4102, from the Canadian Car and Foundry Co., Montreal, and also one official tender, no. 4175, ordered from Rhodes, Curry Co., Ltd., now one of the constituents of the C.C. and F. Co.

The Canadian Northern Ry., between Apr. 15 and May 15, has received 270 box cars from the Canadian Car and Foundry Co., Montreal; 145 flat cars from the Crossen Car Mfg. Co., Cobourg, Ont.; 100 box cars from the Silliker Car Co., Halifax, N.S., and 100 logging cars from the Russel Wheel and Foundry Co., Detroit, Mich.

The C. P. R., between April 13, and May 14, received the following additions to rolling stock: 23 vans, four baggage and express cars and two G. 2 locomotives from its Angus shops, Montreal; one D. 10 locomotive from the Montreal Locomotive Works, and 473 steel frame box cars from the Canadian Car and Foundry Co., Montreal.

The Halifax and South-Western Ry. has ordered 20 thirty-ton Hart hopper ore cars, with hoppers steel lined, from the Hart-Otis Car Co., Montreal. Following are the chief dimensions:—

Length over end sills	21′ 0″
Length inside	16′ 0″
Width inside	8′ 6½″
Height inside	5′ 10″
Height top of rail to top of side	9′ 10″
Height from rail to floor	4′ 1¾″

The C.P.R. has ordered 211 composite Otis type coal cars, 1910 design, 100,000 lbs capacity, from the Hart-Otis Car Co., Ltd., Montreal. Following are the chief dimensions:—

Length over end sills	38′ 10″
Length inside	36′ 5″
Width inside	9′ 7″
Height inside	5′ 0″
Height top of rail to top of side	9′ 4 13-16″
Height from rail to floor	4′ 4 13-16″

The Toronto, Hamilton and Buffalo Ry. has ordered six Hart Convertible cars, 1910 design, from the Hart-Otis Car Co., Montreal. Following are the chief dimensions:—

Length over end sills	36′ 8″
Length inside as gondola	34′ 8″
Length inside as hopper	20′ 10″
Width inside	8′ 8″
Height inside	3′ 9¼″
Height from rail to top	8′ 1⅜″
Height from rail to floor	4′ 4⅛″

The Toronto Construction Co., G.T.P.R. contractors. have ordered ten Hart convertible cars, 1910 design, from the Hart-Otis Car Co., Ltd., Montreal, of which the following are the chief dimensions:—

Length over end sills	36′ 8″
Length inside as gondola	34′ 8″
Length inside as hopper	20′ 10″
Width inside	8′ 8″
Height inside	3′ 9¼″
Height from rail to top	8′ 1⅜″
Height from rail to floor	4′ 4⅛″

The C. P. R., between April 13 and May 14, ordered the following additions to its rolling stock: two first-class cars, 76 wooden box cars, 13 stock cars, 22 flat cars, five vans and 10 D.10 locomotives from its Angus shops, Montreal; one steel ore car, three steel Hart cars, 200 Otis composite steel and wood coal cars and five steel coal cars, from the Canadian Car and Foundry Co., Montreal; 35 consolidation locomotives from the Montreal Locomotive Works, and also purchased 18 steel Hart-Otis dump cars.

Following are the chief details of the 35 consolidation locomotives which the C. P. R. has ordered from the Montreal Locomotive Works:—

Weight in working order	220,000 lbs.
Weight on drivers	195,000 lbs.
Weight on engine truck	25,000 lbs.
Wheel base, driving	16′ 6″
Wheel base, engine	25′ 5″
Wheel base, engine and tender	55′ 8″
Valve gear	Walschaert
Cylinders	24″ by 32″
Driving wheel	63″
Boiler type	Extended wagon top
Boiler, diar.	72″
Boiler pressure	180 lbs.
Tubes, no. and diar.	272 2″ and 24 5″
Tubes, length	15′ 2¾″
Brakes	Westinghouse American
Capacity, water	5,000 galls.
Capacity, coal	12 tons
Superheater	Vaughan-Horsey

The Toronto, Hamilton and Buffalo Ry., has ordered two consolidation locomotives from the Montreal Locomotive Works, of which the following are the chief particulars:—

Weight in working order	196,000 lbs.
Weight on drivers	171,000 lbs.
Weight on engine truck	25,000 lbs.
Wheel base, driving	17′ 0″
Wheel base, engine	25′ 9″
Wheel base, engine and tender	57′ 3″
Cylinder	21½″ by 28″
Driving wheel diar.	55″
Boiler, type	Extended wagon top
Boiler, diar.	68¼″
Boiler, pressure	200 lbs
Tubes, no. and diar.	353 2″
Tubes, length	15′ 0″
Brakes	Westinghouse American
Capacity, water	7,000 galls.
Capacity coal	10 tons

Henri Menier, Paris, France, has ordered one four coupled locomotive for Anticosti Island from the Montreal Locomotive Works, of which the following are the chief particulars:—

Fuel	Wood
Weight in working order	46,000 lbs.
Weight on drivers	40,000 lbs.
Weight on engine truck	6,000 lbs.
Wheel base, driving	6′ 3″
Wheel base, engine	12′ 1″
Wheel base, engine and tender	30′ 0″
Cylinder	12″ by 18″
Driving wheel diar.	36″
Boiler, type	Straight top
Boiler, diar.	42″
Boiler pressure	160 lbs.
Tubes, no. and diar.	92 2″
Tubes, length	9′ 9″
Brakes	Steam
Tank capacity	1,200 galls.
Fuel capacity	1¾ cords

The Temiskaming and Northern Ontario Ry. has recently received 50 steel underframe box cars, Nos. 80,100 to 80,198 (even Nos. only), from the Canadian Car and Foundry Co., Montreal. Following are the chief dimensions:—

Capacity	100,000 lbs.
Length inside	36′ 0″
Length over end sills	36′ 11½″
Width inside	8′ 6″
Width over roof boards	9′ 10⅜″
Width over side channels	8′ 7⅝″
Width over side sheathing	9′ 3¼″
Height from rail to top of floor	4′ 2¾″
Height, top of side sill to under side of plate	7′ 10¾″
Height, top of rail to top of running board	13′ 6 11-16″
Height, top of rail to top of brake mast	14′ 6″
Height, top of rail to centre of draw bar	2′ 10½″
Distance, back of end sill to centre of bolster	5′ 0¾″
Truck wheel base	5′ 6″
Door opening	6′ 0″

Following are the chief details of the combination passenger and caboose car, and the flat cars which the Portland Canal Short Line Ry. recently ordered from the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:

PASSENGER AND CABOOSE CAR.

Length over end sills	50′ 0″
Length over dead woods	55′ 0″
Length over side sills	9′ 10½″
Seating capacity	40
Trucks	4-wheel passenger
Body bolsters	Double transom
Brake beams	Simplex
Air brakes	Westinghouse P. 1412
Wheels	Cast iron 33″
Couplers	Janney
Journal boxes	McCord

FLAT CARS.

Length over end sills	30′ 0″
Width over side sills	9′ 0¾″
Width over floor	9′ 3″
Air brakes	Westinghouse H.C. 812
Body and truck bolsters	Simplex
Brake beams	Simplex
Couplers	Janney
Wheels	Cast iron 33″
Journal boxes	McCord
Journal bearings	Canadian Bronze Co.

Corrections for the Erring.

CANADIAN PACIFIC.—Construction work will probably be carried out this year on the line which has been located from Merritt, B.C., to Penticon, about 75 miles, in the southern end of the Okanagan Valley.—Railroad Age-Gazette, May 6.

The line mentioned is to be constructed by the Kettle River Valley Ry., under an agreement with the British Columbia Government, and not by the C.P.R.

ALGOMA CENTRAL AND HUDSON BAY RY.—The affairs of this company, *which is in the hands of a receiver*, are to be reorganized under the plan of the Lake Superior Corporation.—Railroad Age-Gazette, May 6.

Like all the other subsidiary companies owned by the Consolidated Lake Superior Co., the Algoma Central and Hudson Bay Ry. Co., practically went into liquidation in the end of 1903. Negotiations were entered into for a reorganization, and in order to aid in bringing this about the Ontario Legislature loaned to the reorganization syndicate $2,000,000 under the terms of an act assented to April 26, 1904. The Lake Superior Corporation was successfully formed, took over the whole of the properties of the Consolidated Lake Superior Co., and has been operating them ever since independent of any receivership or liquidation proceedings. What is being done now is to readjust the A.C. and H.B.R. finances to present conditions, and to provide funds for the completion of its line from Pangassin to Hawk Lake Jct., the junction with the Michipicoten branch, and from Hawk Lake Jct., to the C.P.R. at Hoban, Ont.

Mr. Edward Duval chief clerk to Mr. Bury at Winnipeg, has been appointed Superintendent of terminals at Calgary, an office recently created.—Canadian Engineer, May 13.

E. W. Duval has not been appointed superintendent of terminals at Calgary, excepting by the press, nor has such an office been created. He has been appointed Trainmaster in charge of maintenance and operation of Calgary terminals, C.P.R., as announced officialy in our Transportation Appointment Department.

404 St. James St., MONTREAL

National Transcontinental Railway.

The Minister of Railways submitted in the House of Commons April 28, a statement furnished by G. Grant, Chief Engineer, as follows:—Total payments to Dec. 31, 1909, $67,890,698; Dec. estimates, $1,010,014; contract reserve, $3,247,295; amount estimated to complete 21 contracts, $35,949,958; total $108,097,965. To this has to be added $16,149,084 for items not included in contracts, making $124,247,049. From this total has to be deducted $420,223 on account of rental of terminals and on account of shops at Winnipeg, leaving the estimated cost of the line at $123,826,826, or about $9,000,000 more than the last estimated cost submitted by the late Chief Engineer in June, 1909. The two estimates are as follows:—

	June, 1909.	Apr. 5, 1910.
Preparation and excavation	$ 54,748,176	$ 63,893,276
Tracklaying and ballasting	8,188,247	8,473,863
Trestles and bridges	11,638,222	13,521,328
Sundry	2,198,055	2,960,356
Rails and fastenings.	12,945,281	11,984,000
Steel bridges	7,993,809	5,217,503
Buildings	1,962,628	3,710,500
Right of way	1,168,342	2,153,000
Surveys, engineering and expenses	13,550,415	11,913,000
	$114,393,175	$123,826,826

The Dominion Parliament at its last session, voted $27,000,000 on account of surveys and construction. Parliament also voted $1,500,000 on account of construction of the Quebec Bridge. In explaining the latter vote the Minister of Railways stated that the Board of Engineers had got to the point where the contract for the substructure had been let, and the contractor was at work. As regards the superstructure considerable sums had been expended on plans, tests and studies. Experiments had been made in Great Britain and the U.S. and compression tests were made under the supervision of two McGill University professors. The board of engineers was prepared to advertise for tenders for the manufacture and erection of the superstructure. He had not been given any information as to the estimated cost of the bridge. In an interview May 5, the Minister stated that tenders for the superstructure would be asked for immediately, and that the successful tenderer would have to accept full responsibility for the bridge. This decision, it is said was arrived at as a result of a cablegram received from England, May 4, that the tests which had been made there showed that the plans were satisfactory and would provide a safe and reliable superstructure. It is generally understood that the engineers have come to the conclusion that a cantilever type bridge is better than a suspension one. The bridge builders will be given about three months to prepare and submit their tenders.

Replying to a Quebec deputation, May 19, the Chairman of the N.T. Railway Commission said the workshops would be located at Quebec. On the same day there was a general conference in Quebec on terminal matters between the Commissioners, a number of Dominion Ministers, and G.T. Pacific Ry. officers.

The Commissioners were advised May 13, that grading had been started between Abitibi River and Nipigon, Ont. The delay in starting was due to the difficulty of getting supplies and grading outfits in, owing to the distance from existing railways, and the lack of water facilities.

The finishing up of the section between Superior Jct., Ont., and Winnipeg, Man., is being pushed, and it was estimated, May 1, that it would be completed within three months. The work being done includes ballasting, the construction of passing tracks, switches, spurs, telegraph line, station buildings, section houses, water tanks, tool houses, etc.

Tenders are under consideration for the equipment of the power house at the Winnipeg shops, including water tube boilers, mechanical stokers, feedwater heaters, engines, generators, air compressors, pumps, etc.

GRAND TRUNK PACIFIC RY.

The Dominion Parliament last session voted $28,000 to provide for the inspection of construction of the line; and $2,500 as remuneration for the Government director on the Board.

In an interview at St. John, N.B., May 13, the Minister of Public Works said the G.T.P.R. intended to apply to the Government under the provisions of its act, for running rights over the Intercolonial Ry. to St. John, N.B., and Halifax, N.S. If terms could not be agreed on, the Board of Railway Commissioners was authorized to decide on the matter. C. M. Hays, President G.T.R. and G.T.P.R., a few days earlier said it was the original intention that the ocean ports of the line would be Montreal, Quebec, St. John and Halifax, and it would not be departed from.

The G.T.P.R. is reported to have purchased 60 acres at Courtenay Bay, St. John, N.B., for terminal purposes, but the company's officials decline to say anything definite with regard to the matter.

The substructure for the bridge across Wolfe Creek, Alta., was completed April 28, and the steel work is now well in hand. This bridge is 800 ft. long, and the rail level is 200 ft. above high-water mark. According to a statement by Vice President Chamberlin, at a distance of 1,500 ft. from the west end of the Wolfe Creek bridge, is the east end of the McLeod River bridge, upon which the contractors are now engaged in putting the substructure. This bridge will be 900 ft. long. As soon as it is completed track laying will be resumed and will be proceeded with as fast as possible until the grading gangs are overtaken. These are working over 100 miles west of McLeod River, and are reported to be making good progress. There is, however, a shortage of labor which prevents the contractors making the progress they desire.

In a recent interview E. J. Chamberlin, Vice President and General Manager, stated that he expected track would be laid west to Yellowhead Pass this year; on the first hundred miles east from Prince Rupert by July 1, and that a 135 miles further would be ready for the steel a short time thereafter. The construction of the bridge across the Skeena River, 180 miles from Prince Rupert would delay track laying for some time. The contract for the remaining mileage of the line in British Columbia would be let by the end of the year. With favorable labor conditions it was expected that track would be laid right through by the end of 1912.

Pacific Northern and Omineca Ry.—The Dominion Parliament has voted a subsidy to aid in building a line from Edmonton north-westerly to or towards the Peace River not to exceed 110 miles.

The company filed plans with the Department of Railways for a line from Edmonton to the Peace River, some time ago, and the Canadian Northern Ry. is making application for approval of location plans for a line from Edmonton to Dunvegan, along much the same route. The Department has postponed consideration of the applications of both companies in order to give them an opportunity of coming to an agreement.

G.T. Pacific Branch Lines.—A recent press report stated that the company's engineers were making surveys for a line to Brandon, Man., with the idea of securing an entrance into the Canadian Northern Ry. station. We are advised that so far as C.N.R. officials are aware no such surveys are being made, nor have any negotiations been in progress as to the use of that company's station.

In a recent interview E. J. Chamberlin, V.P. and G.M., said it was hoped to lay about 200 miles of track on branch lines in the prairie provinces during the year. Contracts have been let as follows:—For 30 miles from Yorkton, on the Yorkton-Melville branch, to Rigby, Hyland and Plummer, Winnipeg; from Watrous to Prince Albert, 130 miles, to J. D. McArthur & Co.; from Biggar to Battleford, 50 miles, to the Goulin Contracting Co., from Balcarres to Regina, the balance of the Melville-Regina branch, 75 miles, to J. D. McArthur & Co., and for 100 miles from Regina south toward the boundary. The company will lay track as soon as grading is sufficiently far advanced, and get the lines open for traffic as soon as possible. A press report referring to the last of these lines says the original intention was to reach the International boundary at Portal, by a route midway between the C.P.R. and the Canadian Northern Ry., but it has been decided to pass through Weyburn.

J. Dalrymple, Assistant Freight Traffic Manager, went over the Tofield-Camrose line, May 1, for the purpose of advising as to sites for stations, elevators, etc. Grading has been completed for a number of miles from Camrose towards Calgary, and track laying is to be started at an early date. The route of the line into Calgary has been located but it has not been finally approved by the Department of Railways, as some arrangements are being made in the direction of securing a joint station in Calgary with the Canadian Northern Ry. On May 4 it was reported that right of way had been acquired as far as Aricana, on the Langdon branch of the C.P.R., and that negotiations for the rest of the right of way to within five miles of Calgary were nearly closed. A deputation representing the owners of mining properties in the Carbon coal fields has asked the Provincial Government to arrange with the company for the construction of a spur line into these collieries. The line as located is seven miles east of the mines.

A block of property is reported to have been purchased for wharfage purposes in North Vancouver, B.C. The lands lie east of Capilano in Long Flat and are about 300 acres in extent. (May, pg. 375).

British Investments in Canada.—A list has been prepared in England showing that £14,622,192 of British capital has been invested in Canada since Jan. 1 of the present year. Of this amount the following has been invested in railways, or in companies having railway and marine connections:—G.T. Pacific Ry., £1,000,000 of 4 per cent. debenture stock, realized £925,000; British Columbia Electric Ry., £530,000 of 4¼ per cent. perpetual consolidated debenture stock; Canadian Northern Ry., £1,000,000 of 4 per cent. debentures, realized £950,000; G.T. Pacific Branch Lines Co., £1,270,500 of 4 per cent. mortgage bonds, realized £1,251,442; City of Calgary, £325,400 of 4½ per cent. debentures, to provide among other things for an electric railway, realized £336,789.; Canadian Car and Foundry Co., £482,877 of 6 per cent. mortgage bonds, realized £497,363; Canadian Western Lumber Co. (owning a railway, tugs, etc.), £1,500,000 of 5 per cent. mortgage debentures, realized £1,320,000.

The Association of Train Dispatchers of America will hold its annual convention at Seattle, Wash., June 21-23; the principal subjects for discussion being the proposed amendments to the standard rules.

The Hudson's Bay Company

THE COMPANY OFFERS FOR SALE

Farming and Grazing Lands in Manitoba and the Northwest Territories

ON EASY TERMS OF PAYMENT

Town Lots for Sale at Winnipeg, Ft. William, Edmonton, Prince Albert, etc.

The Company has General Stores at Winnipeg, Vancouver, Calgary, Edmonton, and other places where purchasers will find the best of goods at moderate prices.

Transportation by the Company's Steamers, brigades of boats and canoes throughout the Territories not traversed by railways.

Full information at the Company's Offices, Winnipeg, or 1 Lime St., London, E.C.

H & E Patent Ball-Bearing Lifting Jacks

For Railway and Bridge Work, Contractors' and Builders' Use

Foot-Lift

For Convenience, Speed and General Efficiency these Jacks are Unequalled. Are fully guaranteed. Being made of the best grades of Malleable Iron and Steel are strong and durable. Working parts entirely protected insure long wearing qualities. Sizes from 8 to 50 tons now complete. Send for prices and discounts.

Canadian Northern Ry. Construction, Etc.

Quebec and Lake St. John Ry.—Subsidies have been voted by the Dominion Parliament in aid of the construction of the following lines:—From Valcartier station to St. Catherine, Que., 3.8 miles; from Valcartier station towards Gosford, not exceeding 5.5 miles; from mileage 35 of the branch to La Tuque, on the River St. Maurice, to La Tuque Falls, 5 miles; from La Tuque Falls to the mouth of the Creche River, 5 miles; from the La Tuque branch to the steamboat landing near La Tuque, 1.6 miles; from Herbertville to St. Joseph d'Alma, 10 miles; from Chicoutimi south or south-east for 5 miles.

Canadian Northern Quebec Ry.—The Dominion Parliament has voted subsidies in aid of the construction of the following lines:—From Arundel to a point in the united townships of Preston and Hartwell, Que., not exceeding 30 miles; from Montreal to Hawkesbury, Ont., not exceeding 65 miles.

In an interview at Montreal, May 4, D. B. Hanna, President, is reported as saying: "The question of providing big railway terminals in this city is one that is engaging our attention, but matters have not got to such a point yet that I can make any announcement. Our company fully realizes the necessity of such terminals and the importance of providing them, and you may rest assured that we shall push ahead with the work as rapidly as is possible."

Canadian Northern Ontario Ry.—In reference to the entrance into Ottawa, it is said that arrangements are about completed for the purchase of the University Oval athletic grounds for station purposes.

Good progress is being made with construction on the Toronto-Trenton section of the line to Ottawa, and it is expected to complete it this year, work on the Colborne sub-section having been completed. J. Giroux, who had the contract for this part of the line is removing his outfit to Cobourg to go on with grading the section between there and Port Hope. The question of the entry of the line into the latter town was decided at a meeting held May 3, when the company's offer was accepted. According to the plans the station will be situated on Ontario St., near Hope St. The question of the route beyond Trenton is under consideration. The route as laid out runs within ten rods of the Deaf and Dumb Institute, and an objection is being made to this. A committee representing the City Council and the Board of Trade has reported in favor of the company's plans.

In Toronto the question of the granting of a right-of-way along the east bank of the Don River to Ashbridge's Marsh is under the City Council's consideration. A recommendation was made Mar. 19, that the Council construct such a line itself and permit its use by any railway company.

Surveys for the section between Toronto and Niagara Falls have been made, principally along the Electrical Development Co.'s right-of-way, but it is not expected that construction will start this year.

We are advised that the C.P.R. and the C.N.O.R. will have joint use of the line which the C.P.R. is building between Atherly Jct. and Orillia. This is a section of the Georgian Bay and Seaboard Ry., and forms part of the mileage between Coldwater Jct. and Atherly Jct., which has just been placed under contract.

On the Lake Superior section 30 miles are already built from Selwood northwesterly to Gowganda Jct. H. K. Wicksteed, Chief Locating Engineer, has four survey parties at work. About 150 miles have been located west from Gowganda Jct., and two parties are carrying that location on westerly. Two other parties are working east and west from Nipigon. H. K. Wicksteed is reported to have stated in an interview May 6, that work was being pushed ahead as rapidly as possible, and would be completed in a month or two. The reports showed that a very favorable location was being secured. The divide between Port Arthur and Nipigon is crossed at an elevation of 220 ft. lower than where it is crossed by the C.P.R. This insures a gradient of 0.4 per cent. The line will probably skirt the shore for some distance along Thunder bay. The survey parties are now working north of Mackenzie. In an interview at Port Arthur, May 14, Vice President Mann said that no further construction would be done on that line this year, and it was too early to say what would be done next year.

The Irondale, Bancroft and Ottawa Ry., which has been acquired by Mackenzie, Mann & Co., is being operated under lease by G. Collins, General Manager Central Ontario Ry. The I.B. & O.R. is being connected with the C.O.R. at Bird's Creek Station, Ont., by the building of about 1½ miles of track.

Nepigon Ry.—Subsidies have been voted by the Dominion Parliament to aid in building the following lines:—From Nipigon station on the C.P.R. transcontinental line to Nipigon Lake, 30 miles; from Nipigon Bay, Lake Superior, to west of Lake Helen, not exceeding 3.5 miles; from near the crossing of French River by way of Cameron's Falls to Lake Jesse, 1.5 miles; from the north shore of Lake Nipigon for 45 miles northerly.

Canadian Northern Ry.—Vice President Mann, in an interview at Port Arthur, May 14, said, as to works in that city he thought fair progress had been made with the hotel building, although he would like to see the roof on by the fall, but this was not possible. The work contemplated at the terminals included an extension of the steel dock, and the erection of a freight shed there. The roundhouse and workshops would also be enlarged, and various improvements would be made in the yards. Traffic was growing and constant additions had to be made to the facilities. As to the line between Port Arthur and Winnipeg, the work of relaying the track with heavier steel rails would be completed; a number of the wooden bridge structures would be replaced by steel spans on concrete abutments, and at the crossing of Rainy Lake, a dump of rock a mile and a half in length would be put in to replace the present bridge, with swing spans for navigation.

The contract for the interior work on Fort Garry station, Winnipeg, has been let to P. Lyall & Sons, at a cost of about $300,000. A steel viaduct is being erected at the rear of the station for the entry of the trains. Tenders are to be asked at once for the erection of express and other warehouses beneath this viaduct.

A press report states that a branch line is under survey from Goose Island, on the Oak Point branch, for 25 miles, and that that line will, for some distance, run parallel with the C.P.R. line to Teulon, Man., and that it is intended to extend it eventually to Fisher River.

On the Oak Point branch, which is now operated from Oak Point Jct., near Winnipeg, to Oak Point, 60.4 miles, grading was done for 30 miles further last year. The Cowan Construction Co. has a contract for grading for some 70 miles further to Gypsumville, Lake Manitoba. Track will be laid this year on as much of this additional mileage as possible.

A press report states that the company has purchased a number of lots adjoining its yards at Portage la Prairie, Man., for extension purposes.

Writing to the city authorities at Brandon, Man., recently, R. J. Mackenzie said the company had been getting specifications for the proposed hotel at Brandon into shape, in order to ask for tenders at an early date.

On the Greenway-Wakopa line, about 12 miles will be built this year from the present track end. N. Boyd is reported to have the grading contract to Deloraine.

On the branch from Maryfield, on the Brandon-Regina line, running southwest and westerly, and crossing the C.P.R. Portal-Pasqua branch at Midale, track was laid in 1909 on 58.39 miles, and about 80 miles further were graded. This 80 miles will be laid with track this year, and some 50 miles more will be graded and part of it laid with track. Cowan & Co. have the grading contract.

On the branch from Hallboro', Man., westerly via Rapid City, 69.28 miles of track were laid in 1909, and about six more miles of grading have been done. We were advised recently that it had not been decided whether that would be laid with track this year.

The Rossburn branch from Neepawa, Man., which is intended to connect with the main line at Canora, Sask., is now being operated to Russel, Man., 104.2 miles from Neepawa. Last year track was laid to mileage 160 from Neepawa, and grading was done for about a mile further. It is probable that about 30 miles more grading will be done this year. A press report states that Wilson & Wilmot are grading near Stoneway, Sask.

On the Thunder Hill extension from Thunder Hill Jct., Man., near Swan River, on the Dauphin-Prince Albert line, track has been laid for over 40 miles, and about 13 miles more have been graded, on which track will be laid this year. About 20 miles more will be graded this year and track will probably be laid on it. McMillan Bros. have the grading contract.

A press report states that the company has secured a right-of-way for nearly all the route of its proposed line westerly from Regina as far as Moose Jaw, Sask.

From Melfort, Sask., a branch is to be built south 25 miles to the main line at Humboldt. This will probably be completed this year.

On the Goose Lake branch from Saskatoon, Sask., towards Calgary, Alta., track has been laid to Kindersley, the first division point, and 44.14 miles further has been graded into Alberta. We were advised recently that track would be laid on this grade this year, and that some further grading would probably be done. R. J. Mackenzie is reported to have stated recently that about 60 miles of track would be laid and that grading contracts had been let, but that owing to the scarcity of ties he did not think it would be possible to do all the work anticipated.

The Prince Albert-North Battleford branch is now built to Shellbrook, 30 miles from Prince Albert, Sask. About 40 miles further will be built this year. C. J. Murray is reported to have the grading contract.

From the present end of track on the Prince Albert-North Battleford line, via Shellbrook, about 45 miles of the Crooked Lake branch have been graded. The remainder of the 58 miles will be graded this year and track laid on it. C. J. Murray is reported to have the grading contract and tracklaying was reported to have started May 1.

From North Battleford, Sask., via Jackfish Lake towards Athabaska Landing, 40 miles have been graded and track will be laid this year. No further grading will be done at present.

THE T. H. SYMINGTON CO.

BALTIMORE ROCHESTER CHICAGO NEW YORK

On the branch from Vegreville, Alta., southerly via Camrose and Stettler, towards Calgary, about 130 miles have been graded and 19.47 miles were laid with track in 1909. Track will be laid on the balance of this grading, 110.53 miles, this year, and grading will be done and track probably laid for 96 miles further. Reports state that track was laid into Camrose, May 1, across the C.P.R., and that it is being proceeded with towards Stettler. The differences between the C.N.R. and the C.P.R. as to a right-of-way through Stettler have been settled. A press report says that outside the town limits grading has been completed southerly for about 40 miles, and that it is expected to get the grading completed into Calgary this year. The telegraph line has been completed to Round Hill, and poles and wire have been distributed to beyond Camrose; the station and tank gang has reached Lake de May, and ties and other supplies are being shipped into Camrose for the rest of the line.

The revised plans for the route of the company's projected line into Calgary have been approved by the Minister of Railways between Bow River and Calgary, Alta. The actual route into the city is still under consideration, as the City Council is desirous of having the G.T. Pacific Ry. enter by the same route and use a union station.

From St. Albert, 8.5 miles from Edmonton, on the Edmonton-Athabaska Landing branch, about 40 miles will be built north-westerly this year. An Edmonton dispatch, May 10, said M. McCrimmon had been given the grading contract.

On the branch from Edmonton, Alta., towards Athabaska Landing, 21.5 miles are being operated to Morinville, and about 23 miles more have been graded. This will be laid with track this year.

The main line is in operation from Edmonton 21 miles west to Stony Plains and is graded for about five miles further, not 12, as stated in our April issue. It is expected to lay track on this grading and for 24 miles further this year, making altogether 50 miles from Edmonton, and grading will probably also be done as far as the McLeod River.

Canadian Northern Alberta Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from near Edmonton or Strathcona westerly, and giving the company power to take over the line constructed or located by the Edmonton, Yukon and Pacific Ry., or the Canadian Northern Ry., its successor by amalgamation. The incorporators are all associated with Mackenzie, Mann & Co., or with the Canadian Northern Ry. A second act repeals the provisions of chap. 25 of the statutes of 1908, granting aid for the extension of the Edmonton, Yukon and Pacific Ry., and provides for the granting of aid to the C.N.A.R. for the first 150 miles of its line from Strathcona or Edmonton, to the coal areas near the Brazeau River and the headquarters of the McLeod River, by means of a guarantee of bonds. For the first 50 miles of the line the securities are to be guaranteed to the amount of $13,000 a mile, and for the remaining mileage to the amount of $25,000 a mile; the interest to be at the rate of 3½ per cent. and the principal to be payable in 50 years. The securities to be secured by a first mortgage on the lines constructed, buildings, rolling stock, etc., and to be guaranteed to the Government by the Canadian Northern Ry. The Minister of Railways explained that it was necessary to have these acts passed in order to make available the subsidies voted to the Edmonton, Yukon and Pacific Ry. in 1908. One of the conditions upon which that subsidy was voted was that the E., Y. and P.R. should be amalgamated with the C.N.R., but it was found when this was done that the securities could not be issued inasmuch as they would conflict with C.N.R. Consolidated Debenture Stock. By the cancellation of the old agreement of 1908, and the incorporation of a new company with a new agreement, the difficulty is overcome.

Canadian Northern Pacific Ry.—Revision surveys for portions of the located line between Yellow Head Pass and New Westminster, B.C., are being made. C. F. Hannington is at work between Kamloops and Lytton, and J. Irwin in the North Thompson Valley. They will also take soundings in the rivers across which bridges will have to be built. The B.C. Government has placed in reserve large areas of land along the line of the route surveyed, in connection with the proposal to construct branch lines to Revelstoke and Golden, for which it is reported surveys will shortly be made. Representatives of the company's right-of-way department are working in and around New Westminster, arranging for the purchase of properties required for station and right-of-way purposes through the city. A suggestion is under consideration for a joint station with the Great Northern Ry.

G. T. R. Semi Annual Meeting.

At the recent half-yearly meeting in London, Eng., A. W. Smithers, in moving the adoption of the report, which was given in our last issue, after dealing with the various items, said, in part:—"They mark the end of the effect on them of the financial storm caused by the American panic of the autumn of 1907. It came with great suddenness when we were under great obligations, and I think the President deserves the highest credit for the promptitude with which he took in sail and successfully weathered the storm." Referring to the G.T.P. Ry., he said:—"Beginning at Fort William, our terminus on Lake Superior, a new elevator has been built capable of storing 3,500,000 bush.; terminal facilities are in course of construction, a deep-water channel is being dredged from the lake, and the branch line from Fort William to Lake Superior Jct., 200 miles, has been completed, and is ready for operation. From Lake Superior Jct. to Winnipeg, 245 miles, the line is being constructed by the Government, and this section is expected to be completed in time to handle this year's harvest. At Winnipeg a terminal station has been constructed to be jointly used with the Canadian Northern Ry. From Winnipeg to Edmonton, and beyond to Wolf Creek, which constitutes the Prairie section, 916 miles, the line has been completed. Thus, by Sept. 1, we expect to have ready for the moving of this year's crop, 1,361 miles of continuous track from Wolf Creek, the western end of the Prairie section, to Fort William, on Lake Superior. The great problem for all transcontinental lines in the north-west is how and where to cross the Rocky Mountains. After two or three years of experimental trails, the pathfinder recommended a way by the Yellowhead Pass, with only one summit to cross of 3,700 ft., and a grade of only 4-10 of 1 per cent., or 21 ft. to the mile. C. C. Van Arsdol, Engineer in Charge of the Mountain section, under B. B. Kelliher, Chief Engineer, was the pathfinder, and his name will always be associated with the extraordinary favorable grades of the Mountain section, which are the lowest of any transcontinental line. A contract has been let from Wolf Creek, the easterly point of the Mountain section, to Tete Jaune Cache, 179 miles, the grading of which we hope will be completed by the end of the year. From Prince Rupert, the western terminus, the line has been graded for 130 miles east to the Copper River, and tracklaying on this portion should be completed during the summer. Another contract has been let from Copper River easterly to Aldermere, 135 miles, and it is hoped the grading will be completed by the end of 1910. The distance between Aldermere in the west, and Tete Jaune Cache on the east, of the gap still to be contracted for, is 425 miles, and contracts for that portion of the line will be let directly the approach of rail from either side will allow of contracts being let on the most advantageous and economical basis. It is of the greatest importance that a main line of the length ours will be should have feeders, and I am glad to say that the Saskatchewan and Alberta Governments have guaranteed bonds to enable us to build branches to open up those provinces. Good progress has been made with the branches commenced last year, and we hope to complete them from Melville to Regina, Melville to Canora, Sask., and Tofield to Calgary, Alta., during the year. In the last session of the Saskatchewan Legislature guarantees on five additional branches were authorized. In all, nearly 1,000 miles of branch lines are now under, or shortly will be under, construction, and the money to pay for them has been successfully raised. Hardly less important than the finding of the way over the Yellowhead Pass, was the discovery of Prince Rupert, on the Pacific coast, with its splendid natural harbor. It is 500 miles north of Vancouver, and at present is connected by boats which ply between Pacific ports. Already accommodation is quite insufficient, and the G.T.P.R. has ordered two boats, the Prince Rupert and the Prince George, specially adapted for this service. We expect the Prince Rupert will be in service by June, and the Prince George a few weeks later. The G.T.P.R. has also bought another boat, to be named the Prince Albert, which will also be used for the coasting service. These boats will ply between Seattle, Victoria, Vancouver, Prince Rupert, and intermediate points, and will undoubtedly be fully occupied during the summer and autumn months at paying rates. I believe, in the near future, the trip across the Rockies by the C.P.R. to Vancouver, thence to Prince Rupert by boat, and back over the Rockies by the G.T.P.R. will be one of the most attractive tours of the world. Not only will the G.T.P.R. possess the route with the lowest grade of any transcontinental line, but it will be the shortest route, via Prince Rupert, to China and Japan, by 500 miles. I do not think we have begun to realize the possibilities of traffic which will grow between Canada and the Far East, and in which the G.T.P., for the reasons I have mentioned, will be in a first-class position to fully share. I have put before you what we undertook to do when we commenced this great undertaking, and I have shown you the progress we have made up to date. I think you will agree with me the account I have given shows that the operations have been conducted with all the evidence of careful design. The various portions of the scheme are all being pushed forward with a view to completion at the earliest possible moment. The Lake Superior branch and Prairie section will be the part likely to most quickly develop traffic, and, consequently, that will be the part to come into operation first. C. M. Hays, President of both the G.T.R. and G.T.P.R., has been the commander-in-chief who has brought us to what we consider our present satisfactory position, and he has been ably seconded by E. J. Chamberlin, Vice President at Winnipeg; B. B. Kelliher, Chief Engineer, and C. C. Van Arsdol, Engineer in Charge of the Mountain section."

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Notice has been given that the company will on July 30, redeem its 4% prior lien debenture stock outstanding at that date. The transfer book for the stock will be finally closed July 9.

Approximate net profits from all sources, exclusive of land sales, for March, $34,260, against $39,116 for March, 1909. Cumulative net profits for nine months ended Mar. 31, $377,156. Approximate traffic receipts for April, $37,447, against $22,753 for April, 1909. Aggregate traffic receipts for 10 months ended Apr. 30, $323,274.

Atlantic, Quebec and Western Ry.—The first call of $10 due on 5,000 shares of stock was due May 23, and the second call also of $10, is due July 23. These two calls, added to the $80 per share already paid, will pay up the shares in full.

Central Counties Ry.—Subscriptions were recently received by the Bank of Montreal in London, Eng., for £97,500 of 4% first mortgage bonds, the issue price being £90 per £100 bond. The interest is payable half yearly and the bonds are redeemable at par in 1949. The lines owned by the company extend from Hawkesbury to Glen Robertson, Ont., 21 miles, and from South Indian to Rockland, 15 miles, and are operated under lease by the G.T.R. at an aggregate rental of £3,900 a year.

Central Ontario Ry.—Following are the officers and directors for the current year: President, J. J. Warren; Vice President, General Manager and Secretary, Geo. Collins; other directors, C. E. Ritchie, E. B. Stockdale, J. H. Moss.

Delaware and Hudson Co.—The following were elected managers of the company for the current year, May 10: R. M. Olyphant, C. M. Depew, J. J. Astor, R. S. Grant, G. I. Wilber, C. A. Peabody, J. A. Linen, L. F. Loree, W. S. Opdyke, J. R. Maxwell, C. Vanderbilt, R. S. Lovett and R. C. Pruyn.

Dominion Atlantic Ry.—Gross earnings for March, $85,600, against $75,725 for March, 1909. Aggregate gross earnings for nine months ended Mar. 31, $904,750, against $864,204 for same period 1908-09.

Grand Trunk Ry.—We are officially advised that there is no foundation in fact for the reports which have recently appeared in the daily papers that the G.T.R. had acquired control of the Detroit and Mackinaw Rd..

Guelph Junction Ry.—The Dominion Parliament has authorized the City of Guelph to acquire from the present holders the shares in the company held by them. It appears that the city put up all the money for the construction of the line with the exception of $1,000 which was paid in by 10 citizens in order to have the company formed, the city guaranteeing the payment of the balance of the price of the shares. Six of the shareholders transferred their shares to the city but the remaining four declined, and the act now passed declares that the shares were held by them as agents of the city, and not privately.

Halifax and South Western Ry.—The estimated revenue of the province of Nova Scotia for the year ending Sept. 30, 1910, includes $12,750 interest on mortgage on the Central Ry., and $152,730, interest on consolidated mortgage on the Halifax and South Western Ry., with which the old Central Ry. has been amalgamated.

Intercolonial Ry.—An Ottawa dispatch, May 13, says that the accounts of the I.C.R. for the last fiscal year, which are now being balanced, show a surplus of about $500,000, as compared with "a deficit of about $800,000," according to the statement of the Minister of Railways in the House of Commons in Feb.

Ontario and Quebec Ry.—The half-yearly interest on the 5% debenture stock, and on the common stock at the rate of 6% per annum, will be paid to shareholders of record May 2, on and after June 2, at the C.P.R. offices, Charing Cross, London, Eng.

Quebec and Lake St. John Ry.—Total earnings for Apr., $48,678.17, against $44,090.97 for Apr., 1909. Aggregate earnings for three months ended Apr. 30, $168,270.71, against $180,546.99 for same period 1909. Mileage operated, 280, against 285.6 in 1909.

Quebec Central Ry.—Gross earnings for March, $93,182.58; expenses $58,637.12; net earnings $34,545.46, against $94,190.27 gross earnings; $60,635.54 expenses; $33,554.73 net earnings for March, 1909. Aggregate gross earnings for nine months ended Mar. 31, $797,719.52; expenses $553,245.19; net earnings $244,474.33, against $761,859.93 aggregate gross earnings; $543,579.41 expenses; $218,280.52 net earnings for same period 1908-09.

Quebec, Montreal and Southern Ry., Napierville Jct. Ry. See Delaware and Hudson Co.

Reid Newfoundland Co.—A press report states that a new company has been formed in London, Eng., with a capital of $20,000,000 to take over and develop the land, lumber and mineral properties of the R.N. Co. H. D. Reid, Vice President of the company, interviewed at St. Johns, Nfld., May 5, said the President was engaged in obtaining funds for the development of the company's property, but under no consideration would the company's railway, steamships, or their general plant pass into other hands.

Temiscouata Ry.—Profits on operation for March, $5,735, and for three months ended Mar. 31, $8,636.

White Pass and Yukon Ry.—Gross earnings for nine months ended Mar. 31, $886,887.

The Dominion Atlantic Railway.

Sir Thos. G. Shaughnessy, President C.P.R., stated in Montreal, May 15, that "interests friendly to the C.P.R." had secured the Dominion Atlantic Ry. It is generally understood that the D.A.R. property has been in the market for some time and that there were negotiations between the Canadian Northern Ry. interests and the interests in London, controlling the D.A.R. The "interests friendly to the C.P.R." made an offer through the Bank of Montreal, which was accepted, and the control of the company secured. Various reports are current as to the proportion of stock of the different denominations secured, but there is a general agreement that the "interests friendly to the C.P.R." include R. B. Angus, Hon. L. J. Forget of Montreal, and T. Skinner of London, Eng., three C.P.R. directors.

The D.A.R. has never been a financial success, as the net earnings have not been sufficient to do more, after meeting interest on bonds, than to pay interest on the preferred stock as follows: 2%, 1902; 2½% for 1903; 3% for 1904. As a part of a great transcontinental system and under improved management different results may confidently be expected.

The D.A.R. is a consolidation of the Windsor and Annapolis Ry., 84 miles; the Western Counties Ry. (name changed in 1893 to Yarmouth and Annapolis Ry.), 87 miles; Cornwallis Valley Ry., 13.15 miles; the amalgamation being effected by the Dominion Parliament in 1894-5, and of the Midland Ry. amalgamated in 1905. The Intercolonial Ry.'s Windsor Branch was leased to the Western Counties Ry. in 1874, and in 1882 was transferred to the Windsor and Annapolis Ry., subsequently being transferred to the D.A.R. In connection with the Windsor branch, the track and buildings of which are maintained by the I.C.R. out of its proportion of the receipts; trackage rights were secured over the I.C.R. into Halifax, 14.42 miles. The total mileage operated by the company is made up as follows:—Lines owned, 247.30 miles; leased line 31.47 miles, trackage rights, 14.42 miles; total 293.29 miles. In addition there are 17.56 miles of yard tracks and 11.72 miles of spurs and sidings on lines owned, and 3.60 miles of sidings on the leased line. Of the lines owned and leased 276.03 are laid with steel rails, and 2.84 with iron rails; and of the yards, spurs and sidings 24.10 miles are laid with steel, and 8.78 miles with iron rails. There are 17 iron bridges on the line, the longest being that on the Midland Ry. at Truro, 1,207 ft.; no stone bridges, and three wooden ones, each of 50 ft. span; 29 trestles, the longest being of 350 ft.; and 181 level crossings of which two are guarded. The company owns 11 passenger locomotives, 14 freight locomotives, 22 first class passenger cars, 11 combination cars, one dining car, two parlor cars, 15 baggage, express and postal cars, 212 box cars, 219 flat cars, 12 stock cars, 26 coal cars, three cabooses, and seven other cars.

The company also owns wharves and docks at Digby, Yarmouth, St. John, and other points on the Bay of Fundy, and at Boston, Mass., operating between these ports the steamers Prince George, Prince Arthur, Prince Rupert, Prince Albert and Boston. The subsidies paid in aid of the construction of the railways were as follows:—Windsor and Annapolis Ry., $1,193,369, from the Dominion; Cornwallis Valley Ry., $44,800 from the Dominion, $44,800 from Nova Scotia, and $27,685 from municipalities; Western Counties Ry., $500,000 from the Dominion, $679,197.45 from Nova Scotia and $250,000 from municipalities; Midland Ry., $399,060.40 from the Dominion, $185,000 from Nova Scotia and $36,000 from municipalities. The last financial statement showed $2,433,333 of common stock, and $4,901,707 of bonds outstanding, with a miscellaneous indebtedness of $486,616.

There is considerable discussion as to what is likely to happen when the line is operated by the C.P.R. In the first place it is to be noted that by means of the short trip across the Bay of Fundy from St. John, N.B., to Digby, N.S., the C.P.R. will secure a through route to Halifax, thereby giving a much shorter connection between Montreal and Halifax, than by the I.C.R. One report states that the C.P.R. has entered into an agreement with the Michigan Central Rd., for the use of the tunnel under the Detroit River by its trains, thereby releasing the car ferries now used for transferring the trains between Detroit and Windsor. These car ferries, it is stated, will be transferred to the Bay of Fundy, and operated between Digby and St. John, pending the construction of a tunnel under the bay. The originator and the report probably failed to remember that the Bay of Fundy has about the biggest tide in the world, the difference between high and low water being about 40 ft.; that the distance between Digby and St. John is over 50 miles of not the calmest water; and that car ferries built for navigating inland waters are not just the thing for salt water navigation. A 50 mile tunnel is a somewhat large order, even for the C.P.R. We are officially advised that the question of transferring the ferries has not even been considered.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Northern Engineering Works, Detroit, Mich., has issued a catalogue of the Newten cupola.

The Geo. M. Newhall Engineering Co., Philadelphia, Pa., is arranging to have its N.B. air brake and signal hose connection manufactured in Canada.

The Standard Coupler Co. has removed its Chicago office from the Fisher Building to 1005 People's Gas Building, corner Michigan Ave. and Adams St.

The Minneapolis, St. Paul and Sault Ste. Marie Ry., has ordered a freight handling derrick from the American Hoist and Derrick Co., St. Paul, Minn.

The Canadian Fairbanks Co., Ltd., Montreal, has increased its capital stock from $650,000 to $900,000, by creating 2,500 additional shares of $100 each.

The Wire & Cable Co., Montreal, has recently secured some very substantial municipal contracts for weather proof wire from Toronto, Moose Jaw, Saskatoon and Calgary.

The Ontario Wind Engine and Pump Co., Ltd., Toronto, has increased its capital stock from $250,000 to $750,000, by the creation of 5,000 shares of $100 each.

Taylor and Arnold, Montreal, have received orders for five Pilling turntable tractors, for points on the C.P.R. Western Lines. This makes 39 of these tractors on the C.P.R. system.

O. W. Meissner has resigned his position as Superintendent of the Hart-Otis Car Co., Ltd., Montreal, and has been appointed Sales Manager of the Behrand Concentrators, Ltd., 32 St. Sulpice St., Montreal.

Butterfield & Co., Rock Island, Que., have issued their 1910 catalogue of taps, stocks and dies, reamers and Derby screw plates, Young's axle cutters, and bolt for engineers' and steam fitters' use. It comprises 90 pages, and is copiously illustrated.

The Joyce-Crydland Co., Dayton, Ohio, has issued a 100-page catalogue. Besides listing its complete line of jacks for all purposes, the catalogue contains discussions of the construction and recent improvements in this line of jacks, the relative merits of various types of jacks, such as hydraulic, lever, automatic, automatic geared, screw, telescoping, etc., for different classes of service, and recommends the most suitable jack for the different lines of work. It contains complete information concerning the dimensions, weights, price, etc., of the various jacks.

The American Brake Shoe and Foundry Co., of Mahwah, N.J., which is represented in Canada by the Holden Co., Ltd., Montreal, has increased its capital stock from $6,000,000 to $10,000,000, and is offering 10,080 shares of the preferred shares to shareholders of record at May 9, at $105, in the proportion of 18% of their holdings. The company announces that with the proceeds of the new issue, the plants of the Featherstone Foundry and Machinery Co., and the National Brake Shoe and Foundry Co., will be purchased. These properties, with an appraised value of $659,000 are said to be earning about $260,000 a year.

WROUGHT PIPE

Black and Galvanized

M.R.M. brand Pipe is made from the best material that can be obtained for the purpose.

The care taken with each process of manufacture enables us to supply a finished pipe which is reliable and satisfactory to the consumer.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—We are advised that A. F. Dillinger, Assistant Operating Officer, has been directed to make his headquarters in Winnipeg and devote himself entirely to the western railway.

Canadian Northern Quebec Ry.—D. P. Cotter, heretofore ticket agent C.P.R. Atlantic Steamship Service, Quebec, Que., has been appointed ticket agent C.N.Q.R. in the Immigration Offices, Louise Embankment, Quebec, and will also act for all C.N.R. lines.

R. S. Richardson, Assistant Superintendent, and P. A. Lariviere, Chief Dispatcher, with their staffs, have removed from Montreal to Joliette, the latter place becoming a divisional point between Quebec and Ottawa.

Canadian Northern Ry. — Duluth, Rainy Lake and Winnipeg Ry.—M. B. Murphy has been appointed Trainmaster of the portion of Division 2, east of Belmont and east of Brandon, Man. Office, Winnipeg.

K. McLeod, heretofore in the Winnipeg city ticket office, has been appointed city ticket agent at Regina, Sask., vice I. G. Reece, promoted.

J. A. Tait, heretofore Traveling Freight Agent, Winnipeg, has been appointed City Freight Agent at Regina, Sask.

C. R. Hill, heretofore Contracting Freight Agent, Regina, Sask., has been appointed District Freight Agent, Saskatoon, Sask.

I. G. Reece, heretofore City Ticket Agent, Regina, Sask., has been appointed Traveling Passenger Agent, Chicago, Ill.

Canadian Northern Steamships, Ltd.—J. D. Morton, Chief Accountant Canadian Northern Ry., General Auditor Canadian Northern Ontario Ry., Canadian Northern Quebec Ry., Halifax and South Western Ry., Duluth, Rainy Lake and Winnipeg Ry., and Vice President Niagara, St. Catharines and Toronto Ry., has also been appointed Assistant Comptroller Canadian Northern Steamships, Ltd. Office, Toronto.

R. S. Gosset, heretofore chief clerk Accountant's Department C.N.R., has also been appointed Auditor C.N.S., Ltd. Office, Toronto.

T. P. Jones has been appointed Wharfinger at Montreal.

Canadian Pacific Ry.—At the regular monthly meeting of the Board, May 9, Sir Wm. C. Van Horne formally resigned the Chairmanship of the Board of Directors, an honorary position which was created for him when he retired from the Presidency, and the office was abolished. For domestic reasons, it was decided that in future the President should also be known as Chairman of the company.

A. R. Creelman, K.C., the company's General Counsel, has also been elected a director, to fill the vacancy caused by the death of Sir George Drummond.

J. W. McInnich, Locomotive Foreman at Woodstock, N.B., has had his headquarters moved to Aroostook Jct., N.B.

T. M. Barrett has been appointed Assistant Commissary Agent at Quebec, vice M. E. Tansey, transferred.

W. O. Bovard, heretofore in the General Freight Agent's Office, Montreal, has been appointed Contracting Freight Agent at Montreal, vice H. P. Swinton, resigned.

W. C. Casey, heretofore Traveling Passenger Agent Atlantic Steamship Lines, St. John, N.B., has been appointed chief clerk to General Passenger Agent Atlantic Steamship Lines, Montreal.

J. O. Norrie, heretofore in the General Passenger office, Atlantic Steamship Lines, Montreal, has been appointed accountant and cashier of that department, vice G. Lamb, retired.

W. M. Taylor, heretofore in District Passenger Agent's office, Toronto, has been transferred to the office of General Passenger Agent Atlantic Steamship Lines, Montreal, in charge of the berthing department.

C. R. Mackenzie, heretofore Superintendent's Accountant at Farnham, Que., has been appointed Superintendent's Accountant at Ottawa. Ont., vice G. E. Bolton, who has left the service.

E. C. Ferguson has been appointed Car Foreman at Ottawa, vice T. A. Musgrove resigned to enter C.N.R. service.

M. A. Fullington, heretofore Resident Engineer District 1, Ontario Division, Toronto, has been appointed Assistant Engineer, vice A. P. Walker, who has been granted three months' leave of absence.

M. Kelley, heretofore transitman at London, Ont., has been appointed acting Resident Engineer District 1, Ontario Division, Toronto, vice M. A. Fullington.

J. Brownlee, heretofore Superintendent District 4, Western Division, Cranbrook, B.C., has been appointed Superintendent District 1, Central Division, Kenora, Ont., vice J. J. Scully, transferred.

J. F. Sweeting has been appointed Industrial Agent Western Lines. Office, Winnipeg.

O. C. Walker has been appointed Inspector Refrigerator Service, Western Lines, vice R. A. Gamble, appointed Fuel Agent, Western Lines. Office, Winnipeg.

M. E. Tansey, heretofore Assistant Commissary Agent at Quebec, has been appointed Assistant Commissary Agent at Winnipeg, vice H. B. Bridges, resigned.

E. J. Stone, heretofore secretary to General Manager Western Lines, has been appointed chief clerk, vice E. W. DuVal, promoted.

H. J. Reed has been appointed night locomotive foreman at Winnipeg roundhouse, vice W. K. McLeod, transferred.

J. J. Scully, heretofore Superintendent District 1, Central Division, Kenora, Ont., has been appointed Superintendent District 1, Western Division, Moose Jaw, Sask., vice W. J. Uren, transferred.

E. W. DuVal, heretofore chief clerk to General Manager Western Lines, Winnipeg, has been appointed Trainmaster in charge of Maintenance and Operation of Calgary Terminals.

W. J. Uren, heretofore Superintendent District 1, Western Division, Moose Jaw, Sask., has been appointed Superintendent District 4, Western Division, Cranbrook, B.C., vice J. Brownlee, transferred.

J. J. Forster, heretofore Traveling Passenger Agent Atlantic Steamship Lines, Chicago, Ill., has been appointed City Passenger Agent there.

D. I. Lister has been appointed Traveling Passenger Agent C.P.R. Atlantic Steamship Lines, Chicago, Ill., vice J. J. Forster, promoted.

E. L. Sheehan has been appointed Traveling Passenger Agent C.P.R. Atlantic Steamship Lines at Chicago, Ill., vice W. F. Bloomquist, resigned.

The office of H. S. Carmichael, General Passenger Agent, has been transferred from 24 James St., Liverpool, Eng., to the company's European head office, 62 Charing Cross, London.

Department of Railways and Canals.—W. A. Bowden, who has been engaged in the engineering department for about five years, has been appointed Chief Engineer, which position has been vacant since the resignation of M. J. Butler, who was Deputy Minister and Chief Engineer.

Grand Trunk Pacific Ry.—E. McDonald, heretofore tracing clerk G.T.R. General Baggage Agent's office, Toronto, has been appointed baggage clerk G.T.P.R., Winnipeg.

C. Nickerson has been appointed shore steward G.T.P. Steamships, Vancouver, B.C.

Grand Trunk Ry.—W. E. Watt, having resigned, the position of Assistant Trainmaster at Richmond, Que., has been abolished. All reports previously made to him are now made to J. J. Connelly, Trainmaster, Island Pond, Vt.

J. Henderson has been appointed Roadmaster Districts 5 and 6 between Vaudrueuil and Kingston Jct., vice C. H. Storey, acting Roadmaster. Office, Brockville, Ont.

E. R. Battley, heretofore machinist at Stratford shops, has been appointed Locomotive Foreman at Fort Erie, Ont., vice C. A. Livingston, transferred.

C. A. Livingston, heretofore Locomotive Foreman at Fort Erie, Ont., has been appointed Locomotive Foreman at Durand, Mich., vice G. H. Wyatt, transferred to Nichols, Mich.

C. G. Orttenberger has been appointed City Passenger and Ticket Agent, Chicago, Ill., vice J. H. Burgis, promoted.

J. H. Burgis, heretofore City Passenger and Ticket Agent, Chicago, has been appointed General Agent Passenger Department, in charge of passenger traffic in Washington, Oregon and Idaho States, for the G.T.R., the G.T.P.R. and the G.T.P. Steamships. Office, Seattle, Wash.

Inland Lines, Ltd.—H. P. Swinton, heretofore Contracting Freight Agent C.P.R., Montreal, has been appointed Soliciting Freight Agent Inland Lines Ltd., at Montreal, reporting to the General Agent there.

Intercolonial Ry.—J. G. Boyd has been appointed Roundhouse Foreman at Gibson, N.B., vice E. S. White, resigned.

Irondale, Bancroft and Ottawa Ry.—R. S. Derbyshire has been appointed Superintendent, vice C. Hutchinson, resigned. Office, Irondale, Ont.

New York Central and Hudson River Rd., West Shore Rd., Boston and Albany Rd.—E. J. O'Hayer, Jr., has been appointed General Eastern Passenger Agent. Office, New York.

New York Central Lines.—D. R. McBain, heretofore Assistant Superintendent Motive Power New York Central and Hudson River Rd., Albany, N.Y., has been appointed Superintendent Motive Power, Lake Shore and Michigan Southern Ry., Lake Erie, Alliance and Wheeling Rd., Dunkirk, Allegheny and Pittsburg Rd., Lake Erie and Western Rd., Fort Wayne, Cincinnati and Louisville Rd., and Northern Ohio Ry., vice Le Grand Parish, resigned to take service with another company. Office, Cleveland, O.

R. B. Kendig, heretofore Mechanical Engineer, Lake Shore and Michigan Southern Ry., Cleveland, O., has been appointed General Mechanical Engineer New York Central Lines. Office, Grand Central Terminal, New York.

Reid Newfoundland Co.—The following appointments are reported:—

A. Graham, as General Roadmaster of main line and branches.

—. Cobb, as chief of construction on the Bonavista branch.

P. Hannon, as Roadmaster Division 3, between Clarenville and Bishops Falls.

J. Peddle, as Roadmaster Division 4, between Bishops Falls and Bay of Islands.

The Dominion Parliament last session voted $121,400 for the maintenance and operation of the Board of Railway Commissioners, and $10,000 to provide legal assistance in cases coming before it during the current financial year.

The other railways of the Canadian Northern Railway System traverse the finest summering country in **Nova Scotia, Cape Breton Island, Quebec, Western Ontario,** and the **West.** For booklets and information write to the Information Bureau, Canadian Northern Railway System, Toronto, Ont.

2 GRAND PRIZES AND 5 GOLD MEDALS

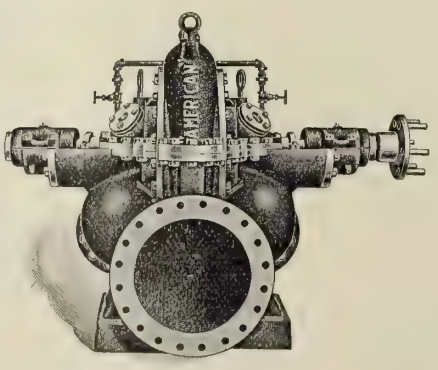
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

CLASSIFICATION RATINGS ON EVAPORATED VEGETABLES.

10241. April 19.—Re complaint of W. J. Cluff, of Edmonton, Alta., complaining of the l.c.l. rate charged by the C.P.R. on a shipment of 50 cases of evaporated potatoes from near Belleville, Ont., to Edmonton; and re application of the Classification and Advisory Committees of the Canadian Freight Association for approval of following changes in the Classification, viz.:

1. Elimination of item 23 on pg. 57 of Canadian Classification 14, covering ratings on evaporated potatoes.

2. Elimination of item 8 on pg. 65 of Classification, covering ratings on evaporated vegetables.

3. Addition of item in Classification, under heading of "Groceries," reading: "Vegetables, desiccated or evaporated: In bags, boxes or barrels, l.c.l. 3, c.l. 5. Upon the report and recommendation of the Chief Traffic Officer it is ordered that the proposed changes in the Classification be approved.

RATES ON PETROLEUM AND ITS PRODUCTS.

10356. April 25.—Re application of British American Oil Co., Ltd., of Toronto, under sec. 315 of the Railway Act, for order directing the G.T.R. Co. and the C.P.R. Co. to readjust the present rates from Toronto on petroleum and its products, in carloads, so that they may be properly related to the commodity rates on petroleum and its products, in carloads, from Petrolia and Sarnia. It is ordered that the tolls now charged from Toronto, Petrolia, Sarnia and Wallaceburg on petroleum and its products, in carloads, as these are enumerated in the current commodity tariffs of the companies from Petrolia and Wallaceburg, be revised, as follows, per 100 lbs, namely:—

To the Undermentioned Groups and Points.	From Toronto.	From Petrolia, Sarnia and Wallaceburg.
1. East of Toronto to Oshawa and Myrtle	5th class	17 cents
2. East of group 1 to Brighton and Indian River	5th class, max. 11 cents	19 cents
3. East of group 2 to Kingston and Sharbot Lake	14 cents	21 cents
4. East of group 3 to Brockville, Kemptville and Prescott	17 cents	23 cents
5. East of group 4 to Cornwall and Finch	19 cents	25 cents
6. East of group 5 to Montreal, also Valleyfield, Ottawa, Hull	20 cents	25 cents
7. Points between Smith's Falls, Kemptville, Valleyfield, Vaudreuil, and Ottawa	20 cents	25 cents

Per 100 pounds.

(b) To points on branch lines between the G.T.R. Toronto-Orillia main line and Belleville, the rates to be reasonably blocked on the basis of the corresponding group rates of section (a) with due regard to the grouping of the class tariffs filed under order 3258; the said branch line rates not to exceed the base (a) rates by greater differences (if any) than exist between the 5th class rates to the same points respectively.

(c) To points on the G.T.R. between Ottawa and Scotia Jct. and on the C.P.R. between Carleton Jct. and North Bay, also to points in the Province of Quebec west of and including Quebec and Megantic, the rates not to exceed the base (a) rates by greater differences (if any) than exist between the 5th class rates to the same points, respectively.

(d) To points on the C.P.R. in New Brunswick, except St. John, Fredericton, Marysville, and Gibson, the rates (including those "for furtherance") not to exceed the rates (a) to Montreal by greater differences than exist between the 5th class rates to Montreal and to the said points; the rate from Toronto to the said excepted points to bear the same proportion to the general group rates as the rate established from Petrolia, Sarnia and Wallaceburg to the same points.

(e) From Petrolia, Sarnia and Wallaceburg to points west of and upon the Grand Trunk Toronto-North Bay Line 5th class rates to be the maxima; but the present rates not to be increased by more than 10% to points east of Sarnia on the line through Stratford, and east of London and St. Thomas, to and including Toronto, Hamilton, Port Dalhousie, and those on the Niagara River (except that Galt may take the Guelph rate), nor by more than 20% to points west of and including London and St. Thomas, with the rate to Windsor as the maximum.

(f) From Toronto to points west of and upon the G.T.R. Toronto-North Bay Line the rates to be those for equivalent mileages from Petrolia and Sarnia, as prescribed in section (e).

(g) The rates on fuel or gas oil and tar, in tank cars, from Toronto, to bear the same proportion to the refined oil rates as any special rates provided thereon from Petrolia, Sarnia and Wallaceburg.

(h) For the purpose of this order, fractions of a cost less than one-half shall be waived, and one-half, or greater, may be charged as one cent.

The rates herein prescribed be made effective within 60 days from the date of the issuance of this order.

CHARGE FOR STOP-OFF "FOR ORDERS" ON FOREST PRODUCTS AT SARNIA TUNNEL, ONT.

10418. April 26.—Re order 6148, Jan. 21, 1909, fixing stop-over charge of 25c per car a day for 48 hours, and the car service toll thereafter, on lumber, shingles, timber, and other forest products, in carloads, originating in British Columbia, and consigned to Sarnia Tunnel, Ont., "for orders"; and re application of G.T.R. to amend the Order. It is ordered that order 6148 be amended by striking out 25 cents in the ninth line of the operative part of the order, and substituting therefor $1.

EXPORT LUMBER RATE TO MONTREAL.

10528. April 19.—Re application of Canadian Lumbermen's Association for disallowance of lumber tariffs of the C.P.R., no. E. 689; G.T.R., no. C.F. 83; C.N.R., no. 116, and C.N.O.R., no. 46, all effective May 1, 1908. It is ordered that the application be, and it is hereby, dismissed, in so far as it affects the rates in the said tariff on lumber for domestic use. And it is further ordered that the C.P.R., the G.T.R., and the C.N.Q.R. Companies publish and file tariffs to be made effective not later than June 15, showing rates on lumber to Montreal for export which in general shall be lower than the rates on lumber to Montreal, which appear in the above mentioned tariffs.

Telegraph and Cable Matters.

The convention of the Association of Railway Telegraph Superintendents, which was to have been held at Los Angeles, Cal., May 16, has been postponed to June 20. This has been done so that the associate members and others may take advantage of the lower railway

The G.T.P.R. has 1,118 miles of poles and 3,871 miles of wire now completed and in operation, in its telegraph system, and during the present year, will construct the following:—main line, Wolf Creek to Tete Jaune Cache, 179 miles, Prince Rupert to Kitselas, 100 miles; branch lines, Melville to Regina, 95 miles, Melville to Canora, 55 miles, Tofield to Calgary, 180 miles.

The Dominion Parliament has voted the following sums for renewals, improvements and extensions of the Government system of telegraphs:—generally, $14,000; Prince Edward Island and mainland, $1,750; Lower St. Lawrence and Maritime Provinces, $33,750; Cape Breton lines, $13,000; Quebec lines, $12,700; Saskatchewan and Alberta lines, $48,950; British Columbia lines, $101,865.66; and Yukon lines, $52,294.

A. B. Smith, Manager G.T.P. Telegraphs, who has been in British Columbia for some time in connection with the proposed extensions of the telegraph lines there, was looking over the route along the Skeena River recently, and it was expected that erection would be commenced towards the end of May, and the line connecting Prince Rupert with Skeena River points be in operation later in the summer. The telegraph line from Winnipeg westerly to Wolf Creek is completed, and four wires, including one solely for commercial purposes, are in operation between Winnipeg and Edmonton.

Among the Express Companies.

S. H. Piatt has been appointed route agent Great Northern Ex. Co., St. Paul, Minn.

J. E. Archer has been appointed agent Great Northern Ex. Co., at Vancouver, B.C., vice W. J. Kirby.

A. C. Scott has been appointed agent Great Northern Ex. Co., at Grand Forks, N.D., vice W. R. Porter, transferred.

W. C. Scott, who has been over 50 years in the Canadian Ex. Co.'s service, has retired from the Quebec agency.

T. M. Horsey, heretofore cashier and chief clerk Canadian Ex. Co., at Quebec, has been appointed agent at Quebec, vice W. C. Scott, retired.

W. R. Porter, heretofore agent Great Northern Ex. Co., Grand Forks, N.D., has been appointed agent at Seattle, Wash., vice I. Waring promoted.

The G.T.P.R. recently gave notice that its cartage business, which had hitherto been handled by the Canadian Northern Transfer Co., would from May 2, be taken over by the Canadian Express Co.

The Canadian Ex. Co. has opened its offices, for the summer season, at Beaumaris, Elgin House, Port Carling, Port Cockburn, Port Sandfield, Rosseau and Windermere, Ont.

The Canadian Express Co.'s officers and directors for the current year as elected recently, are, President, C. M. Hays; Vice President and Manager, J. Bryce; Secretary and Treasurer, F. Scott; other directors, E. H. Fitzhugh, W. Wainwright, M. M. Reynolds, H. Paton and E. J. Chamberlin.

I. Waring, heretofore agent Great Northern Ex. Co., Seattle, Wash., has been appointed Asistant Superintendent for lines west of Whitefish, Mont., and the position of General Western Agent, rendered vacant by the death of F. L. Clark has been abolished, the duties being transferred to the Assistant Superintendent.

The Nova Scotia Legislature has recently passed an act, providing that when any intoxicating liquor is shipped or sent c.o.d. by or through the agency of any express company or other means of conveyance, to be paid for on delivery, such shipping or sending shall be deemed a sale of intoxicating liquor at the place where such intoxicating liquor is delivered, and the shipper or sender thereof, shall be liable to all the penalties which, under any act of the Legislature, may attach to the sale of intoxicating liquor in such place.

ELECTRIC RAILWAYS.

Canadian Street Railway Association.

PRESIDENT, D. McDonald, Manager, Montreal St. Ry.; VICE-PRESIDENT, J. Anderson, Manager, Sandwich, Windsor and Amherstburg Ry.; SECRETARY-TREASURER, Acton Burrows, Managing Director, Railway and Marine World.

ASSOCIATION'S OFFICE, 157 Bay St., Toronto.

EXECUTIVE COMMITTEE.—P. Dubec, Secretary, Montreal St. Ry.; E. A. Evans, Chief Engineer, Quebec Ry. Light and Power Co.; R. J. Fleming, General Manager, Toronto Ry.; H. M. Hopper, Secretary-Treasurer, St. John Ry.; J. E. Hutcheson, Superintendent and Purchasing Agent, Ottawa Electric Ry.; C. B. King, Manager, London St. Ry.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager, Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Reports from New Westminster May 12 indicate that the Vancouver, Fraser Valley and Southern Ry., for the building of which between Vancouver and New Westminster, location plans have been approved by the Board of Railway Commissioners, is controlled by the B.C.E. Ry. Co. The route passes through what is known as the Hastings townsite, and the entire route has been staked out from New Westminster to False Creek. A contract is reported let to M. P. Cotton, of Vancouver, for clearing and grading of a section of about 7.5 miles, the work to be completed in three months. An order in council has been issued limiting the company's franchise through Hastings townsite to 21 years from Dec. 16, 1908, the date of the original agreement.

A car service for milk and small freight was inaugurated May 4 between Vancouver, New Westminster, Cloverdale and Langley Prairie. The management says it is impossible to put on a passenger service at present, owing to the large quantity of construction material to be moved.

Referring to the Chilliwack line, the Assistant Manager said recently that steel had been laid to Abbotsford, and ballasting completed to Harris road. The overhead work has also been completed to this point. About two-thirds of the work has been completed between Abbotsford and Sumas Mountain. Beyond this point to Chilliwack, 16 miles, there is some heavy work, notably the filling in of Sumas marsh.

In connection with the important radial lines being constructed from New Westminster, extensive works are under consideration in the city. The company's engineer and the Mayor went over the routes of a number of projected new lines May 9, with a view to a definite decision being reached. (May, pg. 399.)

Calgary St. Ry.—The commission operating this railway, which is owned by the city, is planning a number of extensions, which will add about eight miles to the existing track. T. H. McCauley is Superintendent.

Calgary, Alta.—E. A. Elton appeared before the railway committee of the city council, and authorized a plan for building a system of radial railways with that city as a center. He said that if a franchise were granted the company which he represented was prepared to complete and put in operation 10 miles of line to the end of 1911. In the proposed agreement the company's cars would be operated over certain of the city lines on terms, and power would be given the city to acquire the company's lines at any time during the currency of the franchise. The committee decided not to take any action. (May, 399).

Cape Breton Electric Co.—It was reported at a meeting of the Sidney Mines, N.S., council, May 10, that the company would build the extension of its line to Cranberry, as soon as the council got Pit St. in such shape as the work could be gone on with.

Central Ry. Co. of Canada.—The Dominion Parliament last session voted $28,300 to pay Molson's Bank, $25,000 deposit made on behalf of the C.R. of B., with interest at 3% from Dec. 5, 1905, to May 1, 1910. This deposit was made under the terms of an act of 1905 when the Ottawa River Ry. Co., obtained an extension of powers, and a change of its name to that of the Central Ry. of Canada. The extensive construction projected which it was hoped to carry out have apparently been abandoned, as the Ottawa River Navigation Co., still retains its independence, and the Irondale, Bancroft and Ottawa Ry., upon which the company had an option, has been acquired by the Canadian Northern Ontario Ry.

The Dominion Ry. and Plaster Co. has abandoned its proposal to construct an electric railway from Sydney to East Bay, N.S., in favor of a steam railway. (April, pg. 310).

Frank, Alta., and District.—A proposition is under consideration in Crow's Nest Pass district for the construction of an electric railway to connect up Frank, Blairmore, McLaren's Mill and Coleman. A 20-year franchise is being asked. (May, pg. 399.)

Grand Valley Ry.—The work of renewing the tracks in Brantford, Ont., formerly the Brantford St. Ry., is being rapidly progressed with. A proposition has been submitted for the extension of the line to the Holmidate district, to be laid on gravel instead of cement. If this is acceded to the line will be built at once. (April, pg. 311.)

Halifax Electric Tramway.—The question of the construction of second tracks and of extensions to existing lines, has been under consideration by the company and the city council for some time. The company desired permission to build a second track on certain of its lines, and the council is not de sirous of granting that permission, unless certain other lines are to be extended at the same time. The special committee has been authorized to continue negotiations, but it is not likely that any arrangements will be made which will lead to construction being started this year. (May, pg. 399.)

Hamilton Street Ry.—We are officially advised that the company is replacing its old rails with 87 lb. rails on steel ties, embedded in concrete, and paving between the tracks with wooden blocks, on the following streets:—James St. north, from Barton to Bay, 1,800 ft. of double track; King St. west, from Bay to Margaret, 3,000 ft. of double track; York St., from Queen to cemetery gate, 3,600 ft. of double track. (Dec., 1909, pg. 929.)

Hamilton, Waterloo and Guelph Ry.—The Dominion act authorizing the company to construct an extension of its projected line from near Hamilton to Toronto, provides that any extension across High Park shall run north of and parallel with the G.T.R., and keep at the same elevation as the G.T.R.; that it shall not receive and distribute passengers between Toronto's western boundary of the city and the terminal in the city, unless under authority of a by-law, but if the city and company cannot agree as to the terms of such a by-law the company may apply to the Board of Railway Commissioners to locate stations or stopping places within the city; the company shall not have power to do a local business within the city, these stopping places being only for the purpose of the convenience of persons coming into the city from outside points, or leaving the city for outside points. The company may enter into an agreement with the Hamilton Radial Ry. Co., but there is to be only one right of way through High Park and in Toronto. Securities for $25,000 a mile may be issued for double track lines. (April, pg. 311).

Kingston, Portsmouth and Cataraqui Electric Ry.—An arrangement has been made by which the company will be permitted to remove its track on the Williamsville line, which is at present unused. It is agreed that the company's rights over the street will not be impaired by the removal of the tracks. (Dec., 1909, pg. 929.)

Moncton Tramways, Electricity and Gas Co.—A by-law was submitted to the taxpayers of Moncton, N.B., recently, approving of an agreement for the construction of an electric railway in the city by the Moncton Tramways, Electricity and Gas Co. The agreement provides for the lease of the electric and gas plants now operated by the city council to the company for 39 years upon certain terms, and provision is made for starting the building and operation of an electric railway, not later than Nov. 30. Two miles of line are to be laid and operated within the city. (See Moncton Electric St. Ry. Heat and Power Co., Mar., pg. 231).

The Montreal Street Ry.'s application to the Quebec Legislature for power to build an underground railway system has been passed. For a couple of years the company has been investigating underground construction as a means of relieving the congestion of traffic, and concluding that it was the best asked authority to construct the same within four years.

The Suburban Tramway and Power Co., a subsidiary of the M.S.R. Co., was also granted power to construct an underground system, and its name was changed to the Public Service Corporation. (April, pg. 311).

Moose Jaw, Sask.—Under the terms of a franchise recently approved of by the taxpayers, three miles of track have to be in operation this year and an additional three miles in 1911. The franchise has been granted to an Ottawa syndicate composed of J. B. McRae, consulting engineer; Dr. P. B. Nielon, E. J. Daly, barrister; A. H. Dixon, electrical engineer, of Ottawa, Ont., and J. T. Cashman, broker, of Moose Jaw.

Nelson Electric Street Railway.—The grading for the reconstruction and extension of the lines was reported completed, and the poles erected for the overhead work, April 30. Tracklaying and ballasting has been practically completed, and it is expected that the operation of the cars will be started early in June. (May, pg. 399.)

Niagara, St. Catharines and Toronto Ry.—We are officially advised that track is laid and ballasting about completed on the line between Welland and Port Colborne, Ont., and that the overhead work is being installed. The diamonds for the railway crossings and the protective crossings are expected to be delivered at an early date. It is expected, if nothing unforseen happens, to have this line opened for traffic by July 1. It has not been definitely decided when the proposed extension from Port Colborne to Fort Erie will be begun. (May, pg. 399.)

Nipissing Central Ry.—A regular half-hourly service was inaugurated on this newly completed line between Cobalt and Haileybury, Ont., April 30. From midnight until 5 a.m. the service is hourly, and cars run on Sundays between 7 a.m. and 11 p.m. It has been decided to build a subway under the Temiskaming and Northern Ontario Ry. at Browning St., Haileybury. (May, pg. 399.)

Ontario West Shore Ry.—We have received information to the effect that about 20 miles have been graded from

"Here's The Job—Now PRODUCE"!

"The last man at this job was a fine chap, but he couldn't 'make good,' so we had to let him go. As I said before, the position calls for a TRAINED man.

Now It's 'UP TO YOU.'"

Suppose it were up to you—could you "make good?" What is the difference between you and the fellow able to "produce" as a foreman or superintendent or manager? Training—that's all. A thousand jobs await the man able to "produce." Employers want him—are always eager to secure his services. The world has no pity for failures; it says to every man, "get ready to 'produce.'"

Every month there are received at the I. C. S. upwards of 300 voluntary letters from men that spare time study has qualified to "produce." Those letters prove conclusively that there is a way for every man—for you—to get ready to "produce." The I. C. S. can help you. Are you willing to help yourself?

To find out all about how you can learn to "produce," mark and mail the coupon. Doing so will cost you only postage and will place you under absolutely no obligation.

SEND THE COUPON NOW.

Goderich to Amberley, and that track has been laid between Goderich and Leaburn, about three miles. The company is not yet operating cars over any portion of its line; nothing has been done in the way of erecting a power house, and it is not known when the work on the dam for developing water-power will be started. The company expects to complete the 20 miles this year, as track laying and grading is being proceeded with. It is intended to carry the line to Kincardine, so far as the present plans have been disclosed. The company has on hand a locomotive and a number of construction cars. At a meeting of the Goderich Town Council, April 26, the Public Works Committee was authorized to confer with the company's representatives and prepare a draft agreement respecting the entry of the line into the town. (May, pg. 399.)

Ottawa Electric Ry.—Plans have been approved by the Ottawa city council for the extension of the street railway lines east and south, and it is expected that construction will be started immediately. (May, pg. 399).

People's Ry.—The city committee managing the Guelph Radial Ry. has notified the City Council that it sees no objection to granting a right-of-way for this projected railway to enter the city from Berlin, via Bridgeport, Bloomingdale and New Germany, Ont. (May, pg. 399.)

Quebec Ry., Light and Power Co.—We are officially advised that it has been decided to build an eight story building on the site at Jacques Cartier Market, lately acquired. Plans and specifications are not completed. The foundations will be made sufficiently strong to carry an additional four stories, should it be deemed advisable to add them later on. At first the company will require four floors for its own use, and will lease the balance for offices. Tenders for clearing away the old market buildings have been accepted and the work is in progress.

With reference to extensions of the company's lines, it is intended to build a double track extension westward from Maple Ave. to the top of Sillery Hill, 2.5 miles. Application has been made for the approval of location plans by the Board of Railway Commissioners, and as soon as this is received grading will be started. Rails and other material have been ordered, and it is expected to have the extension in operation early in the summer. It is not at present the company's intention to extend its lines to the Quebec Bridge site, nor is it intended to build a second track on the line between Montmorency Falls and Ste. Anne de Beaupre this year. (May, pg. 401.)

Regina, Sask.—The taxpayers on May 4, defeated the proposal to grant a franchise to a Winnipeg company to construct a street railway in the city, and on May 13, by a vote of 410 to 26, authorized the City Council to proceed with the construction of a street railway to be operated by the municipality. (May, pg. 401.)

St. Catharines, Ont.—An endeavor is being made to raise $50,000 in shares towards the erection of a high level bridge across the old Welland Canal. The plans provide for a bridge of sufficient strength and width to carry electric railway tracks, as well as a highway for general traffic. The bridge company has no direct connection with any electric railway.

St. John Ry.—A new switchboard is being placed in the company's power house at St. John, N.B., and there is being added to the power plant a 500 k.w. exhaust steam turbine, connected to a 750 k.w. motor generator set for street railway work. The additions to the plant are being supplied by the Canadian Westinghouse Co., Hamilton. (Jan., pg. 59.)

St. Thomas Street Ry.—It was decided at the meeting of the St. Thomas, Ont., City Council, April 28, to maintain for the present the roadbed of the municipal electric railway in the best possible shape, and make all preparations for the submission of a by-law at the elections in Jan., 1911, to make thorough repairs. (May, pg. 401.)

Sherbrooke Ry. and Power Co.—The Quebec Legislature has amended the company's charter of incorporation, giving it power to build extensions to engage in developing and distributing power, etc. The plans for the extensions have been prepared, and it is said that as soon as financial arrangements have been completed contracts will be let for the work.

The new company is preparing to make an issue of bonds to provide funds for retiring existing obligations and to provide funds for reconstructing the line and building extensions. (May, pg. 401.)

Toronto and York Radial Ry.—We are officially advised with reference to press reports as to the immediate construction of proposed extensions, notably one from the Scarboro line to Markham, that the company has not made any arrangements for, or given any consideration lately, to any plans for extending its lines. (May, pg. 401.)

Toronto, Niagara and Western Ry.—The Toronto City Council has been notified that the company is desirous of obtaining an order from the Board of Railway Commissioners permitting it to build its projected railway across Davenport Road and St. Clair Ave., in obtaining an entrance into the city. (July, 1909, pg. 523.)

Toronto Tube Railway proposals.—J. Forgie and C. M. Jacobs, who were engaged by the Mayor and City Engineer, to make a special report on the question of the construction of a tube railway in Toronto, arrived in the city May 18, to make their investigations. (May, pg. 401).

Winnipeg Electric Ry.—We are advised that the company, through its subsidiary the Winnipeg, Selkirk and Lake Winnipeg Ry., will probably undertake the construction of a line into Red River Park, belonging to the town of Selkirk, Man., this year.

Some residents of Kildonan, Man., are protesting against the agreement entered into between the municipality and the company, and are considering the desirability of testing its legality in the courts.

The question of an agreement for the extension of the Headingly car line to St. Francois Xavier is still under consideration. (April, pg. 313).

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for March, $255,423; working expenses $159,681; net operating earnings $95,742; renewal funds $17,852; net earnings $77,890; approximate income from investments $16,500; net income $94,390; against $186,724 gross earnings; $114,447 working expenses; $72,277 net operating earnings; $13,958 renewal funds; $58,319 net earnings; $13,550 approximate income from investments; $71,869 net income for March, 1909. Aggregate gross earnings for nine months ended Mar. 31, $2,224,324; net earnings including approximate income from investments, $955,538, against $1,712,281 and $783,133 for same period 1908-09.

Calgary St. Ry.—Gross earnings for Apr., $14,613.20; maintenance of way and structures $540.88; maintenance of equipment $656.93; transportation expenses $5,586.66; general expenses $443; total operating expenses $7,227.47; net earnings $7,385.73. Operating expenses per car mile, 14.193.

Cape Breton Electric Co.—Gross earnings for Feb., $18,454.43, against $15,-891.54 for Feb., 1909. Net earnings, $2,162.20, against a loss of $622.44 for Feb., 1909. The deductions include operating expenses, interest charges and appropriations for sinking fund.

Gross earnings for 12 months ended Dec. 31, 1909, $240,708.87; operating expenses $142,501.67; net earnings $98,-207.20; interest charges and taxes $48,-940.22; improvement fund $11,500; dividends, preferred stock 6% $14,040; balance $23,726.98. The foregoing figures include one-half of the earnings and expenses of the Sydney and Glace Bay Ry. The company does the entire electric lighting and electric railway business in Sydney, the electric lighting in North Sydney, the ferry business between Sydney and North Sydney, and operates an interurban line between North Sydney and Sydney Mines. It owns $220,000 of the $423,000 outstanding first mortgage bonds, and half of the $500,000 capital stock of the Sydney and Glace Bay Ry., an interurban line between Sydney and Glace Bay, 19 miles. The company is managed by Stone and Webster, Boston, Mass.

Halifax Electric Tramway.—Railway receipts for April, $16,114.66, and for two weeks ended May 14, $7,020.46, against $14,495 and $6,623.70 for same periods 1909.

Hamilton St. Ry.—The earnings for the three months ended Mar. 31, were $81,052, an increase of about $13,000 over those for the same period 1909.

London and Lake Erie Ry. and Transportation Co.—The directors have been authorized to issue $750,000 of 40 year 5 per cent. bonds for the purpose of paying for the 28 miles of line, with its plant, equipment, machinery, franchises, etc., purchased at the sale of the South-Western Traction Co. The bonds are to be secured by a first mortgage to the Trusts and Guarantee Co., Toronto.

Montreal St. Ry.—Passenger earnings for April, $335,941.37; miscellaneous earnings $8,823.74; total earnings $344,-765.11; operating expenses $190,842.05; net earnings $153,923.06; city percentage on earnings $29,850.28; interest on bonds and loans $14,732.98; rent leased lines $552.90; taxes $4,000; total charges $49,136.16; surplus $104,786.90; expenses per cent. of earnings 55.33, against $290,050.26 passenger earnings; $4,323.59 miscellaneous earnings; $294,-373.85 total earnings; $170,551.62 operating expenses; $123,822.23 net earnings; $22,024.96 city percentage on earnings; $15,099.83 interest on bonds and loans; $498.67 rent leased lines; $3,000 taxes; $40,623.46 total charges; $83,198.77 surplus; 57.94 expenses per cent. of earnings; for Apr., 1909. Aggregate total earnings for seven months ended Apr. 30, $2,337,001.32; operating expenses $1,407,826.42; net earnings $929,174.90; total charges $284,114.59; surplus $665,060.31, expenses per cent. of earnings 60.24, against $2,107,716.40 aggregate total earnings; $1,320,135.34 operating expenses; $787,581.06 net earnings; $238,666.04 total charges; $548,913.02 surplus; 62.63 expenses per cent. of earnings for same period 1908-09.

Toronto Ry.—Gross earnings for March, $341,999; expenses $184,150; net earnings $157,849, against $298,142 gross earnings; $161,133 expenses; $137,009 net earnings for March, 1909. Aggregate gross earnings for three months ended Mar. 31, $974,274; net earnings $471,933, against $861,768 and $393,707 for same period 1909.

Toronto Ry. Extensions.

Judgment was delivered May 18 on the application of the Toronto Ry., to the Ontario Railway and Municipal Board, for approval of the routes selected by the company and submitted to the City Engineer, to enable it to carry out the Board's order of Dec. 8, 1908, and to restrain the city from preventing the company from proceeding with the work. The decision of the Board is interesting, in view of the decision of the Judicial Committee of the Privy Council in London, Eng., Mar. 18, and also of the legislation passed during the closing hours of the last session of the Ontario Legislature, both of which were published in full in our April issue. The judgment, which was delivered by Chairman J. Leitch, K.C., and concurred in by the other members, A. B. Ingram and H. N. Kittson, is as follows:—

"The company alleges that it requires and has selected Teraulay St. from Queen St. to Agnes St., thence west along Agnes St. and across University Ave., through Anderson St. and along St. Patrick to Bathurst St., Victoria St. from Adelaide St. to Wilton Ave., Wilton Ave. from Victoria St. and across the new bridge over the Don to east of Broadview Ave., Shuter from Yonge to Victoria St., Harbord St. from Spadina to Ossington Ave., Louisa St. from Teraulay St. to James St., and James St. from Louisa to Queen St., for the extension of its car lines, and that it has prepared plans the same as the plans of other portions of its railway, and has submitted them to the City Engineer, and asks the Board's approval. These streets are in addition to Adelaide St. from Jarvis to Bathurst St., Bay St. from Front to Queen St., University Ave. from Queen to College St., Richmond St. from Victoria to Church St., and Wellington St. from Church to York St., which were the subject of the Board's order of Dec. 8, 1908, and of the subsequent appeal which ended in the Privy Council. These streets are necessary for the construction of the 15 miles of double track and for the operation of the 100 new cars which the Board ordered the company to construct May 17, 1907.

Counsel for the city raised the question that the plans which the company submitted to the City Engineer were insufficient, but that question was set at rest by the company undertaking to furnish him with any further details or drawing which he may require. The city also relied on the provisions of 10 Edward VII., chap. 81, which provides that the company cannot commence the construction of extensions without first having obtained the Board's permission and approval. Counsel for the city addressed to the Board a very lucid exposition of the intent and design of the legislation of last session and the policy which should be adopted in its application: that it is perfectly clear that the legislation of last session was intended to secure a reasonable, proper and adequate railway service for the public, and to prevent the company from selecting streets for the construction of extensions of their lines that were not necessary and convenient for the public service and in the public interests. He urged very strongly on the Board that the company should not be permitted to construct lines on University Ave. in particular. The Board has no quarrel with his exposition of the law, but is of opinion that the legislation is not retroactive in so far as University Ave. and the other streets selected by the company, and which were the subject of the Board's order of Dec. 8, 1908, and of the appeals to the Court of Appeal and Privy Council, are concerned. To hold that the Board has power to prevent the construction of the company's lines on those streets would be to invite reversal by the Court of Appeal and the Privy Council, and would tie up the construction of extensions for another two years. The lines selected by the company, and which were the subject of the Board's order of Dec. 8, 1908, will have to rest where the judgment of the Court of Appeal and Privy Council left them.

In reference to the streets which are the subject of this application, since the argument counsel for the company has addressed a letter to the Board saying that the Manager had instructed him to amend his application by striking out the lines on Louisa St. from Teraulay to James St., and on James St. from Louisa to Queen St., and to say that upon full consideration of the matter, and after considering the argument presented by the city's counsel upon the subject, with which he was impressed, it is the desire of the company to withdraw that part of the application. The Board, therefore, only requires to deal with the remaining streets:—Teraulay, Agnes, St. Patrick, Victoria, Wilton Avenue, Shuter, and Harbord. So far as the proposed extensions on these streets are concerned, the Vice Chairman and Mr. Kittson have inspected them, and have carefully considered whether or not they are necessary or convenient for the public service, and whether or not lines on them would be in the public interest. Their examination of these streets, and taking into account the number of people to be carried, corroborates the evidence of the company that these lines were selected by the company in the public interest. Both the city and the company, while disagreeing as to some of the streets, agree that the extensions are an absolute necessity for the public and should be built at once. The extensions covered by the order of Dec. 8, 1908, and by this application will require about 26 miles of single track. The Board is of opinion that the public interest will be served by approving the application of the company, and thereby securing the construction of the new lines and cars, and we approve and order accordingly. There will be no costs, but the company will require to affix $20 in stamps to the formal order."

Grand Trunk Pacific Ry.—Replying to a question in the House of Commons April 28, the Minister of Finance stated, that the amounts of G.T.P.R. bonds guaranteed to Mar. 31, was:—By the Dominion of Canada, £5,200,000; by the G.T.R., series A., £2,100,000; series B., £1,354,000; Lake Superior branch, £1,550,000; Prairie section, £10,000,000. All of these bonds had been issued Mar. 31.

New Brunswick Public Utilities Commission.—The members of this Commission have been appointed as follows:—D. McVince, K.C., Woodstock, Chairman; O. M. Melanson, merchant, Shediac, and G. O. D. Otty, barrister, Hampton; with F. P. Robinson, Fredericton, as Secretary.

Intercolonial Ry.—Parliament has voted $7,000,000 for the I.C.R., and $35,000 for the Windsor branch on account of collection of revenue for the current year.

Prince Edward Island Ry.—On account of collection of revenue the Dominion Parliament has voted $455,000 for the expenses of the current year.

Power Brakes for Electric Cars.

On Nov. 25 last the Board of Railway Commissioners' secretary notified electric railway companies under its jurisdiction that the Board would on Dec. 7 consider the question of air brake equipment on the Hamilton and Brantford Ry. and the Hamilton Radial Electric Ry., and also a proposed order requiring all electric railways subject to the Board's jurisdiction to equip their cars with automatic air brakes, as well as hand brakes, as an additional safeguard in case of damage or breakage to the air brake equipment. The President of the Canadian Street Railway Association wrote the Board's secretary suggesting that the hearing be deferred, and that the question be taken up between the Association's Executive and one of the Board's officials, so that it might be thoroughly gone into and some mutually satisfactory conclusion recommended to the Board. The Board's Secretary replied that the request would be considered when the case came up for hearing.

At the Board's sitting on Dec. 7, Col. H. H. McLean, M.P., one of the Association's counsel, requested that the hearing be adjourned on account of the short notice given to companies, and that the whole question be referred to the Board's Chief Operating Officer, to hold a conference with the Association's executive committee, so that it might be fully discussed. The Board granted an adjournment of the hearing until Feb. 4, and on Jan. 11 the conference between the executive and the Chief Operating Officer was held, the Association being represented by D. McDonald, President; J. Anderson, Vice President; J. E. Hutcheson and Acton Burrows, Secretary-Treasurer. E. P. Coleman, Manager of Railways, Dominion Power and Transmission Co., represented the two Hamilton companies named in the proposed order. On behalf of the Association it was contended that the proposed order was altogether too sweeping in its character, and that power brakes were not necessary on single truck cars, and on the smaller double truck cars. It was finally decided to hold tests of power and hand brakes at Ottawa under the Association's auspices, at which the Chief Operating Officer would be present or represented and the Board's hearing was further adjourned to May 3. The Association's Secretary-Treasurer proceeded to make arrangements for holding the tests, and the President appointed J. E. Hutcheson, Ottawa Electric Ry.; D. E. Blair, Montreal St. Ry., and W. R. McRae, Toronto Ry., to take charge of them. The Secretary Treasurer also obtained a mass of information from Canadian and U.S. sources in support of the Association's contention that the proposed order was unnecessary. This was submitted to the Chief Operating Officer, and as a result of conferences between him and J. E. Hutcheson and E. P. Coleman, a modification of the proposed order was suggested requiring that all electric railways subject to the Board's jurisdiction should within three years equip all passenger cars of 37 ft. or more in length over all, or weighing 35,000 lbs or more, with power brakes to be approved by the Board, in addition to hand brakes.

When the matter came up for decision on May 3, the members of the Board present took the ground that three years was too long a period to allow. A. H. Royce and J. E. Hutcheson appeared for the Association, and E. P. Coleman, representing the Hamilton companies named, strongly urged its adoption, but the Board decided otherwise and passed the following order, 10462:—

"The air brake equipment on Ham-

ilton & Brantford Ry. and Hamilton Radial Electric Ry.; and the proposed order requiring all electric railway companies subject to the Board's jurisdiction to equip their cars with automatic air brakes, as well as hand brakes, as an additional safeguard in case of damage or breakage to the air brake equipment: It is ordered as follows:—1. On or before June 1, 1911, all electric railway companies under the Board's jurisdiction shall equip all rolling stock in use by them of 37 ft. or over in length, or of the weight of 35,000 lbs. or more, with power brakes, to be approved of by the Board, in addition to hand brakes and proper sanding appliances. 2. Immediately upon the completion of said equipment, the same railway companies shall notify the Board thereof and furnish a detailed account of the rolling stock so equipped.

In preventing by the incontrovertible evidence submitted, the passing of the drastic order first proposed, the Association's executive performed a valuable service to electric railway companies. J. E. Hutcheson devoted considerable time to the presentation of the matter, and is entitled to the warmest thanks for the excellent work done.

Electric Railway Notes.

The Winnipeg Electric Ry. has added to its rolling stock a new pay-as-you-enter car, built at its own shops.

The B.C. Electric Ry. has received five 30 ft. semi-convertible double-ended pay-as-you-enter car bodies from the Ottawa Car Co.

A passenger on a Montreal street car pleaded guilty May 11, to using an old transfer. A second charge of punching holes in it with attempt to deceive is pending.

The Calgary St. Ry. has received three pay-as-you-enter cars from the Preston Car and Coach Co., Preston, Ont., each 45 ft. long, and has also ordered three similar cars from the Ottawa Car Co., Ottawa, for delivery in June.

The Nipissing Central Ry. is issuing workmen's tickets at a rate of 21 trips for $1 between Cobalt and Haileybury, Ont. A half-hourly service is given between 5 a.m. and midnight, and hourly during the intervening time.

The London and Lake Erie Ry. and Transportation Co. is operating a Sunday service of cars between London and Port Stanley. Some residents of both places are protesting and are considering the propriety of taking legal proceedings against the company.

The Toronto Ry., as a contribution to the Y.M.C.A. building fund in Toronto, promised that the receipts, comprising cash and the value of tickets, deposited in the fare boxes, above $5,000 on May 7, should be handed over. The donation was $10,315.56.

H. M. Hopper, heretofore Secretary-Treasurer St. John Ry., St. John, N.B., has been appointed General Manager, Secretary and Purchasing; vice W. Z. Earle, Manager, resigned. A. Seely, heretofore Auditor, has been appointed Treasurer.

The report of the appointment of W. H. Elson, mentioned in our last issue, has been confirmed as Trainmaster for B.C. Electric Ry., interurban lines, New Westminster, Lulu Island and Eburne, with office at Vancouver. He was formerly C.P.R. conductor at Revelstoke.

W. T. Piggott, who has resigned the General Managership of the Windsor, Essex and Lake Shore Rapid Ry., through pressure of other business, will continue to act as director of the company in which he has a considerable interest, but will devote his time chiefly to his lumber interests at Chatham, Ont.

The Nipissing Central Ry., operating between Cobalt and Haileybury, Ont., reports the road open for traffic. During the first day 2,300 passengers were carried on the two cars, after which an accident to the machinery caused a stoppage for three days. The service was resumed May 4, and on the succeeding day, 3,500 passengers were carried.

In connection with the act passed last session of the B.C. Legislature, to which reference was made in our last issue, providing for the inspection of tramways, which, for the purpose of the act, includes street railways, Wm. Ray of Vancouver, has been appointed Inspector of Tramways, reporting to the Attorney General.

The Calgary St. Ry. Commissioners have increased the wages of employes, from 21c. to 25c. an hour for the first year, and 27c. for the second year. An agreement has been signed for two years at fixed rates of pay, on the understanding that no organization of any kind is to take place, the commission being the sole judge of qualifications.

The Toronto postmaster has issued an order to carriers of special delivery letters, by which they are forbidden to ride on cars free, from May 2. R. J. Fleming, Manager Toronto Ry., interviewed the Postmaster General recently, regarding an increase in the grant from the Department for carrying postmen free, which it is claimed is being carried on at a considerable loss.

A. Eastman, heretofore General Passenger Agent Utica and Mohawk Valley Ry., Oneida Ry., and Syracuse Rapid Transit Co., Syracuse, N.Y., has been appointed General Manager Windsor, Essex and Lake Shore Rapid Ry., vice W. T. Piggott, resigned, but who remains as a director. P. H. Scott, heretofore in Pere Marquette Rd. service, London, Ont., has been appointed Traffic Manager. Offices, Kingsville, Ont.

A Vancouver dispatch of May 20 says only three damage actions against the B.C. Electric Ry., arising out of the accident on the interurban line at Lakeview in Nov., 1909, resulting in 14 persons being killed, have yet reached trial. The first was brought by T. E. Slayton's widow. The company did not deny liability. The jury assessed the damages at $14,000. The judge, without a jury, gave T. E. Turtle's widow $8,000 damages. The jury awarded J. D. Taylor, for the wreck of his nervous system, $15,000. Several cases were settled out of court. Others will come up at the end of the criminal assizes.

A. Eastman, who has been appointed General Manager Windsor, Essex and Lake Shore Rapid Ry., was from 1892 to 1901, freight and ticket clerk and telegraph operator G.T.R., Detroit, Mich., and assistant agent M.C.R., Detroit; 1901 to 1902, travelling express passenger agent Detroit United Ry.; 1902 to 1903, general express agent Utica and Mohawk Valley Ry.; 1903, division superintendent Detroit United Ry.; subsequently, general express agent Utica and Mohawk Valley Ry, Oneida Ry., and Syracuse Rapid Transit Co., and in 1908 he was appointed General Passenger Agent of these railways, which position he held to May 1, the date of his present appointment.

The recent case of J. M. Selkirk and W. Simpson of Leamington, against the Windsor, Essex and Lake Shore Rapid Ry., and W. Newman and A. J. Nelles, which was dismissed, as against the company, and decided against the other two defendants, the plaintiffs being awarded $1,000 and costs, has been in the courts again, and the previous judgment reversed on the appeal of the two defendans. Mr. Justice Riddell found that the provisional directors had no power to bind the company, yet unorganized, by making the contract in question as a corporate liability, and therefore placed liability for the amount on the two officers who executed the contract, on the ground that they had represented the competence of the company as a matter of fact and so become answerable in damages to the amount of the bond; but by the special act, the provisional directors may agree to pay for the services of persons who may be employed by the directors for the purpose of assisting the directors in furthering the undertaking or for the purchase of the right of way, and any agreement so made shall be binding on the company. The first judgment was set aside, and judgment entered against the company for $1,000 and costs.

The Ontario Divisional Court has confirmed a judgment of $245.45 given by a lower court in favor of W. N. Warburton, for alleged wrongful dismissal from the position of Manager of the Windsor, Essex and Lake Shore Rapid Ry.

The Third Avenue Rd. Co. of New York tried a gasoline-electric car on its crosstown lines last winter. Now another type of car is being tried, and a comparison will be made of the two. The new car is a reconstructed horse car provided with storage batteries and a pair of five horse-power motors. The battery is placed under the seats of the car, and has a rating of 420 ampere-hours at 84 volts. It is made up of 29 plates per cell, and there are 44 cells at each side of the car. The gases that are generated by the battery are carried off by a ventilating system and exhaust under the rear platform. The car weighs only six tons fully loaded. It has been found to consume in actual service only 0.54 watt-hour per ton mile, while maintaining a speed of six miles an hour with nine stops per mile.

Ottawa Electric Railway Wages.

As a result of negotiations between the Ottawa Electric Ry. Co. and its employes, J. S. Hutcheson, Superintendent, issued the following bulletin recently:—

The following is the schedule of wages, etc., for Conductors and Motormen to take effect May 1:—1st year's service, 19c. per hour; 2nd year's service, 20c. per hour; 3rd year and after, 22c. per hour.

Sunday work will be paid for 2c. per hour advance on the above rates. Regular men will only be booked to work alternate Sundays without their consent. They will, however, be expected to work when booked, unless given leave of absence. Spare men will be expected to work every Sunday if required, but leave of absence may be had occasionally on application to the Inspector.

The rates for work on snow sweepers and plows will be as follows:—From 6 a.m. to 12 midnight, 22½c. per hour; from 12 midnight to 6 a.m., 24c. per hour.

The hours of work for regular men will be as at present, 10 hours constituting a day's work, or as near 10 hours as the schedule of runs will permit. Men will not be expected to work beyond the full day unless they are agreeable to do so, or in case of absolute necessity.

Clothing of Conductors and Motormen will consist as follows:—For summer: full suit, coat, vest and pants; for winter: trousers every year, overcoat every second year. All conductors and motormen must be so provided. The Company will pay full cost of such clothing for all men in the service over one year; and half the cost of those in their first year. Uniform caps and badges will be supplied by the Company without charge.

C.P.R. LANDS

The Canadian Pacific Railway Company have 3,000,000 acres of selected lands for sale in Manitoba, and Saskatchewan.

Maps, as enumerated below, showing these lands in detail, will be sent free on application.

Map No. 1—Winnipeg to Second Meridian	$ 8.00 to $15.00 per acre
Map No. 2—South-Eastern Saskatchewan, 2nd to 3rd Meridians	10.00 to 25.00 per acre
Map No. 3—Main Line, 3rd and 4th Meridians (generally)	8.00 to 10.00 per acre
Map No. 4—Part of Western Saskatchewan, 3rd to 4th Meridians	10.00 to 25.00 per acre
Map No. 5—South-Western Alberta	8.00 to 25.00 per acre

All prices are subject to change without notice.

TERMS OF PAYMENT

An actual settler may purchase not more than 640 acres on the ten instalment plan by paying a cash instalment at time of purchase, interest at six per cent. on the unpaid purchase money at the end of the first year, and the balance of the principal, with interest, in nine equal instalments annually thereafter, as shown in the following table:

160	Acres at	$ 8.00	per acre,	cash payment	$191.70	first year's interest	$ 65.28	and nine instalments of	$160.0
"	"	9.00	"	"	215.70	" " "	73.46	" "	180.0
"	"	10.00	"	"	239.70	" " "	81 62	" "	200.0

GRAND MASTER, Capt. J. H. McMaugh, Toronto, Ont.; GRAND SECRETARY-TREASURER, Capt. H. O. Jackson, 376 Huron St., Toronto.

The Water-Carriage of Goods Act.

Following is the full text of that important measure which was passed at the Dominion Parliament's recent session:—

1. This Act may be cited as The Water-Carriage of Goods Act.

2. In this Act, unless the context otherwise requires:—

(a) "goods," includes goods, wares, merchandise, and articles of any kind whatsoever, but does not include live animals;

(b) "ship" includes every description of vessel used in navigation not propelled by oars;

(c) "port" means a place where ships may discharge or load cargo.

3. This Act applies to ships carrying goods from any port in Canada to any other port in Canada, or from any port in Canada to any port outside of Canada, and to goods carried by such ships, or received to be carried by such ships.

4. Where any bill of lading or similar document of title to goods contains any clause, covenant or agreement whereby:—

(a) the owner, charterer, master or agent of any ship, or the ship itself, is relieved from liability for loss or damage to goods arising from negligence, fault, or failure in the proper loading, stowage, custody, care or delivery of goods received by them or any of them to be carried in or by the ship; or,

(b) any obligations of the owner or charterer of any ship to exercise due diligence to properly man, equip, and supply the ship, and make and keep the ship seaworthy, and make and keep the ship's hold, refrigerating, and cool chambers, and all other parts of the ship in which goods are carried, fit and safe for their reception, carriage and preservation, are in any wise lessened, weakened or avoided; or,

(c) the obligations of the master, officers, agents, or servants of any ship to carefully handle and stow goods, and to care for, preserve, and properly deliver them, are in any wise lessened, weakened or avoided;

such clause, covenant or agreement shall be illegal, null and void, and of no effect, unless such clause, covenant or agreement is in accordance with the other provisions of this Act.

5. Every bill of lading, or similar document of title to goods, relating to the carriage of goods from any place in Canada to any place outside of Canada shall contain a clause to the effect that the shipment is subject to all the terms and provisions of, and all the exemptions from liability contained in, this Act; and any stipulation or agreement purporting to oust or lessen the jurisdiction of any court having jurisdiction at the port of loading in Canada in respect of the bill of lading or document, shall be illegal, null and void, and of no effect.

6. If the owner of any ship transporting merchandise or property from any port in Canada exercises due diligence to make the ship in all respects seaworthy and properly manned, equipped and supplied, neither the ship nor the owner, agent or charterer shall become or be held responsible for loss or damage resulting from faults or errors in navigation or in the management of the ship, or from latent defect.

7. The ship, the owner, charterer, agent or master shall not be held liable for loss arising from fire, dangers of the sea or other navigable waters, acts of God or public enemies, or inherent defect, quality or vice of the thing carried, or from insufficiency of package, or seizure under legal process, or for loss resulting from any act or omission of the shipper or owner of the goods, his agent or representative, or from saving or attempting to save life or property at sea, or from any deviation in rendering such service, or other reasonable deviation, or from strikes, or for loss arising without their actual fault or privity or without the fault or neglect of their agents, servants or employes.

FRANK PLUMMER,
General Manager Canadian Lake Transportation Co., Ltd., and President Dominion Marine Association.

8. The ship, the owner, charterer, master or agent shall not be liable for loss or damage to or in connection with goods for a greater amount than $100 per package, unless a higher value is stated in the bill of lading or other shipping document, nor for any loss or damage whatever if the nature or value of such goods has been falsely stated by the shipper, unless such false statement has been made by inadvertence or error. The declaration by the shipper as to the nature and value of the goods shall not be considered as binding or conclusive on the ship, her owner, charterer, master or agent.

9. Every owner, charterer, master or agent of any ship carrying goods, shall on demand issue to the shipper of such goods a bill of lading, showing, among other things, the marks necessary for identification as furnished in writing by the shipper, the number of packages or pieces, or the quantity or the weight, as the case may be, and the apparent order and condition of the goods as delivered to or received by such owner, charterer, master or agent; and such bill of lading shall be prima facie evidence of the receipt of the goods as therein described.

10. In case of wood goods, notwithstanding anything in the charter party, bill of lading, or other shipping document, the owner, charterer, master, or agent of the ship, or the ship itself, shall only be bound to deliver to the consignee, the pieces received from the shipper, and shall not be held responsible for deficiency in measurement; and any words inserted in any charter party, bill of lading or other shipping document for the purpose of making the owner, charterer, master or agent of the ship, or the ship itself, liable for deficiency in measurement in such case shall be illegal, null and void and of no effect.

11. When a ship arrives at a port where goods carried by the ship are to be delivered, the owner, charterer, master or agent of the ship shall forthwith give such notice as is customary at the port, to the consignees of goods to be delivered there, that the ship has arrived.

12. Everyone who, being the owner, charterer, master or agent of a ship—

(a) inserts in any bill of lading or similar document of title to goods any clause, covenant or agreement declared by this Act to be illegal; or makes, signs, or executes any bill of lading or similar document of title to goods containing any clause, covenant or agreement declared by this Act to be illegal;

without incorporating verbatim, in conspicuous type, in the same bill of lading or similar document of title to goods, section 4 of this Act; or,

(b) refuses to issue to a shipper of goods a bill of lading as provided by this Act; or,

(c) refuses or neglects to give the notice of arrival of the ship required by this Act;

is liable to a fine not exceeding $1,000, with cost of prosecution; and the ship may be libelled therefor in any Admiralty District in Canada within which the ship is found.

2. Such proportion of any penalty imposed under this section as the court deems proper, together with full costs, shall be paid to the person injured, and the balance shall belong to his Majesty for the public uses of Canada.

13. Every one who knowingly ships goods of an inflammable or explosive nature, or of a dangerous nature, without before shipping the goods making full disclosure in writing of their nature to, and obtaining the permission in writing of, the agent, master or person in charge of the ship, is liable to a fine of $1,000.

14. Goods of an inflammable or explosive nature, or of a dangerous nature, shipped without such permission from the agent, master or person in charge of the ship, may, at any time before delivery, be destroyed or rendered innocuous, by the master or person in charge of the ship, without compensation to the owner, shipper or consignee of the goods; and the person so shipping the goods shall be liable for all damages directly or indirectly arising out of such shipment.

15. This Act shall not apply to any bill of lading or similar document of title to goods made pursuant to a contract entered into before this Act comes into force.

16. This Act shall come into force September 1, 1910.

The name of the steamboat Columbia has been changed by order in council to Yennek.

THE DREDGE SHUNIAH.

The Great Lakes Dredging Co.'s suction dredge, which was launched at the Polson Ironworks, Toronto, May 14, and named Shuniah, is said to be the largest dredge built in Canada. Its dimensions are:—Length, 125 ft.; beam, moulded, 40 ft.; depth, moulded, 9 ft., and it has been designed to dredge to a depth of 35 ft. The total weight is 800 tons, and it has capacity for dealing with 1,000 tons of solid matter per hour. It is of steel construction throughout, with deckhouse 96 by 32 by 9 ft., providing accommodation for a crew of 25. On account of its large capacity, it has been built somewhat heavier than the average dredge, and it has been made as nearly as possible unsinkable and fireproof. The machinery includes dredging pump with 22 ins. inlet, and discharges and runners 78 ins. diar., pump shaft 8 ins. diar., made in two parts to facilitate removal, coupled by large clamps, and supported external to the pump. The pump is connected to a marine type, vertical triple expansion engine, with cylinders 15, 22 and 36 ins. diar., by 18 ins. stroke, capable of running at 200 revolutions a minute, and of developing 700 i.h.p., with steam supplied at 190 lbs. pressure. The boiler is of the safety water tube marine type, equipped with mechanical stoker and forced draught. The cutter head consists of a single steel casting, 70 ins. diar. by 56 in. long, with eight extra heavy spiral blades, adapted for hard digging. The cutter shaft is driven through three sets of gears by means by a 10 by 14 double reversing steam shovel type of engine in the hold. The gear driving consists of, for the first and third pairs, pinion and spur, and for the second pair, mitres, mounted on a single steel casting base to prevent spreading. The suction pipes consist of lap welded steel tube, 20 ins. diar., connected through cast steel swivel elbows. A five drum winch, driven by 8½ by 8 in. double cylinder reversible engine, is also provided. Two drums 16 ins. diar. will be used for raising the spuds and one similar drum will raise the digging ladder; two 24 in. drums will be used to operate the bow swinging lines. The drum shaft is of hammered steel 6 ins. diar., connected to the engine by two gear reductions. The spud and ladder hoist clutches will be operated by hand, and the swinging clutches by compressed air. The two spuds are of wood, heavily reinforced with steel bars and provided with a wing pointed steel casting point about 54 ins. long, and are attached to the hull by circular keepers to prevent rotation when the dredge swings. A steel gantry is also provided to raise the spuds to the level of the bottom of the hull. The auxiliary pumps include two 7½ by 5 by 6 duplex feed pumps, and one 10 by 6 by 12 simplex pump for general purposes, operated by compressed air, supplied by a Westinghouse 11 ins. air compressor, with the necessary tubes and flanges. A surface condensing outfit is also provided on account of the muddy water to be dealt with, to protect the boiler, etc. The dredge is equipped with a 15 k.w. turbo generating set for electric light and for the 14 in. searchlight. There is also being supplied with the dredge 3,500 ft. of piping and pontoons for transporting and discharging the dredged material at one operation without the use of scows. The general plan on this page shows the location of the machinery, and the method of conveying the discharge pipe, which is a departure from the means usually adopted.

Canadian Northern Steamships Limited.

The Canadian Northern Steamships' service between England and Canada was inaugurated, May 13, when the s s. Royal Edward sailed from Avonmouth for Montreal. A number of guests were invited to join the vessel at Glasgow, for the trial trip down the coast, the Lord Mayor and a number of the civic officials of Bristol being included, when congratulatory speeches were made by the Lord Mayor, Hon. Robt. Rogers, Minister of Public Works for Manitoba, and others, and responded to by President W. Mackenzie. The vessel sailed from Avonmouth, May 13, at 8.10 p.m., and passed Cape Race, May 17, at 6 a.m., ship's time; Father Point, May 18, at 5.8 p.m., and arrived at Quebec, May 19, at 1.30 a.m., leaving there at 8.30 a.m. and arriving at Montreal, May 19, at 6.18 p.m. The official time occupied in the voyage from Avonmouth to Father Point, is 5 days, 22 hrs., 41 mins., and the average speed from North Point to Father Point, pilot to pilot, was 18 3-4 knots an hour. The daily record of distances covered is as follows:—

May 13—	Steaming time	15	hrs.	50	mins.	278	knots.
14—	"	25	"	23	"	447	"
15—	"	24	"	46	"	466	"
16—	"	24	"	47	"	472	"
17—	"	24	"	30	"	440	"
18—	"	24	"	52	"	480	"
19—	"	13	"	41	"	245	"

It is claimed that this was a record voyage from Great Britain by the southern route via Cape Race.. The vessel was met at Montreal by D. D. Mann, Vice President; D. B. Hanna, Second Vice President, and other officials.

A Montreal dispatch of May 18, announces the earliest opening of the Straits of Belle Isle for navigation on record by the s.s. Manchester Mariner, bound from Montreal to Manchester. In previous seasons no vessel has attempted the northern passage until the end of June, and sometimes the first week in July.

An Ottawa dispatch of May 20, says an order in Council has been passed amending the regulations passed under the petroleum and naphtha inspection act to allow tank ships to carry in bulk petroleum and naphtha used for other than illuminating purposes. Heretofore tank vessels have been allowed to carry these cargoes in bulk only when used for illuminating purposes; now they will be able to carry naphtha used for supplying motive power.

Notices to Mariners.

The Department of Marine has issued the following:—

31. Apr. 8.—75. Ontario, Georgian Bay, buoys in Collingwood harbor and approaches to be numbered. 76. Georgian Bay, Parry Sound ship channel buoys to be numbered.

32. Apr. 11.—77. British Columbia, tidal results on the Pacific coast.

33. Apr. 21.—78. Ontario, entrance to Georgian Bay, Tobermory, hand fog horn at light station. 79. Ontario, Georgian Bay east side, approach to Parry Sound, Seguin bank, change in character of gas buoy light. 80. Georgian Bay east side, approach to Parry Sound, Red rock, change in character of light. 81. Ontario, River St. Mary, Sault Ste. Marie Canadian canal, change in position of front light of upper entrance range, new lighthouse. 82. Manitoba, Lake Winnipeg, Gull Harbor, Black Bear island, Cox reef and George island, hand fog horns at light stations.

34. Apr. 22.—83. Nova Scotia, Halifax harbor, McNab island, Government rifle ranges. 84. Nova Scotia, south coast, Egg island gas and whistling buoy, change in color of light. 85. Nova Scotia, Cape Breton island, Gut of Canso, Bear island, hand fog horn at light station. 86. Nova Scotia, southern approach to the Gut of Canso, Cerberus rock, change in color of gas buoy light.

35. May 2.—87. Ontario, Lake Erie, Port Dover, position of back range lighthouse. 88. Ontario, Lake Superior, Thunder bay, off Hare island, uncharted danger. 89. Ontario, Lake Superior, Thunder bay, off Mutton island, wreck.

36. May 2.—90. Quebec, Gulf of St. Lawrence, Gaspe coast, Grand Pabos, light established on wharf. 91. Quebec, River St. Lawrence, Orleans island, Ste. Famille, change in position of back range lighthouse. 92. Quebec, River St. Lawrence, Orleans channel, Orleans island, St. Pierre, position of front range lighthouse. 93. Quebec, River St. Lawrence, ship channel between Quebec and Montreal below Cap Charles, buoy established on Grande Pointe shoal.

37. May 3.—94. British Columbia, Strait of Georgia, Burrard inlet, Point Atkinson, change in character of light. 95. British Columbia, Strait of Georgia, Cortes island, off Reef Point, gas buoy established.

38. May 4.—96. Nova Scotia, west coast, South West shoal, Tusket River, buoys established. 97. Nova Scotia, south coast, Ragged Island harbor, name changed to Lockeport. 98. Nova Scotia, Cape Breton island, St. Peter inlet, Freestone island, name changed to Gregory island.

39. May 7.—99. Quebec, River St. Lawrence, Cape Salmon, marine signal station established. 100. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Lake St. Peter, Pointe du Lac, temporary light at site of old pier. 101. Quebec, Lake Memphremagog, Magog, light established on wharf.

40. May 9.—102. Quebec, River St. Lawrence, White island, reef lightship, change in characteristic of fog alarm.

Toronto's Inadequate Port.

The Norwegian steamship Odland arrived in Toronto, May 8, with 1,500 tons of pig iron from England, and found on her arrival that there was no pier for her to tie up to, and no appliances available for unloading. Yet Toronto is a port having a very considerable trade; is under the control of a board representative of the Board of Trade, the City Council and the Dominion Government, and on the harbor of which large sums have been and are being spent under Parliamentary authority. There is an extensive waterfront, there are numerous wharves, all of which owned by or leased to steamship companies, so that when a cargo like this reaches the city in a non-line vessel, it has no place to go, and even if a place could be found to tie up to, there are no appliances for unloading. While this is an exceptional case, and it may not occur again for a long time, it brings into relief the fact that the conditions under which Toronto harbor—in common with harbors in other parts of the Dominion—are administered, are out of date, and are not calculated to attract trade. The present facilities for caring for the passenger steamboat traffic to and from Toronto are not adequate, but while these should be increased it is doubtful whether any large expenditure in the way of providing for a casual bulk freight trade would be justified. At any rate it is hardly likely that much improvement can be expected from the present system of administration, therefore the only hope there is that the marine interests of Toronto will be adequately cared for and developed is by the abolition of the present harbor authority, and the substitution therefor of a new body with specific powers, and authority to raise money by way of debentures to provide such additional facilities as are imperatively necessary, and to do what is possible in the way of attracting to the port such trade as may be legitimately handled there.

Atlantic and Pacific Ocean Marine.

The Allan Line s.s. Mongolian has been completely overhauled, and equipped with a wireless telegraph installation.

The s.s. Rakaia, the first vessel of the Montreal-Australia service, in which the C.P.R. is interested, arrived at Montreal, May 11.

The Department of Marine is moving the buoys marking the Crane Island channel to give a greater width of passage. It is stated that there is now a depth of 30 ft., at low water from Quebec to the Gulf.

The Union Steamship Co. of New Zealand is reported to have decided to build a sister vessel to the recently constructed s.s. Makura for the services between Vancouver, B.C., and Australasian ports.

Capt. A. H. Vipond of the Allan Line s.s. Virginian, has resigned after nearly 50 years of ocean navigation. He has been with the Allan Line for about 34 years, having previously been with the Castle Line.

A preliminary enquiry, held by Capt. Riley, into the causes of the grounding of the Allan Line s.s. Grampian, early in May, near Cap a la Roche, showed that the vessel drifted from her course during bad weather, during which it was impossible to see any distance, and that the accident was unavoidable.

The Allan Line is asking tenders for the construction of two turbine driven steamships, 700 ft. long, to have an average speed of 22 knots an hour, with accommodation for 2,300 passengers. It is said that the building of these vessels is conditional on the granting of certain Government subsidies.

Specifications with Prices on Application

Capt. Rollo, of the Thomson Line s.s. Iona, was presented with a walking cane by the Montreal Harbor Commissioners recently, his vessel being the first trans-Atlantic vessel to enter Montreal harbor this season. G. W. Stephens, Chairman, is reported to have stated that the old custom of making a presentation to the captain of the first ocean vessel arriving in each season, would be revived.

The Shipping Federation of Canada received a wireless message from Belle Isle, May 22, that three large passenger vessels had passed through the Straits of Belle Isle. These were the s.s. Cassandra of the Donaldson Line, the C.P.R. Empress of Ireland, and the Allan s.s. Tunisian. Although the Straits have been used by cargo vessels, the Manchester Mariner having passed outward May 17, this is the earliest date on record that the Straits have been used by passenger liners. Usually the latter take the southern route, via Cape Race, until July. The Empress of Ireland reported having passed 11 icebergs from the Straits to a point nine miles east.

Maritime Provinces and Newfoundland.

The Nova Scotia Legislature has voted various sums totalling $73,000 in aid of steamboat, packet and ferry services in the province.

The name of the schooner Cymbeline, no. 88,438, registered at Arichat, N.S., has been changed by order in council to Florrie V.

The Levis Ferries Ltd.'s ferry steamboat Levis was launched at Levis recently and christened by Miss M. Demers, daughter of the president.

The name of the schooner W. E. Young, no. 83,174, registered at Lunenburg, N.S., has been changed by order in council to Clara Hamilton.

The name of the steamboat Frederick A., no. 103,773, registered at St. John, N.B., has been changed by order in council to Kenton.

The name of the schooner Ada Louise, no. 90,737, registered at Charlottetown, P.E.I., has been changed by order in council to Flora T.

The Government steamship Stanley will sail from Halifax, N.S., during June, for Hudson Bay, with a surveying party. She will probably return in Aug.

An order in council has been passed defining the limits of the Minas Pilotage District as all the navigable waters south of a line drawn from Cape Blomidon to the south extremity of the largest of Five Islands, and fixing the pilotage rates.

The Government steamboat Gulnare left Pictou, N.S., May 9, with a number of Marine Department officials on an inspection trip to the Magdalen Islands, Chaleur Bay, Gaspe Basin and Labrador, in order to report as to the advisability of erecting lighthouses and other public works at various points there.

The schooner Sweet Marie, was driven ashore at Kouchibouac, N.B., May 5, during a storm, while bound from Campbellton, N.B., to Charlottetown, P.E.I., and became a total loss. She was built at Charlottetown in 1907, her dimensions being, length 75.8 ft., breadth 21.3 ft., depth 7 ft., tonnage 77 register, and was owned by M. P. Hogan, Charlottetown.

Notice has been issued that four spar buoys have been placed at intervals between Thrum Cap shoal and the eastern passage at Halifax, N.S., each painted red, with cross heads painted red and white, to mark the limits of the danger zone in the neighborhood of the rifle ranges there. A red flag will be hoisted at the south end of McNab's Island when shooting is in progress.

The ss. Belle of Scotland sailed from Sydney, N.S., May 2, with about 6,000 tons of rails, for the G.T.P.R. at Prince Rupert, B.C. The voyage by way of the Horn is expected to take about 70 days. This vessel is one of several which have recently, at stated intervals, left Sydney for Prince Rupert, under charter to the Dominion Steel Co., with rails. So far each has completed the voyage without accident or loss of any kind.

ronto, length 104 ft., breadth 36 ft., depth 9¾ ft. The machinery and equipment will be installed at Montreal.

The Richelieu and Ontario Navigation Co. has declared its usual quarterly dividend of 1¼ %, payable June 1 to shareholders of record at May 20.

The Department of Public Works is having built at the Polson Iron Works, Toronto, a twin screw steamboat for service on Lake Deschenes, Que. Her dimensions will be, length 45 ft., breadth 11½ ft., draught 3½ ft. The hull will be of steel and oak planking, and she will be equipped with a 6x7 high pressure engine and Fitzgibbon boiler.

The Snowdon Shipping Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $10,000, and office at Montreal, to own and operate steam and other vessels, and to carry on the general business of ship-owner and common carrier on the high seas and within inland navigation. The provisional directors are: G. I. Dewar, Ottawa; W. A. Taft, Arlington, Mass.; W. H. Chandler, Newton, Mass.; J. B. Fallon, Boston, Mass.; W. McKissock, Boston, Mass.

The Governor General in Council has sanctioned the repeal of sec. 20 of the Quebec Harbor Commissioners' by-laws, and the substitution of by-law 107, as follows:—"All steamships and all sailing vessels in tow in passing up or down through the harbor on the north (Quebec) side of the river while between the Mariner's Chapel and the entrance to the Louise docks shall keep out at least one-half cable's length from the front of the wharves. No ocean steamship in passing down through the harbor of Quebec shall exceed half speed between Cap Rouge point and the eastern boundary of Indian Cove and in passing up between the eastern boundary of Indian Cove and the site of the Quebec bridge."

Ontario and the Great Lakes.

The Department of Railways and Canals has let the contract for the construction of section 6 of the Trent Valley canal to Haney, Quinlan and Robertson, Montreal and Toronto.

The Department of Marine has placed four spar buoys and a gas buoy on Grubb's Reef in Lake Erie. This is considered a dangerous point, the steamboat George Stone, with six of her crew, being lost there last October.

The Government drydock at Kingston was handed over to the Kingston Shipbuilding Co., Ltd., May 2. The company has a lease of the property for 21 years at a rental of $10,000 a year. It is intended to extend the property considerably and improve the existing buildings and plant.

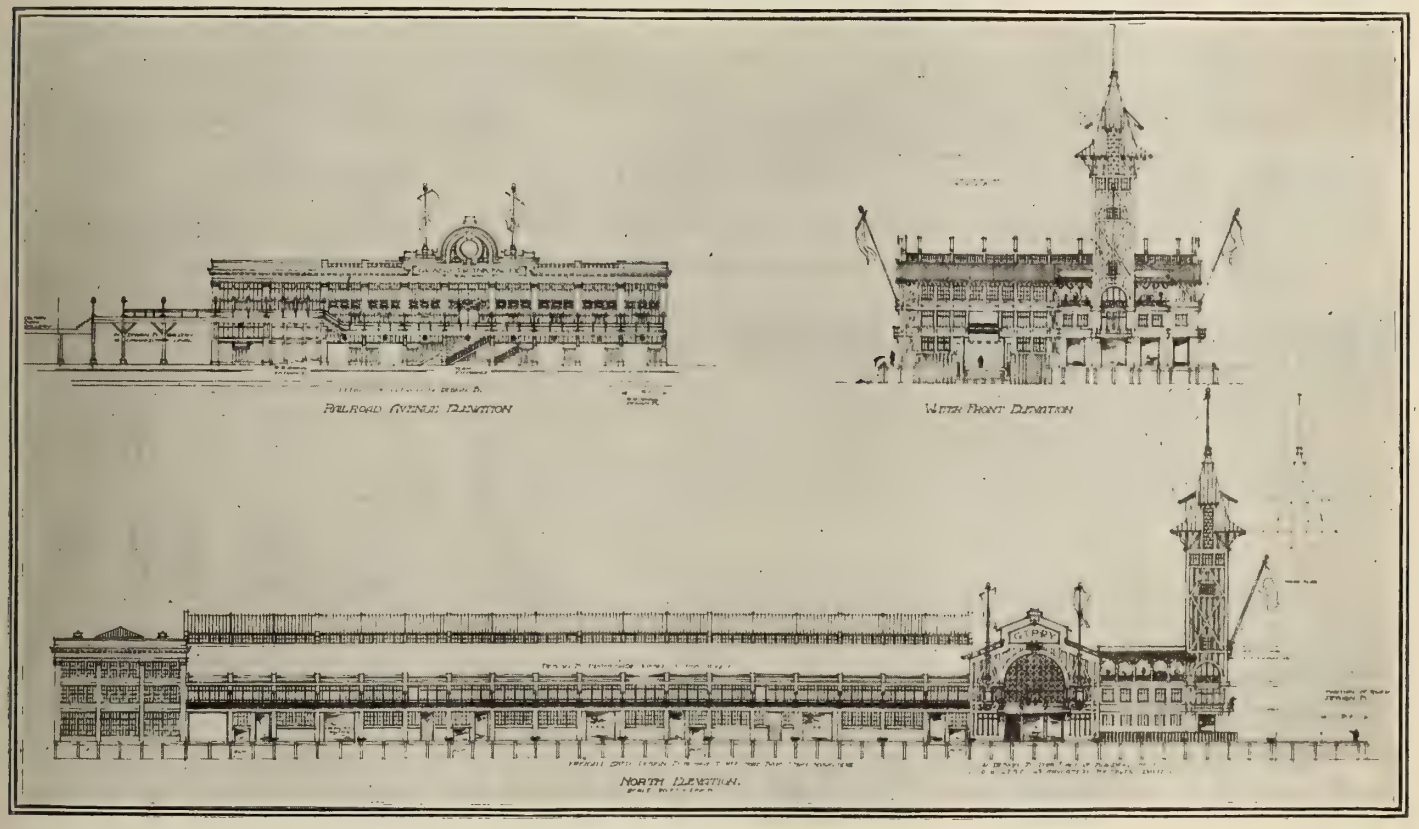
The Montreal and Lake Erie Steamship Co.'s steamboat City of Montreal arrived in Chicago, May 13, being the first time for eight years that an all water service has been operated between Montreal and Chicago. It is stated that the company will operate its vessels on this route throughout the season in both passenger and freight trades.

The Keenan Towing Co., Ltd., has been incorporated under the Ontario Companies act, with a capital of $40,000 and offices at Owen Sound, to carry on a general transportation and towing business and for such purposes to own and operate steam and other vessels. The provisional directors are, J. E., J. C. and W. P. Keenan, Owen Sound.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for April, as follows:—Superior, 601.60; Michigan and Huron, 580.27; Erie, 572.04; Ontario, 245.97. As compared with the average April levels for the past ten years, Superior was 0.39 ft. below; Michigan and Huron, 0.26 ft. below; Erie, 0.28 ft. below, and Ontario, 0.40 ft. below.

The Toronto Ferry Co. is having a ferry steamboat built at the Polson Iron Works, Toronto, which is, in the main, a duplicate of its steamboat Bluebell. The dimensions are: length 150 ft., breadth 45 ft. overall, depth 8 ft. 4 ins. She will be equipped with inclined compound engines with cylinders 17 and 34 ins. diar. by 48 ins. stroke, supplied with steam from a Clyde boiler 10" 6' by 11 ft. She will have capacity for about 3,000 passengers.

The Cornwall and Montreal Transportation Co., a recently organized company, is reported to have purchased the Montreal and Cornwall Navigation Co.'s steamboat Filgate, which it will operate on a semi-weekly service between Montreal and Cornwall. She was built at Montreal in 1879, her dimensions being: Length, 158 ft.; breadth, 25.4 ft.; depth,



GRAND TRUNK PACIFIC DOCK CO.'S BUILDINGS AT SEATTLE, WASH.

The building illustrated above will be erected on what was formerly known as the Flyer Dock property, acquired by the company at the end of last year. A pier 600 ft. by 130 ft. will be built and as soon as the sub-structure is sufficiently under way, a large warehouse and office building, of which the above is the preliminary sketch, will be erected. It is intended that the street front of the building will be three stories high, with stores on the ground floor, and offices above. The warehouse will have the second story devoted to ticket offices and about 45 other apartments, which will be rented for business purposes. At the outer end of this will be a large waiting room, with roof garden overhead. The dock and buildings will cost about $200,000, and when completed, will be the most handsome and up to date water terminal on the Pacific coast, and will possess many features which are not surpassed by similar terminals on the eastern coast.

7.8 ft.; tonnage, 425 gross, 237 register, and she is equipped with engine of 100 n.h.p., driving a paddle.

The steamboat which was recently purchased in Kingston by Capt. Argue, of Parry Sound, which it was reported was to be operated between Parry Sound and Little Current, as mentioned in our last issue, is being run between Point au Baril Station dock and the Point au Baril hotels and cottages, in connection with the C.P.R. The vessel has been named Wanakewan, has been specially built for this traffic, and has seating accommodation for 125 passengers.

The Algoma Central Steamship Line's steamboat Thomas J. Drummond, which was launched at Dumbarton, Scotland, May 3, has been specially designed and constructed for the rail trade. Her dimensions are, length overall, 257 ft., between perpendiculars, 247 ft. 9 ins., beam 43 ft. 8 ins., depth 26 ft. The machinery consists of triple expansion engines, with cylinders 20½, 33 and 54 ins. diar. by 36 ins. stroke, supplied with steam at 190 lbs., by two Scotch boilers 10 ft. 6 ins. by 14 ft. diar.

Inland Lines, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $3,500,000, and office at Hamilton, Ont., to carry on a general navigation business, and in connection therewith to own and operate steam and other vessels, dock and shipbuilding yards, wharves, piers, etc., and any other facilities conducive to the company's objects. The provisional directors are: W. Southam, J. P. Steedman, J. I. Hobson, F. A. Magee, Hamilton, and J. Playfair, Midland. The chief object of the company is the taking over of the Inland Navigation Co., the Midland Navigation Co., and the Empress Transportation Co., as outlined on pg. 237 of our March issue.

Manitoba, Saskatchewan and Alberta.

The Northern Fish Co.'s steamboat Chieftain opened the navigation season on Lake Winnipeg April 23, when she sailed from Selkirk with supplies for northern ports.

The opening of the St. Andrew's locks on the Red River, near Winnipeg, took place May 2, when the Government steamboat Victoria made the passage. The formal opening will, it is said, take place later in the season, when several members of the Dominion Government will attend.

A Winnipeg dispatch says the Hyland Navigation and Trading Co. operating steamboats on the Red River, mostly in the excursion business, has bought five acres at the foot of Lusted St., in the north end of Winnipeg, as a dock site. It is preparing to build scows and tugs for the freight business from Lake Winnipeg, made possible by the opening of St. Andrew's locks.

B.C. and Pacific Coast Marine.

The Comet Transportation Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $15,000, to own and operate steam and other vessels, and to carry on a general transportation and trading business.

The stern wheel steamboat which the C.P.R. is having built at Polson Iron Works, Toronto, for service on the Arrow Lakes, will be 200 ft. long, 38 ft. wide and 7½ ft. deep. She will be equipped with tandem compound engines, with cylinders 16 and 35 ins. diar. by 96 ins. stroke, supplied with steam by a large locomotive boiler. The parts will be shipped to Nelson, on completion, where they will be fitted up.

The s.s. Bruno, which has been purchased by the G.T.P.R. for its Pacific Coast service, arrived at Vancouver towards the end of May. Her name has been changed to Prince Edward, and she has been thoroughly overhauled since being purchased. She was built at Hull, Eng., in 1892, her dimensions being: Length, 232 ft.; breadth, 30 ft.; depth, 14.1 ft.; tonnage, 841 register. She was built to Lloyds' highest classification, and has a speed of about 13½ knots, and capacity for 1,200 tons, and accommodation for 50 first class passengers, in addition to third class. The route on which she will run is between Prince Rupert and Portland Canal ports.

Locomotive Fuel Consumption.

The following report, by a committee, of which D. Meadows, Division Master Mechanic Michigan Central Rd., St. Thomas, Ont., was chairman, was presented at the International Railway Fuel Association's meeting at Chicago:

For the purpose of gaining information to enable us to prepare this paper, your committee sent out the following explanation of the subject:

1. Methods of supervision, means, whether by fuel supervisors, road foremen or through the master mechanics or the division superintendents, or a combination of the above named officers. Whether fuel inspectors were employed at the mines in order to improve the grade of fuel, keeping in mind at all times to whom the officers or assistants named should and do report.

2. Instruction and encouragement in locomotive operation to include whether or not a definite programme of work has been installed; by whom and in what manner are engineers and firemen, as well as hostlers and roundhouse men instructed as to the best methods of promoting fuel economy in order to reduce the amount consumed. The above also to cover the question of examinations in progressive fuel economy of all interested in its use or having anything to do with its handling; the giving of premiums in order to stimulate and encourage every interest in the question.

3. The installing of any additional plans likely to mature the subject of efficiency in fuel consumption, its scope to be defined as follows:—How best to secure a reduction in cost at engine-houses in keeping engines alive, in dumping fires and again building them, in preparing engines for service. The results, so far as the three above divisions are concerned, to be tabulated.

The following list of questions was also sent out, and to those questions a fair number of replies were received. A few of these replies would indicate that some of the roads in the country are giving the supervision of coal careful attention, while on others it is a secondary consideration. However, we think it well to analyze the answers to each of the questions submitted, in order to consider them in a logical manner.

1. What methods of supervision are in vogue on your road or in your territory to promote the greatest measure of fuel economy, and who are responsible and to whom do they report?

The replies to this question show that a few railroad companies keep inspectors at the mines; the majority, however, do not. All the replies but one would indicate that the supervision of fuel economy is generally looked after by the road foreman of engines and his assistants, they reporting to the master mechanic or superintendent of motive power.

2. Instruction and encouragement in locomotive operation: a, What programme have you installed; b, By whom and in what manner are instructions given to enginemen?

Some roads have books of instruction for economical firing, which are given to the engineers and firemen. In the majority of cases, however, the instruction of enginemen is handled entirely by the road foreman and his assistants.

Marshall H. Brown,
General Freight Agent Local Traffic, Ontario Division C.P.R., and President Canadian Freight Association.

3. Do you advise class or individual instruction? Give reasons.

Replies received would indicate that all believe in both class and individual instruction, but emphasize individual instruction.

4. Do you advocate as an example in the instruction of enginemen that they be shown how many pounds of coal are consumed per locomotive, or per ton mile, and then be urged to make a saving by using less?

All answering agree that enginemen should be shown how many pounds of coal are used per locomotive, or thousand ton miles, and comparisons made. The methods of doing this, however, vary considerably. This showing, or rather comparison, brings about a rivalry for a good record, and also shows the poor men who need special attention.

5. Do you have a system of progressive examination which engineers, firemen, hostlers and engine preparers are required to pass as to their knowledge of the properties of fuel and economies to be practised to secure results?

Replies to this question would indicate that the majority of roads have a progressive system of examination for firemen which includes fuel economy. On other roads instructions are given almost entirely by the road foreman of engines and his assistants.

6. Please name the method by which you require engineers and firemen to co-operate to avoid waste and loss of fuel and necessary firing.

All roads evidently attempt to bring about close co-operation between the engineer and fireman, instructing them that it is only by united efforts that the best results can be obtained, and the best means to this end is to feed the fire as lightly as possible, consistent with the service required, to feed the water to boiler evenly, to keep the fire clean, avoid waste of steam from pop valves by having a full understanding of work to be done, where steam will be shut off, etc.

7. Is it considered, from your experience, good practice to generally inform your engineers and firemen by circulars or charts, the temperature that can be obtained in a locomotive firebox by the varying degrees of heat and the color of the flame?

Some of the answers indicate that instructions by circulars and chart are very valuable; others simply answer "yes," while one states that he does not believe any good is obtained by going into technical details of this character with the average engineer and fireman. A good practical illustration, it is believed, will bring about the best results.

8. Does your company make up an individual performance sheet monthly, showing the cost of fuel per ton, and per locomotive mile, making comparisons between individual engineers from month to month?

All answers would indicate that individual performance sheets are not made out on the majority of roads.

9. Are money premiums or prizes of any sort employed by your road as an incentive to enginemen to improve and maintain a good fuel record? If so, of what do they consist?

To this all answer "no," it being gen-

Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending the skidding sheaves. They are hung from a vertically hinged jib or triangle the outer end of which is guyed by two lines, one on each side, which are power tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading.

The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from the tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines with stiff or swinging boom. Constructed entirely of steel, except loading boom.

IS WITHOUT QUESTION THE STRONGEST AND FASTEST MACHINE OF THE DAY

LOGGING CARS AND DUMP CARS

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

erally the impression that it would tend to make enginemen dishonest.

10. What influence, in your opinion, has the preparation of coal in small convenient sizes for use in making a good coal record? What is your practice?

To this all agree that the breaking of coal so that there are no lumps larger than three or four inches square has a great influence on fuel economy.

11. Which, in your opinion, will make the best fuel record, run of mine coal or coal that has passed over a three-fourths inch screen, price being considered; or, in other words, which will show greater economy, the amount of mine run coal purchased by $1, or coal that has passed over a three-fourths inch screen? If you consider run of mine will show most economy, give maximum per cent. of slack that can be used to bring about this economy.

Three replies say coal that has passed over a three-fourths inch screen will show greatest economy. The others state that this depends very largely on the field from which the coal is procured. The coal from some fields contains such a large percentage of impurities, that better results are obtained by screening same, in this way, removing a large percentage of the impurities. On the other hand, where the mining conditions are favorable, better results are obtained by burning run of mine coal.

12. What do you consider are the most valuable essentials of fuel economy outside the purchase price?

All replies agree that the most valuable essentials outside the purchase price consist in keeping the engines in thorough repair, eliminating all leaks, blows and waste of steam, ample grate area and heating surface, good terminal facilities for caring for power, enginemen trained to burn fuel economically, the operating department eliminating unnecessary delays, see that the coal delivered is the coal specified in the contract, and lastly, by keeping everlastingly at it.

13. Mention any device or appliance for use on engines and tenders to prevent waste en route, etc., and results obtained from same.

We find that some roads are covering all shaker bar holes and deck plates. The use of a flanged apron between engine and tender is also mentioned as being used to prevent waste.

14. What effect, if any, does the weather have on stored fuel coal where exposed for any length of time?

All answers agree that coal stored will depreciate in value, some classes more than others. Claim is made that on account of losses by exposure to the air and by handling, some coals will depreciate twenty per cent. in sixty days. Your committee believes that with some coals this high percentage of loss is reasonable. Generally speaking, however, five per cent. should cover all depreciation. A great deal depends on the manner in which the coal is stored, also how picked up. If coal is picked up with a clam shell or any other mechanical device, they may gather up quantities of gravel, clay, or other non-combustible substances and the value of the coal is depreciated greatly.

15. Do you furnish an analysis of the constituent parts of coal to your engineers and firemen, and do you consider this practice of value?

One reply states: "We bring this up at the classes, also at examination, to show importance of keeping fire free from clinkers and pans clean. It aids in keeping fire cleaner." Others answer: "No, nor do we think it of much value."

16. Do you consider it of value to furnish to your engineers and firemen an analysis of the gases of combustion, so as to show their relative heat value and consequent loss when unconsumed?

The answers to this question vary somewhat; some do give such instructions and believe it of value; others do not believe it of any value whatever. In the matter of supervision, quite a number of roads keep inspectors at the mines, whose duties are to closely watch the loading of coal into the cars, see that cars are properly cleaned before placed under the tipple, the inspector having authority to reject all cars which contain a high percentage of non-combustible matter, slack, etc. Those reporting in favor of inspectors at the mines claim that they receive a better grade of coal, due to this inspection, also a better loading of cars, thus requiring less cars to haul the same tonnage. In some cases the best mines are selected for loading of their fuel, which would not have been done if inspectors were not on the ground. The cars are cribbed with lumps so as to prevent loss while in transit. The cost of inspection at the mines being more than balanced by the better grade of fuel received. The majority of roads, however, do not employ an inspector at the mines, but rather put it up to the coal company to see that the coal is properly prepared and cleaned. It would appear that the latter method is the wiser, for various reasons. All coal companies employ experienced men to supervise the loading of cars, and at the same time throw out any impurities, bone coal, etc., that may have passed the men in the mine. This being a fact, why should it not be up to the coal company to deliver a grade of coal suitable to the contract or requirements of the contractor?

If you were contracting for a large quantity of flour to be delivered in quantities of 100 barrels each day, said flour to be of a certain grade, you would not feel justified in sending an inspector to watch the milling of this flour, but if the quality did not come up to the agreement, you would hold same for inspection and possibly cancel contract. The same would apply to almost any other business.

Again, would not the cost of this inspection more than offset a large number of small economies brought about in other ways? Presuming that a railway company uses 1,000,000 tons of coal in a year, which is a small average estimate, at one-fourth cent per ton for inspection at the mines, which we believe to be a very modest figure, the inspection will cost $2,500.00, a large sum to expend in looking after what should legitimately be done by the producer. The inspector for some railroad companies must inspect the coal from a number of mines, and as these mines are at times a distance apart, it naturally follows that while he is watching the loading at one mine, his work is being neglected at another, with the result that he knows nothing of the coal that was loaded while he was absent. We all know that you can form but a very poor opinion of coal from the appearance of the top of the car, more particularly if the car is loaded with run of mine coal. The top of a car of run of mine coal looks about as good as one loaded with coal that has passed over a commercial screen. This is due to the methods followed in loading.

We believe that greater economy will be affected by the railroad consumer, contracting for a certain class or grade of coal, instructing its coal dock foremen, as to the quality of coal contracted for, and to hold all cars that do not come up to standard, for inspection by a coal inspector, he, the inspector, to reject or hold for joint inspection with a representative from the coal company. The company's inspector should occasionally visit the mines and watch the preparation of the coal. He then will be in a position to say if the coal company is honestly trying to prepare and deliver the quality of coal contracted for.

Your committee further believes that in selecting coal, railway companies should be guided by practical tests, or in other words, should select a certain engine and assign it to a certain service, this service to compare with ordinary service on that division; weigh the coal, calibrate the tank, so as to know in pounds or gallons the amount of water used each trip, and figure the evaporation results from that data; the coal that shows the greatest evaporation per dollar of cost being selected. We believe this will be much more satisfactory than a laboratory test intended to determine its calorific value, and its chemical constituents. To quote from the West Virginia Survey, vol. 2: "The value of a coal as a steam producer is determined, primarily, by the total amount of heat it will produce in combustion, but in view of the very crude way in which we burn our fuel, even more depends on the manner in which it responds to ordinary conditions of handling and firing."

To illustrate, we will presume that a railway company deems it advisable for business reasons, to use a quick igniting, and somewhat rapid burning coal at two points on two connecting divisions; at another terminal they are offered a slow igniting coal at the same price, that requires a considerably sharper draft than the first mentioned coal to bring about results; they would hesitate in buying this last mentioned coal with a saving in haul, even if its B. T. U.'s value was higher than the first mentioned coal, owing to the fact that having to draft their engines more sharply to burn the slow igniting coal, would result in a considerable waste of the rapidly igniting or easily burned coal which is used at two of the three terminals.

All railways should endeavor to select a certain or suitable grade of coal, assigning it to a certain territory and have it definitely understood that no

Appreciation from England.

H. J. Cowie, who has represented the Canadian Northern Railway interests in England for several years, and who has recently been appointed European Traffic Manager, is a constant reader of The Railway and Marine World, of which he has on several occasions written appreciatively. A short time ago he wrote as follows:—

"The incoming mail brought with it the current number of the Railway and Marine World, and I write a line in appreciation of same, which as usual is full of information. Your publication is certainly invaluable to those who wish to keep 'au courant' with every branch of Canadian transportation."

In addition to its most thorough circulation among transportation officials throughout Canada, our paper is largely taken by representatives of Canadian transportation companies in the United States, in Great Britain, on the European Continent, and in Japan and China. They look to it, not only for information on Canadian transportation matters generally, but especially for news connected with their own lines, very much of which is not obtainable from any other source.

change will be made except in grave emergency. This will enable the mechanical department to draft their engines so that the best results may be obtained from the fuel, rather than having to draft their engines to burn the poorer class of fuel to the detriment or waste of other classes. Enginemen also will become familiar with the fuel used and be enabled to handle it more economically.

Coal should be placed on the tender of engines in such size that the fireman can devote his entire time and attention to feeding the coal to the fire. If the lumps are larger than three inches square, whether the firemen break these lumps or not, is at the expense of a certain amount of coal wasted. The better coal is prepared before being placed on the tender, the more economical its use will be.

Instruction to engineers and firemen in any manner should be beneficial. Class instruction, progressive examinations, the distribution of books on combustion, etc., are beneficial, but we believe, however, the greatest benefits are derived from individual instruction by men who are fully qualified to do so. These men should be practical enginemen and fuel specialists, and should devote their entire time to instructing firemen and weak engineers. We believe that practical demonstration would be far more reaching and beneficial than class instruction, and will result in greater economy. Each man's territory should be sufficiently small to enable him to reach all under his charge at least once each month.

We believe that a locomotive performance sheet showing consumption in pounds per ton mile per hour would create a rivalry among the enginemen that would bring about good results. This method, we believe, gives the enginemen a fair showing for work done. A performance sheet showing the engine miles made per ton of coal is not worth the paper it is written on and a sheet on the ton or thousand ton mile basis is very little better. Nor are any of these of but little value if there is not some fairly accurate method of determining the amount of coal used by each engineman each trip. At present the majority of roads run their engines in what is called "the pool." An engineer takes one engine from the home terminal and returns on another, probably changes firemen half way over the division. The coal is put on the engine by a man who receives a small wage and who has no other aim in connection with this work than to properly coal the engine and have his accounts straight at the end of each week or month. He has full authority to say how much coal the tender will hold and should he be short of checks for coal given out he immediately proceeds to take checks for from one-half to two tons more coal than he puts on the engine. This may appear to some as an exaggeration, but we believe that if we look closely into this matter, we will find the above method is the practice on the majority of roads in America. Under such conditions, a comparative sheet of any kind is valueless and the time of the office man consumed in making out this report might be better be used in some more profitable work. Some roads, however, weigh the coal put on tenders, or have some fairly accurate way of measuring the coal. On these roads a performance sheet based on the ton mile per hour basis puts into the hands of the master mechanic or road foreman something fairly accurate and reliable and from which they can select the weak, careless or inefficient men, and put them in a way of doing better. It also will assist the road foreman in locating engines that need attention.

We believe that the supervision of coal placed on tenders and the performance obtained from the use of this coal is not given anything like the attention it deserves, that it is a secondary consideration to almost everything else on the majority of roads, and that until some accurate method of knowing how much coal is put on tenders, what percentage of it is consumed at the enginehouse, also some accurate method of determining the amount of work done for coal consumed is arrived at, that the desired results can scarcely be expected. We trust, however, that the committee handling this feature will be able to recommend a method which will enable railway companies to prepare a performance sheet which will be fairly accurate, and from which fair individual comparisons can be made.

Prince Edward Island Railway Shops.

Owing to the unusual conditions existing in the P.E.I.R., owing to its narrow gauge and its isolated insular location, it has to have shop facilities for repairing and rebuilding all its locomotives, and the building and repairing of all its passenger and freight cars. The location of the new shops, roundhouse,

W. S. Poole
Mechanical Superintendent Prince Edward Island Railway.

etc., in Charlottetown, is at the extreme end of the yard, running from Prince and Water Sts. They are very nicely situated, with abundance of light and every convenience for handling work. The Mechanical Superintendent's office is in the freight building near by.

The shops have concrete foundations with brick walls, and consist of carpenter, erecting, machine, and blacksmith shop combined, with a section 80 by 85 ft. partitioned off for the blacksmiths and boiler makers. The machine and erecting shops are 163 ft. 4 in. by 85 ft., with an annex of 20 by 34 ft. for a fan room. A monitor roof extends the whole length of the shop, with a raised monitor 40 by 85 ft. for the 60 ton electric travelling crane. There are three pits running the whole length of the machine shop, and one track running through the machine shop into the blacksmith and boiler shop. One pit is used chiefly for dissecting locomotives, and the other two for erecting and repairing them.

The machines in the erecting shop consist of 72 in. engine driving wheel lathe, 72 in. tire turning and boring mill, 16 in. slotting machine, standard planing machine of heavy pattern, with a table 12 by 45 ft. with three teeth slots and six rows of holes, cross rails to raise and lower by power with two heads, also two sets of heads on standards; 20 in., 24 in. and 36 in. lathes, gap lathe which will swing 3 ft., four 16 in. lathes, 24 in. and 36 in. drill presses, 300 ton wheel press, radial drill press, boring mill; all made by the John Bertram & Sons Co., Dundas, Ont.; also a universal milling machine. The blacksmith shop has eight fires, tube welding machine, power hammer, and 1,100 lbs. steam hammer; all made by the John Bertram & Sons Co. In the boiler shop there are 6 in. and 12 in. sets of rolls, and set punch and shears with 36 in. throats.

The car shop is 252 by 52 ft., with a monitor roof extended its whole length. There are two pits running the length of the shop; one used for repairing, and the other for building cars. The following machines are installed:—Small planer, small rip saw, large band saw with re-sawing attachment, tenoning machine, small cut-off saw, planer and matcher, knife grinding machine, small mortiser, dado machine, circular rip saw, large cut-off saw,, large hollow chisel mortiser, and a band saw. The paint shop is a wooden building 132 by 42 ft., with capacity for painting four cars. The brass and copper foundry is of stone, 48 by 40 ft.

The power house is 100 ft. by 50 ft., with concrete foundation and brick walls, with a generator, engine and air compressor. The generator is a continuous current machine capable of continuously supplying 75 kilowatts of electrical energy. There are three boilers of 250 h.p. each.

The new round house is 103 ft. in diameter, concrete foundation and brick walls, with 20 stalls.

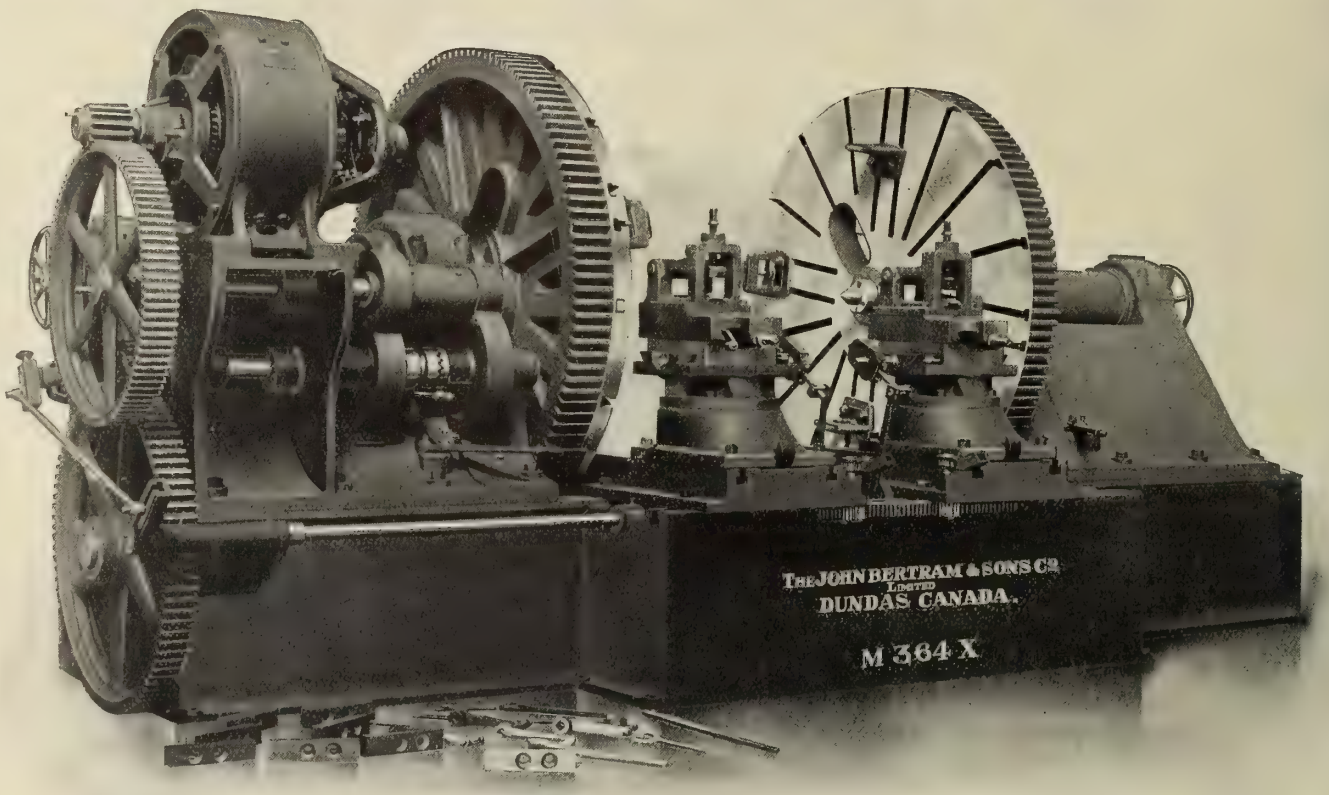
Marker Sockets on G. T. R. Trains

The Board of Railway Commissioners passed the following order, 10453, dated May 3:—Re location of markers on G.T.R. passenger trains. Where passenger cars are equipped with marker sockets in the lower position, markers shall be carried in such lower sockets. All passenger cars hereafter constructed shall be equipped with marker sockets in the lower position. All passenger cars now in use not equipped with marker sockets in the lower position, shall be so equipped on or before June 1, 1911.

E. J. Chamberlin, Vice President and General Manager G.T.P.R., on his recent return from a tour of inspection over the line between Winnipeg and Edmonton, intimated that some of the townsites at present obtaining a great deal of prominence from the efforts of real estate salesmen, are situated a great distance from the railway stations and even from the G.T.P.R. right of way.

S. P. Howard, who resigned his position as General Freight Agent, C.P.R., Montreal, recently, to engage in real estate business there, has written our Managing Director as follows:—"You will undoubtedly understand the deep regret I have in leaving railroading, particularly in severing the strong connections that have been formed during 28 years, and amongst these regrets is your own good self. One thing, however, is of considerable satisfaction, and that is that through your paper, I will be able to keep in touch with the railway world, and to keep posted as to what is going on, and I hope thereby not to get away from railroading and its associates."

BERTRAM RAILWAY TOOLS



The illustration represents our new design Double Driving Wheel Lathe supplied the Intercolonial Railway. This lathe has an actual swing of 104 inches and is equipped with Patent Tool Holder and Teas Patent Drivers. Manufactured in sizes 80, 90 and 100-inch swing.

The Mexican Route to B. C.

In our May issue we gave the decision of the Board of Railway Commissioners disputing Elder Dempster Co.'s application against the C.P.R. and G.T.R. with respect to export rates. Chief Commissioner Mabee's decision is of such importance that it is given in full as follows:—

This is an application made under sec. 323 of the Railway Act "for an order directing the respondents to apply the established export basis covering general merchandise and commodities shipped from points in Eastern Canada to Montreal, St. John and Halifax, for export to Vancouver, Victoria, and other B.C. points." The Elder Dempster Co. is a steamship line operating, during the winter from St. John and Halifax, to, among other points, Puerto Mexico, which is the eastern terminus of the Tehuantepec National Ry., and it has for some months been carrying traffic destined for British Columbia points, delivering it to the Tehuantepec National Ry. at Puerto Mexico, the railway in turn delivering this traffic at its western terminus, Salina Cruz, to the Canadian Mexican Steamship Line, which carries it up the Pacific Coast to Vancouver, Victoria, and other B.C. points. There is no joint tariff between these three carriers making up this through route from St. John and Halifax to B.C. points, but one was said to be in course of preparation; and it was said the Elder Dempster Co. quoted rates over this route some 25% lower than the all rail rate from Montreal and other eastern points to B.C. points. It was stated that as to the traffic that had already moved, the applicants, the Tehuantepec National Ry. and the Canadian Mexican Co., had divided the through rate equally, and that it was the intention to do the same when the tariff was finally arranged.

The C.P.R. and the G.T.R. have tariffs on file with this Board giving much lower rates upon export traffic than upon domestic traffic. For instance, the export rate upon canned goods Hamilton to St. John is 21c., while the domestic rate is 32c.; upon the same commodity the export rate to Halifax is 22c., the domestic 33c.; Hamilton to Montreal export 19c., domestic 25½c.; a great variety of commodities is covered by these export tariffs, on most of which the variation between the export and domestic rates is not so great as upon canned goods, without attempting to be exact, it may be that, roughly estimated, upon all the traffic covered by these tariffs the export are about 10% lower than the domestic rates. This system of export rates was established by the railway companies for the benefit of the Canadian producers, and the tariffs covering these rates make them applicable only to traffic moving to British or foreign points and as they are framed, they do not apply to traffic destined to points in B.C. The application is to compel either their amendment so they may be applicable to such traffic, or that the railway companies be directed to file tariffs that would be applicable to such traffic.

The products of Canada that move under the export rates come into competition in British and foreign markets with those of many other countries, and to meet such competition and to permit their reaching these markets, the railway companies make these reductions in the rate to the seaboard; the same system prevails in the U.S., and all the rail export trade of both countries moves under these tariffs. This system grew up years before the Tehuantepec route was in existence, and these tariffs when framed were not intended to apply to traffic moving to B.C. points. The question is whether it is fair and proper, assuming, but without deciding, that there is jurisdiction, to require the application of these tariffs to traffic moving over this new route.

It was argued that the movement under these export tariffs would build up a trade that did not now exist; but it was clearly established upon behalf of the railway companies that they have for years been carrying to B.C. points exactly the same class of articles that might go to the same points over this water and rail route; so that the result of applying these export rates to this traffic would be to compel the companies to divert their long haul westbound business to a short eastbound haul under a low rate; and for whose benefit?

This application is made by the Elder Dempster Co. and supported by the Canadian Mexican Steamship Co. All the traffic that could be diverted to this route would add to the receipts of these companies and the Tehuantepec National Ry. Upon the face of the matter then, it is a struggle to obtain from the railways part of their westbound traffic; and it is by no means clear that the shippers would obtain any material benefit if the application succeeded.

The rates over these railways are under the control of the Board; the westbound rates have been adjudged reasonable and fair; if at any time, owing to changed conditions, it is thought that they should be reduced, it is open to anyone concerned to apply, or the Board, upon its own initiation, can reduce them. How about the rates over this Tehuantepec route? All the traffic over it would be carried by the applicants to Puerto Mexico. There is no competition between St. John and Halifax to that point: there is only one railway across the Isthmus, and the Canadian Mexican Steamship Co. carries all the Canadian traffic from Salina Cruz. The rates over this route, even from St. John and Halifax, have to be submitted for approval to the Mexican Government, as the following extract from the evidence of Mr. Worsnop, Manager of the Canadian Mexican Co., will show:—

"Q. You said that your through rates were subject to control by the Mexican Government? A. Yes.

Q. That is, even the rate from Montreal say around to Victoria? A. It has to go for the approval of the Tehuantepec Ry., which then submits it to the Government, and it is approved.

"Q. That is the whole rate has to go? A. Yes.

"Q. Not just the Tehuantepec proportion? A. The through rate, I understand.

"Q. That would seem to be an extraordinary thing I wanted to make sure that I understand you, that that rate over which the Government of Mexico had really no control, and practically no interest, so long as the Tehuantepec got a proper share, should be subject to that control? A. It does seem a very extraordinary thing, I will admit, but that is what the railway company informs me. That is the excuse I get every day, that we have to submit the whole thing. That is my information.

"Q. On what basis do the Mexican Government pass upon the reasonableness of the through rates? A. I am not aware, I do not know anything of their deliberations outside.

"Q. You do not know of any particular rate that has received their approval as a through rate, do you? A. All the rates, so far as I understand. If there is an alteration in the rates, an alteration in any one item, so far as we are aware it comes to us for approval, and then it is submitted, according to the Freight Traffic Manager's letters, back to the Mexican Commissioner for his final endorsation.

"Chief Commissioner Mabee:—Your used the expression alternately, 'Mexican Commissioner' and 'Mexican Government.' I thought the road was operated jointly by the Pearsons, and somebody representing the Government."

"Mr. Worsnop:—I do not know under whose control, whether it is a commission, or the Minister. I only used the word 'commission.' There is a Minister, or some official, whom they have to consult. The operation of the road is simply a matter of equal shares. The Mexican Government take a half and the Pearsons take half."

Mr. Kelly of the Elder Dempster Co. was called, and with reference to the through rate, the following is an extract from his evidence:

"Chief Commissioner Mabee:—Are you not at liberty to carry from here, Montreal, or from St. John to Puerto Mexico, through shipments to B.C. points at any charge you choose from here to Puerto Mexico, so long as the shipper pays two-thirds of the through rate to the other two carriers? A. No, that is not as I understand it.

"Q. What is there to prevent you? A. There is nothing really to prevent us, but we do not do it.

"Commissioner McLean:—Does the Tehuantepec Ry. charge a higher rate on a shipment like that than the through rate? Supposing a shipper just ships to Puerto Mexico? A. They would charge their local rate further.

"Chief Commissioner Mabee:—How would they know it? You turn over to them two-thirds of the through rate, do you not? A. Yes, but they have no rate in effect from Puerto Mexico, or Salina Cruz to Vancouver.

"Q. What is there to prevent your sending shipments right straight through and making any rebate you choose between here and Puerto Mexico? A. There would be nothing; but we do not do it.

"Q. What is to prevent your doing it if you choose? A. There would be nothing.

"Chief Commissioner Mabee:—Then if the Mexican Ry. Co. compels you to charge more then you are willing to charge a Canadian shipper from the Canadian point to B.C. points, what would be morally wrong about your making the shipper a rebate? A. The only thing we know is that we have not done it before. We know we will always live up to our rates."

Upon the hearing, I expressed the opinion that the Board should be satisfied by reasonable evidence that the through rate now quoted over this route was a reasonable one, and further consideration has strengthened this view. These three carriers quote to shippers a certain rate over this route; two of the three join in this application to compel the railways to assist in moving traffic over it. Why should the railways and not the applicants and the Tehuantepec National Ry. Co. do the cutting? We were given no information whatever of the reasonableness of either the through rate quoted by the applicants or the reasonableness of the division between the three carriers concerned. It would appear that the steamship companies are entirely in the hands of the Tehuantepec National Ry. Co. or the Mexican Government, or both, not only as to the total through rate, but also its division, and that the applicants cannot quote a rate to Puerto Mexico, without the consent of the railway company. Supposing the present through rate over this route is highly remunerative to the three carriers, and that they could well afford to absorb the difference between the domestic and export rail rate, would it be fair to compel the railways to apply the export rate and thereby swell the receipts of

Labour-Saving Machine Tools

MANUFACTURED BY **ALFRED HERBERT, LTD.,** COVENTRY ENG.

The **Patent Hexagon Turret Lathe**

is the machine for all classes of bar work in the LOCOMOTIVE SHOPS, whether on construction or repair work.

The present-day machine will do so much more work than previous types, that it will well repay investigation.

On Stay Bolt Work

we offer you the No. 2 Patent Hexagon Turret Lathe, fitted with the Patent Stay Bolt outfit, enabling steel stays up to 30 in. long to be produced in record time either from bars or forgings without any subsequent operations.

For **Locomotive Shops**

These machines are built in three sizes, as follows:

No. 1—1½" x 21"
No. 2—2¼" x 30"
No. 4—3½" x 42"

Below we give particulars of a recent test carried out on the No. 2 Patent Hexagon Turret Lathe:—

Material—30-ton mild steel.

Reduction in diameter, 2" to ¾".

Speed of Work—158 ft. per minute.

Weight of Metal Removed—7¾ lbs. per minute.

FULL PARTICULARS FREE ON REQUEST

We will be pleased to give a guarantee of output on receipt of samples or sketches

We also carry a complete line of

Machine Tools and High-Speed Steel

the applicants at the expense of the railways' traffic? If the rates over this joint ocean and rail route were under the control of this Board, one would have the machinery to work the matter out, and would be able to give the shippers all the benefit of this competition, and at the same time preserve some reasonable proportion of profit between the competing routes; but as the matter is presented, we have carriers outside of the Railway Act, free and unfettered as to external control over rates and facilities, attempting to make use of the Act, to divert to themselves the legitimate traffic of the railway companies by the enforced application to that traffic of tariffs that were not intended to apply. So long as there is no Government control over ocean traffic, control over the land rates must necessarily produce the exporter or importer but a limited benefit. In the present case, upon a shipment from Hamilton to Montreal, this Board has control over the rate for that 375 mile haul, and it is that power that is asked to be exercised that traffic may be moved from Montreal to Victoria, 7000 miles, at rates to be established at the carriers' will, and free from control or interference. The Board is anxious that the shipper should be allowed to avail himself of every competitive condition of carriage, and every available route, but in the exercise of its powers must have equal regard to the interests of all concerned; and while the granting of this application might have some advantage to shippers of certain commodities, it seems, upon the information now before us, that it should be refused.

A very considerable volume of traffic has moved under the domestic bill rate over this route; what is there to guarantee the shipper that if the export rail rate were applied, the through rate in question would not proportionately rise? It could be put up apparently by those controlling the Tehuantepec National Ry., even against the protest of the two steamship companies, and if that were done, how would the shipper have been benefited by the granting of this application and would not the railway companies have been injuriously affected by an improper or unwise exercise of the powers of the Board? If the alternative ocean route were under control, one could preserve the existing rate, if that were proper, to the shipper, or otherwise deal with it as might be just, but as matters stand the position does not justify our interference.

In the Seattle rate case the Interstate Commerce Commission referred to traffic originating at South Bend and destined to Spokane, going via New York over the Tehuantepec National Ry., thence to Seattle and by rail to destination; also that the route offered active competition to the railways as to all traffic originating east of a line drawn between Buffalo and Pittsburg, and it is interesting to note that all the traffic that has moved via this route has carried the domestic and not the export rail rate. No application has been made to the Interstate Commerce Commission similar to the present, and if this traffic can move from eastern U.S. points to New York under the domestic rate, I do not see why it cannot here.

The applicants, in the alternative, asked for the application of tariffs for "furtherance" to Maritime Provinces, Newfoundland, the West Indies, etc., in the event of not getting the export rate. This was not covered by the formal application but was discussed at the hearing. These so-called "furtherance" tariffs are the necessary result of competitive conditions at Boston and New York, and compelling their application to this B.C. traffic would be no more equitable than requiring the railway companies to apply the export rate.

It was argued for the applicants that if they were unsuccessful in obtaining relief, Canadian traffic for B.C. points would go via New York, and the haul would be lost by the Canadian railways as well as by the Elder Dempster Co. It would seem, however, from a regulation of the Customs Department, that this is not possible, as unless the traffic went in British ships from New York to Puerto Mexico, they must be treated upon arrival at B.C. ports as imported, and would be liable to duty. The following is the regulation:—

"Except as otherwise ordered, goods in transit from one part of Canada to another part of Canada, wholly or partly by water carriage through the U.S., shall be transported in British registered vessels under customs manifests, and the transfer of such goods from car or vessel, and vice versa, shall be made in the presence of a special officer of the Canadian Customs and be certified by him. The salary of the special officer shall be paid by the carrier applying for his services."

The water route travelled by the Canadian Mexican Steamship Co. from Salina Cruz to B.C. ports is covered by an order in council of May 29, 1909, granting that company an additional subsidy of $25,000 upon the understanding that "the steamships performing the service on the Pacific shall fly the British flag."

It will, of course, be understood that the reasonableness of the westbound rail rates is not involved in this controversy. They are not attacked either in evidence or argument, and the sole contention was that the eastbound export rates should be arbitrarily applied to this new route.

Upon the facts as they now stand, no order will be made; but the dismissal of the application must be without prejudice to the rights of any person interested in this matter to any relief the Board may deem proper upon a different set of facts being presented to it.

Claims Against the Government Railways.—An act to provide for the adjustification of small claims arising in respect of the operation of the Government railways has been passed by the Dominion Parliament. It provides that suits for amounts not exceeding $200 may be taken in any provincial court having jurisdiction, under the ordinary rules of procedure, in every respect as "in like cases in the said court between subjects." The process shall be issued against the "Government Railways Managing Board," and may be served on any member of the Board, on any officer of the railway, or any person specially authorized to receive the same; no personal liability being attached to any of them. In determining any action the court shall be governed by the rules and principles of law which should be applied if the Crown were defendant and consented to the court's jurisdiction. If the provincial courts have not the necessary jurisdiction, the cases may be transmitted to the Court of Exchequer and dealt with as if they had originated there. The Managing Board is authorized to pay out of any money appropriated for that purpose damages or costs adjusted in any action brought under this act.

Advance in Passenger Fares.—The Boston and Albany Rd. issued a tariff recently, effective June 1, advancing local fares on its main line from 2c to 2¼c. per mile—substantially the basis which was in effect prior to 1906, at which time a voluntary reduction was made. This action is made necessary on account of the sharp advance in the cost of everything that enters into the conduct of railway transportation and the consequent demand for increased revenue, of which the passenger traffic must of course produce its share.

Quebec Public Utiiities Commission.

F. W. Hibbard, Chairman Quebec Public Utilities Commission, in a recent address at Montreal, reviewed fully the commission's object and scope. After a general review of principles governing the control of public utilities, he stated that the public had, under the act, power to complain to the Commission, which would, after hearing evidence, adjust the matter about which there was a difference. In general, he said, every company and person supplying any service to the public and liable to the enactments of the Quebec Legislature is within the jurisdiction of the Commission. The Commission had no right to set aside or disturb the terms of a contract between a municipality or a person on a public utility, except in the case of a monopoly; neither had it anything to do with cases of damage. The Commission had general supervision over all public utilities under its authority; it superseded the authority of the Railway Committee of the Province. It might require and regulate the carrying of goods upon any tramway, fix all tolls for any public utility, but always subject to any contract existing, regulate the placing of rails, posts, wires, conduits, pipes and other appliances along, across, over or under any road, street, square or water course; settle difficulties as to use of streets, roads, etc., between municipalities and public utilities; see that wires are so placed and supported that they are neither dangerous, unsightly nor obstructive; upon the application of any city, town or village compel the putting of wires under ground upon the conditions the commission may fix. In the carrying out of these powers it might require the construction or demolition of any works, or that they should be altered and repaired, and decide how and at whose expense this, or any of it, shall be done. It might also take entire possession of any public utility and all its property and powers, using and exercising them until its orders have been carried out. The consent of the Commission must be obtained to any amalgamation of one public utility with another; and an appeal could be made to the Attorney General to secure the dissolution of any corporation which refused to obey the orders made.

The Commission has prepared rules regulating the proceedings before it, and the chairman said at a meeting held in Quebec recently, that these were being printed for distribution. It had been decided, said the Chairman, to carry out the rules now observed by the Dominion Railway Commission and similar organizations in the United States. Anyone could appear before the Commission in support of his own complaint, but otherwise advocates only could appear.

Concrete.—In the 19th edition of Trautwine's Civil Engineer Pocket Book, issued in 1909, there was given a mass of information concerning concrete, plain and reinforced, and its use in structures of all kinds. This information has been collected out of the Pocket Book, brought up to date, added to and issued in a separate volume, provided with thumb index for handy reference. The subjects dealt with include:—Strengthening materials, general principles, tranverse strength, cement mortar, cement, sand, mortar, concrete, reinforced concrete, experiments, specifications, cost. Following this is a bibliography of the subject and an index covering 12 pages. The publishers are John Wiley and Sons, 43 and 45 East Nineteenth St., New York City, and the price of the book is $2 net.

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

Charge for Stop-off for Orders on Grain, Etc.

On the application of the C.P.R. and the G.T.R. under sec. 29 of the Railway Act, for an order amending order 6147, Jan. 21, 1909, fixing a stop-over charge of 25c. per car a day for the first 48 hours, and the car service toll thereafter, on western grain and grain products, in car loads, consigned to Cartier and Sarnia Tunnel, Ont., "for orders."

The Board of Railway Commissioners gave judgment Mar. 15, advancing the charge from 25c. to $1 a day.

Chief Commissioner Mabee gave the following oral judgment:—When this question was before the Board in Dec., 1908, the disposition that was made of it at that time was upon considerably more limited material than has been presented to-day. There was a difference of opinion as to the proper disposition of the matter after hearing, and in the memorandum that I made at that time the charge was left at the old rate, viz., 25c. a day, and Tariff Supplement 13, effective Sept. 1, 1908, was disallowed for the reasons there appearing. These reasons were practically two: one that there never had been any affirmative evidence given to satisfy the Board that the old 25c. charge had not been considered when the rate was being fixed; the other ground was, that there had been given to the Board no evidence showing the additional expense or trouble imposed upon the carrier by reason of the stop-over privilege. This clause appears in my memorandum: "Perhaps the carrier is also put to some small expense by reason of granting the privilege." At that time I had no knowledge whatever that the expense connected in performing this service was anything like it is now said to be. The Assistant Chief Commissioner differed from me, and was of the opinion that a rate of $1 a car would under the circumstances be reasonable. Since that time, viz., in April of this year, we had before us the consideration of what sum would be a reasonable toll for the carriers to take for the extension of the re-consignment privilege to the shipper. We had at that hearing considerable evidence given showing the expense and burden to the carrier connected with the granting of that privilege, and the view that the Board took was that $3 a car would not be an unreasonable sum for the shipper to pay for the re-consignment privilege. Of course, it was present to the minds of all when that $3 rate was provided for, that it was considerably out of joint with the 25c. charge which the railway companies had been limited to under the judgment of the Board in the Dec. previous, for the stop-over privilege, because, while each is not exactly upon all fours with the other, yet the services are largely similar. The benefit to the shipper and the privilege is much the same, and the expense to which the carrier is put in carrying out the wishes of the shipper to re-consign, and not acting upon the instructions of the shipper to continue the car where the stop-over privilege is granted, are, while not exactly identical, largely the same. Later on, counsel representing the railway companies drew to my attention the fact that these two charges did not appear to be at all harmonious, and it was suggested that application might be made for the purpose of re-hearing this matter. I gave leave later on to apply to have the matter re-opened, and to present any additional features that had not been offered to the Board when it had been previously discussed, that the companies might think proper.

Upon this application a good deal of information has been given to the Board that we had not access to when the 25c. charge was required to be re-established by the railway companies. Upon further consideration, so far as I personally am concerned, I am not satisfied that it is quite fair to, in every case, assume or take for granted, that each and every service, from the initial point to destination, is always taken into consideration in fixing the initial rate by the carrier. Perhaps, generally speaking, an assumption of that sort might not be improper or unfair, but I am inclined to the view that a good deal of injustice might be done if it were laid down as a rule that in every instance every service performed must be assumed to have been considered in the fixing of the rate. Of course, we know that such a holding as that would put upon the company the onus of disproving that fact in every case in which the question arose, and it strikes one that that might possibly put the carrier in a very unfair position to be required to go back 20 or 30 or 40 years for the purpose of ascertaining what was in the minds of the men who originally framed the rate. In the great majority of cases such a view as that, even after the lapse of a very few years, would place the carrier in such a position that it would be quite impossible for him to establish affirmatively or negatively that any given service performed was present in the minds of the men who established the rate. Therefore, in my view, perhaps the fair way would be to withdraw the conclusion that was embodied in that memorandum, covering the particular matter I have just adverted to.

When the matter was considered before, the Board's Chief Traffic Officer, Mr. Hardwell, who gave the Board the benefit of his views, and the Assistant Chief Commissioner were both of the opinion that I was in error in requiring the company to re-establish the 25c. rate. After the discussion of today and upon a further consideration of the matter, I am entirely free to admit that I was in error, and I am of the opinion that an injustice was done to the companies in disallowing the tariff that had been filed, and in requiring them to reinstate the old toll of 25c. The members of the Board present (Commissioners Mills and McLean) neither of whom were in the former hearing, are both of the opinion that the 25c. toll is too low, and that some higher sum should be fixed. The question now is what would be a fair sum to allow. It has been suggested, and not without some force and show of reason, that the services connected with the re-consignment situation, are so nearly the same as the services connected with the stop-over, that the tolls should be the same. We are of the opinion that there is a sufficient difference to justify a lower toll being established in the present matter, than was fixed in connection with the re-consignment case.

In the judgment of the Assistant Chief Commissioner in the re-consignment matter, he referred to the various steps that might be taken when a re-consignment was required, and he says:—"First, there must be a telegram to the agent at the point where the change is to be made; second, the agent at that point must be on the lookout for the car, and this may require his going to the van of each freight train that passes in order to examine the conductor's record; that when the car is found it must be rebilled and the waybill must be checked; the amount of charges must be verified and the auditor of the department informed; then the car must be cut out of the train, put to one side, and all this will require shunting, switching, and so forth, which takes up the time of the train crew and causes delay; then the car must be picked out and put on the new train; the railway company must assume the legal responsibility of deciding whether the party who asked that the destination of the car be changed owns the merchandise and has the right to deal with it."

It will be observed that many of these matters do not apply to the stop-over situation. No telegram is necessary, the agent does not have to look out for the car, he is not required to go along the freight train to examine the conductor's records; the switching and shunting and so on is the same, but there is no legal responsibility of deciding whether the party who asks the destination of the car changed owns the merchandise and has a right to deal with it. Therefore, upon a closer examination it will be seen that there are a considerable number of matters involved in the re-consignment that are not present in the stop-over case. As stated during the discussion on the re-consignment case, and speaking altogether from recollection, it seems to me that considerably more than $1 was mentioned as being the cost of the telegraphic service to the railway company connected with the re-consignment of a car. However that may be, we have nothing left but to try and fix such a reasonable sum as we are able to for this particular service. It is said that the actual cost connected with the switching and order clerk amounts to $1.12 a car. These amounts are no doubt gotten up honestly and with the best of intentions, but they lend themselves at once to the criticism that it is next to impossible, perhaps absolutely impossible, to make up an exact statement of the expense connected with this particular service. All that any one can do is to make an estimate based upon the general expense of maintaining and operating a switching engine and crew, and making certain repairs, and so on. They are, of course, and they must be, based upon a general average. For instance, the locomotive engineer is set down at 35c. an hour. That is what the locomotive engineer gets, but to say that 35c. an hour for a locomotive engineer should be applied to every car, or to the cars that are switched, is hardly proper, because there is a switching engine in the yard, and that switching engine may be standing idle and doing nothing, if these cars were not to be switched. The same remark applies to the fireman and to the conductor and the trackmen and the fuel consumed. It does not always happen, and it is impossible to tell how frequently it does or does not happen, that the time of this man should be strictly and accurately and properly charged against any particular movement of cars from the train to some particular siding, because if the cars were not there to be moved, it might be that the engine would be standing steaming, and these men would be loafing about and not doing anything. However, the matter is fairly put by the companies in the way it is, because it is the only way it can be put. But at the same time it does not necessarily mean that there is the same outlay every time these services are performed. The sum here made up in this way and upon these estimates shows an expense of $2.39 connected with the movement of each car, and it is not at all likely that in the actual working out of the matter there is such an expense as that. The toll allowed should not be confined, of course, to the actual cost of the service. It should be some toll that should include some reasonable return for the service. The shipper is not necessarily entitled to have a privilege of this kind at actual cost, but it is next to impossible to fix with accuracy a charge that would to some extent remunerate the carrier.

Upon the former hearing of this case Mr. Scott thought that $1 a car would be reasonable, and that view was concurred in by Mr. Hardwell. Both my

brother commissioners now are of the opinion that $1 is not an unreasonable charge and an order may go that the present charge of 25c shall be increased to $1 and as Mr. Scott stated in his judgment before: "I would not differentiate between a case where the instructions for re shipment arrived at Cartier before the car, and a case where the car arrived before the instructions, although the service rendered by the railway company in the second case would be more than in the first, because of the question as to which arrived first at Cartier became an important element in determining the charges, there would undoubtedly be found confusion and friction between the shipper and the railway company. As pointed out by the Chief Traffic Officer it would be fair to set off the advantages to the railway in the first case against the extra service in the second case and merely allow the standard charge of $1 per car for 24 hours in all cases."

There only remains a word to be said with reference to the situation at Sarnia Tunnel. There was an unfortunate misunderstanding with reference to that when the case was disposed of before. It was not known that these were foreign cars that were principally held at Sarnia, and I think in disposing of the case I stated that the facts were similar. As a matter of fact the facts are not similar with regard to the two places, and the matter has been sufficiently cleared up to-day to show that. The dollar will have application to both Sarnia and Cartier.

July Birthdays.

Many happy returns of the day to—

J. H. Black, Superintendent Temiskaming and Northern Ontario Ry., North Bay, Ont., born near Smiths Falls, Ont., July 8, 1874.

M. S. Blaiklock, Engineer Maintenance of Way G.T.R., Montreal, born at Quebec, July 19, 1859.

D. E. Blair, Superintendent of Rolling Stock, Montreal St. Ry., Montreal, born at St. Thomas de Montmagny, Que., July 25, 1877.

D. C. Coleman, Superintendent Car Service, C.P.R. Western Lines, Winnipeg, born at Carleton Place, Ont., July 9, 1879.

Geo. Collins, General Manager Central Ontario Ry., Trenton, Ont., born at Kingston, Ont., July 20, 1960.

D. D'E. Cooper, Canadian Freight Agent Lehigh Valley Rd., Toronto, born at Buffalo, N.Y., July 8, 1862.

John Corbett, General Foreign Freight Agent C.P.R., Montreal, born in Lanarkshire, Scotland, July 19, 1863.

E. J. Coyle, ex-Assistant General Passenger Agent C.P.R., Vancouver, B.C., born at Stayner, Ont., July 23, 1870.

S. E. Dewey, Travelling Freight Agent G.T.R., New York City, born at Beckenham, Kent, Eng., July 4, 1879.

J. F. Dolan, City Passenger and Ticket Agent Richelieu and Ontario Navigation Co., Montreal, born at Kingston, Ont., July 1, 1868.

F. C. Foy, Canadian Passenger Agent New York Central Lines, Toronto, born there, July 5, 1881.

J. A. Goodearle, General Manager Turbine Steamship Co., Toronto, born at Kingston, Ont., July 4, 1867.

J. H. Gordon, Travelling Freight Agent C.P.R., Winnipeg, born there, July 21, 1883.

W. R. Haldane, General Freight Agent C.P.R., Kootenay and Boundary Districts, Nelson, B.C., born at Galashiels, Scotland, July 6, 1867.

By what Unit of Measure is the Efficiency of a Storekeeper Properly Determined.

By E. J. McVeigh, Storekeeper G.T.R., Ottawa

If this read by what unit of measure should the efficiency of a storekeeper be determined, I could simply say "results," and let it go at that. By that method I could avoid at least repeating many things that others have said, and save some time. But the way the question reads places me in doubt. It would seem to imply that today his efficiency is properly determined, meaning judged, or decided, and the truth of the matter is that it is not properly determined, at all. Who is to determine? The individual storekeeper each for himself? I have no doubt many of us think we are quite capable of doing that, but I doubt if our judgment would be accepted as final in the case. Then who is to do it? The president, the general manager, the general superintendent? Say any of them, or all of them on any one road. Now, how are they going to do it; on what will they base their judgment? On the fact that the storekeeper is a good chap and doesn't bother them much? On the fact that his storehouses are kept in good order, that there are not too many complaints against him, and that he doesn't ask for an increase of salary too often? These are all good things, but while they all help, they cannot be the chief determining factor—that we know—so when they get through the list thus far, they will take up his figures, and if they are good live men, they will want to know:—How many miles of road he supplies. What is the amount of his stock balance? What is the monthly issue? The amount of the store pay roll? How does that figure out on a percentage basis with business done? Good work, that—these are the determining factors, but there is one lacking without which these are of no value, and that is Comparison. Let me say again that a thing is good or bad, only by comparison with something of like nature and, until this comparison is made, you don't know.

The thing of like nature in this case is the storekeeping results of some other road, and who has as yet ever made this comparison? How many have even attempted to make it? Don't forget that the mere figures, even when available, are not always sufficient for an intelligent comparison. We know that figures cannot lie, but we also know that liars can figure, and even if this last were not true, our "systems" of supply accounting are like our human bodies, so fearfully and wonderfully made that a proper diagnosis can only be made after careful dissection. In case there should be any misunderstanding as to what I mean by dissection as I apply the term to the handling and accounting of railway supplies, I may say my meaning is this: When a member of this association tells us that the handling of supplies on his road costs 3%, his "stock on hand" so much, and his "issues" so much, it conveys no meaning until we look into the system followed out on his road, take it apart as it were, and see the wheels go round, for these figures may mean one thing on one road, and quite another thing on some other road. For instance—suppose a general storekeeper would give us these figures from his general store. They might mean that the handling of supplies for that road had cost 3% at one stage in the turnover between the factory and when they are actually put to use. But how many additional turn-overs do they get, and what more expense is added. We don't know. They may go from the general store to a division store, and from there to a motive power store, a bridge and building, or a road stock, away beyond the jurisdiction of the stores department altogether, and be turned over three or four times before they are used. What meaning have these figures got by this time? They simply show one stage in the process and have no meaning as to the cost to the road for the handling of supplies. Nor are the figures of "stock on hand" more satisfactory. They don't mean the actual cash tied up in stock by that road, whatever else they may mean, and that is what we want to know. A running shot that only takes off a little hair will not stop the game.

I don't think the above is an exaggerated picture of the methods of some of the big systems. But if these figures were given us by a storekeeper on a small road, and that road carried two stocks only, fuel and supplies, and the storekeeper received his supplies direct from the factory and supply house, and disbursed these supplies in detail direct to the user, what a different meaning these figures would have then. These are the two extremes, in one case the figures mean practically nothing, in the other, everything. There are many cases that come in between, and without careful dissection, how are we to judge whether good or bad work is being done? And who is to be the dissector? I say the storekeepers as a body. If they don't, others will, and it is time we got at it, and I say in reply to the question that the efficiency of the storekeeper is not, and cannot yet be properly determined until this work is done.

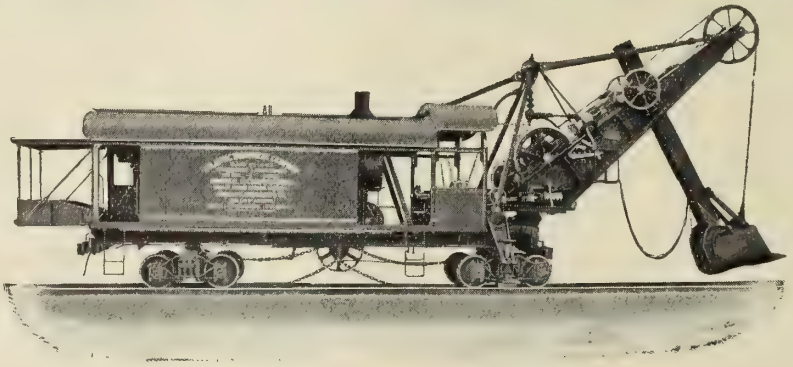
The foregoing paper was read before the Railway Storekeepers' Association.

LOCOMOTIVES FOR ALL CLASSES OF SERVICE

Consolidation Type Freight Locomotive, Built for Eastern British Columbia Railway.

Total weight of engine in working order, 186,310 pounds. Weight on driving wheels, 166,100 pounds. Diameter of driving wheels, 51 inches. Boiler pressure, 210 pounds. Cylinders, 20 x 28 inches. Maximum tractive power, 39,200 pounds.

ATLANTIC STEAM SHOVEL



Direct wire rope hoist with but one sheave, instead of chain hoist with from five to seven sheaves, reduces delays and loss of time due to breakdowns, increases the efficiency of the engines, and reduces repair bills as well as fuel consumption.

Finished, interchangeable spare parts always on hand at works.

MONTREAL LOCOMOTIVE WORKS, LIMITED

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

Amendments to the Railway Act.

The Dominion Parliament last session passed an act amending in a number of details the Railway Act, chap. 37 of the Revised Statutes. and making some additions thereto. Sub-section 3 of section 56 respecting the right of appeal to the Supreme Court as to jurisdiction is repealed, and a new sub-section as to appeals "on questions of law is substituted." This provides that leave to appeal to the Supreme Court upon questions which, in the opinion of the Board, are questions of law, may be made upon leave being obtained within one month after the order is made, or within such further time as the Board may allow. Due notice must be given to the opposite party, stating the grounds of appeal, and such appeal must be entered within 30 days of the making of the order granting leave to appeal.

A new section, 59A, is added, providing that wherever the act requires or directs that the Board's approval must be obtained before the doing of any work, if the work has been done before Dec. 31, 1909, without such approval, the Board shall have power to approve and to impose such terms and conditions as may be thought proper.

Section 121 provides for the making of by-laws by directors and a sub-section has been added making provision for the election or appointment of officers, styled vice presidents, who need not be directors of the company.

A new sub-section is added to section 246, setting out that an order of the Board shall not be required in cases in which telegraph, telephone or electric light wires are erected across the railway with the consent of the company, in accordance with any general regulations, plans or specifications approved by the Board for such purposes.

The word "lands" is added to sub-section 3, section 254, which deals with the erection of fences, gates and cattle guards, and the word "freight" is struck out of sub-section 7, section 261, which deals with the carrying of traffic over any portion of a railway not opened for general traffic.

Section 276 deals with the moving of trains or cars reversely in cities, and to this a sub-section is added providing that the Board may order that section 276 shall not apply to any particular train or classes of trains, but that no such order shall apply to trains engaged in shunting, switching, yard or terminal movements.

The question of damages caused to or by cattle on railways is dealt with by section 294, and the recent act repeals sub-section 4, substituting for it a new sub-section; providing that the value of animals killed or injured on the line may be recovered in any court, unless the company establishes that such animal got at large through the negligence or wilful act or omission of the owner or his agent, or of the custodian of the animal or his agent. Section 295 is amended to bring it into conformity with the alterations made in sections 254 and 294.

Section 298 deals with the liability for fire caused by locomotives. This is repealed and a new section inserted setting out the procedure to be taken to recover damages for fires caused by sparks from locomotives, limiting the damages to $5,000, less any insurances on the property destroyed, and providing that the company shall not be liable for damages if modern and efficient spark arresters are used, and if it has not been otherwise guilty of negligence. Pending litigation is not to be affected by the new section.

The granting of free or reduced rates is dealt with in section 341, and a new sub-section C has been inserted in place of the one previously existing. The only change in the new sub-section is that the railways may grant free or reduced rates to former employes of any railway, members of the Interstate Commerce Commission of the U.S., its officers and staff, their baggage and equipment, in addition to the persons mentioned in the old sub-section.

The words "and such damages should not be subject to any special limitation, except as expressly provided for by this or any other act," are added to sub-section 2, section 427, dealing with penalties not otherwise provided for.

Section four of the amending act passed in 1908, deals with the approval of telegraph and telephone tolls, and sub-section 8 has been repealed, and a new sub-section as to the conditions under which the working agreements between companies are to be made and approved by the Board substituted.

Section 238a has been amended so that any railway constructed after May 19, 1909, shall at its own cost (except otherwise provided by agreement), provide, subject to the order of the Board, all the necessary protection for the public at highway crossings.

Under sub-section 4, section 275, if a fatal accident has happened at any crossing since Jan. 1, 1900, the trains are not to go at a greater speed over that crossing than 10 miles an hour, unless it is protected. This section is now amended by substituting 1905 for 1900.

Recent Quebec Legislation.

Among the acts passed last session of the Quebec Legislature were the following affecting transportation interests:—

CIVIL CODE.—To amend the civil code respecting contracts made with public utility companies.

LITTLE NATION RIVER RY.—Extending time for construction and authorizing an extension.

MONTREAL STREET RY. — Amending powers of company, and authorizing it to build underground lines.

LONG SOO AND ABITIBI RY.—Incorporation.

SHERBROOKE STREET RY.—Extension of powers.

SUBURBAN TRAMWAY AND POWER CO.—Extending powers as to construction, etc.

Railway Subsidy Contracts.

The Dominion Government has entered into agreements, under the act providing grants in aid of railway construction, as follows:—

CANADIAN NORTHERN QUEBEC RY.—From the main line near L'Epiphanie, to Rawden, by way of St. Jacques l'Achigan, 16 miles. (May 23.)

QUEBEC, MONTREAL AND SOUTHERN RY.—For construction of bridges over the Nicolet, Gentilly and Becancourt Rivers. (June 1.)

International Traffic Rates.—J. P. Mabee, Chairman of the Dominion Board of Railway Commissioners, has been appointed Canadian representative in connection with the discussion of an arrangement for the just control of International traffic rates between Canada and the United States. It is understood that a member of the Interstate Commerce Commission will be designated to act with Canada's representative in this matter, and that the representatives of the two countries will meet at an early date to discuss the question of organization, etc. The whole question, we are informed, is in a preliminary stage, and nothing has yet been determined as to how the matter will be worked out.

Manitoba's Early Railway History.

The Managing Director of the Railway and Marine World wrote the editor of The Mail and Empire, Toronto, recently, as follows:—"I have read with a great deal of pleasure T. A. Gregg's reminiscences of his trip with the first colonist train to Winnipeg in 1879, as published in your issue of June 4.

"I fully agree with him as to the debt Canada owes to Sir Wm. Van Horne, who will go down in history as one of the greatest of Empire builders. There are, however, two little inaccuracies in Mr. Gregg's most interesting narrative, which I desire to point out. He says that Mr. Van Horne came from the Missouri Central Rd. to the Canadian Pacific Ry. This is not correct. At the time of his selection by the Canadian Pacific Ry. directors, Mr. Van Horne was General Superintendent of the Chicago, Milwaukee and St. Paul Ry.

"Further on Mr. Gregg says that Mr. Van Horne 'did not begin where Egan left off at Winnipeg, but he made a complete alteration of plans and began anew,' the inference being that Mr. Van Horne succeeded Mr. Egan. The facts are that almost immediately after the incorporation of the Canadian Pacific Ry. Co. in 1881, A. B. Stickney, of St. Paul, Minn., was appointed General Superintendent, with headquarters at Winnipeg, and took charge of the construction and operation of the western lines. Mr. Stickney resigned at the end of that year, and Mr. Van Horne was appointed General Manager, with headquarters at Winnipeg. He took J. M. Egan from the Southern Minnesota Rd. to Winnipeg, making him General Superintendent of the Western division. Mr. Egan retained that position until September, 1886, when he was succeeded by Wm. Whyte, the company's present Second Vice President."

Quebec Transportation Club.—Following are the officers, elected at the recent annual meeting:—Hon. President, C. E. A. Carr, General Manager Quebec Ry., Light, Heat & Power Co.; Hon. Vice Presidents, E. O. Grundy, General Freight and Passenger Agent Quebec Central Ry., and W. M. MacPherson, White Star-Dominion Line; President, J. A. Everell, Superintendent Montmorency Division Quebec Ry., Light, Heat & Power Co.; Vice Presidents, M. P. Connolly, General Agent Richelieu & Ontario Navigation Co., and G. B. Ramsay, White Star-Dominion Line; Hon. Secretary-Treasurer, J. S. Blanchet, General Freight and Passenger Agent, Quebec Ry., Light, Heat & Power Co.; Committee, J. Hone, Jr., City Passenger and Ticket Agent C.P.R.; G. Stott, City Passenger and Ticket Agent G.T.R.; F. S. Stocking, City Passenger and Ticket Agent Quebec Central Ry.; W. J. Thompson, Manager Quebec and Levis Ferry Co., and F. M. Spaidal, General Superintendent Canadian Northern Quebec and Quebec and Lake St. John Rys.

Stock Yards for Winnipeg—The Stock Yards Commission, which has been considering the provision of stock yards at Winnipeg, has completed its work, and it is said that a report will be prepared recommending the formation of the St. Boniface Union Stock Yards Co., in which the C.P.R., the Canadian Northern Ry., and the G.T. Pacific Ry. will be jointly interested; that the yards when equipped will be managed by a Board of Commissioners, the C.P.R. to be represented by two members, and the other two lines and the Manitoba Government by one each. The rates to be charged are to be subject to the Government's approval. The legislation necessary to carry out the plans of the Commission is expected to be introduced in the Legislature next session.

THIS VANADIUM STEEL GEAR BLANK

is 5½ inches in diameter and was bent cold—flat upon itself as shown, without a sign of a crack or fracture

Vanadium is an elementary metal; it melts at 3600 degrees F.; alloyed with iron in the proportion of one to two, it melts before the fusing temperature of iron or steel, and as Ferro-Vanadium may be thus added in the foundry ladle, the open-hearth furnace or the crucible, to molten iron or steel.

When so added, it combines with oxygen and nitrogen and removes these gases in a fusible slag, making the remaining metal dense, non-porous, homogeneous and stronger to a marked degree.

Its action is consistent, because while it increases the tensile strength and elastic limit of steel, it maintains the ductility, as may be seen from this experiment.

A pocket knife with a Vanadium Steel blade will cut chips from a steel spike; a carpenter's saw of Vanadium Steel will cut through a two-inch gas pipe unharmed; locomotive cylinders of Vanadium Cast Iron wear five times as long as ordinary iron without reboring; forgings from Vanadium Steel ingots are the strongest, most elastic and longest lived forgings possible. Vanadium Steel Springs, owing to their freedom from crystallization wear three times as long as carbon steel springs.

We are the largest exclusive manufacturers of Vanadium Alloys in the world. Our mines are rich enough and extensive enough to supply the world's demands. Our factory is now producing six thousand pounds of carbonless Ferro-Vanadium a day, and its capacity is being increased. We guarantee deliveries.

We do not make steel but can give you a long list of companies from whom you can buy any type of Vanadium Steel you may require.

Booklets free.

AMERICAN VANADIUM COMPANY

324 Frick Building, Pittsburgh, Pa.

C.P.R. Betterments, Construction, Etc.

Dominion Atlantic Ry.—J. G. Sullivan, Assistant Chief Engineer C.P.R., and P. B. Motley have made a complete examination of the Dominion Atlantic Ry. for the C.P.R. Sir Thos. G. Shaughnessy, with other C.P.R. directors, subsequently went over the line, and then proceeded to Halifax, N.S., to inspect the terminal facilities there. A press report states that the C.P.R. has purchased a property on Hollis St., Halifax, for use as an office building.

St. Stephen Wharf, etc.—The existing wharf at St. Stephen, N.B., is to be replaced with a new one, about 150 ft. out from the present shore line, and having a frontage of 600 ft. The additional space gained will be filled in, and the whole space covered with tracks, six new tracks being added. The yard layout will be from a lead independent of the main tracks. The freight shed is to be moved to another point in order to suit the rearranged yard.

Branch to Mattawamkeag.—W. Downis, General Superintendent Atlantic Division, is quoted as stating, June 2, that there was no foundation for the press reports to the effect that the company proposed to build a branch line to Mattawamkeag, Me. The report was circulated in connection with the statement that the C.P.R. had acquired the Washington County Ry., and would connect it up with Mattawamkeag, so as to give a new route into St. John, N.B.

Tobique and Campbellton Ry.—The New Brunswick Legislature has granted an extension of time for the construction of this projected line.

Lachine Bridge.—The bridge across the St. Lawrence River, at Lachine, Que., constructed at a cost of over $2,000,000, in 1884, is to be replaced by a double track structure. Plans are being prepared for the work, and a contract for the steel superstructure has been let to the Dominion Bridge Co. The contract for the piers and abutments has not been let, as the question of whether entirely new piers will be erected or the existing piers widened has not been decided. It is expected that some of the pier work will be built this year, and that the whole structure will be completed in two years. The superstructure of the present bridge will be utilized in bridges on other parts of the line.

Ottawa Entrance.—D. McNicoll, Vice President, was present at the meeting of the Ottawa board of control, June 7, and explained that the conditions affecting the C.P.R. in Ottawa were anything but satisfactory. The Central station, under existing conditions, was not suitable; the operation of trains via Hull was roundabout, consequently the company had been for some time looking for a new route for some of the trains. The plans filed by the company were produced and explained. They show the closing up of the Rideau Canal, north of the deep cut, and the building of a tunnel from the Central station, under the Post Office, down Wellington St., and after a detour, coming out at the Union station. By this means trains would be run from one station to the other in five minutes, instead of 25, as at present. The company recognized that the closing of the canal might meet with much opposition, but it was impossible to find a route equally advantageous. This company was ready to start work on the construction of the necessary works at once, and the Dominion Government wished to have the city council's opinion before giving consideration to the question. The board promised to give full consideration to the proposal.

Toronto.—D. McNicoll, Vice President, stated June 8, that the C.P.R. was the purchaser of the Government House property on King and Simcoe streets, Toronto, at $800,000. The property would not be taken over by the company until 1912. The company had in view an extensive programme of improvements in Toronto, but nothing could be said as to just what the plans would be. When they were prepared they would be submitted to the city council, and to the Board of Railway Commissioners. This property is immediately to the north of the old Legislative Buildings, on which site the G.T.R. laid out its local freight yards about four years ago.

The Board of Railway Commissioners had under consideration June 7, the plans of the C.P.R. viaduct at Yonge St. and Avenue Road. The plans show that the gradient begins at Rosedale Ave., and at Yonge St. reaches a height of 12½ ft.; and at Avenue Road it is 9½ ft., reaching the original level at Poplar Plains crossing. Yonge St. will have to be depressed 5½ ft., and Avenue Road 7½ ft., in order to provide for a 14 ft. headway. The board of control at a meeting June 9, expressed the opinion that the plans did not provide a final solution of the difficulty, and their further consideration was postponed.

North Parkdale Station.—A contract has been let to Wells & Gray, Ltd., Toronto, for the erection of a new passenger station building at North Parkdale, Toronto. They began work June 13.

London Improvements.—In an interview at London, Ont., recently D. McNicoll, Vice President, said the company would have an interesting and important announcement to make shortly, so far as London was concerned. Plans had been prepared for improvements there, but nothing would be made public about them until the company was ready to go ahead with the work.

Fort William-Winnipeg Ballasting.—Referring to the press reports that the C.P.R. had appropriated $250,000 to be expended for the purpose of reducing dust on the line between Fort William, Ont., and Winnipeg, Man., we are advised that the company intends putting some ballast on the line which will, it is hoped, do away to a certain extent with the dust nuisance that has been so prevalent since the first coat of ballasting was put down. There has been no especial arrangement made, such as the press reports indicated, to eliminate the dust.

Winnipeg-Brandon Second Track.—The grading for the laying of a second track between Winnipeg and Portage la Prairie has been completed, and the contractors, J. G. Hargrave and Co., received instructions to continue to grade westerly from Portage la Prairie toward Brandon. W. Whyte, Second Vice President, stated June 10, that it had been decided to carry the second track as far as Brandon, but whether the work would be completed this season or not, he could not say.

Six miles of track had been laid from Winnipeg towards Portage la Prairie, June 11, and it was expected that the second track would be laid into that place, and be ready for operation in August. The contractors state that it is expected to have the second track completed into Brandon in time for the grain movement of 1911.

Weyburn-Lethbridge Line.—A revised location map of the route of the projected line from Weyburn, Sask., to Lethbridge, Alta., which has been submitted to the Lethbridge city council, shows a line passing 50 miles due south of Walsh in tp. 3, and 42 miles south of Medicine Hat, in tp. 5, passing into tp. 6 range 7, in the middle of sec. 12, into tp 6 range 7 8, on the second line between secs. 12 and 13, thence almost due west to the northwest corner of sec. 13, tp. 6, range 12, thence almost in a direct line northwesterly into Lethbridge.

Lethbridge, Alta.—Representatives of the C.P.R. and the Alberta Ry and Irrigation Co., had an interview recently with representatives of the Lethbridge council, as to the Coutts St. bridge and other matters. The bridge is estimated to cost $90,000, and it is said that an arrangement was made by which the city will pay half of the cost. The question of a spur track to industrial sites was discussed, and the company proposes to make an offer to the city as to the location of the same. At a meeting of the council June 3, the arrangement as to the Coutts St. bridge was approved.

Carmangay Branch.—A construction gang arrived in Carmangay, Alta., June 4, and began work on the extension of the line northerly. This work includes the construction of a bridge across the Little Bow River. The bridge will be a somewhat similar structure to that at Lethbridge, but will not be as long nor as high.

Strathcona - Edmonton Bridge.—We are advised that the negotiations between the company on the one hand, the Dominion and Alberta Governments and the Edmonton and Strathcona councils on the other, with respect to this projected bridge, have not been completed. As soon as a satisfactory arrangement can be effected with regard to the addition of a highway section to the bridge the plans will be completed, and preparations for its construction gone on with.

The location of the Calgary and Edmonton Ry., from Strathcona to Edmonton, which was recently approved by the Board of Railway Commissioners, is the re-approval of an old plan which was filed two years ago.

Kootenay Central Ry.—A Vancouver press dispatch states that the C.P.R. has let a contract to Foley, Welsh and Stewart for the construction of the first 25 miles of this projected railway, the work to be completed within a year. The section to be built will start from near Wardner on the Crow's Nest Pass branch to Fort Steele. The line will ultimately be extended to Golden, on the C.P.R. transcontinental line. The route is a direct one to Fort Steele, thence it will follow the valley of the Kootenay River to Canal Flat, past upper Columbia Lake and the Upper Columbia River to Golden. A survey party in charge of A.E. Sharpe arrived at Golden, from Vancouver, recently and are making their headquarters at Windermere, for the survey of the Golden end of the line. The Board of Railway Commissioners has approved the revised location from mileage 0, a little south of Wardner, to mileage 24.9, a little north of Fort Steele.

Steel Snow Sheds.—We are advised that the recent reports as to the erection of steel snow sheds in the Rocky and Selburn mountains in place of the present timber structures is merely newspaper talk.

Revelstoke via Lardo, B.C.—We are advised that the reports that the company would make an early start towards connecting the transcontinental line at Revelstoke, via Lardo with the Crow's Nest branch, is only a newspaper rumor.

New Westminster Station.—Plans have been prepared for the enlargement of the station at New Westminster, B.C. The extension will consist of a one story brick building on stone foundation, at each end of the present building.

Esquimalt and Nanaimo Ry.—We are advised that a contract for clearing the right of way of the extension north of Union Bay to Black Creek, 14 miles, has been let to Sabin and Stevens, Victoria, B.C., to be completed in five months.

In connection with the building of the proposed Cowichan Lake branch, we are advised that if the state of the labor market will admit of its being

done, the company will begin the clearing of the right of way in the fall so as to be in a position to go on with grading in the spring.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—The company is preparing to build the following additional lines: From Moose Lake, Carlton county, Minn., northwest to near McGregor, Aitkin county, 23 miles, and from Lawler, Aitkin county, westerly to Cuyana, in Crow Wing county, 37 miles. (June, pg. 479.)

A Railway to Hudson Bay.

Sir Wilfrid Laurier, in company with Hon. G. P. Graham, will visit Pas Mission during their western tour, which will be begun early in July. The Minister of Railways, in a recent interview at Ottawa said the Government would shortly be letting a contract for the erection of a bridge across the Saskatchewan River at the Pas, as the initial step toward the building of the railway. The first section of the line, extending for 160 miles from the Pas, would then be gone on with. This mileage can be built whether it is finally decided to have the terminal at Fort Churchill or Port Nelson.

With a view of securing all the data possible as to the two routes three parties have been dispatched to investigate the resources of the country through which the line will pass. The water routes will be investigated by two parties which were expected to sail from Halifax early in July, one by the s.s Stanley and the other in the schooner Chrissie Tyron, recently purchased in Newfoundland by the Dominion Government. The Stanley will survey the whole route, to both Fort Churchill and Port Nelson while the Chrissie Tyron will explore the rivers and inlets inside the bay.

An announcement was made in Ottawa June 13, that tenders would be called for at an early date for at least 50 miles of this line from Pas Mission. On June 16 it was announced that the steamer Stanley would leave for Hudson Bay by the end of June, and that the work would be in charge of W. J. Stewart, Chief of the Hydrographic Survey. H. B. Pariseau will have charge of the party to survey the water approach to Fort Churchill, and A. A. G. Bachaud charge of that to survey the water approach to Port Nelson. The surveys are expected to be completed during the summer, so as to have a report ready for the meeting of Parliament.

House of Commons Railway Committee.—Speaking in the House of Commons recently, E. A. Lancaster, M.P., suggested that the number of the members of the Railway Committee be reduced. The present membership is nearly 200, of which 40 form a quorum. It now frequently happens, he said, that one day a quorum will vote upon a section of a bill, and two or three days later a different set of members will be sitting, and will reverse that decision. The result was that the work of the committee was unsatisfactory as far as precedents were concerned. It was considered by a large body of members that the committee should consist of not more than 40 members, with 25 as a quorum. The committee would then be able to present to the House reports on some stated principle, instead of making reports, as at present contradictory in principle. He had had ten years experience on the Committee, and it was apparent that the evils were increasing. The question was allowed to stand over to next session, when Mr. Lancaster will submit a resolution.

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

NO JURISDICTION OVER QUEBEC CENTRAL RY.

10561. May 10.—In our last issue we noted the dismissal of complaint by Auger and Son, of Quebec, that the Quebec Central Ry. failed to supply cars of not less than 35 ft. long, for pulpwood shipments. The Chief Commissioner gave the following judgment:—"The applicants, carrying on business at Quebec, complain that the Q.C.R. neglects or refuses to supply to them cars of not less than 35 ft. in length, for pulpwood shipments. This railway is not under the jurisdiction of this Board. It is a Provincial corporation and has never been declared by Parliament to be a work for the general advantage of Canada. The shipments made by the applicants, and for which the cars in question are required, move almost entirely to points in the U.S.—the State of New York and some to Wisconsin—from the lines of the Q.C.R., these cars pass to the Boston and Maine. The point, therefore is, can the Board make any order regarding the equipment that should be supplied where traffic originates upon a Provincial road in direct connection with a foreign road? The point of transfer was not mentioned at the hearing, nor do I think it material. The only ground upon which an argument in favor of jurisdiction could be put, is, I think, sec. 8, sub-sec. (b) of the Railway Act. Is this 'through traffic,' and are the cars 'matters pertaining thereto?' It is traffic of an international character and clearly should be under the Federal control; but even if it could be regarded as 'through traffic,' since the judgment of the Supreme Court in the case of the Montreal S.R. Co. v. the City of Montreal, this Board would be powerless to interfere; and if I understand the effect of that judgment, it is to hold the above sub-section ultra vires of Parliament. We do not deal with the merits of the application. It is sufficient to say the Board could not interfere, no matter what the merits were."

LIVE STOCK RATES, TORONTO TO SMITH'S FALLS.

10649. May 17.—The complaint of J. Tucker, of Smiths Falls, Ont., complaining that the rate of 17c. per 100 lbs. charged by the C.P.R. on shipments of live stock, in carloads, from Toronto to Smiths Falls, is excessive and discriminatory against Smiths Falls as compared with the rate charged from Toronto to Montreal. It is ordered that the railway company put into effect, not later than June 6, a rate not exceeding 14c. per 100 lbs. upon shipments of live stock, in carloads, from Toronto to Smiths Falls aforesaid.

GRAIN EX-LAKE RATES.

10653. May 19.—Re application of the Montreal Board of Trade, under sec. 323 of the Railway Act, for order directin the C.P.R. and the G.T.R. to publish rates on wheat, oats, and barley "ex-lake" from Montreal to points in Ontario and Quebec on the same mileage basis as that in force on the same commodities from Georgian Bay elevator ports to points in Ontario. It is ordered as follows:—The rates of the G.T.R. and C.P.R. on ex-lake western grain carried from lake or river ports to points on the lines of the said companies in the Provinces of Ontario and Quebec, shall be the same for equivalent distances from all lake and river ports at which facilities exist for the transhipment of the said grain from vessels to cars, between Depot Harbor and Montreal, inclusive, and shall include the cost of like services at all such ports of transhipment and at all points of destination, whenever the said cost is included in the rate or rates at one or more port or ports of transhipment, or at one or more point or points of destination; and to points off the lines of the said companies to which points joint rates are made by the addition of "arbitraries," the said arbitraries shall be the same on shipments from all the said ports of transhipment. On such grain transhipped at ports west of Montreal, destined to points east of Montreal to which points through rates are based on arbitraries, the western portion of the said rates shall be based on St. Henri mileage in the case of the G.T.R. and an Outremont mileage in the case of the C.P.R. The G.T.R. and C.P.R. shall give effect to this order by publishing and filing special tariffs to take effect not later than June 13.

INTERNATIONAL BILL OF LADING.

10761. May 17.—Re application of Canadian Freight Association for approval of uniform bill of lading in use in the United States on shipments from points in the U.S. to points in Canada, and from points in the U.S. through Canada to points in the U.S. It is ordered that the Uniform Bill of Lading in use in the U.S. and approved by the Interstate Commerce Commission as respects all traffic which may be carried from any point in the U.S. into Canada, or from the U.S. through Canada to the U.S., be approved.

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases from 1908-09, from July 1, 1909:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.

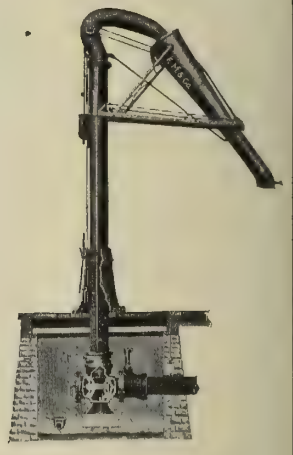
Sheffield-Johnson Flexible Spout Standpipe Installed on C.P.R. at St. Clet, P.Q.

SHEFFIELD-JOHNSON

THE

IDEAL STANDPIPE



Showing Telescopic Spout Lowered.

It meets with the approval of practical railway men and its popularity is assured. It has a range of flexibility of 5 ft. or over as desired and the spout can be introduced directly into the highest as well as the lowest tender. Nothing could be simpler, more easily operated or more convenient than the type of telescopic spout shown. This, in connection with our horizontal main valve and other special features, makes a combination that is far ahead of all other standpipes on the market. Locks automatically and positively parallel with tracks when not in use. Revolves in complete circle. Operated entirely by one man. Self-draining—cannot freeze. Equipped with relief valve

The Canadian Fairbanks Co., Limited

Fairbanks Scales—Fairbanks-Morse Gas Engines

MONTREAL TORONTO ST. JOHN, N.B. WINNIPEG CALGARY VANCOUVER

Apr., 1909. Aggregate operating revenue for 10 months ended Apr. 30, $699,862.55; expenses $614,549.04; net revenue $85,313.51, against $689,687.14 aggregate operating revenue; $574,-444.50 expenses; $115,242.64 net revenue for same period 1908-09. Approximate earnings for May, $62,390, and for two weeks ended June 14, $29,283, against $68,983 and $30,718 for same periods 1909.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. and M. Ry., separately, for Apr., as compared with Apr., 1909:—

	1910.	1909.
GRAND TRUNK RAILWAY.		
Earnings	$2,684,600	$2,377,500
Expenses	1,891,300	1,619,200
Net earnings	$793,300	$758,300
CANADA ATLANTIC RAILWAY.		
Earnings	$158,400	$138,900
Expenses	138,300	130,300
Net earnings	$20,100	$8,600
GRAND TRUNK WESTERN RAILWAY.		
Earnings	$569,600	$495,200
Expenses	438,600	331,700
Net earnings	$131,000	$163,500
DETROIT, GRAND HAVEN AND MILWAUKEE RY.		
Earnings	$154,700	$131,100
Expenses	136,600	117,900
Net earnings	$18,100	$13,200

Approximate earnings for May, $3,731,820, and for two weeks ended June 14,, $1,682,606, against $3,245,791 and $1,433,823 for the same periods 1909.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to May 31:—

	1910.	1909.	Incr.
Grand Trunk	£2,683,966	£2,309,061	£374,905
Can. Atlantic	156,003	132,022	23,981
G.T. Western	,536,731	454,909	81,822
D.G.H. & M.	159,840	128,639	31,201
Totals	£3,536,540	£3,024,631	£511,909

G.T.R. Betterments, Construction, Etc.

Southern New England Rd.—According to the information filed with the Massachusetts Railroad Commission, June 1, the G.T.R., through its subsidiary company, the Central Vermont Ry., proposes to build under the S.N.E.R. charter, 58 miles of line in that State at a cost of $3,500,000. The estimate includes the following items:—Right of way, $192,381; grading, $1,163,287; bridging, $1,047,221; tracks, $536,769; station buildings, $26,000; telegraph lines, $17,433; water service, $9,000. Of the 10,000 shares into which the capital stock has been divided, the G.T.R., through President C. M. Hays, holds 9,-860 shares. The plans show that the new road will leave the New London and Northern Rd. at Palmer, Mass., and by almost a straight line will enter Providence, R.I. The New York, New Haven and Hartford line will be crossed twice overhead. The application came before the Commission June 8. E. H. Fitzhugh, First Vice President G.T.R., and Vice President Central Vermont Ry., said:—"The line is to be an extension of the G.T.R. system, its purpose being to link up the manufacturing interests of New England with the West, the north-west and the Orient. If the right to build the line is granted the plan will be carried out by the G.T.R.

The route of the projected line in Massachusetts, is described as follows:—At Palmer it will leave the New London and Northern Rd. and go through Monson, Brimfield, Sturbridge, Dudley, Webster, Douglas, Uxbridge and Blackstone, a little over 58 miles. It is not a straight line, but one of easy grades and easy curves. From Palmer it will run to Brimfield Summit, through Brimfield, Fiskdale, Westville and Southbridge, crossing three streets in Southbridge; then through Sandersdale to Dudley Summit, six miles east of Sandersdale, then to Webster, crossing streets in that town overhead. From Webster the line will rise again to Mount Daniel Summit and descend to Douglas, Millville Heights, and finally to the line between Massachusetts and Rhode Island. The New York, New Haven and Hartford Rd. is crossed overhead a mile west of Douglas and again at a point 2,000 ft. north-west of the State line.

Lachine, Jacques Cartier and Maisonneuve Ry.—The decision of the Quebec Legislature, not to allow any more level crossings in Montreal, is likely to considerably modify the company's plans. The line is projected to give the G.T.R. access to the water front at the east end, where there are larger manufacturing concerns. In order to get into that district the line will have to cross a number of streets, the levels of which are such that the construction of subways or overhead bridges would be very expensive. An alternative route with a terminus at some distance north from the waterfront, has been surveyed, but it is not so convenient to the factories as the route first laid out.

Montreal Level Crossings.—In an interview, June 13, W. Wainwright, Second Vice President, said the company's plans for the elimination of level crossings in Montreal would be filed Aug. 1. It was proposed to apply to the Railway Commissioners for approval of the same. The plans would provide for doing away with 13 crossings between Bonaventure Station and Turcot village, west of St. Henri, at an estimated cost of $4,000,000. An important question to be decided by the Board will be the proportion in which the cost of the work will be divided between the company and the city.

Montreal-Ottawa Line.—It is reported that negotiations are in progress between the company and the Dominion Government which will result in the building of a second track between Coteau Junction, Que., and Ottawa, which would give double track connection between Montreal and Ottawa, 116 miles. The Montreal-Ottawa trains run over the existing double track line to Coteau Jct., 38 miles so that the second track will be required on 78 miles, which forms part of the Canada Atlantic Ry. The general understanding is that the projected work is being contemplated in connection with the completion of the National Transcontinental Ry. One of the G.T.P.R. plans is the building of a branch southerly to Ottawa, and if a double track were provided from Ottawa to Coteau Jct., trains from the west could be taken into Montreal without disturbing the present traffic.

Toronto Belt Line.—We are officially advised that arrangements are being made to rebuild the section of the old Belt Line between Fairbank Jct. and the west side of Yonge St., and to use it for freight and switching service only. This section extends from the junction of the line with the old Northern Ry. to Yonge St. A portion of the line east of Yonge St. is used by the Canadian Northern Ry.

Ottawa Terminal Station.—C. M. Hays, President G.T.R., made an inspection of the work in progress at the new terminal station and hotel at Ottawa, recently. He expressed his satisfaction with the progress made, and stated that it was expected to have the station completed in the fall, and the hotel ready for the summer traffic of 1911.

Brantford Improvements.—G.T.R. officials and representatives of the city council of Brantford, Ont., had a conference June 6, with reference to the building of a switch into the Holmedale district. The route proposed by the city is from the G.T.R. main line, skirting the westerly limits of the Institute for the Blind, via St. Paul's Ave. to Holmedale. The Council asks that this line be completed and utilized as a part of the Tillsonburg branch, and so do away with a number of level crossings on that branch's existing route through the city. (June, pg. 473.)

Great Northern Ry. Lines in Canada.

Midland Ry. of Manitoba.—The recent negotiations between representatives of the C.N. Ry. and the railway committee of the Winnipeg city council have resulted in an agreement by which, in order to cross various streets, six subways will be constructed at Brant St., Tecumseh St., Elgin Ave., lane between Elgin and Ross Streets, Ross St., and Nena St. A resolution was passed by the committee agreeing to a level crossing at McPhillips St., provided that a subway or overhead bridge be provided when the council at some future date might decide it was necessary, and that in the meantime the crossing be protected to the City Engineer's satisfaction. The company is allowed six months from July 1 to construct the subways, and the whole work has to be completed by April 1, 1911. The agreement applies to the entry of the line into the city, and the work to be completed by April 1, includes the track, shunting yards and freight sheds. These latter will take up the whole of the property acquired by the company between Ross and Pacific Avenues, west of Isabella St.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—In a recent interview at Keremeos, B.C., J. H. Kennedy, Chief Engineer, said construction on the line was proceeding satisfactorily beyond Princeton, but he did not think that any tracklaying would be done this year. A contract has been awarded to Ferguson for clearing about seven miles of the right of way in the vicinity of Abbotsford.

The by law confirming an agreement made between the company and the city council was voted upon by the citizens of Vancouver June 28. The city in 1907 granted certain lands on False Creek, east of Westminster Ave., to the Vancouver, Westminster and Yukon Ry., which company transferred them to the V.V. and E. Ry. This latter company acquired other lands in the same vicinity, and being desirous of obtaining further areas, after considerable negotiations with the city, an agreement was entered into by which the city grants the company, subject to Provincial and Dominion sanction, all its right to the bed of False Creek, east of Westminster Ave., above the ordinary high water mark, except the area to be occupied by Boundary Ave., extended 66 ft. from the north shore of False Creek to Glen Drive on the south shore, and some other small areas near by. The company agrees to reclaim the territory and to lay out its freight and passenger terminals there, within five years, and to expend on the work not less than $2,500,-000. A union passenger station is to be built near the intersection of Park Lane and Prior St., for the use of the G.N.R., the Northern Pacific Ry., the G.T. Pacific Ry., the Canadian Northern Ry., or any other railway which may in future secure an entrance to the city. (June, pg. 439.)

A. Ramsey, local manager Canadian Baggage Transfer, was recently fined $3 and costs for trespassing on C.P.R. property at Winnipeg, for the purpose of soliciting orders for his company. He appealed the case, and the C.P.R., not appearing, the appeal was upheld, the C.P.R. to pay the costs.

During April, 16 employes were killed and 40 injured, in the course of their work on Canadian railways. Of the fatalities, six were due to being run over, and five each to derailments and to falling material; while of the other accidents, 14 were due to derailments, eight to falling material, seven to being run over, three each to collisions, to machinery and to flying material, and two to falls.

Railway Construction Notes.

This paper is compiled from notes made by the writer whilst Resident Engineer of Construction for the C.P.R. grade reduction and revision, Medicine Hat section, 1907-8. It is submitted primarily with a view to elicit the practice of the profession with regard to shrinkage and overhaul, and the discussion on points raised herein, the author trusts, will be of greater value than the paper itself.

SHRINKAGE.—The first question that comes up in this connection is, "What is the contractor to be paid for?" On prairie work, when light, embankment quantities are often taken, and, considering the practical impossibility of accurately measuring shallow borrow pits, as left by the generality of contractors and sub-contractors, it would seem to be the most accurate method. If, however, work is paid for from cut quantities, to be rational, all borrow pits must be staked and measured. The practice of paying for cuts up to limit of haul and balance on embankment quantities is not logical. In the case of excavation quantities, the question of shrinkage is not a live one with the contractor, but the reverse is the case when embankment is paid for.

A method of applying shrinkage is required to be sufficiently elastic to meet the variety of conditions met with in the field, and at the same time sufficiently exact to do justice as between the company and the contractor. This question is often a bone of contention between them on account of the magnitude of the quantities involved being overlooked.

On side-hill ground, and when cuts and fills alternate rapidly, and are of considerable extent, the theoretical shrinkage, if applied on top, would lead to anomalous conditions. When track laying has closely followed construction, cases are not unknown where the top shrinkage applied has had to be removed, or where, as illustrated in fig. 4, the shrinkage, if not immediately taken up by settlement, might exceed the permissible grade. From these considerations it would appear reasonable to omit raising the fill above profile grade and applying side shrinkage only to make a full shoulder so as to carry the material required to make up to grade as bank settles.

Fig. 1 shows the usual method of applying shrinkage, whilst figs. 2 and 3 show modifications of this method according as to whether or not excess quantities are permissible, or whether or not it is thought desirable to steepen the side slopes. Setting the slope stakes 1.3, 1.4, 1.6 or 1.7 to 1 instead of the customary 1.5 to 1 is easily done in the field by adding or subtracting 1-10 or 2-10 for every foot in height of fill to the 1.5 to 1 half breadths. Tables 1, 2, and 3 are inserted for purposes of comparison; the quantities being based on these different methods of applying shrinkage (figured to profile grade only) whilst the actual percentage increase from the standard roadbed and side slopes, is stated.

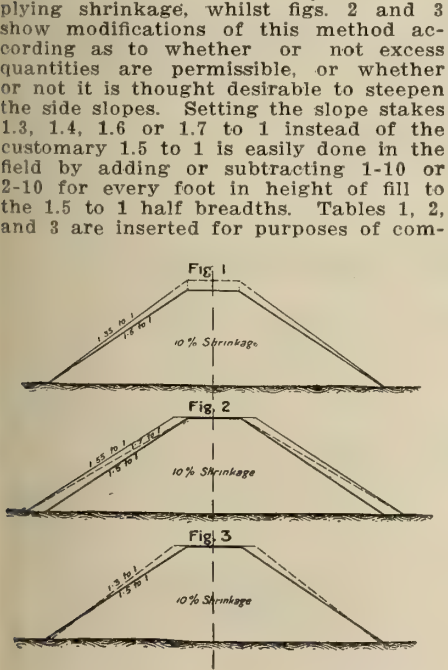

Fig. 4

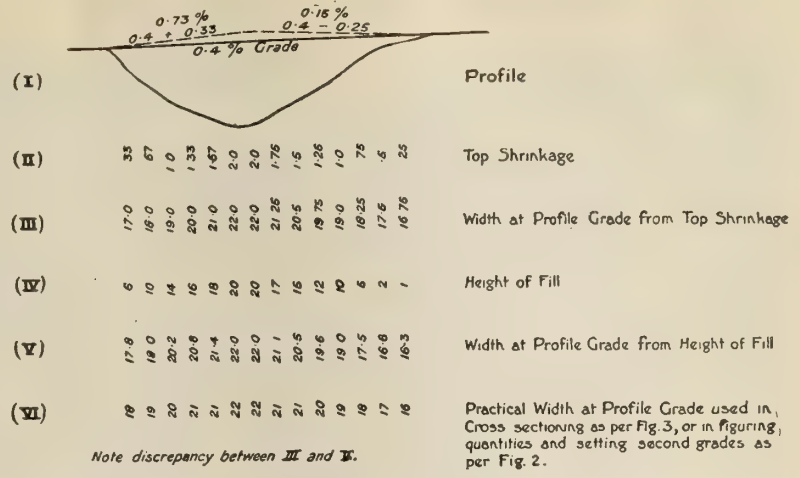

To provide the full shoulder (always desirable), the width required at profile grade from considerations of height of fill at that point (fig. 4) is taken, reduced for practical purposes to the nearest foot and slope stakes set in accordance with fig. 2 or 3. This representation in the cross section notes of the quantities to profile grade represents the cross sections as they are staked without additions or alterations, and avoids complication and consequent chances of error in figuring the quantities. It gives a definite and straightforward basis to work on, and enables another man to pick up one's notes and follow what has been done.

In paying for embankment quantities if an arbitrary classification of shrinkage is adopted, such as:

Team and slip work	Nil
Wheeler and wagon work	5%
Dumpcar and wheelbarrow	10%

and from a consideration of the fact that earth, when first moved by these several methods, expands about that same percentage, it would appear that the old expedient of putting on shrinkage and paying for neat embankment quantities is not very wide of the mark after all.

TABLE 1.

Fill Ht. in ft.	Slopes.	R.B.	Cubic yds.	5% Fig. 1 Cub. yds.	Slopes.	Actual %	10% Fig. 1 Cub. yds.	Slopes.	Actual %
10	1.5	16	1,428	28	1.425	2	55	1.35	5

					10% Fig. 2	
10	1.7—1	16	19	1,222	63+ 74=137	12%
20	—	—	22	3,703	252+296=548	16%
30	—	—	25	7,444	566+666=1232	18%

TABLE 3.

Fill	Slopes.	R.B. for X section and setting stakes	Cubic yds.	Nominal shrinkage 5% Fig. 3 Cub. yds.	Actual percentage increased quantities over 16' roadbed 1.5—1
10	1.4	17.5	1,166	18	1%
10	—	19.0	3,481	74	2%
30	—	20.5	6,944	166	3%
				10% Fig. 3.	
10	1.3	19	1,185	37	3%
20	—	22	3,555	148	4%
30	1.3	25	7,111	333	5%

To provide the full shoulder (always desirable), the width required at profile grade from considerations of height of fill at that point (fig. 4) is taken, reduced for practical purposes to the nearest foot and slope stakes set in accordance with fig. 2 or 3. This representation in the cross section notes of the quantities to profile grade represents the cross sections as they are staked without additions or alterations, and avoids complication and consequent chances of error in figuring the quantities. It gives a definite and straightforward basis to work on, and enables another man to pick up one's notes and follow what has been done.

In paying for embankment quantities if an arbitrary classification of shrinkage is adopted, such as:

Team and slip work	Nil
Wheeler and wagon work	5%
Dumpcar and wheelbarrow	10%

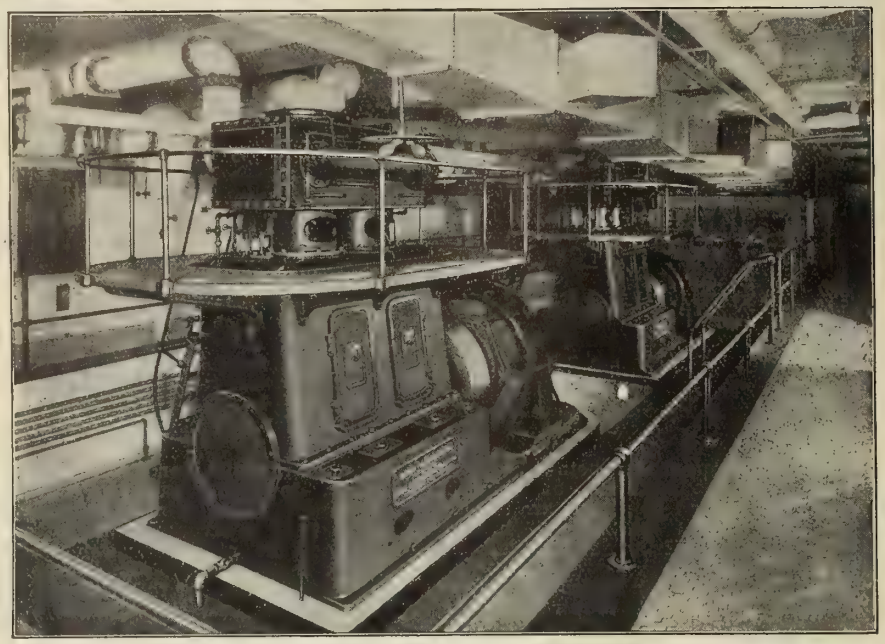
and from a consideration of the fact that earth, when first moved by these several methods, expands about that same percentage, it would appear that the old expedient of putting on shrinkage and paying for neat embankment quantities is not very wide of the mark after all.

OVERHAUL.—Here, again, the first question that arises is, "What is the contractor to be paid for, theoretical or actual overhaul?" If paid for actual overhaul, it often happens that through some extraneous conditions as, for instance, down-hill haul, by the method of handling the work, or perhaps on account of a structure not being built in time, the most economical distribution of the material, from the company's point of view, is not followed out. When, however, the material expands considerably, as in a rock cut, the contractor would get the worst of the bargain unless the actual haul is used.

Another point in connection with the actual haul made by contractor is the case where borrow is made between two hauls; generally this borrow is put in by slip work, all in the bottom of the fill, and the actual haul made difficult of determination without elaborate figuring and close watching of the work, as the two hauls close on completion, and is often impossible under these circumstances. In this case it is necessary to give the theoretical overhaul, unless, in cases of rock, when the method shown in fig. 5 should be used, assuming some equitable percentage of expansion as found by measurements or taking actual haul.

Fig. 5 illustrates the method, which is self-explanatory, of figuring expansion in overhaul. Fig. 6 is a typical cut hauling both ways, and serves to illustrate some of the points raised, but on account of the small quantities of overhaul, does not bring out very forcibly the discrepancies in the various methods of calculating. From this figure it is evident that the c.g. of cut is not the most economical distribution point, but the point that such a cu. yd. can be hauled either way at the same cost is the point

HAS COST NOTHING FOR REPAIRS



A Customer says:

'We have used one of your vertical high speed engines, English type, forced lubrication, since 1907. The engine runs at 425 revolutions per minute almost constantly night and day. It has given us every satisfaction and so far has cost us nothing for repairs.".

wanted. Considering the many assumptions necessary in preparing the overhaul diagram on account of shrinkage and expansion, it would appear that the large scale diagrams are not offset by increased accuracy sufficiently to warrant their use, and that a diagram on the field profile (fig. 6) will give the information to as great a degree of accuracy as the method warrants, besides being always available for giving the contractor his points for distribution of material on the ground.

By using the planimeter various methods of distribution can be easily computed. Set the index to read square inches and ascertain the area of diagram under balancing line drawn in accordance with the method noted above. This, multiplied by the proper factor according to scale (fig. 6—2000 cu. yds. to 1" and 400 ft. to 1"=8000 cu. yds.) gives the total yards hauled to 100 ft. Ascertain area of free haul, and to this add the number of cubic yards hauled 10 stations. Subtracting these two from the whole area of diagram gives the pay overhaul.

With a small outfit, without variety of equipment, it often pays the contractor to waste and borrow (freehaul limit, 1000 ft.) rather than haul, the extra price for overhaul enabling him to do this. Care must be exercised, or one is apt to pay him for material wasted at his own expense.

ROAD CROSSINGS.—Although relatively unimportant, yet having to be established on prescribed lines and at regular intervals, often occur in places where the quantities involved are considerable. Also as they frequently cross the roadbed at an oblique angle, a method of figuring them may be of service, although open to criticism from its being an approximation only. Figs. 7 and 8 show a road crossing on a skew.

M. N. P. Q., are the most important points to establish on the ground. P. and Q. should be laid out to give the requisite grade on road crossing between P.—Q. and the point S., otherwise the grade has to be steepened. Although a detail, this is often overlooked.

A (fig. 7) is calculated from ordinary cross sections. Area of $Y = \frac{\text{Area X}}{\text{Cos } 0}$

B (fig. 7) can be divided into two truncated triangular prisms, whose solidities are given by the following formula: Area of right section ÷ ⅓ sum of lateral edges.

C (fig. 7) can be divided into pyramid and tetrahedron:

Solidity of pyramid= $\frac{\text{Area X}}{\text{Cos } 0} \times \frac{1}{3}$ (half breadth—½ roadbed)..

Solidity of tetrahedron=⅓ depth at M × (half breadth—½ roadbed) × ½ roadbed of road crossing.

GRADING MACHINES.—Figs. 9 and 10 are diagramatic plan and rear elevation of a grading machine, which requires 42 ft. to work in, but has a 3 ft. extension section on the elevator, so that when required, this can be removed, making it capable of working in a 36 ft. cut. With sand or loose material, however, the extra height to which the elevator has to be raised to properly clear wagons, exceeds the workable angle of repose of the material, and it refuses to elevate. With the short elevator the cut requires to be taken down very uniformly, or the wagons catch on the underside of elevator, even when used with one side board removed. Working in a 36 ft. cut with a full length elevator, about 6 furrows in the centre have to be thrown to the sides of cut and rehandled at a disadvantage, as the loose material will not throw a good

WIRE ROPE

Why experiment continually with wire rope you know is not up to "**Dominion**" quality—quality that means better material, better construction and better service?

Material—All our ropes are made from the best quality of wire, specially drawn to our rigid specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

Construction—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years' experience in manufacturing wire ropes enables us to offer the best to be had anywhere.

Service—Every length of "Dominion" Rope gives satisfaction, because it is serviceable and dependable.

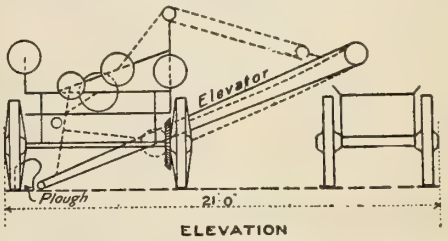
furrow and is, besides, in the way of the wagons. On the Medicine Hat section, in order to give the required width for these machines to work in, cuts were staked, as shown in fig. 11, and in the cross-hatched section of fig. 12. This increased the cut quantities slightly (as in fig. 12 at ends of cut only), but the material being required in the fill, the overhaul only was increased. This cutting away of the toe of slope would be objectionable, if not impossible, in some instances, but here the banks caved back to a natural slope very quickly. With six pairs of horses the machine could be



ELEVATION

Fig. 10

turned in 36 ft. by crowding, but to turn quickly more room is required. With a cut, say 1232 ft. long, the lost time turning, at 2½ min. per turn, amounts to 1½ hours per day, while the lost time ploughing furrows to waste for the lower 5.6 of cut was two hours. Whilst actually at work a wagon was loaded on an average every 65 seconds, including stop for next wagon. This gives an output for the main part of cut, 404 wagons=505 cu. yds. per day, and for the lower 5.6, 307 wagons, at say, 1.25 cu. yds.=384 cu. yds. per 10-hour day, which

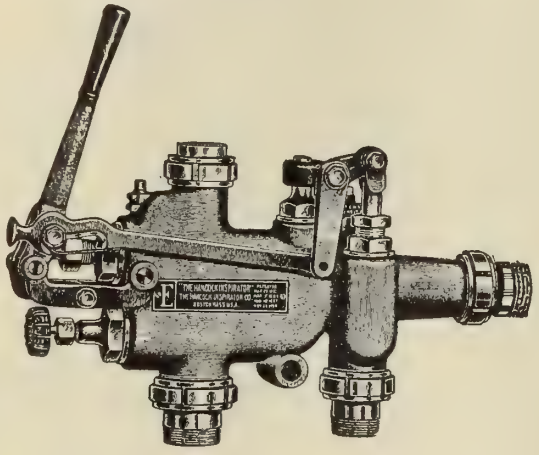
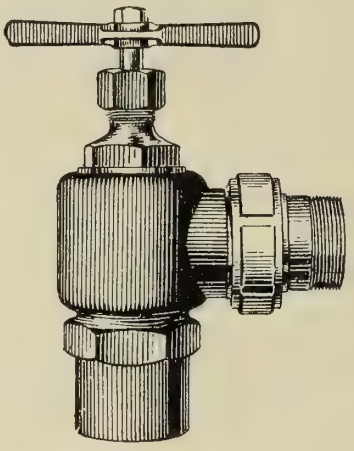
T. McAVITY & SONS, Ltd., St. John, N.B.

MANUFACTURERS OF

Locomotive Boiler Fittings, Car Heater Fittings, Hancock Inspirators, Injector Main Steam Valves,





Pop Valves, Standpipes, Electric Semaphores, General Railway Supplies, Brass and Iron Body Globe, Angle and Gate Valves, Hydrants and Corporation Supplies.

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

GRAND TRUNK RAILWAY SYSTEM

Finest Roadbed in Canada. Modern and Luxurious Trains. Courteous Employees. Beautiful Scenery. The Best of Everything on this Popular Route.

4 FAST TRAINS, TWO EXPRESS AND TWO LIMITED

BETWEEN MONTREAL AND TORONTO, EACH WAY, DAILY

THROUGH TRAINS between BOSTON (via Boston & Maine R.R. and Cent. Vermont Ry.) MONTREAL, TORONTO and CHICAGO.
THROUGH TRAINS between NEW YORK, TORONTO and CHICAGO via Lehigh Valley R. R. and Niagara Falls.

Dining and Parlor-Library-Cafe Cars on Day Trains. Pullman Sleeping Cars on Night Trains.

THE "INTERNATIONAL LIMITED"

The "Railway Greyhound of Canada," the finest and fastest train in the Dominion, runs every day in the year between Montreal and Chicago.

The Lines of this Great System reach all the Principal Cities and Towns in Quebec and Ontario

W. E. DAVIS, Passenger Traffic Manager, Montreal. G. T. BELL, Asst. Pass. Traffic Manager, MONTREAL.
G. W. VAUX, Gen. Passenger Agent, MONTREAL

is a very poor showing for the number of teams required. Whilst of great service in shallow borrow pit, street grading, and open work of that nature, this machine is all that is claimed by the makers, the writer is of opinion that money can easily be lost by trying to use it where boulders or hardpan are encountered, or where cuts are limited in width. Its chief drawbacks are: Too many delicate parts, frame not heavy or rigid enough, and consequently too much lost time for minor repairs, and as there is usually a big outfit waiting on account of the repairs, a series of short stoppages soon make a big loss..

STEAM SHOVEL WORK.—Fig. 12 shows the diagram used to stake cuts for this work, giving equivalent quantities to the roadbed used, viz., 22 ft. slopes 1½—1. It is advisable to stake these cuts to a 1½—1 also, and cut a grip along this line to induce the bank to break back to the correct lines. If this is not done it breaks away in pockets. Fig. 13 will be found useful in determining what a given size of shovel will do, and enable one to lay out the most economical lifts which should be taken in making a thorough cut. The question of water supply for the shovel, its quality and quantity, should never be overlooked, as it materially affects the cost of the work. The use of heavier steel than the dinkeys and dump cars call for, is not economical, as it costs too much to move around and handle. An all around shovel on traction wheels with a 1½ or 2 yd. dipper, and 2½ yd. cars on 30 lb. steel, would often be more serviceable than the heavier types of shovels, where the frequency and distance of moves is considered, and if it could be operated by a gasoline motor to solve the fuel difficulty, an almost ideal machine for railway work would be available.

On deep cuts and high fills it is very convenient for purposes of running fence stakes, etc., to have them set out before ground is broken, as great trouble is experienced in setting them afterwards, particularly around curves.

The foregoing paper by F. P. Wilson, was read before the Canadian Society of Civil Engineers.

The Manual of Statistics and Stock Exchange Year Book for 1910, has been issued from the publishing office, 20 Vesey St., New York City. This is the 32nd annual issue of a carefully compiled review of the financial position of the principal railways—steam and electric—and other transportation, industrial and financial companies whose stocks are dealt in on the principal exchanges in the U.S. and Canada. The section near the end of the volume, dealing with the range in prices of the stocks dealt in on the principal exchanges of North America for 1907, 1908 and 1909, is of importance to all investors. There are also added a large number of tables covering prices of various commodities, visible wheat supply, average prices, value of exports, etc., as well as much other information to which all interested in financial matters need constantly to refer. The price is $5.00.

The New Brunswick Railway Act was amended at the last session of the Legislature, by substituting for sec. 9 a new one providing that the right of way which may be taken without the consent of the owner, shall not exceed 100 ft. in width, except where necessary for banks, slopes, etc., or for stations, yards and other buildings. A new section, 90, was added providing for the making of agreements for the construction of temporary or permanent spur tracks, to gravel and ballast pits, etc.

Sir Wm. White, who was recently elected a director of the G.T.R. in the place of Sir Chas. Rivers Wilson, was in Montreal early in June.

Railway Finance, Meetings, Etc.

Albert Ry.—A press dispatch from Moncton, N.B., June 11, stated that the Government Railways Managing Board had made an inspection of this line. This is one of the branch lines which it has been proposed should be acquired by the Intercolonial Ry.

The railway extending from Salisbury, on the I.C.R. for about 50 miles, through Albert County to Albert and Harvey, was originally the Albert Ry. For some years it was known as the Salisbury and Harvey Ry., and in 1909, after a sale and reorganization, it was renamed the Salisbury and Albert Ry. There is an extension of 19 miles known as the Alberta Southern Ry., which has not been operated for some years. (See Salisbury and Albert Ry., May, 1909, pg. 357.)

Alberta Ry. and Irrigation Co.—Approximate net profits from all sources, exclusive of land sales, for April, $30,360, against $10,089 for Apr. 1909. Cumulative net profits for 10 months ended Apr. 30, $407,516. Traffic receipts for May, $31,863 against $22,293 for May 1909. Aggregate traffic receipts for 11 months ended May 31, $355,137.

Atlantic, Quebec and Western Ry.—Application is being made to the Board of Railway Commissioners for approval of an agreement of sale of the lines forming the Baie des Chaleurs section of the Atlantic and Lake Superior Ry., from Matapedia to Paspebiac, Que., to the Quebec Oriental Ry. The Q.O. Ry. is the title of the company incorporated by the Quebec Legislature, working under a Dominion charter as the Atlantic, Quebec and Western Ry.

Canada Southern Ry., Niagara River Bridge Co.—Niagara Grand Island Bridge Co. At the annual meetings of these companies, at St. Thomas, Ont., June 1, with Nicol Kingsmill, K. C., in the chair, the following were elected directors for the current year:—W. K. Vanderbilt, F. W. Vanderbilt, C. M. Depew, W. H. Newman, W. C. Brown, J. E. Brown, E. A. Wickes, L. C. Ledyard, New York, and H. B. Ledyard, Detroit.

Canadian Northern Ry.—A trust deed, dated Jan. 27, has been deposited with the Secretary of State, between the C.N. R., the British Empire Trust Co., and the National Trust Co., supplementary to a trust deed of Oct. 21, 1908, securing an issue of 3½% 50-year debenture stock, guaranteed by the Government.

Canadian Pacific Ry.—In connection with press reports that the C.P.R. had secured control of the New York, Ontario and Western Ry., and of the Washington County Ry., Sir Thos. G. Shaughnessy said the stories represented cases of "some one buying a railroad for us without consulting us."

Another report credits the C.P.R. with having under consideration the formation of a company to take over and deal with its lands. Similar reports have been denied on numerous occasions.

The bonds issued by the Midland Ry. of Nova Scotia, amounting to $1,200,000, are reported to have been acquired by "interests friendly to the C.P.R." at 85 per cent. of face value, from the holders: Hon. S. H. Holmes, Halifax, N.S.; T. G. McMillan, Truro, N.S.; P. Lyall, Montreal; the A. Putnam estate, and the Sir Robt. G. Reid estate. The company's common stock has also passed under the control of the same friendly interests.

Central Ontario Ry.—Following are the directors and officers for the current year:—President, C. E. Ritchie; Vice President, J. J. Warren; General Manager, G. Collins; other directors, J. H. Moss, E. B. Stockdale.

Dominion Atlantic Ry.—Gross earnings for Apr., $86,000 against $89,773 for Apr. 1909. Aggregate earnings for 10 months ended Apr. 30, $990,750, against $953,977 for same period 1908-9.

A circular has been addressed to the shareholders in which the directors recommended the acceptance of the offer made through the Bank of Montreal by interests friendly to the C.P.R. to purchase a controlling interest in the company at 60% for the preferred stock, and 20% for the ordinary stock.

Grand Trunk Western Ry.—Notification has been given that this company (which is the western U.S. end of the G.T.R. Co.) is to pay on Dec. 1, under the optional provision of the mortgage, 85 per cent. of the principal and all interest earned and accrued on the second income mortgage bonds, of which $1,500,000 was originally issued.

Intercolonial Ry.—The financial statement for the fiscal year ended Mar. 31 shows a revenue of $9,268,234.99, and operating expenses of $8,645,070.33, leaving a surplus of receipts over operating expenses of $623,164.33. The revenue from freight was about two-thirds of the total, and that from passengers about one-third. There was expended on capital account during the year $1,278,409.45.

Kettle River Valley Ry.—A special meeting of shareholders has been called for July 8, in Toronto in connection with the issuing of first mortgage bonds.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—There has been listed on the New York Stock Exchange $1,207,000 additional first consolidated mortgage 4½ per cent. bonds. Of the proceeds of the sale of these bonds $1,200,000 was used to pay for extensions, and $7,000 was exchanged for a like amount of Minneapolis and Pacific first mortgage bonds.

Montreal and Vermont Jct. Ry.—Following are the officers and directors for the current year:—President, C. M. Hays, Vice President, E. H. Fitzhugh; A. H. Gilmour, Secretary-Treasurer; W. H. Chaffee, Assistant Secretary-Treasurer; other directors, G. C. Jones, E. C. Smith and C. W. Witters.

New Brunswick Coal and Ry. Co.—The New Brunswick Legislature has authorized the Government to pay to the Dominion Government $48,919.05 on account of the N.B.C. and Ry. Co., as follows: For rails and fastenings supplied during construction in 1902-03, $39,459.11; for car service, freight balances, ticket balances and car repairs, $9,459.94.

Quebec and Lake St. John Ry.—The bondholders at a meeting held in London, England, May 28, decided to continue the receivership with a view of dealing with pressing debts, and to raise £50,000 on special priority securities, so as to provide for the continued operation of the line.

The Railway Share Trust and Agency Co., London, Eng., acting as trustees for the holders of prior lien, first mortgage and income bonds of the Q. and L. St. J. Ry., and A. J. Gorrie, Receiver, have entered an action aginst the company, and the Canadian Northern Quebec Ry., to recover about $8,000,000, the amount of bonds outstanding, and overdue interest.

Temiscouata Ry.—Profits for Apr., $1,010, and for four months ended Apr. 30, $9,646.

Toronto, Hamilton and Buffalo Ry.—Following are the officers and directors for the current year:—W. C. Brown, W. H. Newman, C. F. Cox, New York; H. B. Ledyard, Detroit, Mich.; Sir Thos. G. Shaughnessy, D. McNicoll Montreal; E. B. Osler, N. Kingsmill, W. P. Torrance, W. L. Scott, Toronto.

A Quebec jury has given $25,000 damages to a man who was permanently injured by the collapse of the Quebec Bridge in Aug., 1907.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Albert and Moncton Ry.—The New Brunswick Legislature has authorized the Aluminum Production Co., of N.B., to build a line from its mines to Hillsborough, and thence to Moncton, with such branches, spurs, etc., as may be necessary, and to be known as the Albert and Moncton Ry. The Aluminum Production Co. has acquired 1,480 acres of mineral lands in Albert County, covered by mining lease 81, granted in 1891 to H. A. Calhoun, and transferred by him to J. L. Peck.

Alberta, Peace River and Eastern Ry.—Press reports from Pincher Creek, Alta., state that those interested in this newly incorporated company are completing arrangements to begin construction on the Pincher-Cardston section, and that it is proposed to use the McGuire survey, placing the station at the police reserve, and to start work by the end of July. (June, pg. 447.)

Algoma Central and Hudson Bay Ry.—A contract has been let, we are officially advised, to the O'Boyle Construction Co., Sault Ste. Marie, Ont., for building the portion of the line from Hawke Lake Jct., to Hobon, on the C.P.R. transcontinental line, about 30 miles. This piece of line will connect up the Michipicoten branch with the C.P.R.

The work to be done on the line between Hawke Lake Jct., and Hobon, on the C.P.R., will be difficult, as the country is rocky and broken. The maximum gradient will be 0.6%, and the maximum curvature 12 degrees. There will be 17 trestle bridges on the 31 miles of line. The company will build a round house at Hobon.

London, Eng., cables state that arrangements have been completed for placing on the market £770,000 first mortgage 5% bonds, at an early date. The bonds are guaranteed, principal and interest by the Lake Superior Corporation.

Anticosti Island.—We are advised that arrangements are being completed for the building of a logging railway of about 10 miles. It will extend from the logging camps in the interior to a convenient shipping point.

British Columbia and Alaska Ry.—Reports from Lytton, B.C., state that survey parties have been organized to proceed with the location of this projected line; that the first party, in charge of J. Early, will work between Lytton and Eagle Lake, and the second party, in charge of E. C. Simpson, will work from Fort George, and that as soon as these surveys have been completed a branch from Lillooet to Vancouver will be located. The provisional directors named in the act of incorporation, passed last session of the B.C. Legislature, were local men acting as representatives of a New York syndicate which proposes to construct a railway from Vancouver through B.C. and Alaska. The syndicate has been incorporated in the State of Delaware with a capital of $12,000,000, with the title of the British Columbia Ry. and Development. R. Smailes, Greenwood, B.C., one of the provisional directors, stated that the surveys from Lytton to Fort George were being made first, in order to secure the right of way, but the first section of the line to be constructed would be that from Vancouver to Lillooet. (May, pg. 349. See also Howe Sound and Northern Ry.)

Chibougamou District.—The commission which the Quebec Government has appointed to investigate the resources of the Chibougamou district consists of Dr. A. E. Ballou, E. R. Laribault, of the Provincial Geological Survey, and J. G. Gwilim, of the School of Mines, Kingston, Ont. The first two will investigate the geology of the district, and the last named the economic value of the mineral showings. Topographical surveys will be made by —. Valliquette, Quebec, and the commissioners will be accompanied by a party of student assistants. The commissioners have nothing to do with locating a route for a railway, although, if their report on the country is favorable, the Government, as stated by the Premier, will consider the question of either aiding the building of a line, or building one as a provincial undertaking.

Delaware and Hudson Co.—The Dominion Government, under the terms of the act granting aid to certain railways, has entered into a contract with the Quebec, Montreal and Southern Ry. (the title of the D. & H. Ry.'s Canadian line) for the construction of bridges over the Nicolet, Gentilly and Becancourt Rivers, Que. These bridges are on the section of the line completed in 1908. (Oct., 1909, pg. 743.)

The Eastern Canada Lumber and Construction Co. has been incorporated in New York City for the purpose of taking over and developing the Prescott property of 20,000 acres of timber lands in Albert County, N.B. The company has also acquired 3.5 miles of railway extending from the saw mill to the wharf at Harvey. The officers are: President, W. H. Malcolm; Vice President, J. H. Moran; Treasurer, A. Tippett; Secretary, J. W. Clow, all of New York.

The Fredericton and Grand Lake Coal and Ry. Co. was incorporated last session of the New Brunswick Legislature to build a line from Gibson, on the Intercolonial Ry., to a junction with the N.B. Coal and Ry. Co.'s line near Minto. The provisional directors are:—A. R. Slipp, H. P. Zimmerman, C. F. Chestnut, H. W. Words, A. B. Wilmot, D. K. Hazen, P. Glasier. The company is authorized to arrange for running rights over the Intercolonial Ry., the C.P.R., the New Brunswick Ry. and Coal Co.'s line, and the line which may hereafter connect with the National Transcontinental Ry. (May, 1910, pg. 349.)

Halifax and Eastern Ry.—An order-in-council has been signed by the Lieut.-Governor of Nova Scotia, under the authority of chap. 1 of the statutes of 1906 incorporating a company with this title, having for its object the construction of several lines of railway for the development of the Alfred Dickie and Co.'s timber limits in Halifax and Guysboro counties, which have been acquired by the syndicate now incorporated. The company is given power to build a railway from Halifax or Dartmouth to Guysboro, with branches to Country Harbor and other points, for the construction of which various projects, subsidized by Nova Scotia and the Dominion, have been put forward during the past 15 years under the titles of the Musquodoboit Valley Ry., New Glasgow and Sunny Brae Ry., Halifax Northeastern Ry., North-Eastern Ry., Halifax and Eastern Ry. The provisional directors are:—J. B. Bartram, Toronto; T. P. Fogg, Toledo, Ohio; G. H. Raw and S. Hirsch, London, England, brokers. The board of directors is to consist of not less than two nor more than nine members of the company. The Governor-in-Council is to have the right to appoint two, who shall not be shareholders. The head office is to be in Halifax or such place in Nova Scotia as the directors determine. The capital stock is to be $3,000,000. The company is to have free right of way over Crown lands, and the charter is to cease unless the company be actually organized and engaged in business in two years. It is expected that the contract for the construction of the road will be signed in a few days.

Surveys have been made for the line by different companies which from time to time have had the matter under consideration, as well as by the N.S. Government. The Government report, together with the subsidies voted by the Dominion Parliament and the Nova Scotia Legislature, will be available for the new company. (See Halifax and Eastern Ry., June, pg. 449.)

The Hartland and Miramichi Ry. Co. has been incorporated by the New Brunswick Legislature to build a railway from Hartland, Carleton County, to a convenient point on the National Transcontinental Ry. The provisional directors are:—E. A. Britton, D. H. Lamont, S. S. Miller, M. L. Hayward, and H. A. Smith. (May, pg. 349.)

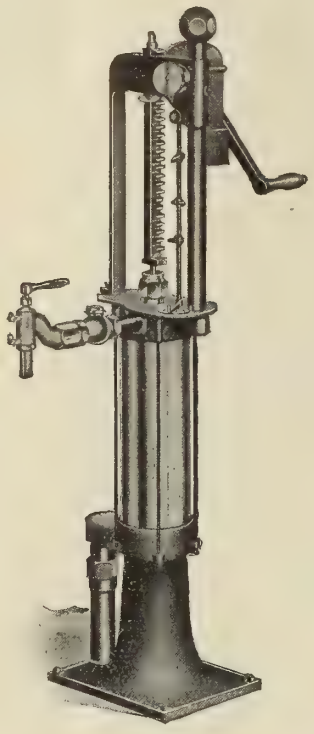
Howe Sound and Northern Ry.—Announcement was made recently in Vancouver that a contract had been let for the completion of the line from the present terminus to Newport, B.C., and that it was expected to have the portions of the line now under construction ready for operation at an early date. It is also reported that construction is being proceeded with on the Marquain River branch, which is intended to open up some extensive timber areas. Nothing, it is reported, has been decided as to construction between Pemberton Meadows and Lillooet. J. C. Gill, Manager, is quoted as stating that the company is an independent one, and it was proposed ultimately to extend its line to Fort George on the Grand Trunk Pacific Ry. (June, pg. 449. See also British Columbia and Alaska Ry.)

Hudson Bay and Pacific Ry.—We are advised that at present only survey work is being done, and that the company is not in a position to give any details as to its ownership, organization or construction programme.

From another source we learn that there is a hitch in the organization proceedings of the company, and that it will be some weeks before permanent directors can be elected. The provisional directors are at variance among themselves and some technical objections, arising out of which one side has obtained an injunction to prevent the others acting, in the transfer of the charter to the new company. "The people have the money and are ready to go on," we are advised. The court proceedings taken in Ottawa show that the difference is between the Canadian and the British directors, against whom an injunction has been issued. The British directors are Colonel Josiah Harris, J. Weston, H. Spicer and J. F. Greville, and along with them is associated in the injunction the Hudson Bay and Pacific Development Co., which they had organized to finance the construction. The Canadian directors are R. Jones, E. E. Latiere, Ottawa; A. Racine, E. H. Lemay, Montreal, and they allege in their complaint that the British directors desire to get control and oust them.

Several conferences have been held at Ottawa between J. A. Taylor, New York, and members of the Government relative to railway construction in the vicinity of Hudson Bay. J. A. Taylor, who has been mentioned as head of the firm, having a contract to build the H.B. and P.R., is said to have as associates W. C. Teebier, P. Tiffany, and E. Van Etten, of New York.

Since the above was written we have been officially advised that the officers and directors are: The Earl of Essex, Lord Tenterden. Col. Sir A. FitzGeorge, Col. N. Fleudver, Col. I. Josiah Harris, J. Western, S. Hemage, W. Vaughan Williams, M. S. Jobling, C. H. Spicer, J.G.F. Greville, (Managing Director); (these directors reside in London, Eng.); H. Spicer, Managing Director in Canada; C. R. J. Bethune, K.C., Ottawa; Secretary, J. G. Hatton; Solicitors, Shepheards



BOWSER

SYSTEMS FOR RAILWAY OIL STORAGE

are backed up by twenty-five years of experience in the manufacture of Self-measuring Pumps and Tanks.

The Tanks are made of any capacity, either cylindrical or rectangular, may be buried underground and connected with the pumps which are placed any distance away, wherever most convenient. No danger from FIRE.

The Pumps measure accurately, and by means of a Gallon Meter, keep an accurate record of all oil drawn. ABOUT ONE HUNDRED AND FIFTY RAILROADS ARE USING BOWSER EQUIPMENT. Drop a card for BULLETIN 18.

& Walters, London, Eng.; A. Smith, Ottawa; Auditor, Wm. Pearce; Consulting Engineers, Attwood and Hooper, London, Eng.; Chief Engineer, G. Attwood, Mem. Inst. C. E.; Assistant Engineer, A. H. May; engineer in charge of surveys, L. S. Taylor. The route which the company proposes to lay out is from Prince Albert, Sask., via Cumberland, Cranberry, and Split Lakes to Fort Churchill on Hudson Bay, about 640 miles. In 1902, a general survey was made by J. W. Tyrell, of Hamilton, from Cumberland to Fort Churchill, and last winter a flying survey was made of the country from Prince Albert to Torch River by L. D. Taylor. A complete location survey has been made for 50 miles from Prince Albert, and surveys for the further location are being made under the charge of L. D. Taylor. It has not been decided when the building of the line will be started, but we are advised that it is very probable a beginning will be made very shortly, the question of the contract now being under consideration. (June, pg. 449.)

Intercolonial Ry.—The contract for building a line from Nelson to Chatham, N.B., 8.5 miles, has been let to Morrison and Clark, Summerside, P.E. I. The object is to reduce the heavy gradients on the main line between Nelson and Loggieville.

A. W. Campbell, Deputy Minister of Railways, left Ottawa June 6, for the purpose of making a trip of inspection over the line. He was accompanied by the other members of the Board of Management, and met the officers of the different divisions along the route. At various points he received deputations from local organizations desirous of bringing forward proposals for improvements. At St. John, N.B., June 9, he delivered an address before the Canadian Club, in which he announced that the deep water terminals at that port would be extended. The property to be used in these extensions would be that originally granted by the city for the sugar refining project, and later exchanged by the promoters for some property belonging to the I.C.R.

E. Tiffin, a member of the Managing Board, in a recent interview at Montreal, said the time was coming when it would be officially recognized that Halifax should be both the summer and winter port for the mail steamers. As to the future of the I.C.R. it was recognized that the markets for the country through which the line passed, lay in Montreal and west, and he thought, personally, it would be a good thing, both for the I.C.R. and the Maritime Provinces, if the line were extended to Toronto. (June, pg. 449.)

Kettle Valley Lines.—Surveys for the extension of the line from Grand Forks to Vancouver, B.C., are being completed. H. D. Lumsden, being reported to be in charge of the work. (June, pg. 449..)

London and Port Stanley Ry.—It is estimated that the cost of electrifying this line, owned by the city of London, Ont., will not exceed $250,000. This includes the laying of a second track, and the provision of a sufficient number of cars. A suggestion is made that the city should run its own electric service and give running rights over the line to the several steam railways running into London and desirous of having a connection with Port Stanley. (April, pg. 271.)

Long Soo and Abitibi Ry.—The Quebec Legislature has incorporated a company with this title, to build a railway from some point on James Bay, between the Ontario and Quebec boundary and the East Marn River, and the Long Sault at the foot of Lake Timiskaming, and the Desmoines River, Que., and to connect with the National Transcontinental Ry., and the C.P.R. The company may operate its line by steam, electricity or other motive power. The provisional directors are:—T. G. Brigham, G. E. Mulligan, D. B. Mulligan, W. E. Hayes, Jr., J. Ayler.

Michigan Central Rd.—The work of raising the track and otherwise improving the main line through Essex county, Ont., is being proceeded with, and will be completed this summer. The tracks of the electric railway which cross the line at Talbot St., Essex, have been raised for some distance on each side of the track to correspond with the new M.C.R. levels.

The old buildings on the site of the proposed new station in Detroit, Mich., have been cleared away, and everything is now ready for making a start on the building. (June, pg. 451.)

Montreal Central Terminal Ry.—Plans showing the company's proposed lines and a tunnel under the St. Lawrence River have been filed with the Department of Railways. The proposed line starts a short distance east of Montreal Junction, north of the Lachine Road, and runs into the city via St. Antoine St. A detour is made north-easterly at Windsor St., between Craig and Dorchester Streets, as far east as Amherst St., where it crosses St. Catharine St., and continues to Delorimier St., passing along between Ontario and Sherbrooke Streets to a junction with the C.P.R. near Viauville. A branch line to the C.P.R. station at Place Viger is shown from near the corner of Craig St. and St. Lawrence Boulevard. Another branch starts from between Amherst and Delorimier Ave., to the river, across to Ile Ronde, thence to Longueuil and on to a junction with the Central Vermont Ry. to Chambly. The company's application to the Dominion Parliament for an extension of time was defeated last session, but it is claimed that its charter does not expire until 1911. (Jan., pg. 21.)

Nasuga Gulf to G.T. Pacific Ry.—The British Columbia Legislature will be asked next session to incorporate a company to build a line from Nasuga Gulf, on Portland Canal, following the Naas River to its headquarters, and down the Kitsum Kalum River to the G.T. Pacific Ry. Barnard and Robertson, Victoria, are solicitors for applicants.

Nelson River Ry.—A meeting of the shareholders is to be held in Winnipeg, July 2, to elect directors, change the location of the head office, pass bylaws, and transact other business incidental to organization. (June, pg. 451.)

Northern New Brunswick and Seaboard Ry.—The total authorized bond issue is $390,000 of 4% 30-year gold bonds, being at the rate of $15.000 a mile on not exceeding 26 miles of railway. Of this there has been built 16.9 miles and there has been placed on the market by the Royal Trust Co. $253,500 of the bonds at 99¼. They are guaranteed by the Canada Iron Corporation and by the Province of New Brunswick.

Peace River Ry.—Press reports from Edmonton, Alta., state that application will be made to the new Legislature by J. Revillon and the other partner of Revillon Freres, for the incorporating of a company with this title to build a line from Edmonton north-westerly via Sturgeon Lake to Grand Prairie, on Peace River, about 250 miles.

Port Moody, Indian River and Northern Ry.—A press report states that 50 men with teams started grading, May 23, north of Port Moody, B.C., on a line to tap the country north of Burrar Inlet. The first four miles from the head of the Inlet, it is reported, is to be completed within three months. (May, pg. 353.)

Quebec and New Brunswick Ry.—A press report states that T. Malcolm, President of the International Ry. of New Brunswick, has secured control of the Quebec and New Brunswick Ry. charter. The latter company was incorporated by the Dominion Parliament in 1900 to build a line from Connors, N.B., on the Temiscouata Ry., St. Francis branch, to St. Charles Jct., Que., on the Intercolonial Ry., St. Anselme, Que., on the Quebec Central Ry., or Chaudiere Jct., on the G.T.R., about 130 miles. Some small amount of grading was done near Connors, in 1903, in order to hold the charter, and an extension of time for construction was granted in 1903, and at subsequent dates. In 1908 a further extension of time was granted for construction, and the company was authorized to add a point on the National Transcontinental Ry. in the St. Francis River Valley to the points from which a choice of a possible northerly terminal could be made; and to construct a line from either of these points to the International boundary line, at the 13th tp. in the State of Maine. Power was given in 1909, to build a line in addition to those already noted from Connors to Centreville and Woodstock, and thence by the St. John River Valley to St. John.

Reid Newfoundland Ry.—Eight miles of the Bonavista branch have been completed; the grading has been completed to Goose Bay and work is being proceeded with on to Southern Bay. Track laying is being done at the rate of about 3,000 feet a day, and the ballasting gang is following close behind. It is expected that the branch will be completed by the end of this year. (June, pg. 451.)

St. John and Quebec Ry.—See St. John Valley Ry.

St. John Valley Ry.—The New Brunswick Legislature has authorized the Government to have a survey made for a railway from the National Transcontinental Ry., passing through or near Centreville, Lakeville, Woodstock, Fredericton and Gageton, to St. John, or to the C.P.R. near Westfield, or other points. The line is to run as near as practicable to the western bank of the St. John River. The engineers are to report to the Government as to the route proposed and the estimated cost of construction. The cost of making the survey is to be repaid to the Government by any company undertaking the construction of the line. The Government is authorized to guarantee the bonds of any company undertaking the construction of the line up to $25,000 a mile, at 4 per cent., the principal to be repaid in 50 years, the guaranteed bonds to be issued as each 10 mile section is completed, the Government to be secured by a first mortgage on the railway, rolling stock and other property. The guarantee shall not be given until a contract has been entered into with the Dominion Government under the acts for aiding certain railways, and a further agreement under which the line will be operated for 99 years by the Department of Railways as part of the I.C.R. at a rental of 40 per cent. of the gross receipts, payable to the N.B. Government. The Government is also authorized to guarantee the bonds of any company to the extent of $25,000 a mile to construct a railway from Andover to Westfield. Provision has to be made in either case for running rights to St. John, L'Etang, St. Andrews or other points in Charlotte County. The N.B. Legislature last session incorporated the St. John and Quebec Ry. Co. to build the line mentioned above. The provisional directors are:—A. R. Gould, A. N. McLennan, J. M. Robinson, H. B. Robinson, R. Thompson. (June, pg. 451.)

Southampton Ry.—The New Brunswick Legislature has incorporated a company with this title to construct a railway from near Millville station, on the C.P.R. Gibson branch, crossing the

north-east Nackawich stream to Pokrok bridge in York county. The provisional directors are:—J. E. Stewart, J. K. Pinder, H. H. McNally, D. Gilman, P. A. Guthrie, A. C. Hagerty and W. E. Trites. (May, pg. 353.)

Spokane International Ry.—Press reports state that construction has been begun on the Cœur d'Alene and Pend d'Orielle Ry., from the Spokane International Ry., 25 miles east of Spokane, to Cœur d'Alene city, Idaho. The report says it is expected to have the line completed in about three months. The Spokane International Ry. connects with the C.P.R. Crow's Nest branch at Yahk, B.C. The President of the new line is D. C. Corbin, and the Chief Engineer E. G. Taber, who hold similar positions on the S.I. Ry.

Toronto, Hamilton and Buffalo Ry.—Application is being made for permission to lay five additional tracks at the east end yards, Hamilton, and considerable opposition is being given by the city council. The company says it desires the increased accommodation at the belt line junction, and that there is no intention to abandon the west-end yards, and build a roundhouse in the east.

A statement was made by Gen. Superintendent Adams, Jan. 9, that owing to the increase of the company's business the line between Hamilton and Welland, Ont., would be made a double track one, but we were officially advised, June 17, that the work is not now in contemplation. (Apr. 1908, pg. 247.)

Vancouver to New Westminster, B.C.—Application will be made to the British Columbia Legislature to incorporate a company with this title to build a railway from Vancouver, through the municipalities of Point Grey, South Westminster and Burnaley to New Westminster, with branch lines not exceeding 15 miles in length in any single instance. Promoters desire to have power to operate the line by steam, electricity or any other motive power. Harris and Bull, Vancouver, are solicitors for applicants.

Western Canada Power Co.—The railway which this company proposes to build will extend from Ruskin station, adjoining the wagon road by Stave River, on the C.P.R., to the falls at Stave Lake, about 8 miles. The line is to be used for taking in the material for the construction and equipment of the power house which is being built at the falls. A small electrical plant has already been installed in connection with the development of the company's larger plans. It is expected that the line will be completed by Sept., when the power house should be sufficiently far advanced to receive the steel work. Plans have been filed at Victoria, B.C., for the route of the high tension line from the falls to Vancouver. It will follow the Dewdney trunk road and the Como and Johnson roads.

A contract is reported to have been let to Morrisey, Smith and McLean for the grading of the line from Ruskin to Stave Lake. A press report from Ruskin, June 4, says work has been started, and it is expected to have the line completed by Sept. (June, pg. 453.)

E. A. Bent, wholesale and commission lumber, New London, Conn., in renewing his subscription, writes: "I find The Railway & Marine World very complete in its information on Canadian railway and marine doings, and being a Canadian, I am very much interested in it."

The C.P.R. commenced on June 1 a double train service each way every day between Montreal and Vancouver, the Pacific Express leaving Montreal in the morning and Imperial Limited in the evening. The company also runs a daily train from Toronto to Winnipeg.

National Transcontinental Railway.

Upon his return to Ottawa June 13, after having made a visit of inspection over the G. T. Pacific Ry., and attended to some matters in connection with arbitrations between the contractors on the N.T.R., and the Commissioners, C. Schreiber, Chief Consulting Engineer, said he did not look for the completion of the line from Moncton to Prince Rupert before the end of 1913. The work was going ahead nicely, but the great difficulty in the way of an earlier completion was the heavy work in the Mountain section and the scarcity of labor. On the line west of Winnipeg 915 miles of track had been laid and of this, 820 miles were being operated. The Mountain section would be 836 miles long and there were 438 miles under construction, 249 miles from Prince Rupert easterly, and 189 miles westerly from Moose Creek. Track was being laid over the first 100 miles of the Mountain section. The maximum gradient going west is 0.4%, and with the exception of a 1% gradient for about 20 miles, it is the same coming east. Sir Wilfrid Laurier is expected to leave Ottawa July 7, for a tour to the Pacific Coast, during which he will visit a number of the construction camps, and the places reached on the line. The Minister of Railways said that when the party reached Winnipeg special attention would be given to the terminal question.

The annual report of the Commissioners covering the work of the last fiscal year to March 31, was issued June 14. It shows that 63% of the grading on the whole line from Moncton to Winnipeg was finished and 45 % of the bridging. During the year 521 miles of track were laid, the total track mileage on Mar. 31 being 760, with 165 miles of sidings. The line from Winnipeg to Fort William will be opened for regular traffic in August. The total expenditure on the road up to the end of the fiscal year was $71,137,993.

Reports from Moncton, N. B., state that track laying has been completed on the Corbett and Floesch and the McManus Co.'s contracts, and that there is a fill-in to be made on the east side of Salmon River where the contracts meet, in order to enable the two ends of track to be joined. The bridge at Chipman is completed, and that at Salmon River is well forward. Track has been laid from Chipman to McGivney's, 40 miles, and 30 miles of ballasting has been completed. From McGivney's to Plaster Rock, 66 miles, grading has been completed, while 38 miles of track has been laid. The work between Plaster Rock and Grand Falls, 30 miles, is very heavy, but good progress has been made. The tunneling has been completed, with the exception of some of the approach work, and about 10 miles of track has been laid. There are some heavy bridges to be erected on this section, for which the Dominion Bridge Co. has the contract. There is a great scarcity of labor, but it is expected that the 256 miles of line in the province will be completed by the end of the season.

Westerly from Quebec there has been completed, with the exception of about 10 miles west of La Tuque, a stretch of 160 miles, on which about 100 miles of track has been laid. Cochrane, Ont., is the next centre of construction, and from that point track had been laid for 26 miles east to Mistange River, and grading is completed for 52 miles beyond the river. A steel bridge is being erected across the river. Track has been laid westerly from Cochrane to Ground Hog River, 52 miles, where a temporary bridge is being built to carry supplies across pending the erection of a permanent bridge. It is expected to lay an additional 50 miles of track westerly from Cochrane this season. A 24-stall roundhouse is being built at Superior Jct., Ont., the junction with the G.T.P. branch line to Fort William. West of Superior Jct., the finishing touches are being given to the line into Winnipeg, which will be opened for regular traffic in Aug. W. S. Calvert, one of the Commissioners having charge of construction, in a recent interview, said splendid progress was being made with construction all along the line, and especially in Northern Ontario. The commissioners were doing all they possibly could to have the terminals at Winnipeg rushed forward, so as to have everything ready to enable the G.T.P.R. to carry grain through to Fort William this season.

Atlantic Coast Terminals.—C. M. Hays, President G.T.R. and G.T.P.R., paid a visit to St. John, N.B., in June to inspect the site on Courtenay Bay, recently purchased for terminal purposes. It is reported that the G.T.P.R. will be enabled to carry freight to St. John and Halifax by using the Intercolonial Ry. from Moncton. A St. John report of June 11, says: "The G.T.P.R. will probably enter St. John by means of a branch tapping the N.T.R. main line at Chipman. Survey parties are at work locating this branch, which it is proposed shall run from Chipman via the Belleisle and Washademoak, through Kingston and across the Kennebecasis at Reid's Point to St. John."

Quebec Bridge.—The removal of the shore approaches to the bridge is being carried out by the company which put them up—the Phoenix Bridge Co. The steel is being stored by the Dominion Government, and will be utilized for bridges on the Intercolonial Ry. or for highways. The specifications for the new bridge have been completed by the engineers, and are being examined prior to tenders being called for. In a recent interview, the Minister of Railways said from the enquiries made about plans, he expected that tenders would be submitted by bridge builders from Canada, the United States, Great Britain, France, and Germany. The estimated weight of metal in the new bridge is 75,000 tons. The advertisements state that tenders will be received to Sept. 1.

Quebec Terminals.—At a recent meeting of the Quebec city council, S. N. Parent, Chairman N.T.R. Commission, said they were prepared to renew the previous offer of $100,000 for the Champlain market site and guarantee that the commissioners would expend $2,000,000 in the city upon a station, workshops and sheds, and they were ready to commence work immediately if the city accepted the proposition. The Federal Government was willing to spend between $8,000,000 and $10,000,000 within the next few years on the river front, building a revetment wall and wharves between Champlain market and Lampson's Cove. He understood that the city was ready to have the works commenced immediately and that was the reason he was present at the meeting to try and have matters settled. He had had an interview during the day with Sir Wilfrid Laurier and the Minister of Public Works, and as a result the latter had informed him that he would immediately see that the dredging of the River St. Charles was carried out. After some discussion, it was decided to give the question further consideration in committee. The finance committee has since recommended the acceptance of the offer.

GRAND TRUNK PACIFIC RY.

The bridge across the McLeod River, westerly from Edmonton, Alta., is expected to be completed Aug. 1. after which track laying will be resumed and carried on as far as the grading has been completed. The first divisional point west of Edmonton, will be Edson, eight

miles west of the McLeod River, and the erection of the roundhouse and other buildings will be gone on with as soon as construction materials can be taken in.

Working from the Pacific Coast the right of way has been cleared as far as Hazleton, and it is expected that the clearing gang will have got as far as Morricetown on the Bulkeley River, 30 miles from Hazleton, early in July. The contractors have completed the approaches to the tunel near Hazleton, and have started work on the boring. About two-thirds of the length of the Duncan Ross tunnel at Bulkeley River has been bored. and good progress is being made on the remaining 100 ft.

C. M. Hays, President G.T.P.R., passed through Winnipeg on a trip of inspection over the line June 19. In an interview he stated that the company had 12,000 freight cars ready for the handling of the crop along its lines from Edmonton to Fort William. It was the company's intention to build a large hotel in Winnipeg.

The Board of Railway Commissioners has approved the location of the line easterly from mileage 408.69 to 434.5, in the vicinity of Fort George, B.C.

GRAND TRUNK PACIFIC BRANCH LINES.

The question of the location of the line from Regina, Sask., to the International boundary, was recently discussed between the Premier of Saskatchewan and E. J. Chamberlin, Vice President and General Manager. The question at issue was whether the line should be diverted from the route located by the company so as to pass through Weyburn, as the people of that town desired. The company said it would have to abandon its extension in Southern Saskatchewan if this were insisted upon, but offered as an alternative to build a branch from the Regina line north of Weyburn into the town and on to the International boundary, where a connection would be made with a branch of the Great Northern Ry., now terminating at Scobey, N.D. (June, pg 483.)

The International Aviation Association, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000, and office at Montreal, for the purpose, among other things, of manufacturing and dealing in aeroplanes, balloons and all devices and machines for traveling in the air.

The Pere Marquette Rd., beginning June 27, abandoned Walkerville, Ont., as the terminus of its Canadian line, and now runs its trains from London and St. Thomas through to Detroit, Mich. The trains leave Detroit station, are carried across the river by car ferries, and are run from the C.P.R. dock around the Essex Terminal Ry. to Walkerville Jct.

The apprentices in the various G.T.R. shops were recently examined in mechanical drawing and practical mechanics. The standing of the different shops is as follows:—Drawing—1st, Stratford; 2nd, Montreal; 3rd, Deering; 4th, Allandale; 5th, Ottawa; 6th, Battle Creek; 7th, Toronto. Practical Mechanics—1st, Stratford; 2nd, Montreal; 3rd, Toronto; 4th, Battle Creek; 5th, Deering; 6th, Ottawa; 7th, Allandale.

J. P. Mullarkey, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $500,000, and office at Montreal, to carry on a general contracting business, to construct railways, canals, wharves, elevators, steam and other vessels, and public and private buildings, and in connection therewith to take over the business now carried on by J. P. Mullarkey, with existing contracts, assets and liabilities.

Canadian Northern Ry. Construction, Etc.

Canadian Northern Quebec Ry.—A contract has been entered into between the company and the Dominion Government under the act granting aid to certain railways for the building of a line from near L'Epiphanie on the main line north of Montreal, by way of St. Jacques L'Achigan to Rawdon, a distance of 16 miles. This line was completed in 1909, and a regular train service is being operated over it.

With a view to making Joliette a division point a round house, and shops for the making of running repairs to rolling stock are being erected. As soon as these are completed the employes at the present shops at Shawinigan Jct., will be moved there. The dispatching of trains on the line has already been centered at Joliette, it having been found to be a more convenient point than Montreal. The Assistant Superintendent has also been transferred there from Montreal.

The C.N.R. has secured options on a considerable area of property in Montreal, in the vicinity of St. Catharine St., and press reports state that it is being acquired for terminal purposes. Some papers credit the company with having in view the boring of a tunnel unaer Mount Royal.

The Board of Railway Commissioners has approved the location plans of a line from Hawksbury to Montreal. The line will cross the Ottawa River and run through Carillon, St. Andrews and St. Eustache to Hochelaga and Montreal. The company now obtains an entrance into Montreal by the line built as the Chateauguay and Northery Ry., joining the Ottawa-Quebec line at Joliette, but the route now located will give a very direct line. Tenders have been asked for the building of the line.

Quebec and Lake St. John Ry.—The first three of the lines for which the Dominion Parliament voted subsidies last season, particulars of which were given in our June issue, page 485, have been built, and trains are being operated over them. We are advised in regard to the other three lines, for which subsidies were voted, that it has not yet been decided whether any construction work will be done on them this year.

Canadian Northern Ontario Ry.—Plans have been filed with the Board of Railway Commissioners showing the route of entrance of the Toronto-Ottawa line into Ottawa. Starting from the point to which the route had previously been approved—at the crossing of the Rideau River, near Nepean and Gloucester streets—it crosses almost at right angles the Bank St. extension, or Metcalf road, some distance south of Billing's Bridge, by an overhead crossing; parallels the St. Lawrence and Ottawa line of the C.P.R. to Rideau Jct.; crosses the G.T.R. and the C.P.R. near the second diamond, and effects a junction east of the Rideau River with the company's Montreal line, terminating for the present on Gladstone Ave.

We are advised that the sub-contractors engaged on the Don Valley-Trenton section of the line from Toronto to Ottawa, with their headquarters, are as follows:—Henderson & Kroft, mileage 237-241¼, Malvern; A. Piro & Co., mileage 233-234¼, Cedar Grove; John Baskin, mileage 229¾-233, Greenwood; C.A. Cook, mileage 226-229¾; Pickering, J. L. Boyd, mileage 219-222¼, Brooklin; J. A. Livingston, mileage 216¼-219, Brooklin; Ross & McComb, mileage 213-216¼, Oshawa; E. Mackenzie, mileage, 192-213, Toronto; W.M. Murray, mileage, — 192, Osaca; Allan & McPherson, mileage 171-177, Cobourg; Stewart & McInnis, mileage 165-171, Grafton; J. O. Giroux, mileage 155-165, Colborne; Delvin and Verlando. mileage 145-155, Trenton. The contractors for the concrete work on this contract are, Henderson Bros., Brooklin; and —. Campbell, Oshawa.

The Toronto board of control has passed a resolution providing that strip of the railway reservation on the east side of the Don River, be leased to the C.N.R. as soon as the Board of Railway Commissioners approve the terminal plans, showing the use to which the particular strip will be devoted.

The survey parties under H. K. Wicksteed, have completed the survey of the route for its line from north of Sudbury, to Port Arthur, Ont., and the work now in hand consists of reducing the survey notes into plans, and the making of special surveys, of points where improvements may be desirable or necessary, in order to get a perfect line. The route secured is said to be a most favorable one, obviating all the heavy gradients on the routes previously surveyed, and passing through country rich in minerals and timber, and having large areas of land suitable for agriculture. The new route will enter Port Arthur from the east, at Bare Point, while former routes provided an entry from the north.

Irondale, Bancroft and Ottawa Ry.—We are advised that a piece of line to connect the Irondale, Bancroft and Ottawa Ry. with the Central Ottawa Ry. at Bird's Creek, Ont., is being made and is expected to be completed early in July. The C.O. Ry. is doing the work. The I.B. and O. Ry is being operated under a lease by the C.O. Ry., for the Mackenzie-Mann interests which control it.

Duluth, Virginia and Winnipeg Ry.—Tenders have been received for building of a line from Duluth to Virginia, Minn., 142 miles. This will connect with the existing Duluth, Rainy Lake and Winnipeg Ry., now in operation from Virginia to the Rainy River, opposite Fort Francis, Ont., and so give the Canadian Northern Ry. a through connection from Duluth to Winnipeg and Port Arthur over its own lines.

We are further advised that it is not the company's intention to begin the construction of ore docks at Duluth at present. The plans for the docks are not yet complete.

Canadian Northern Ry.—The construction of the new coal sheds on the docks at Port Arthur, Ont., is well under way, and the filling of the new storage yard is about completed. The Vice President of the Pittsburg Coal Co., has been in Port Arthur on a trip of inspection, during which he discussed the question of the construction of another unit. The Thunder Bay Harbor Improvement Co. has been given a contract to extend no. 3 dock 250 ft. in length, with a width of 74 ft., pile foundation with heavy timber deck. When the dock extension is completed a freight shed 400 by 50 ft. will be built of mill construction, steel clad.

A contract has been let to Foley, Welsh and Stewart, for the permanent roadbed across Rainy Lake, Ont. The dump is to be sufficiently wide to permit of a double track line. The new work will diverge from the present track for about two miles between Nickel Lake and Rocky Inlet, about four miles east of Fort Frances, Ont. The channels between the islands will have to be filled except in two places, where there will be bridges, with draw spans. This is a heavy piece of work, as it incudes the building of a rock bank across the lake. The contract calls for completion by 1912. The length of the present trestle is about 6,700 ft., base of rail 20 ft. above high water. The material required for filling is estimated at about 800,000 cubic yards. The contract has been let for the superstructure of a double track stel bridge over the Assiniboine River at Winnipeg. In the course of an interview in Winnipeg, June 16, D. D. Mann, said the company would build an hotel probably on the site of the old Manitoba Hotel adjoining the present station, in

time for the Selkirk Centennial Fair in 1914.

Surveys have been completed for a branch from the Oak Point line near Cross Isle, and it is expected that construction will be started at an early date. We are advised that it is not the intention to go on with the extension of the Ochre River line this season.

The excavation for the station and hotel building at Brandon, Man., was begun June 6. The building, which is estimated to cost $150,000, is expected to be completed by April 1, 1911. The Brandon city council June 9 approved the route for the projected transfer railway. It was decided to adopt the First Avenue route as being in every respect the most favorable for the city.

The Greenway-Wakopa branch, we are advised is being extended for a few miles, but it is not likely that the extension will be pushed as far as Deloraine this year.

A press report states that plans have been prepared for a line to run from North Portal to Melville, and on to Hudson Bay Jct., Sask.

The extension from Maryfield, is the line which is ultimately to be extended to Lethbridge, Alta., and we are advised that it is expected to complete the grading of about 50 miles this season.

A line is to be built from Melfort on the Prince Albert line to Humboldt on the Edmonton line, and we are advised that it is expected to grade about 20 miles at the Melfort end this season.

In a recent interview at Calgary, Alta., M. H. McLeod, referring to the Vegreville-Calgary line, said it would be known during July the route which the company would follow into Calgary, and he expected that the grading would be completed in the spring of 1911. There was a good deal of heavy work to be done for about 30 miles from Red Deer, and the work in hand involved the building of the line to the Bow River. From that point into Calgary the company had no routes under consideration. The town sites on the line had been located to 30 miles east of the Red Deer River; the grading would be completed to a point 12 miles east of the Red Deer River by Aug. 1, and track laid to the same point by the end of the season. The C.P.R. secured an interim injunction June 16, restraining the C.N.R. from proceeding with the building of its line south of Stettler, Alta., on the ground of non-compliance with some of the requirements of the Railway Act. A large area of land through which the line runs, belongs to the C.P.R.

M. H. McLeod, General Manager, stated at Strathcona, Alta., June 3, that construction on the line from that place to Camrose on the Vegreville-Calgary line was to be started by the end of the month, and that 25 miles would be completed this season. The right of way for the entire line had been purchased, and 60 acres 12 miles from Strathcona, had been secured for a townsite.

The contractors are reported to be preparing to start work on the construction of the first 50 miles westerly from St. Albert, Alta. The only thing that is delaying a start is that the route has not been finally approved by the Dominion Government engineers.

W. Mackenzie, President, C.N.R., returned to Toronto from England June 3, where it is stated that he has secured altogether about $40,000,000 to aid in carrying out the various enterprizes in which he and his associates are interested. In an interview, he said during the present year the western end of the line should be well under way, and the distance between Edmonton and the Rocky Mountains pretty well covered. A start would also be made on the section round Lake Superior, but the question of a line to the Maritime provinces would be taken up later. The 70-mile line to give connection to Duluth, he hoped would be completed in the spring of 1911. The Brazeau coal districts were to be opened up, and a branch line of 140 miles run there from the Edmonton-Calgary line, which was now under construction. The purchase of the Dunsmuir mines, etc., on Vancouver Island, was not a C.N.R. matter, although C.N.R. people were interested in it.

Canadian Northern Alberta Ry.—In connection with the development of the Brazeau River Valley coal areas by the Mackenzie, Mann and Co. interests, several parties of engineers are in the field preparing plans, etc. The C.N. R. branch now terminating at Stony Plains, will be extended into the territory. Surveys of the line are being made, and it is expected that construction will be started early in 1911. This is the section of the line of the Yellowhead Pass for which the Dominion Parliament passed an act guaranteeing the company's bonds for $13,000 a mile for 50 miles; and $25,000 a mile for the next 100 miles. The main line from Stony Plains will pass north of the coal fields, but will be connected with them by a branch from near Wolfe Creek. It is proposed to build a direct line to the coal fields from near Stettler on the Vegreville-Calgary line.

Canadian Northern Pacific Ry.—We are advised recently that the trial surveys in British Columbia, with the exception of about 20 miles either side of Spences Bridge, had been completed, and that the plans were nearly ready for filing. Two parties are at work completing the surveys, for the line from the Yellow Head Pass to New Westminster, one working from the Pass and the other from Chilliwack, 60 miles above New Westminster. The route surveyed from the Pass follows the Fraser River to opposite Tete Juane Cache, where it crosses over the Cranberry Summit to the head water of the North Thompson River, and proceeds down the North Thompson River to its position with the South Thompson River opposite Kamloop, crossing it four miles above Lytton to the Fraser River, and down the left bank of that river to New Westminster. The surveys now being made may bring about some deviations in detail from the route above outlined. The surveys show that a gradient of 0.5% is feasible for the whole route. The route from New Westminster to Chilliwack, 60 miles, along the river front has been finally located and tenders for grading, etc., were received to June 15.

H. Sutherland, Executive Agent, stated in a recent interview that the funds required for the completion of the first unit of 150 miles of this line had been made and that arrangements had been made for the financing of the remaining sections as required. D. D. Mann, Vice President, in a subsequent interview, added the further statement that work on the Pacific section would be commenced at tide water about July 1, and that the 150 miles would be built this season. Tenders for grading, bridging, masonry, tracklaying, ballasting, and the erection of the telegraph line on 60 miles of line from New Westminster, were received to June 15 and are under consideration. The work has to be completed by June 1, 1911. This section will start from the south end of the Fraser River bridge, and will follow the river to Fort Langley, thence across country to Whonnock, then along the river to Matsqui, and again across country to Sumas mountain and around the north side to Chilliwack. Reports from Kamloops, B.C., state that preparations are being made to start construction at that point also, and that tenders will be asked for grading at an early date.

Interviewed at Vancouver June 8, D. D. Mann said the company was prepared to take its tracks into the city and to own its own terminals. A union station was all right, but union terminals were not. He would recommend, on his return to Toronto, the location of the repair shops at Port Mann, to which point the line would be built at once. The construction would be started as soon as the rails arrived.

In an interview at Winnipeg, June 16, D. D. Mann stated that with the exception of some changes from the original route in order to obtain better gradients the route from the present end of steel, westerly from Edmonton, to Vancouver, had been located. The company had also practically completed all its arrangements for building 120 miles on Vancouver Island, from Victoria to Barclay Sound. While Mr. Mann was in Victoria, he was quoted as saying that the building of this line would be placed under separate and independent officials reporting direct to Toronto, and that the local offices would be in Victoria, —. Hughes being Resident Chief Engineer. Alternative routes are being surveyed, and construction will be started as soon as possible. (June, pg 485.)

Dual Language in Quebec.

The Quebec Legislature at its last session passed an act making the following addition to the Civil Code to go into effect January 1, 1911:

"1682c. The following shall be printed in French and English: passenger tickets, baggage-checks, waybills, bills of lading, printed telegraph forms, contract forms, made, furnished or delivered by a railway, navigation, telegraph, telephone, transportation, express or electric power company, as well as all notices or regulations posted up in its stations, carriages, boats, offices, factories or workshops.

"1682d. Every contravention, by a railway navigation, telegraph, telephone, transportation, express or electric power company, doing business in this Province, or any of the provisions of the foregoing article shall be punished by a fine not exceeding $20, without prejudice to recourse to damages."

The British North America Act, in section 92, provides that in each province the Legislature may exclusively make laws in such matters coming within the classes of subjects next hereafter enumerated. Sub-sec. 10 reads:—

"Local works and undertakings other than such as are of the following classes,

"a. Lines of steam or other ships, railways, canals, telegraph and other works and undertakings connecting the province with any other or others of the provinces or extending beyond the limits of the province.

"b. Lines of steamships between the province and any British or foreign country.

"c. Such works as, although wholly situate within the province, are, before or after their execution declared by the Parliament of Canada to be to the general advantage of two or more of the provinces."

It would therefore appear that the additions to the Civil Code which Mr. Lavergne has secured will apply only to provincial railways, etc., and not to the C.N.R, and C.P.R., and other Dominion companies.

The Pere Marquette Rd., put on a Sunday train service between London and Port Stanley, Ont., June 26.

In future the charge for movement of each special passenger car from points in Canada east of the Detroit River to points in the territories of the Central Passenger, New England Passenger and Trunk Line Associations, will be not less than the amount of 25 adult fares, computed on the basis of 2c. per mile per capita.

THE JOHN INGLIS COMPANY, LIMITED

ENGINEERS AND BOILERMAKERS

14 Strachan Avenue - - - TORONTO, Canada

Mackenzie, Mann & Co. Flotations in Europe.

W. Mackenzie, President Canadian Northern Ry., returned to Toronto early in June after spending nearly three months in England, during which and subsequently he made the following flotations and sales:

Canadian Northern Ry. Co., 4% perpetual consolidated debenture stock, £1,000,000.

Canadian Northern Ry. Co., 5% income charge convertible debenture stock $5,000,000.

Canadian Northern Steamships, Ltd., debenture stock, £600,000.

Duluth Winnipeg and Pacific Ry. Co., 4% 1st mortgage debenture stock £950,000.

Winnipeg Electric Ry Co.. 4½% perpetual debenture stock, £280,000.

Canadian Collieries (Dunsmuir) Ltd., 5% 1st mortgage bonds, £2,054,800.

Brazeau Collieries, Ltd., 1st mortgage bonds, $2,000,000.

Canadian Western Lumber Co., Ltd., 5% 1st mortgage debenture stock, £1,500,000.

THE CANADIAN NORTHERN RAILWAY CO. made an issue of £1,000,000 4 per cent. perpetual consolidated debenture stock at 95. It is perpetual and irredeemable and ranks pari passu in all respect with the similar stock officially quoted on the London Stock Exchange. The prospectus states that the trust deed provides that the total amount of debenture stock shall not exceed £2,500 per mile of line for the time being open and operated, and an amount not exceeding the cost price of securities of independent corporations from time to time deposited with the trustees, but the company cannot issue any debenture stock against such securities without the trustees' consent. The debenture stock is secured by a general charge upon the undertaking, property and assets (other than land and money subsidies) of the company, subject to the £1,180,600 of bonds primarily charged on the Ontario Division, 287 miles, and to charges created, or to be created, not exceeding $10,000 per mile of line, other than the above-mentioned 287 miles of line in Ontario, or $15,000 per mile if guaranteed by the Dominion, or any of the Canadian provinces, and is a specific first mortgage upon certain securities deposited with the trustees. The company is operating 3,180 miles, which includes 665 miles of leased lines. In addition, 371 miles of new branch lines have been completed and will shortly be opened for traffic, and over 500 miles more are under construction, a large proportion of which will be completed during the coming season.

For the first time in its history the Canadian Northern Ry. has issued a speculative security in the form of 5% income charge convertible debenture stock. The prospectus speaks of an issue of $15,000,000, or £3,086,419, of which $5,000,000 has now been disposed of. The prospectus states that it is repayable at par, May 6, 1930. or at any time after May 6, 1920, on six months' notice. The interest, which will be contingent on the railway's annual profits will be paid half yearly. Holders will have the option, on Jan. 1, 1916, and on each subsequent Jan. 1 and July 1, until Jan. 1, 1919. on 60 days' notice, to convert the stock into fully paid common shares at a fixed rate of $500 for $500 of shares in the company's common stock. The company has not at present the power to issue sufficient shares to exchange for this income charge stock, but application will be made for such powers and in the meantime the convertibility of the issue of $15,000,000 will be secured by the deposit with the trustees of fully paid common stock to meet any claims for conversion arising out of the present issue until the necessary additional powers have been obtained. The stock will be secured by a general charge on the company's railway and assets other than land and money subsidies, ranking behind the charge created thereon to secure the 4% perpetual consolidated debenture stock and all securities having priority over the 4% perpetual consolidated debenture stock and also ranking behind all charges for securing any of the company's securities guaranteed by the Dominion or provincial governments. The stock will be constituted by a trust deed to the British Empire Trust Co. and the National Trust Company, whereby the total amount of income charge convertible stock will be limited to $10,000 per mile of railway. The interest on the stock each year will only be payable to the extent that the net earnings arising from the operations of the railway in such year are sufficient to pay the same after providing for all operating expenses and other payments not chargeable to capital and the company's fixed charges. It is the intention in the future to amalgamate the railways of the Canadian Northern System by lease, purchase or otherwise, into one great corporation, which will unify and increase the earning power and at the present time increase its capital stock. When this is done and the further lines now projected have been constructed the C.N.R. will be one great transcontinental railway and navigation system, similar to the C.P.R. It is probable that another $5,000,000 of this stock will be disposed of in the autumn and the remaining $5,000,000 of the $15,000,000 early in 1911. The stock has been listed on the Toronto Stock Exchange where there have been some sales at 95½ to 96½ and application has been made for its listing on the London Stock Exchange.

THE CANADIAN NORTHERN STEAMSHIPS, Limited, recently issued £600,000 of debenture stock to pay for the three steamships which have been bought. This stock was acquired by the Canadian Northern Ry. Co., which company pays for the vessels partly in cash and partly of its 4 per cent. consolidated debenture stock.

THE DULUTH. WINNIPEG AND PACIFIC RY. Co. made an issue through Lazard Bros. and Company, of London, Eng., of £929,000 four per cent. first mortgage debenture stock, part of a total issue of £10,500,000 of similar stock and bonds, principal and interest guaranteed by Canadian Northern Ry. Co., repayable at par on June 1, 1939, interest payable half yearly. The issue price was 92½. The stock is secured by a first mortgage on railway to be built from near the present terminus of the Duluth Rainy Lake and Winnipeg Ry., at Virginia, to Duluth, all in Minnesota and 40 acres of terminal accommodation in Duluth. The trust deed provides that on repayment of the $2,000,000 bonds of the Duluth, Rainy Lake and Winnipeg Ry. Co., which mature Jan. 1, 1916, and to retire which $2,000,000 of the Duluth, Winnipeg and Pacific Ry. Co.'s first mortgage debenture stock is reserved, the D.R.L. & W.R. Co.'s property will be transferred to the D.W. & P.R. Co. so that the debenture stock will be a first charge upon about 173 miles of railway and equipment between Duluth and the International boundary. In the meantime the control of the D.R.L. & W.R. Co. will be vested in the trustees to which the company's entire capital stock will be transferred.

The prospectus states that the present issue is made for the purpose of enabling the company to construct and equip a line from Virginia to Duluth. thus completing to the important railway and shipping centre of Duluth the line of the Canadian Northern system now in operation between Fort Frances and Virginia, and giving that system a second and shorter access to the Great Lakes. It is also proposed by means of the present issue to provide adequate terminal accommodation in Duluth to enable the company to handle the large traffic with which it will have to deal. The section will form an important part of the Canadian Northern system. Fort Frances, the point nearest to Duluth on the main line of the C.N.R., is about 175 miles distant. The section between the International boundary (two miles south of Fort Frances) and Virginia, about 100 miles, has already been built and is owned by the Duluth, Rainy Lake and Winnipeg Ry. Co., and its net earnings already largely exceed the interest on its $2,000,000 5% bonds. The new line will complete the remaining section into Duluth. It is expected that the line will be completed and ready for traffic at the opening of navigation on the Great Lakes in the spring of 1911 Duluth is a large railway centre and is entered by a number of the great American railway systems; it is therefore important to the C.N.R. to reach that city over its own lines, since it will then be in a position to exchange traffic with them. Duluth harbor (which embraces the ports of Duluth and Superior,) situated at the head of the Great Lakes is a most important shipping and distributing centre, is the largest ore-shipping port in the world. The increase in freight at Duluth harbor is shown by the figures given in the latest available report of the U.S. engineer in charge of the river and harbor work on Lake Superior:—1897, 8,475,000 tons; 1909, 32,529,000 tons. The rapid development of the Canadian West has resulted in a heavy and constantly growing traffic between Winnipeg and the Western and Middle States. As the new line will complete the shortest route from Winnipeg to Duluth and the Great Lakes. a large traffic is assured from the outset. Adjoining the railway between Virginia and Rainier are the timber limits of the Virginia and Rainy Lake Lumber Company, which claims to have the largest virgin forests of white pine timber in the Northern United States east of the Rocky Mountains. The lumber company has large mills at Virginia and Duluth, and expects to cut this year 250,000,000 ft. of lumber. The D.W. & P.R. Co. has a contract with the lumber company to carry all its logs and lumber so long as there is any timber to cut on the present limits. In the vicinity of Virginia are situated the great Mesaba iron ore mines. A very large proporfion of all the iron ore used in the U.S. is mined from this range. and this ore has to be carried by rail to the Great Lakes for shipment. The new line will secure a share of this traffic, which is exceptionally profitable, and which in 1909 amounted to over 29,000,000 tons. The heavy traffic, which the road is expected to carry, will necessitate its being built to a high standard. A large equipment of iron-ore trucks and heavy engines will be necessary. It is estimated that as the result of its first year's operations from the date of its opening, the net earnings of the new line should amount to $487,200, whilst the interest on the $6.148,333 stock now issued will only amount to $245,935 a year

WINNIPEG ELECTRIC RAILWAY CO.—The position of this company is so thoroughly assured that it was not necessary to issue any prospectus, £200,000 of 4½% perpetual debenture stock being placed, largely with people who were already investors in the company's securities, through the British Empire Trust Co.

THE CANADIAN COLLIERIES (DUNSMUIR), LIMITED., has a share capital of $15,000,000, of which $5,000,000 are 7 per cent. cumulative pre-

To Engineers and Others

Have the stations on your line name signs placed conspicuously? They should have, for the comfort of your passengers alone, if for no other reason. You know how aggravating it is, when the train pulls up at the platform, to have to crane your neck or leave your seat, endeavoring to see what station you are at. Besides it is good advertising for the line.

Enameled iron has proven the best sign for station purposes. It never fades or cracks.

Made in any colors with mileage figures if desired.

ference shares, all of which have been subscribed for and $10,000,000 are common shares issued as fully paid. The directors are: President, W Mackenzie, President C.N. Ry.; Sir E. E. Walker, President Canadian Bank of Commerce; D. D. Mann, Vice President C.N. Ry.; A. D. McRae, Vice President Canadian Western Lumber Co.; E. R. Wood, Director G.T. Pacific Ry.

The recent issue is £2,054,800 5% first mortgage gold bonds at 95, repayable Sept. 1, 1950, at par, or at the option of the company before then on six months' notice at 105. The prospectus states that the company has been formed to purchase as a going concern, all the properties in British Columbiba and in California of Jas. Dunsmuir, in anywise relating to coal, coal mines and fire-clay. These properties include the whole of the share capital of the Wellington Colliery Co., Ltd., operating collieries on Vancouver Island, a 51% interest in the share capital of Robert Dunsmuir Sons Co., of San Francisco, and the mortgage existing on the property of the latter company. The properties of the Wellington Colliery Co. will be conveyed to this company and will be included in the mortgage and trust deed securing these bonds. The Wellington Colliery Co.'s holdings comprise all the coal in and underlying some 1.850,000 acres of the Esquimalt and Naniamo Ry. Co.'s land grant, estimated to contain not less than 600,000,000 tons of bituminous coal, together with the operating mines, railroads, shipping docks, etc., also several smaller tracts not included in the above grant. In addition the Wellington Colliery Co. owns about 20,000 acres of timber lands on Vancouver Island, 104 houses and an hotel, all of which are well rented. It further owns and operates 17½ miles standard gauge railway, including locomotives and cars, by which the coal is delivered to that company's docks. The company also acquires about 1,250 acres of land on Vancouver Island on which iron ore has been found, and about 5,000 acres of land on Denman Island. The property of R. Dunsmuir Sons Co., of San Francisco, consists of a town lot in Stuarts st., San Francisco, together with a wharf and bunkers on the water front; the value of which is estimated to be $1,000,000 These are leased to the Western Fuel Co. at a monthly rental. Amongst the contracts made by the Wellington Colliery Co. is one, having about three years to run, with the C.P.R. to supply coal to its ships and locomotives; there are others with important companies and firms. During 1908-9 the company delivered to the C.P.R. about 250,000 tons of coal. Both the Canadian Northern and the G.T. Pacific Railways are building to the Pacific Coast and will be large consumers of coal both for their railways and steamships.

The net proceeds of sale of these bonds will be applied towards the price payable to J. Dunsmuir for the properties, which is $11,000,000, the balance of the purchase price, together with the $3,000,000 required for improvements, having been raised by the issue of $5,000,000 of the preference shares above mentioned. Over $3,000,000 has in the past been spent in development of the properties.

Chartered accountants have examined the Wellington Colliery Co."s accounts for the last three years, and the profits, according to their report, after allowing for all expenses, other than depreciation and exhaustion of minerals, and allowing for the addition for 1909 of £4,155, interest on the mortgage on the San Francisco properties averaged £154,751 a year, the average profit per ton of coal being about $1. During the year ended June 30, 1909, no profits were received from the sale of coal at the San Francisco wharf of R. Dunsmuir Sons Co., the wharf having been leased to the Western Fuel Co. instead of being worked on joint account with that company. The directors intend as soon as possible to alter these arangements, which are not, in their opinion, satisfactory

The properties have been examined by Mr. Coulson, mining engineer and coal expert of Pittsburg, and by Foster, Brown and Rees, mining and civil engineers of London and Cardiff. It is the Board's intention to commence immediately to open up additional mines and to improve handling facilities in accordance with Mr. Coulson's recommendations, and $3,000,000 wil be provided for this purpose. Mr. Coulson estimates that when these improvements are completed, the output will be 2,000,000 tons a year and the profits $1.53 per ton, making a total net profit, per year of $3,060,000, or £628,767. The interest on the bonds now issued requires per year £102,740.

THE BRAZEAU COLLIERIES, LTD., has a share capital of $4,000,000, all common stock, half of which is owned by Mackenzie, Mann & Co., Ltd., and half by the German Development Co., Ltd., Toronto. Its coal fields, which are situated in Alberta, on the eastern slope of the Rocky Mountains, between parlallels 52 and 54, north latitude, comprise a total area of about 28 square miles. The directors are: President, W. Mackenzie; Vice President, D. D. Mann; Managing Director, Secretary and Treasurer, M. Nordegg; A. J. Mitchell, Comptroler Mackenzie, Mann & Co., Toronto; E. Baerwald, New York, and G. Duxenstein, Berlin, Germany.

Its recent issue was $2,000,000 of 5% first mortgage bonds, which were disposed of to a syndicate of Bankers, the principal members of the syndicate being in Belgium. The proceeds will be utilized in mine development, equipment, etc. The Canadian Northern will build a line to the mines, probably from Stettler, Alta., which is likely to be ultimately extended to the C.N.R. main transcontinent line east of Yellow Head Pass.

THE CANADIAN WESTERN LUMBER CO., LTD., has a share capital of $10,000,000, of which $2,500,000 is 6% cumulative preferred stock and $7,500,000 common stock issued and fully paid up. The directors are: President, A. D Davidson, Land Commissioner and General Industrial Agent Canadian Northern Ry.; Vice President, A. D. McRae, late President Fraser River Lumber Co.; W. Mackenzie, President C.N. Ry.; D. D. Mann, Vice President C.N. Ry.; R. M. Horne-Payne, Chairman B. C. Electric Ry.; D. B. Hanna, Third Vice President C.N. Ry.; P. Jansen, President Saskatchewan Elevator and Grain Co.; A. R. Davidson, Director Saskatchewan Valley and Manitoba Land Co. The offices are at Fraser Mills, B.C.

The recent issue is £1,500,000 5% first mortgage debenture stock at 88, repayable in 35 years at par, or sooner, by means of sinking fund.

homes by thousands of immigrants has produced an enormous demand for lumber.

The company's land and timber is in carefully selected and easily accessible blocks mostly scattered through Comox district. The larger portion lies in the valley of the Tsolum and Oyster rivers and their tributaries. The total cut has been carefully estimated to produce 5,500,000,000 ft. of good merchantable timber, and of this about 75% is situated on the company's own freehold land, and, consequently, has the exceptional advantage of being free from all timber dues to the Government and from all taxes, except the ordinary land taxes of the province. This gives the company an advantage of about 50c. per 1,000 ft. over nearly every other lumber company in Canada. The land is heavily timbered, the principal growth being fir, the trees scaling from 3,000 to 15,000 ft. of lumber per tree, and these trees run to a good percentage of no. 1 logs. The situation of the land affords the great advantage for economical operation that it is all practically level. When the timber is cut, the greater part of the land will be saleable for agricultural purposes.

The company has acquired the largest and most modern of any saw milling plant in Canada, which is capable of producing more lumber at a less cost per thousand than any mill on the Pacific Coast. It is situated on the Fraser River adjacent to New Westminster, and has a water frontage of 4,000 ft. Large ocean-going vessels can load at the company's docks, and the company can thus export under the most economical conditions to the principal markets for B.C. timber, namely, the United Kingdom, Australia, New Zealand, South America, China and Japan, but the greatest and most profitable trade, and one that is constantly increasing, is that with the Canadian interior. The mills are already served by the C.P.R., the C.N.R. should reach the mill within a month, and the B.C. Electric Ry. shortly afterwards. The Canadian Northern Ry. will also build a line to the mill as soon as its main line reaches Vancouver The company owns some 425 acres of land at the mills, on which is situated a small town of some 2,000 inhabitants, and it also owns a number of dwelling houses, from which a good rental is received. The company will immediately acquire land at the principal distributing centres in Alberta, Saskatchewan and Manitoba for the establishment of retail yards, and thus be in touch with and supply direct the enormous requirements of these provinces.

In valuing the resources, Col. Davidson, the President, states that he confidently estimates that, without taking into account the profits to be derived at the retail yards, the timber will realize at the mill a profit of at least $7.50 per 1,000 ft., after allowing for all expenses, and that the land will realize an average price of $15.00 per acre.

5,500,000,000 feet of timber at $750 per 1000 ft.	$41,250,000.00
75,000 acres of land at $15. an acre	1,125,000.00
Estimated value of lumber, logs and merchandise on hand	1,020,000.00
Saw mill, planing mill, dry kilns, tramway, docks, railway, railway equipment, stores, warehouses, dwelling houses and townsite of 425 acres	2,500,000.00
	$45,895,000.00

The prospectus states that this company has been formed to acquire certain blocks of freehold land, aggregating approximately 75,000 acres, bearing an immensely valuable body of timber, and also certain valuable timber leases and licenses, extending over about 60,466 acres, granted partly by the Dominion and partly by the Province of British Columbia, to manufacture lumber and sell the same, and more especially to retail the same in Alberta, Saskatchewan and Manitoba, where the building of

The directors are of the opinion that owing to the increasing scarcity of accessible timber land in the United States, and the enormous demand for timber caused by the rapid settlement on the Canadian prairies, there will, from now on, be a constant increase in the price of timber in Canada, and that large timber holdings in B.C. will become extremely valuable, and that the annual profit above estimated will consequently be greatly exceeded.

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

PYLE-NATIONAL ELECTRIC HEADLIGHT CO.

Highway Crossings Regulations.

Following are the Board of Railway Commissioners' Standard Regulations for highway crossings as amended May 4:

Unless otherwise ordered by the Board the regulations for future construction of highway crossings are and shall be as follows:—

1. With each application, the railway company shall send to the Secretary of the Board three sets of plans and profiles of the crossing or crossings in question:

Plan .....Scale 400 ft. to 1 inch.
Profile of railway—
Horizontal .....Scale 400 ft. to 1 inch.
Vertical .....Scale 20 ft. to 1 inch.
Profile of highway—
Horizontal .....Scale 100 ft. to 1 inch.
Vertical .....Scale 20 ft. to 1 inch.

1st set, for approval by and filing with the Board.

2nd and 3rd sets, to be furnished to the respective parties concerned, with a certified copy of the order approving of the same.

2. The plan and profile shall show at least one-half mile of the railway each way and 300 ft. of the highway on each side of the crossing.

3. The plan shall show all obstructions to the view from any point on the highway within 100 ft. of the crossing to any point on the railway within one-half mile of the said crossing.

4. The company shall give the municipality in which the proposed crossing lies, 10 days' notice of the application and copies of the plan, and furnish the Board with proof of service.

5. The road surface of level or elevated approaches, and of cuts made for approaches, to rural railway crossings over highways shall be 20 ft. wide.

(a.) A strong, substantial fence, or railing, 4½ ft., with a good post-cap 4 by 4 ins., a middle piece of timber 1½ by 6 ins, and a 10-in. board firmly nailed to the bottom of the posts to prevent snow from blowing off the elevated roadway, shall be constructed on each side of every approach to a rural railway crossing over a highway where the height is 5 ft. or more above the level of the adjacent ground,—leaving always a clear roadsurface of 20 ft. in width.

6. Unless otherwise ordered by the Board, the planking, or paving blocks, or broken stone topped with crushed-rock screenings, on rural railway crossings over highways (between the rails and for a width of at least 8 ins. on the outer sides thereof), shall be 16 ft. wide.

7. In cities, towns and villages, the width of all kinds of approaches to a railway crossing over a highway(street or avenue), and of the planking between the rails and on the outer sides thereof, must be regulated by the position of the street and the traffic or the anticipated traffic thereon, but shall not be less than 20 ft. wide.

8. Wherever a cut on the line of railway exceeds 9 ft. or a filling thereon exceeds ft. at a highway or street crossing, the railway company, before proceeding with the work of construction, shall refer the matter to the Board, with a full statement of the facts and circumstances, that the Board may decide as to the advisability of ordering a separation of grades at the said crossing.

9. In special cases, it may, upon application, be ordered that any existing highway crossing be constructed so as to conform to the foregoing standards and requirements.

The arbitration proceedings in connection with the claims of the Canadian Northern Ry, carmen and steamfitters for an advance of wages closed at Winnipeg, June 11. The award is expected to be made early in July.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The American Well Works, Aurora, Ill., has issued bulletin 115, devoted to American air compressors.

S.F. Bowser and Co., Ltd., has been authorized to increase the amount of capital which it may use in Ontario, from $40,000 to $100,000.

The Northern Engineering Works, Detroit, Mich., has installed two 10 ton hand power northern cranes, 30 to 34 ft. span, in the Detroit United Ry.'s substations.

Flannery Bolt Co., Pittsburg, Pa., has issued its 1910 catalogue, showing the various standards and assemblages of the Tate flexible staybolt, which it manufactures.

Taylor & Arnold, Limited, has been incorporated under the Dominion Companies Act, with an authorized capital of $50,000, and head office at Montreal, and with power to acquire and carry on the business of Taylor & Arnold, dealers in railway, mining and contractors' supplies, etc. The incorporators include Jno. Taylor, T. Arnold, and L. S. Hough.

L. M. Booth and Co., New York and Chicago, have completed the installation of a 40,000 gallons per hour water softener at the Vandalia Rd. Co.'s new roundhouse and shops at Terre Haute, Ind. This softener is claimed to be the largest plant of its kind ever installed. Power is furnished by an overshot water wheel at the top of the softener and all of the working parts, including feeding apparatus as well as regulating equipment, are located in a substantial brick structure at the ground level.

The Canadian Fairbanks Co. has its general catalogue ready for distribution. It contains about 1,200 pages, is profusely illustrated and shows the many and varied lines handled by the company. It is divided into the following sections:—1, scales; 2, electrical apparatus and supplies; 3, pumps, steam, belt and gasoline; 4, valves and steam goods; 5, railway and contractors' supplies; 6, small tools and supplies; 7, power transmission appliances; 8, safes, vaults and metal office furniture. In addition to the general catalogue, small sectional catalogues as listed above are being issued. A copy will be mailed free to those who are interested in receiving it.

The Canadian Freight Association will hold its summer meeting at Penetanguishene, Ont. The members will leave Toronto by special G.T.R. train July 6, at 9 a.m., arriving at Penetanguishene about noon. Meetings of the freight, classification and executive committees will be held that afternoon, and the general meeting on July 7 at 10 a.m. As usual at the annual meetings there will be a number of social features, including a trip through the islands on July 7, as the guests of the town council, and a base ball match in the afternoon. On July 8, through the courtesy of Messrs. Playfair of Woodland, and Paton of Collingwood, there will be a yachting trip on the Georgian Bay.

A motion by the Pullman Co and the Great Northern Rd. for a preliminary injunction to prevent the lowering of sleeping car rates by the Interstate Commerce Commission, was denied in the U.S. Circuit Court at Chicago, June 11.

Apportionment of Crossings Construction and Maintenance.

An order served by the Board of Railway Commissioners, no. 10,457, dated April 28, respecting protection to be provided at the crossing of the Lachine road, at Rockfield, near Montreal, by the G.T.R., is of considerable interest, on account of the apportionment of the expense of construction and maintenance. The order follows:—

It is ordered that the G.T.R. Co. construct an overhead bridge at the said crossing, the cost of the work to be borne as follows:

G.T.R. Co. 50%
Montreal Park and Island Ry. Co. 14%
City of Lachine 10%
Parish of St. Pierre 2%
Parish of Lachine 2%
Turnpike Trust 2%

The Railway Grade Crossing Fund, 20%, provided that 20% of the cost does not exceed $5,000. If it does exceed $5,000, then the G.T.R. Co. is to pay the difference between $5,000 and 20% of the cost, in addition to the 50% above mentioned.

The G.T.R. Co. to file within 30 days, detail plans of the work for the approval of the Chief Engineer of the Board; the said work to be commenced as soon as the plans have been approved, and to be completed within six months from this date; the maintenance of said overhead crossing and the approaches to be borne as follows:

G.T.R. Co. 62½%
Montreal Park and Island Ry. Co 17½%
City of Lachine 12½%
Parish of St. Pierre 2½%
Parish of Lachine 2½%
Turnpike Trust 2½%

Any of the parties to be at liberty to apply to the Board should any dispute arise as to carrying out the terms of this order.

Ottawa, Rideau Valley and Brockville Ry.—A meeting for the organization of this company was held at Ottawa June 18, when directors were elected as follows: W. E. MacLaren, J. N. Gilmour, Brockville; F. A. Heney, E W. Clarke, D. H. MacLean, G. H. Kidd, K.C., Ottawa; A. McDermott, R. E. Elliott, Montreal. A decision was arrived at to complete the surveys without delay and to arrange for the immediate construction of the line. According to press reports it will leave Ottawa by the G.T.R., branching off near Graham's Bay and passing through Manitick, North Gower, Burritt's Rapids, Merrickville, North Augusta and Algonquin to Brockville. The company also has power to cross the Interprovincial bridge and build a line to the iron mines at Ironsides, Que. The reports also add that the line will probably be operated by the G.T.R. (May, pg. 353.)

Quebec Central Ry.—Gross earnings for April, $88,354.86; expenses, $59,290,-45; net earnings, $29,064.41, against $82,-082,78 gross earnings; $56, 248.80 expenses; $25,833.98 net earnings for Apr. 1909. Aggregate gross earnings for 10 months ended Apr. 30, $886,074.38; expenses, $612,535.64; net earnings, $273,-538.74, against $843,942.71 aggregate gross earnings; $599,828.21 expenses; $244,114.50 net earnings for same period 1908-09.

Temiskaming and Northern Ontario Ry.—Operating revenue for Mar., $161,-022.04; operating expenses, $89,579.52; net operating earnings $71,442.52; less hire of equipment, $4,474.77; balance, $66,967.75; percentage 55.5; operating revenue for Apr., $133,825.36; operating expenses $88,910.21; net operating earnings, $44,915.15; less hire of equipment, $4,408.33; balance, $40,506.82; percentage, 66.4.

An order-in-council has been passed, dated May 11, rescinding a previous order of Aug. 2, 1899, relating to the importation of petroleum in bulk in tank ships and enacting new regulations.

MAINLY ABOUT PEOPLE.

D. Galvin, G.T.R. roadmaster, district 3, Eastern Division, died at Richmond, Que., recently.

Rear-Admiral C. E. Kingsmill, R.N., has been appointed Director of the Naval Service of Canada.

N. Tessier, Secretary of the Department of Public Works, died of typhoid fever at Ottawa, June 3.

A. H. Myles, at one time Treasurer Hamilton, Grimsby and Beamsville Ry., died in Hamilton, Ont., June 20.

R. W. Bruce, fuel inspector for the C.P.R. at Cleveland, Ohio, was married to Miss L. Herod, in Toronto, June 8.

Miss Clara Hays, youngest daughter of C. M. Hays, President G.T.R., was married at Montreal, June 9, to H. C. Scott.

The engagement is announced of Miss L. M. Hays, third daughter of C. M. Hays, President G.T.R. and G.T.P.R., to H. Grier.

Hon. F. Oliver, Minister of the Interior, is reported as likely to be appointed a member of the Board of Railway Commissioners.

C. M. Hays, President G.T.R. and G. T. Pacific Ry.. reached Winnipeg June 22, on a trip of inspection, and went on to Vancouver.

A. W. Smithers, Chairman of the G.T.R. Board in England, has been elected a director of the South-Eastern and Chatham Ry. of England.

Miss Aileen Sinclair, daughter of Angus Sinclair, C.E., railway contractor, Toronto, was married there June 23 to H. K. Mackenzie, barrister.

Miss I. F. Barber, daughter of the late A. W. Barber, Superintendent C.P.R. Telegraphs, Toronto, was married June 6, to H. P. Meeking, Toronto.

G. W. F. Evans, a member of the National Transcontinental Ry. engineering staff at Quebec, has resigned and left for Red Deer, Alta., June 4.

Lord Strathcona, it is stated, is the holder of 2,030 shares of Hudson's Bay Co.'s stock, and his daughter, the Hon. Mrs. Howard holds 2,025 shares.

Miss Clara M. Foy, second daughter of the late John Foy, President of the Niagara Navigation Co.. was married in Toronto, June 9, to R. O. Petman.

Frank Plummer, President Dominion Marine Association, and his family, will leave Toronto about the middle of July, to spend a few weeks at Aylmer, Que.

Mrs. J. W. Canatsy, wife of J. W. Canatsy, trainmaster, Wabash Rd., St. Thomas, Ont., who died there recently, was buried at Memphis, Miss., June 7.

J. A. Mackenzie, at one time in the C.P.R. pay office, Montreal, and latterly in the dining and sleeping car office at Calgary, Alta.. died there recently.

H. H. Vaughan, Assistant to the Vice President C.P.R.. visited Winnipeg early in June, for a consultation with the motive power officials of the Western lines.

T. Cowley, a former G.T.R. locomotive driver, who died recently at St. Thomas, Ont., was father of F. W. Cowley, Trainmaster, Michigan Central Rd., St. Thomas.

F. H. Phippen, K.C., General Counsel, Canadian Northern Ry., Toronto, has been elected a director of the National Trust Co., in place of Cawthra Mulock, resigned.

L. Mulkern was presented with a gold chain and locket by the General Freight Agent staff at Toronto. June 1, on his promotion to be District Freight Agent at London, Ont.

D. C. Coleman, Superintendnt C. P. R. Car Service, Winnipeg, was one of the principal speakers at the first annual meeting of the Railway Men's Y.M.C.A. at Kenora, Ont., recently.

K. M. Fitzpatrick, ticket agent Lehigh Valley Rd., Toronto, was presented recently with a leather chair and an address by his business associates on the occasion of his marriage.

Jas. Cross, foreman blacksmith in the C.P.R. Winnipeg shops, who died in Winnipeg, June 15, aged 58, was a brother of W. Cross, formerly assistant to the Second Vice President, C.P.R.

Sir Thos. G. Shaughnessy has been elected President of the general committee appointed to provide for the erection of a monument to King Edward VII. in Montreal.

Miss Ina Spencer, daughter of G. Spencer, Superintendent C.P.R., North Bay, Ont., was married there recently to J. O. Carlisle, M.A., of the Riverdale Collegiate Institute, Toronto.

Hon. G. P. Graham, Minister of Railways and Canals, has been elected President of the Travelers' Life Assurance Co., Montreal. J. W. Pyke, Montreal, has been elected Vice-President.

Sir Wm. C. Van Horne returned to Montreal, June 9, from a trip of inspection over the Cuba Co. railway, of which he is President. He was accompanied home by his son, R. B. Van Horne.

W. R. Tiffin,
Superintendent Northern Division G.T.R., Allandale, Ont., who died there, May 29, after 50 years' service.

C. A. Magrath, M.P., formerly Land Commissioner for the Alberta Ry. and Irrigation Co., is the author of a recently published book, "Canada's growth and some problems affecting it."

A. Pretty, train dispatcher Reid Newfoundland Ry., died recently on an I.C.R. train at Amherst, N.S., on his way home from New York, where he had been for medical treatment.

T. H. Skinner, of London, Eng., a C.P.R. director. has been elected Deputy Governor of the Hudson's Bay Co., and Wm. Mackenzie, President Canadian Northern Ry., has been elected a director.

The Shielah, the steam yacht in which J. S. Ross, of Montreal, and a party has been cruising recently in the Mediterranean, arrived at Sydney, N.S., from Southampton, Eng., after a run of 11½ days.

Alex. Johnston, ex-M.P.. Sydney, N.S., has been appointed Deputy Minister of Marine and Fisheries in place of G. J. Desbarats, who has been appointed Deputy Minister Canadian Naval Service.

J. Irwin was presented recently with an address and a purse of gold by G.T.R. employes and other friends, on resigning the office of Trainmaster at Lindsay, Ont., to enter the Canadian Northern Ry. service.

L. Black, an assistant resident enginer of the National Transcontinental Ry., at Barrington, N.S., was seriously injured, June 12, by falling from a train. His recovery was considered improbable, as his back was broken.

H. G. Beemer, who was associated with his brother, H. J. Beemer, in the construction of the lines now known as the Ottawa Northern and Western Ry., and other projects, died at Mishawaka, Ind., recently.

W. R. Sutton. chief clerk in the G.T.R. audit department, died June 8, at Montreal. He started life as a fellow apprentice to the wholesale dry goods business in London, Eng., with Lord Mount Stephen.

When King George visited Newfoundland as a midshipman on H.M.S. Canada in 1883, he took part in the spike driving near Cort Hills, 43 miles from St. John's, on a section of what is now the Reid Newfoundland Ry.

H. B. Moore, Secretary-Treasurer G. T. R. Insurance Society, was presented with a gold watch and an illuminated address by the committee of management June 16. on his completing 25 years in the G.T.R. service.

W. E. Bagnall. the Ottawa stockbroker, whose business affairs are being wound up with an estimated loss of $100,000 to his clients, up to five years ago was a train dispatcher on the C.P.R. Chalk River-North Bay section.

Major J. E. Hutcheson, Superintendent and Purchasing Agent, Ottawa Electric Ry., sailed from Montreal June 17, for England, where he is acting as Adjutant to return to Canada in about seven weeks.

J. W. Fortune, who died in Detroit, Mich., June 5, was a native of Stratford, Ont., and had been for many years in the G.T.R. service. When he retired from active work 15 years ago, he was chief clerk in the General Superintendent's office.

J. W. Stoughton, construction superintendent Canadian Bridge Co., Walkerville, Ont., died at Detroit, Mich., May 31, aged 67. He was in charge of the erection of the Victoria Jubilee bridge over the St. Lawrence, at Montreal, on the G.T.R.

J. C. Earls, Travelling Freight Agent, Pennsylvania Rd., of New York State, with headquarters at Rochester, and son of Jno. Earls, ex-Secretary-Treasurer Canadian Freight Association. was married at Buffalo. N.Y., June 21. to Miss E. F. Kaake.

G. Attwood, Chief Engineer of the Hudson Bay and Pacific Ry., spoke on the Panama Canal and other trade routes connecting the Pacific and the Atlantic oceans, at the annual meeting of the Athenian Club, Prince Albert, Sask., June 3.

E. Dunlop, Roadmaster District 30 Ottawa Division, G.T.R., was presented with a case of silver recently by the employes of the road department of the district, on his resignation to accept a similar appointment on the G.T.P.R. at Edmonton, Alta.

C. E. Cartwright, who recently resigned his position as Division Engineer, Pacific Division, C.P.R., Vancouver, will practise there as consulting civil engineer, making a specialty of railway location and construction, bridges and land improvement.

W. E. Duperow, Travelling Passenger Agent G.T.R., Toronto, was presented

with $200 by the passenger staffs of the various railways represented in Toronto, May 31, on his leaving for Victoria, B.C., to take up his new duties as General Agent G.T.R. and G.T. Pacific Ry.

C. E. Goad, C.E., who died in Toronto June 10, was on the engineering staff of the old Toronto, Grey and Bruce Ry., or what is now the C.P.R., between Montreal and Ottawa, and on what is now a portion of the Intercolonial Ry. between Halifax and Cape Breton Island.

R. Witherspoon, who came to Canada as a locomotive driver for the G.T.R. contractors, in 1855, and who afterwards entered the G.T.R. service, died at Cornwall, Ont., May 30, aged 77. He drove the first locomotive on the first passenger train between Montreal and Toronto, Oct. 6, 1856.

G. H. Brass, a third year student in civil engineering, Toronto University, who died in Toronto, June 18, aged 24, was a son of P. Brass, for a number of years foreman, and at the time of his retirement from service, acting Master of Bridges and Buildings, G.T.R., Middle Division, Toronto.

Lady Reid, widow of Sir Robt. G. Reid, and mother of W. D. Reid, H. D. Reid and R. G. Reid, President, Vice President and General Superintendent, respectively, of the Reid Newfoundland Co., died at Montreal, June 7, aged 67. Her illness was of short duration, she having recently returned from Great Britain, accompanied by Miss Reid.

C. G. Orttenburger, whose appointment as city passenger and ticket agent G.T.R., Chicago, Ill., was announced in our last issue, was born at Port Huron, Mich., Jan. 21, 1869, and entered G.T.R. service Dec. 1886, as messenger. He was transferred June 1890 to the Audit Department at Detroit, Mich., and to the Chicago city office May 1896.

Guy Boyer, Superintendent of Construction Montreal St. Ry., underwent an operation on his nose and throat in the Royal Victoria Hospital, Montreal, June 9. The representatives of the member companies of the Canadian Street Railway Association which was then in session in Montreal sent him some flowers with an expression of sympathy.

A. McCowan, who was recently appointed General Car Foreman Canadian Ry., Winipeg, was born at Perth, Scotland, Dec. 5, 1868, and entered railway service, May 1888, since when he has been to Mar., 1890, carpenter, C.P.R.; Mar. 1890 to 1897, change hand, C.P.R., 1897 to 1903, foreman C.P.R., Farnham, Que.; 1903 to Apr. 1910, foreman C.P.R. Cranbrook, B.C.

L. V. Druce, who has been appointed Commercial Agent G.T.R., G.T.P.R., and G.T.P. Steamship Co., at Vancouver, B.C., was born in London, Eng., Oct. 20, 1873, entered G.T.R. service in Aug. 1896, at Los Angeles, Cal., and was, from Mar. 1897 to Aug. 1904, Agent at Seattle, Wash.; Aug. 1904 to May 23, 1910, Commercial Agent at Seattle, Wash.

P. J. Lynch, who has been appointed Superintendent Northern Division, G.T.R., was, in 1908, engaged as conductor, G.T.R., between Toronto and North Bay, and from Oct. 1, 1898 to 1899, was Trainmaster at Stratford, Ont.; from 1899 to 1900, Trainmaster at Belleville, Ont.; 1900 to 1904, Trainmaster at Stratford, Ont.; 1904 to June 1, 1910, Assistant Superintendent Northern Division, Allandale, Ont.

W. J. Piggott, who has been appointed Trainmaster G.T.R., Allandale, Ont., was born at Point Edward, Ont., Nov. 24, 1872, and entered G.T.R. service Aug. 1889, since when he has been, to Apr., 1892, night operator at Lorneville Jct., Ont.; Apr. 1892 to Aug. 1896, dispatcher and relieving agent, Midland Division; Aug. 1896 to Nov. 1904, dispatcher at Allandale, Ont.; Nov. 1904 to June 1, 1910, Chief Dispatcher at Allandale, Ont.

J. F. Sweeting, whose appointment as Industrial Agent, C.P.R. Western Lines, was announced in our last issue, was born at Worthing, Eng., Aug. 20, 1872, and entered C.P.R. service June 19, 1906 since when he has been, to Aug. 1906, stenographer General Freight Department, Winnipeg; Aug. 1906 to Mar. 1, 1908, stenographer, clerk in tariff bureau and claims clerk, in Assistant Freight Traffic Manager's office, Winnipeg; Mar. 1, 1908 to May 1910, chief clerk to the Assistant to Second Vice President, Winnipeg.

R. A. Gamble, who was recently appointed Fuel Agent, Western Division, C. P. R., Calgary, Alta., was born at Dublin, Ireland, Mar. 1, 1876, and entered C.P.R. service Oct. 1, 1901, since when he has been, to May 15, 1903, yard clerk at Winnipeg; May 15, 1903 to Oct. 15, 1905, chief yard clerk; Oct. 15, 1905, to Sept. 11, 1907, assistant yardmaster; Sept. 11, to Nov. 25, 1907, night yardmaster; Nov. 25, 1907, to June 7, 1909, chief clerk Car Service Department, Western Lines; June 7, 1909 to May 1, 1910, Inspector Refrigerator Service, Western Lines, Winnipeg.

L. Mulkern, who has been appointed District Freight Agent, C. P. R., London, Ont., was born there, June 18, 1871, and entered C. P. R. service, Mar. 1890, since when he has been, to 1897, operator Toronto freight office; 1897 to 1901, inward freight clerk, London freight office; June 1, 1901 to June 1903, clerk in General Freight Agent's office, Toronto; June 1903 to Apr. 1908, canvassing freight agent, Toronto, chief clerk to General Freight Agent Local Traffic, Toronto, and Travelling Freight Agent, Toronto, consecutively; Apr. 1908 to June 1910, chief clerk to General Freight Agent Through Traffic, Toronto.

S. P. Howard, who has been on the C.P.R. staff over 28 years, acting for some years past as General Freight Agent at Montreal, retired from the company's service May 31. He was made the recipient of several gifts on the occasion, viz.: A cut glass punch bowl, silver ladle, and glasses, and a silver mounted cut glass fern dish for Mrs. Howard from the freight staff generally; a loving cup from the General Freight Agent's staff at Montreal, and a cut glass decanter from representatives of other companies with whom he had been associated in the Canadian Freight Association.

R. S. Gosset, whose appointment as Auditor Canadian Northern Steamships, Ltd., was announced in our last issue, was born at Toronto, Sept. 28, 1879. He entered transportation service Mar. 1894, since when he has been, to July 1899, stenographer to President Toronto Ry., July 1899 to June 1901, secretary to R. J. Mackenzie, Mackenzie, Mann & Co.; June 1901 to Dec. 1902, secretary to General Superintendent Canadian Northern Ry.; Dec. 1902 to June 1904, secretary to Third Vice President Canadian Northern Ry.; June 1904 to Apr. 1907, in Accounting Department C.N.R., in charge of disbursements, and from Apr. 1907, chief clerk Accountant's Department, C. N. R., which position he retains.

M. H. Brown, whose portrait appears on the first page of this issue, was born at Richmond Hill, Ont., Sept. 2, 1866, and entered C. P. R. service, Oct. 1, 1877, since when he has been, to Apr. 1890, clerk General Freight Department, Toronto; Apr. 1890 to Aug. 1893, chief clerk to District Freight Agent, Detroit, Mich.; Aug. 1893 to Mar. 1896, chief clerk to Freight Traffic Manager, Toronto; Mar. 1896 to July 1899, chief clerk to Freight Traffic Manager, Montreal; July 1899 to June 1901, District Freight Agent, Detroit, Mich.; June 1901 to Oct. 1902, Assistant General Freight Agent Ontario Division, Toronto; Oct. 1902 to Nov. 1907, General Freight Agent Ontario Division, Toronto, and from Nov. 1907, General Freight Agent Local Traffic, Ontario Division, Toronto. He is president Canadian Freight Association for the current year.

Arthur White, formerly Division Freight Agent G.T.R., at Toronto, who died there June 16, of cancer of the throat, was born at Hadleigh, Suffolk, Eng., Nov., 17, 1840, and entered railway service in 1859, since when he had been, to 1866 on the Great Eastern Ry., England; 1866 to 1873, freight checker, clerk and agent, consecutively, G.T.R.; 1873 to 1876, Assistant General Freight Agent same road; 1876 to 1878, General Freight Agent Great Western Ry.; 1878 to 1880, General Freight and Passenger Agent Midland Ry.; 1880 to 1884, Traffic Manager same road; 1884 to May 1885, District Traffic Manager Midland Division G.T.R.; May to Aug., 1885, Division Freight Agent Midland Division G.T.R.; Aug. 1885, to June 1892, District Freight Agent same road; June 1892 to July 1902, Division Freight Agent same road at Toronto.

W. R. Tiffin, Superintendent Northern Division G.T.R., died at Allandale, Ont., May 29, after the last forms of our June issue had gone to press, so that it was impossible to mention it in that issue. He was born at Hamilton, Ont., in 1844, and entered railway service in 1860, since when he was, to 1875, clerk Great Western Ry. of Canada at Hamilton; 1875 to 1880, Assistant Superintendent same road, Palmerston, Ont.; in 1890 on the amalgamation of the G.W.R. with the G.T.R., he was appointed Assistant Superintendent Northern Division, Stratford, Ont., which position he held until July 15, 1896, when he was assigned to other duties, and from Jan. 1, 1897, he was Superintendent Northern Division at Allandale. He had completed his 50th year in the service of the G.T.R. and its predecessors, and had been Superintendent at Allandale since 1897. He had not been in robust health for some years, but was active in his duties until the beginning of May. The funeral took place at London, Ont., June 2, a special train conveying the funeral party from Barrie. At Toronto the train was joined by a large gathering of railway men from all parts of the G.T.R., as well as by representatives of other companies. Amongst those present were:—E. Tiffin, Traffic Manager, Intercolonial Ry., Moncton, N.B., a brother; F. H. McGuigan, Toronto, formerly Fourth Vice President G.T.R.; J. Oborne, General Superintendent Ontario Division C.P.R., and the following G.T.R. officials:—W. G. Brownlee, Transportation Manager; W. W. Ashald, Superintendent of Telegraphs; J. E. Quick, General Baggage Agent; H. E. Whittenberger, Superintendent Montreal Terminals; L. G. Coleman, Superintendent, Belleville, Ont.; L. Macdonald, Division Freight Agent, Toronto; U. E. Gillen, Superintendent, Toronto; J. D. McDonald, District Passenger Agent, Toronto; W. H. Farrell, Superintendent, Toronto; J. J. Beck, Superintendent Union Station, Toronto; G. A. Mitchell, Master of Bridges and Buildings, Toronto; H. Ferguson, General Roadmaster; E. L. Cousins, Resident Engineer, Toronto; J. Markey, Master Mechanic, Toronto; E. W. Smith, Superintendent of Dining Cars; J. A. McLardy, Trainmaster, Stratford; —. Forester, Chief Dispatcher; D. Crombie, Assistant to General Traffic Manager.

The C.P.R. has let the contract for the erection of the Y.M.C.A. building for its employes at Cranbrook, B.C., to J. G. McCallum, of that place, who has started work.

Railway Rolling Stock Notes.

The G.T.R. has received three mogul locomotives from the Canadian Locomotive Co., Kingston, Ont.

The Temiskaming and Northern Ontario Ry., has ordered four Pacific type locomotives from the Canadian Locomotive Co., Kingston, Ont.

The Winnipeg city council has purchased a standard flat car from the C.P.R., to be utilized as an oil tank car in connection with the city's portable asphalt plant.

M. P. and J. T. Davis, contractors on the National Transcontinental Ry., have purchased a Rodger double plow ballast distributing car from the Hart-Otis Car Co., Montreal.

The G.T. Pacific Ry. has received 221 box cars, nos. 311617 to 311838; one official car, no. 4103; and six first class coaches, nos. 2036 to 2041, from the Canadian Car and Foundry Co.. Montreal.

The Essex Terminal Ry., which, at present is only moving other companies' cars to and from the various industries on its line, has no cars of its own, but has one switching locomotive in service.

The Ha Ha Bay Ry., is reported to have ordered one double ended locomotive, with cylinders 14 by 22 ins., 44 ins. driving wheels and a total weight of 80,000 lbs., from the American Locomotive Co.

The Canadian Northern Ry., between May 15 and June 15, received the following additions to rolling stock: two first class cars, 40 ore cars, and 380 box cars from the Canadian Car and Foundry Co., Montreal; 15 box cars, 15 stock cars, and 115 flat cars, from the Crossen Car Mfg. Co., Cobourg, Ont.

The Dominion Coal Co. has ordered 12 all steel Otis type coal cars from the Hart-Otis Car Co., Montreal, of which the following are the chief particulars:

Length over end sills	38' 10"
Length inside	36' 5"
Width inside	9' 7"
Height inside	5' 0"
Height from rail to top	9' 4 13-16"
Height from rail to floor	4' 4 13-16"

The G. T. Pacific Ry. has ordered from the Canadian Car and Foundry Co., Montreal, for delivery in 1911, four mail and express cars, nos. 106 to 109; three second class coaches, nos. 1018 to 1020; 12 first class coaches, nos. 2042 to 2053; 23 colonist cars, nos. 3015 to 3037; five tourist cars, nos. 3405 to 3409; three dining cars, nos. 4003 to 4005; 200 box cars, nos. 312325 to 312524; and 300 flat cars, nos. 361300 to 361599.

Following are the chief details of the seven suburban cars, which the C.P.R. is building at its Angus shops, Montreal:—

Length, over frame	65' 0"
Breadth, over frame	9' 10½"
Accommodation	72
Body and under frame	Wood
Axles and brasses	5" by 9"
Springs	Quadruple elliptic, 38"
Wheels	Steel tires, 36¼"
Trucks	Four wheel passenger
Brake Beams	Simplex
Air Brakes	Westinghouse
Heating	Gold System
Seats	Rattan

Following are the chief dimensions of the 1,000 steel underframe box cars, which the G.T.R. is having built in the U.S., as mentioned in our last issue:—

Length over end sills	36' 9¾"
Width over side sills	9' 0¾"
Height, top of sills to under side of plate	7' 10¾"
Length inside	36' 0"
Width inside	8' 6"
Height inside, top of floor to under side of carlin	8' 0"
Outside end sill to centre of body bolster	5' 0"
Height, top of rail to centre of draw-bar	2' 10½"
Wheel base of truck	5' 2"
Door opening	6' 0"
Height from rail to top of running board	13' 5½"
Height from rail to top of brake mast	14' 0"
Height from rail to top of eaves	12' 7½"
Width over eaves	9' 6⅛"
Height from rail to top of floor	4' 1¼"
Framing	G. T. R. Standard
Truck bolster	Simplex
Air brakes	Westinghouse

The 500 steel underframe automobile cars which the G.T.R. is having built in the U.S., as mentioned in our last issue, will, with the exception of the door opening, be similar to the standard box car. Following are the chief dimensions:—

Length over end sills	40' 9"
Width over side sills	9' 0¾"
Height, top of sill to under side of plate	8' 4¾"
Length inside	40' 0"
Width inside	8' 6"
Height inside, top of floor to under side of carlin	8' 6"
Outside end sill to centre of body bolster	5' 2"
Height top of rail to centre of draw-bar	2' 10½"
Wheel base of truck	5' 2"
Side door opening	8' 2" by 10' 0"
Height from rail to top of running board	13' 6"
Height from rail to top of brake mast	14' 0"
Height from rail to top of eaves	12' 7½"
Width over eaves	9' 6⅛"
Height from rail to top of floor	3' 8"
Air brakes	Westinghouse
Framing	G. T. R. Standard
Roof, inside	Metal
Truck bolsters	Simplex

Following are the chief details of the 10 ten-wheel locomotives, class D. 10, making 26 of this class now under construction, which the C.P.R. is building at its Angus shops, Montreal, as mentioned in our last issue:—

Weight on drivers	141,000 lbs.
Weight total	190,000 lbs.
Cylinders, diar. and stroke	22½" by 28"
Drivers, diar.	63"
Boiler type	Radial stayed, wagon top
Boiler pressure	180 lbs.
Heating surface, tubes	2,263 sq. ft.
Heating surface, superheater	408 sq. ft.
Heating surface, firebox	190 sq. ft.
Tubes, no. and diar.	24 5", 244 2"
Tubes, length	14' 6"
Firebox	100 ⅞" by 69¾"
Grate area	49 sq. ft.
Capacity, water	5,000 galls.
Capacity, coal	10 tons
Air brakes	Westinghouse E.T. 6
Brake shoes	C. P. R. Standard
Brake beams	Simplex, diamond, inside hung
Couplers	Tower
Headlight	Pyle National Electric
Journal bearings	C. P. R. Standard
Lubricators	Detroit 5-feed
Springs	C. P. R. crucible
Wheel tires	Crucible steel
Wheel centres	Cast Steel
Tractive effort	34,400 lbs.

The G.T.R. has placed orders for rolling stock as follows:—Five first class cars, length over end sills 67½ ft., width over side sills 9 ft. 8 in., seating capacity 60 in body, nine in smoking room; one steam motor car for the International Bridge Co., length over end sills 60 ft., width over side sills, 9 ft. 8 in., seating capacity 24 in body, 16 in smoking room; three dining cars, length over end sills 70½ ft., width over side sills 9 ft. 8 ins., capacity of dining room 30; three parlor cars, length over end sills 73 ft., capacity 30 in body, six in smoking room; three parlor-buffet cars, length over end sills 73 ft., width over side sills 9 ft. 8 in., capacity 27 in body, six in smoking room, to be built at its Point St. Charles shops, Montreal; two double track flangers, to be built at its Port Huron shops, Mich.; 20 baggage cars, length over end sills 60 ft. 10 ins., width over side sills 9 ft. 8 ins., length inside 60 ft. 1 in.; five of these will be fitted with movable stalls and other equipment for the conveyance of 16 horses each; 1,000 twin hopper steel coal cars; 1,500 box cars, to be built by the Canadian Car and Foundry Co., Montreal; 500 box cars from the Silliker Car Co., Halifax, N.S., and 1,000 box cars and 500 automobile cars to be built in the U.S., as mentioned in our last issue.

Patrick Dubee, Secretary Montreal St. Ry. Co., was married at Montreal June 28 to Miss Dineen.

Sleeping Car Reservations.

The Chief Railway Commissioner having suggested that the railway companies abolish the system of reserving sleeping and parlor car accommodation without prepayment, the following rules have been adopted in the Eastern Canadian Passenger Agents' territory·

(a) Commencing June 19, sleeping and parlor car accommodation will not be held unless paid for at the time of making reservation, except as per paragraph (b).

(b) Accommodation reserved on telephone or telegraph request from points outside a radius of five miles from the cities where sleeping or parlor car space is on sale, may be held until departure of car from place at which space is reserved.

(c) Sleeping or parlor car tickets will be redeemed if presented to agent from whom purchased or to agent at station prior to departure of train for which they are sold.

Portland Canal Short Line Ry.—Detail plans for the first five miles of this railway have been filed with the British Columbia Government. The line will be approximately 16 miles long, and will extend from Stewart, at the head of Portland Canal, back into the hills serving all the proven mines of the district. The construction of the docks at Stewart is being proceeded with, so that they will be ready about the same time as the line is completed, about the end of August. Local reports state that as soon as this 16 miles of line is completed an extension will be carried through about five miles of Alaskan territory, to and through the Salmon River district. A favorable pass exists by which the line might ultimately be extended to the Naas Valley, which opens up the Cassiar and Omineca districts, and to the Canadian Northern Ry. (June, pg. 473.)

Quebec Railway Acts, etc.—J. A. Lefebvre, Secretary of the Railway Branch Public Works and Labor Department, Quebec, is issuing a volume of about 200 pages in English and French, containing the acts of the province relating to railways, to taxes payable by railway companies, and to the repayment of railway subsidies. taken from the Revised Statutes of Quebec, 1909, with a table showing the subsidies of all kinds which have been granted and paid on account of provincial railways. Its price is $2.

The sale of the Dunsmuir collieries etc., in British Columbia, was completed June 16, and the property transferred to the Canadian Collieries (Dunsmuir) Ltd., a company of which W. Mackenzie, President Canadian Northern Ry., is the head. W. L. Coulson has been appointed manager.

A circular has been issued by J. W. Leonard, General Manager C.P.R. Eastern Lines, directing the crews of passenger trains to attend the St. John's Ambulance "first aid" lectures, and announcing that emergency medical outfits will in future form part of conductors' kits.

The Railway Association of Special Agents and Police of the U.S. and Canada, which held its annual meetings at Los Angeles, Cal., recently, has changed its name to the International Association of Railway Special Agents and Police. The association has 318 members, representing 79 railways, covering 162,000 miles.

The C.P.R. and the C.N.R. in conjunction with the Manitoba Agricultural College are sending dairy instruction cars over their Manitoba lines. The railways supply the cars and transport them from place to place, and the college supplies the lecturers, demonstrators and instruction equipment.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

10629. May 17.—Authorizing Town of Paris, Ont., to lay pipe under G. T. R.

10630. May 16.—Authorizing Manitoba Government Telephones to place wires across C. N. R., near Swan Lake Station, Man.

10631. May 17.—Authorizing Alberta Government to place wires across C. N. R. between secs. 25 and 26, twp. 55, r. 20, w. 4 m.

10632 to 10633. May 17—Authorizing city of St., Thomas, Ont., to place wires across telegraph wires and London & Port Stanley Ry. at two points.

10634 to 10636. May 17.—Authorizing city of St. Thomas, Ont., to place wires across G. N. W. Telegraph Co.'s wires at three points.

10637. May 17.—Adopting Standard Conditions and Specifications for Wire Crossings, approved by order 8392, Oct. 7, 1909, pursuant to amendment to sec. 246 of the Railway Act, which reads: "5. An order of the Board shall not be required in the cases in which telephone, telegraph or electric light wires are erected across the railway with the consent of the company in accordance with any general regulations, plans, or specifications adopted or approved by the Board for such purposes."

10638. May 18.—Authorizing C. P. R. to appeal to the Supreme Court of Canada from order 10340, which directed the arrival and departure of trains of the Maniwaki Branch to and from Sappers' Bridge, Ottawa.

10639. Mar. 22.—Approving revised location of N. St. C. and T. Ry. between mileage 11.53 and 13, Welland County, Ont., authorizing crossings on north and south sides of canal feeder, at stations 307.83, and 314. 22; at mile 11.97 on north side of the Government raceway, and the town line between lot 27, Humberstone tp., and lot 27, Crowland tp., and authorizing it to cross the Canada Southern Ry. and T., H. & B. Ry.

10640. May 17.—Recommending to Governor-in-Council for sanction lease of Georgian Bay and Seabord Ry. to C. P. R. by indenture dated Jan. 1.

10641. May 17.—Recommending to Governor-in-Council for sanction by-law 96, imposing a penalty upon C. P. R. officers and employes for failure to fulfill and keep the company's general train and interlocking rules and rescinding by-law 87.

10642. May 17.—Dismissing application for order directing C.P.R. and G.T.R. to honor each other's tickets between Toronto and Hamilton.

10643. May 17.—Temporarily approving, final determination of tariffs of tolls which Bell Telephone Co. shall charge, and form of agreement with other companies, agreement between Bell Telephone Co. and Euphemia Rural Telephone Association, of July 12, 1907.

10644. May 18.—Approving location and detail plans of C. P. R. station at Walsh, Alta.

10645. May 18.—Extending, until July 15, time within which C. P. R. was required by order 10130, to make connection with G. T. R. at Galt. Ont.

10646. May 12.—Ordering that C. P. R. within 50 days raise the barrel conveyor over its tracks at Keewatin, Ont., to not less than 22½ feet above base of rail.

10647. May 18.—Extending, for 60 days from date, time within which interlocking plant at Mt. McKay & Kakabeka Falls Ry.'s crossing of C.P.R. at Fort William, Ont., was to be installed.

10648. May 18.—Extending, for 60 days from date, time within which protective appliances shall be installed at M. McKay & Kakabeka Falls Rv.'s crossing of the C.P.R. at Yonge St., Fort William, Ont.

10649. May 17.—Ordering C. P. R. to put into effect, not later than June 6, a rate not exceeding 14c. per 100 lbs., upon shipments of live stock, in carloads, from Toronto to Smith's Falls. Ont.

10650. May 17.—Approving supplement 2, to C. P. R. Standard Freight Tariff, C. R. C. E.—1244, applying between stations on Orford branch.

10651. May 18.—Authorizing C. P. R. to build a bridge over Rogers Creek at mileage 132.5, E. & N. Ry., Alberni extension, B. C.

10652. May 18.—Authorizing Alberta Government to lay watermain under C. P. R. at Lethbridge.

10653. May 19.—Re rates on G. T. R. and C. P. R. on ex-lake western grain from Lake or river ports to points in Ontario and Quebec. This order is given fully in another page.

10654 to 10655. May 17.—Reinstating C. N. O. R. applications for authority to build across certain highways in Smith's Falls, and for approval of location through Lanark County, mileage 29, to 41; and rescinding orders 10493 and 10492, May 3, which dismissed the applications.

10656. May 17.—Dismissing C. N. O. R. application for authority to build across and divert public road on lot 20, con. 1, Cramahe tp.

10657. May 17.—Reinstating C. N. O. R. application for approval of its revised location through Smith's Falls, from mile 38.2 to 42.1, and for authority to build across certain highways there, and rescinding order 10494, May 3, which dismissed the application.

10658. May 19.—Authorizing C. N. O. R. to build between lots 30 and 31, con B, Brighton tp.

10659. May 19.—Ordering G. T. R. within 90 days to install electric bell at first highway east of Ernestown Station, Ont.

10660. May 17.—Ordering that C. P. R. do not permit any engine, tender, or car to stand on siding east of east end of freight house at Ingersoll Ave. crossing, Woodstock, Ont.

10661. May 25.—Ordering that Pullman Co. be added as party to proceedings in matter of sleeping car tolls under consideration.

10662. May 21.—Approving location of G. T. P. Branch Lines' Tyfield-Calgary branch from mileage 150 to 197.8, near Calgary, Alta.

10663. May 25.—Approving location of C. N. O. R. station grounds at Malvern, Scarboro tp.

10664. May 22.—Ordering that C. N. R. build highway crossing where Wiegand Ave, produced in a straight line would intersect its line in Fort William, Ont.

10665. May 23.—Authorizing C. N. O. R. to operate trains across Division St., Hamilton tp., Northumberland Co., temporarily, and for construction purposes only, pending completion of subway.

10666. May 25.—Approving location of C. N. O. R. station grounds at Orono.

10667. May 26.—Authorizing M.C.R. to reconstruct drawbridge east of Welland station, Ont.

10668. May 26.—Authorizing C.N.O.R. to cross private road between lots 20 and 21, con. B, Murray tp.

10669. May 26.—Authorizing C. P. R. to build bridge 58.93, White River section, Lake Superior Division.

10670. May 26.—Dispensing with publication of Atlantic and Lake Superior Ry.'s notice of application for sanction of agreement of sale entered into by Royal Trust C. and Quebec Oriental Ry. Co., dated May 19.

10671. May 21.—Authorizing town of Weyburn, Sask., to lay sewer and watermain under C. P. R.

10672. May 25.—Authorizing Alberta Government to lay a watermain under A. Ry, and I. Co., track at junction with C.P.R. n.e. ¼ sec. 32-8-21, w. 4 m.

10673. May 25.—Authorizing Canadian Niagara Power Co., to place wires across Bell Telephone Co.'s wires at Bridgeburg, Ont.

10674. May 23.—Authorizing Camden Rural Telephone Co. to place wires across Bay of Quinte Ry., near Moscow, Ont.

10675. May 21.—Authorizing Bell Telephone Co. to place wires across London & Port Stanley Ry, near St. Thomas, Ont.

10676-10679. May 26.—Authorizing city of Winnipeg to build conduit under C.P.R. at four points.

10680. May 27.—Authorizing Montreal and Southern Counties Ry to open for traffic for one month portion of its line, from St. Denis St., St. Lambert, to Longueuill, Que.

10681. May 26.—Relieving G. T. R. from providing further protection at crossing of second highway west of Nelles Corners Station, Ont.

10682. May 26.—Ordering C. P. R., within 60 days to install an electric bell at Foundry St. crossing, Woodstock, Ont.

10683. May 26.— Relieving G. T. R. from providing further protection at crossing of four miles south of Elora, Ont.

10684. May 26.—Approving location of C. P. R. station at Cache Bay, Ont.

10685. May 26.—Approving location of C P. R. Regina and North Saskatchewan branch from mileage 132 to mileage 148, and from mileage 168 to 199.6.

10686. May 26.—Approving Montreal and Southern Counties Ry.'s Standard Passenger Tariff C. R. C. subject to reconsideration on receipt of copy of the first annual report furnished to Minister of Railways.

10687. May 26.—Amending order 10237, April 19, approving location of M. C. R. station at Tecumseh Rd., Ont.

10688. May 27.—Approving C. N. O. R. revised location through Cobourg, mileage 170.66 to 172.58 from Ottawa.

10689. May 26.—Approving diversion of G. T. P. R. crossing in south half of sec. 18, tp. 12, r. 20, w. 1, m., Man.

10690. May 26.—Authorizing Consolidated Mining and Smelting Co., of Canada, Ltd., to lay pipe under C. P. R. at Smelter Jct., B. C.

10691. May 25.—Authorizing Superior Portland, Cement Co. to lay pipe under C. P. R. at Orangeville, Ont.

10692. May 26.—Authorizing Bell Telephone Co., to place wires across C. N. O. R. near Beaverton station.

10693. May 26.—Authorizing Manitoba Government Telephones to place wires across C. P. R. near Strathclair station.

10694. May 26.—Relieving C. P. R. from providing further protection at crossing 2½ miles west of MacGregor, Man.

10695. May 27.—Approving location of C. P. R. station at Mile End, Que.

10696. May 27.—Authorizing city of London, Ont., to lay drain under C. P. R. at George St.

10697 to 10699. May 27.—Authorizing C. N. O. R. to build between lots 6 and 7, con. A., Murray tp., and between lots 18 and 19, con. 1, Cramahe, tp.; and to cross and divert private roads across lots 3, 4 and 5, con. 5, Darlington tp.

10700. May 27.—Authorizing C. P. R. to move its station at Shawville, Que., to new location.

10701, to 10702. May 30.—Authorizing Norfolk Gas Co. to lay pipe under G. T. R. at St. Patrick and Nelson Sts. Port Dover, Ont.

10703 to 10705. May 30.—Authorizing St. Francis Hydraulic Co. to place wires across Bell Telephone wires at three points in Thetford Mines, Que.

10706. May 30.—Authorizing Kaministiquia Power Co. to place wires across C. P. R. on Yonge St. Fort William, Ont.

10707. May 21.—Ordering C. P. R., within 60 days to install electric bell at Maple St. crossing, Hartland, N. B.

10708 to 10709. May 23.—Temporarily approving, pending final determination of tolls which the Bell Telephone Co. shall be authorized to charge, and form of agreement with other companies, agreements between the Bell Telephone Co. and Chingucousy, tp., April 18; and Monk Rural Telephone Co., Mar. 29; providing it be not taken to authorize higher tolls than were authorized previous to May 13, 1906.

10710. May 27.—Authorizing G. T. R. to build across road between lots 85, con. 2, and Lot 9, con. 3, Tiny, tp. Ont.

10711 to 10713. May 25—Authorizing C.P.R. to build spurs to premises of Pigeon River Lumber Co. in Port Arthur, Ont.; Eastern Canada Steel & Iron Works, St. Sauveur parish, Que.; and G. F. & J. Galt, Ltd, Camrose, Alta.

10714. May 19.—Refusing application of Woolwich tp., for authority to open road across the G. T. R. between lots 85 and 86.

10715. May 26.—Ordering that time within which electric bell was required by order 10,000, Mar. 23, to be installed at C. P. R. crossing, Zorra St., Beachville, Ont., be extended for one month from date.

10716. May 19.—Ordering that in all switching movements over Grey St., London, Ont., the M. C. R. and P. M. R. shall have a watchman on street, and that no cars be left standing within 50 fet. of either side of Grey St.

10717. May 23.—Approving standard specifications for bridges and viaducts which railways are authorized to construct under sec. 257 of Railway Act., and declaring them to be standard specifications of the Board for steel bridges and viaducts, and rescinding order 921, Feb. 9, 1906, approving standard specifications for bridges and viaducts authorized to be constructed under sec. 203 of the Railway Act, 1903.

10718. May 26.—Approving plans and specifications of a bridge across Maxwell Creek drain, Dover, tp., where C.W. & L.E. Ry. will cross on Baldoon St.

10719. May 19.—Authorizing C. N. O. R. to build spur to connect with G.T.R. siding in Brighton across road between lots 4 and 5, con. 1.

10720. May 25.—Authorizing C.N.O.R. to connect with Central Ontario Ry., at Trenton.

10721 to 10722. May 27.—Temporarily approving agreements between North American Telegraph Co. and Ernestown Telephone Co., Dec. 1, 1909; and Heckston Rural Telephone Co., April 16, 1909; provided it shall not be taken to authorize higher tolls than were authorized previous to May 13, 1906.

10723. May 30.—Approving location of C.N.O.R. through Trenton, mileage 145.43 to 145.76.

10724. May 30—Ordering C.P.R. to build crossing over its Stobie branch in lane between Durham and Elgin Sts., Sudbury, Ont.

10725 to 10730. May 30.—Authorizing On-

A HISTORY OF THE PAY-AS-YOU-ENTER CAR

AND ITS LESSON

The following cities are using Pay-As-You-Enter Cars: Chicago City Railway, 839 cars; Chicago Railways, 1,328; Public Service Corporation of New Jersey, 466; New York City Railway, 555; Third Avenue Railroad, New York, 550; International Railway, Buffalo, 200; Buffalo & Lake Erie Traction Co., 10; Washington Ry. & Elec. Co., Washington, D.C., 100; Capital Traction Co., Washington, D.C., 51; Municipal Traction Co., Cleveland, Ohio, 180; United Rys. Co. of St. Louis, Missouri, 310; Portland Ry., Lt. & Pwr. Co., Portland, Ore., 25; Columbus Ry. & Lt. Co., Columbus, Ohio, 10; Wichita R.R. & Lt. Co., Wichita, Kan., 14; Jacksonville Elec. Co., Jacksonville, Fla., 5; Dallas Elec. Co., Dallas, Texas, 20; Houston Elec. Co., Houston, Tex., 41; Northern Texas Trac. Co., Ft. Worth, Texas, 25; Ithaca Street Ry., Ithaca, N.Y., 2; Peoria Street Ry., Peoria, Ill., 13; Urbana & Champaign Ry., Champaign, Ill., 3; Mutual Lt. & Water Co., Brunswick, Ga., 4; Rochester Ry. Co., Rochester, N.Y., 25; Ft. Dodge, Des Moines & So. R.R. Co., 2; Muskogee Elec. Trac., Muskogee, Okla., 6; Union Traction Co., Dubuque, Ia., 4; Topeka Ry. Co., Topeka, Kas., 12; United Rys. & Elec. Co., Baltimore, Md., 32; Detroit United Ry., Detroit, Mich., 225; Cincinnati Traction Co., Ohio, 50; Montreal Street Railway, 400; British Columbia Elec. Ry., 30; Calgary Street Railway, 18; Metropolitan Street Ry., Kansas City, Mo., 50; Edmonton Radial Ry., 4; San Antonio Traction Co., San Antonio, Tex., 6; Rockford & Int. Co., Bloomington, Ill.; Corsicana Transit Co., Corsicana, Tex.; Compania Electrica y de Ferrocarriles, Mexico; The Milwaukee Elec. Ry. & Lt. Co., Milwaukee, Wis.; Springfield Street Ry. Co., Springfield, Mass.; Lynchburg Traction Co., Lynchburg, Va.; Chicago & Southern Traction Co., Chicago, Ill.; Calumet & South Chicago Ry. Co., Chicago, Ill.

THE LESSON

taught by this widespread use of Pay-As-You-Enter Cars is obvious. Increased Revenue, Accident Elimination and Schedule Improvement have been demonstrated in every case. Isn't all this sufficient to show that it always pays to operate the Pay-As-You-Enter Car? Why not remodel some of your present cars?

We license manufacturers and railways to build and use the Pay-As-You-Enter Car, the Patents on which are owned by

tario Hydro-Electric Power Commission, to place wires across Bell Telephone Co.'s wires at six points.

10731. May 31.—Approving G.T.P.R. location, Prince Rupert easterly mileage 408.69 to 434.5, Fort George District, B. C.

10732. June 1.—Authorizing C. P. R. to construct bridges 151.7, Kitsukus, Creek, Alberni Extension, Esquimalt & Nanaimo Ry.; 8.2 Michael Creek, Cranbrook Section; 100.4, Portal Section, Western Division; 114. 01. Cartier Section; Lake Superior Division; 113.5 Scott Creek, Cascade Section, Pacific Division.

10733. May 30.—Ordering Brandon, Saskatchewan and Hudson's Bay Ry., within 60 days to install electric bell at crossing between secs. 24 and 13 tp. 3, r. 20, Boissevain, Man.

10734. May 31.—Approving C.N.O.R. Sudbury-Port Arthur Division, location through unsurveyed territory in Algoma District, mileage 160 to 180.

10735 to 10739. May 31.—Authorizing C.P.R. to lay extra track across Seventh St., High River, Alta, between secs. 32 and 33, tp. 11, r. 10, w.p.m., MacGregor, Man., between secs. 12, tp. 8. r. 9, w.p.m. and secs. 7, tp. 8, r. 8, w.p.m., Rathwell, Man.; between secs. 28 and 29, tp. 11, r. 11, w.p.m., Austin, Man.; and between secs. 5 and 6, tp. 11, 3. 12, w.p.m., Sidney, Man.

10740. June 1.—Approving location of Bay of Quinte Ry. station at Napanee, Ont.

10741. June 1.—Authorizing Bell Telephone Co. to place conduit under Montreal Terminal Ry., at Elmwood Farm road crossing, Longue Pointe, Que.

10742. June 1.—Approving C. N. R. standard 20 ft. arch culvert.

10743. June 1.—Approving clearance diagram for bridges on C.P.R. lines in Canada.

10744. June 2.—Authorizing C. P. R. to construct bridge 21.7, Moose Jaw section, Western Division.

10745-10746. Apr. 26.—Authorizing C.N.O.R. to build across Meade Ave., and Prince Edward St., Brighton.

10747 to 10748. Apr. 30.—Authorizing C.N.O.R. to build across Division and Railway St., Brighton.

10749. May 19.—Ordering G.T.R. within 10 days to employ watchman at Hurontario St., Port Credit, Ont., crossing, from 7 a.m. to 7 p.m. daily.

10750. May 19.—Ordering G.T.R. within 30 days to file plans for the erection of gates at crossing of 7th line, near Oakville, Ont., such gates to be erected within 60 days after approval of plans by the Board's Engineer, and to be operated from 7 a.m. to 7 p.m. daily.

10751. May 19.—Ordering G.T.R. to file plan of road to be constructed for diversion of highway in Dorchester, tp., Ont.; work to be completed within 90 days after approval.

10752. May 19.—Ordering G.T.R. to divert highway southward between cons. 1 and 2, Kings tp., Ont., construct overhead bridge at crossing, and acquire necessary land for fencing; plans to be filed for approval within 30 days, and work to be completed within 60 days after approval.

10753. May 31.—Extending to Aug. 15, time within which C.P.R. shall build spur to Standard White Lime Co., Beachville, Ont.,

10754. June 1.—Extending to July 15, time within which C.P.R. was required by order 9980 to erect crossing signs, cattle guards, and fencing on its Lacombe branch from Stettler to Castor, Alta.

10755. May 31.—Authorizing C. P. R. to build across 32 highways on its Langdon North branch from mileage 0 to 39.45, Alta.

10756 to 10759. May 30-June 2.—Authorizing C.N.O.R. to build between lots 2 and 3, con. 1, Brighton, tp.; across Centre and Napier Sts., Brighton, and between lots 32 and 33, con. B, Brighton, tp.

10760. June 2.—Relieving G.T.R. from providing protection at crossing of concession road D, near Scarboro Jct., Ont.

10761. May 17.—Approving uniform bill of lading in use in the United States and approved by Interstate Commerce Commission as regards all traffic which may be carried from any port in U. S. into Canada, or from the U. S. through Canada to the U. S.

10762 to 10766. May 23.—Authorizing Toronto, Niagara and Western Ry to build across St. Clair Ave.; to cross G. T. R. and C. P. R. at St. Clair Ave.; and G. T. R. at Davenport Road; and to cross Davenport Road, Toronto

10767. May 23.—Directing that order of Railway Committee of the Privy Council, Dec. 16, 1893, with reference to protection of certain level crossings at Dufferin and Bathurst Sts., Toronto, be varied by relieving York tp, from its liability to contribute to cost of maintenance.

10768. May 23.—Ordering G. T. R., until otherwise ordered, in addition to watchman already provided at Cherry St. crossing, by city of Toronto, to maintain watchman on south side of crossing, from 7 a.m. to 7 p.m.

10769. June 1.—Ordering that no G.T.R. train shall cross Oxford, Richmond, Metcalfe, Caradoc and Victoria Sts., Strathroy, Ont., at more than 10 miles an hour, nor remain within 50 ft. of either of the boundaries of them.

10770. June 6.—Approving Kootenany Central Ry. revised location from B.C., Southern Ry., south of Wardner, mileage 0 to north of Fort Steel, mileage 24.9, Kootenay District, B.C.

10771 to 10772. June 4.—Ordering C.P.R. within 60 days to install electric bells at Maria St. and Mark St. crossings, Peterboro, Ont.

10773. June 4.—Extending for two months time for completion of P.M.R. and M.C.R. interchange track and that the Leamington Canning Co. convey certain lands under authority of order 9753, half to M.C.R. and half to P.M.R., division line being drawn from junction of each right of way to half distance on 370.48 limit.

10774. June 6.—Relieving C.P.R. from providing protection at highway crossing in N.W. ¼ sec. 16, tp. 12, r. 1, w.p.m., near Meadows, Man.

10775. May 19.—Authorizing G.T.R. to use jointly with C.P.R. spurs to premises of Spietz Furniture Co., Hanover Portland Cement Co., and Knechtel Furniture Co., Hanover, Ont.

10776. June 2.—Authorizing C.P.R. to build branch across Strickland Place and Earnbridge St., Toronto.

10777. June 2.—Ordering that C.N.R. be subject to penalty of $25 a day for every day after July 1, that requirements of par. 1, of order of Oct. 16, 1909, re diversion of Thebault St., St. Boniface, Man., have not been complied with.

10798. June 7.—Approving location of proposed C.P.R. station at Chalk River, Ont.

10799. June 6.—Authorizing G.T.R. to construct branch lines south of Don River, Toronto, to premises of the Toronto Iron Works, and British American Oil Co., and along roadway on north side of Keating"s Channel.

10800. June 6.—Authorizing Government to build subway across C.P.R., 300 ft. northerly from junction of its Kimberly and Crow's Nest branches.

10801. June 9.—Authorizing G.T.R. to build along and across Hibernia, Albert, Nunn and Third Sts., and certain lands in Cobourg, Ont., to provide roadway 16 ft. wide from east end of Nunn St. along southeast side of its right of way to ferry dock.

10802.—June 4.—Authorizing C.N.R. to open for traffic the portion of its line from Rosetown to Kindersley, 54 miles.

10803. June 8.—Authorizing C.P.R. to build additional track across Alberni St., Moosomin, Sask.

10804. June 7.—Authorizing Ontario Hydro-Electric Power Commission to place its wires across Bell Telephone Co."s wires at lot 108, Thorould tp., Ont.

10805. June 6.—Authorizing Tillsonburg, Lake Erie and Pacific Ry. to construct spur to Ingersoll Packing Co.'s' premises, Sts.; to take certain lands and give compenport by Chief Engineer and Chief Operating ing west of Blenheim, Ont.

10806. June 8.—Relieving P.M.R. from furnishing further protection at first crossing west of Blenhem, Ont.

10807. June 7.—Relieving Wndsor, Essex and Lake Shore apd Ry from providing further protecting at crossing at Gosfield South, Ont.

10808. June 7.—Approving location of proposed C.P.R. station at Cartier, Ont.

10809. June 7.—Ordering diversion of highway four miles east of Tilbury station by M.C.R..

10810. June 7.—Authorizing G.T.R. to construct spur from its line east of Milton, Ont., to P. L. Robertson Mfg. Co.'s premises, Trafalgar tp., Ont.

10811. June 8.—Approving location of proposed G.T.R. station at Malton, Ont.

10812. June 8.—Approving location of piers in International bridge, M.C.R., Front St., Niagara Falls, Ont.

10813. June 8.—Ordering C.N.R. to build cattle pen and loading chute at Ashville, Man.

10814. June 9.—Authorizing C.P.R. to alter bridge by which Notre Dame St., East, is carried over its tracks at Place Viger station yard, Montreal.

10815. June 9.—Approvng C.N.O.R. line from east end of proposed viaduct near Wright St. station 330, to west side of the river; and authorizing t to buld brdge over Port Hope Creek, Hope tp.

10816. June 9.—Authorzing C.N.O.R. to build across road between lots 2, and 3, con. A, Trenton.

10817. June 7.—Making Toronto Ry. and Toronto and York Radial Ry. parties to application re separation of grades at C.P.R. crossings over Yonge St. and Avenue Rd. Toronto.

10818. June 7.—Dismissing application of town of Ferris, Ont., to order G.T.R. to construct crossng where it intersects proposed deviation of road allowance between cons. 3, 4 and 5, lot, 29.

10819. June 6.—Dismissing application of Morningtown vllage for a subway, and orderng C.P.R. to widen approaches to 22 ft.; raise hollow on north approach at least 5 ft. and clay approaches on both sides with 6 inches of gravel.

10820. June 13.—Authorizing G.T.R. to build spur from its line west of Brock St., Toronto, to Gall Lumber Co.'s premises.

10821 to 10839. June 9.—Authorizing Atlantic, Quebec and Western Ry. to build across highways at 19 points in Quebec province.

10840. June 9.—Authorizing C.N.O.R. to build between lots 13 and 14, con. 1, of Cramahe tp.

10841. June 7.—Authorizing Chatham, Wallaceburg and Lake Erie Ry to build a branch 3½ miles from its main line, con. 4, to road between cons. 3 and 4., Dover east tp., Ont.

10842 to 10844. June 9.—Dismissing application of Ontario Pubic Works Department, for authorty to build crossing over C.P.R. at lot 8, con. 11,, at lot 7, con. 11, Dennison tp., and at New Algoma Mills station, or mill location, Long, tp.

10845. June 1.—Ordering Canadian and Dominion Express Cos. to file before Aug. 1, a rate of $1.50 per 100 lbs. on oysters from Providence, R. I., to Toronto.

10846. June 10.—Approving location and plans of proposed C.P.R. station at Erskine, Alta.

1084 to 10848. June 9.—Authorizing the C.P.R. to build bridges 90.09 over Magpie River, White River section, Lake Superior dvson and 61.64 Lac du Bonnet secton, Central division.

10849. June 10.—Approving plan of canopy to be built along the west side of Quaker Oats Co.'s warehouse, Peterboro, Ont.

10850. June 10.—Relieving Boston and Maine Rd. from further protection at crossing at Tyler St., Ayers Cliff, Que.

10851 to 10865. June 9-10.—Authorizing Atlantic, Quebec and Western Ry to build across road at 15 points in Quebec province.

10866. June 10.—Approving C.N.O.R. revised location through Cobourg, from mileage 172.58 to 173.9.

19867. June 10.—Amending order 10330, Apr. 22, relieving C.P.R. from providing further protection at crossing 466 and 504, St. Felix de Valois parish.

10868 to 10869. June 10.—Authorizing C. N.O.R. to build between lots 30 and 31, con. A., Haldimand tp., and to build spur line to ballast pit across Kingston road between cons. A and B, of Brighton, tp.

10870. June 10.—Authorizing C.P.R. to build bridge 20.64 over North River on Georgian Bay and Seaboard Ry.

10871. June 9.—Authorizing Bell Telephone Co., to place wires across G.T.R. near Jeannett's Creek station, Ont.

10872. June 10.—Authorizing Ontario Hydro-Electric Power Commission to place wires across C.P.R. telegraph wires in West Flamboro tp.

10873. June 10.—Authorizing J. Aitkens, to lay gas pipe under G.T.R. 1¼ miles west of Onondaga, Ont.

10874. June 10.—Authorizing city of Fort William, Ont., to lay sever pipe under C.N.R. at Francis St.

10875. June 10.—Authorizing W. J. Aikens to lay gas pipe under G.T.R. near Cainsville, Ont.

10876, to 10877. June 10.—Authorizing C. P.R. to build spur to J.D. Clerk and Co.'s Winnipeg premises, and to Yale Columbia Lumber Co.'s premises, Nelson, B.C.

10878. June 13.—Authorizing Nipissing Power Co. to place wires across G.T.R. at Callander, Ont.

10879. June 13.—Authorizing city of Toronto to lay water pipe under C.P.R. at St. Clarens Ave.

Ruggles, Central Passenger Agent, in respect of passenger traffic, and W. C. Rowley, General Freight Agent, in respect of freight traffic, to prepare and issue tariff of tolls.

10918. June 15.—Relieving P.M.R. from providing further protection at first crossing east of Merlin station, Ont.

10919. June 16.—Authorizing Kaministikwia Power Co. to carry wires across C.P.R. on Yonge st., Fort William, Ont.

10920. June 16.—Authorizing V.V. and E. Ry. and Nav. Co. to build bridge over Park Drive, Vancouver, B.C.

10921. June 16.—Authorizing C.N.O.R. to build under Ontario St., Port Hope.

10922 to 10923. June 16.—Declaring that errors in C.P.R. books of reference, respecting lines approving orders 10805, June 6, and 10323, Apr. 23, have been corrected.

10924. June 16.—Ordering M.C.R. to divert and construct road surface along north of second highway crossing east of Yarmouth, Ont., so as to cross at right angles.

10924. June 17.—Extending for 30 days from date time within which C.P.R. was requred by order 10614, May 12-13, to file plans of subway at Main St. crossing, Kenora, Ont.

10926. June 13.—Approving G.N.W. Telegraph Co.'s tolls east of and including Windsor, North Bay, Ont., and the T. and N.O. Ry., included in its tariff of tolls, C.R.C. 9, July, 1909, and extending until Nov. 1, time for approval of its tolls west of North Bay and between points west of North Bay and east of North Bay and Windsor, also included in tariff.

10927. June 13.—Approving C.P.R. telegraph tolls east of and including Sudbury., and Windsor, Ont., included in its tariff of tolls C.R.C. 5, Jan. 1, and extending until Nov. 1., time for approval of tolls between points west of and including Sudbury, and points east of Sudbury, and east of, and including Windsor, also included in tariff.

10928. June 13.—Extending until Nov. 1, time for approval of Canadian Northern Telegraph Co.'s tolls.

10929. June 13.—Approving North American Telegraph Co.'s tariff of tolls, C.R.C. 1.

10930. June 13.—Extending until Nov. 1, time for approval of White Pass and Yukon Route, and G.T.P.R. telegraph tolls.

10932. June 10.—Ordering G.T.R. within 30 days to install electric bell at crossing 1½ miles west of Melbourne parish, Ont.

10933. June 1.—Ordering C.P.R. to build farm crossing for Z. Sabourin, Cadaret, Que.

10934. June 18.—Dismissing complaint of E. B. Neely, Humboldt, Sask., that lands in secs. 20-37-22 are injuriously affected by C.N.R. off-take water pipe along its right of way from its roundhouse and yards east of sec. 20.

10935. June 18.—Approving amended location of V.V. and E. Ry. and Nav. Co.'s line from west line of tp. 26 to east line of New Westminster District, B.C.

10936. June 17.—Authorizing Vancouver-Naniamo Coal Co., to cross Esquimalt and Nanaimo Ry. with line from its coal mine, sec. 11, Mountain District to Exit Passage, Vancouver Island, B.C.

10937 to 10938. June 18.—Approving location and plans of G.T.R. stations at Ste. Martine, and Lacadie, Que.

10939. June 20.—Approving location of G.T.R. station and remodelling of siding at St. Agapit, Que.

10940 to 10941. June 20.—Authorizing C.P.R. to build additional track across road allowance between sec. 9, and sec. 4, and between sec. 4, and sec. 3, tp. 13, r. 30, w. p. m., on its main line at Fleming, Sask.

10942 to 10943. June 18.—Approving location of C.P.R. stations at Barnet, B.C., and Franktown, Ont.

10944. June 18.—Authorizing C.P.R. to divert highway from north to south side of its Waltham Branch in lot. 28, r. 9, Clarendon tp., Que.

10945. June 18.—Authorizing C.P.R. to build bridge 27.3. over Sheep Creek, McLeod Section. Western Division.

10946. June 17.—Authorizing C.N.R. to open for traffic the portion of its line from Russell to Calder, Man., 41 miles.

10947 to 10954. June 18.—Approving location of the C.N.R. station grounds at Bowmanville, Kendall. Colborne, Cherrywood, Oshawa, Grafton. Brooklin, and Osaka, Ont.

10955. June 18.—Authorizing G. Heggie, of Enderby, B.C., to lay pipe under C.P.R. Shuswap and Okanagan branch at mileage 28.

10956. June 18.—Authorizing city of Fort William Ont., to lay a sewer under C.N.R. at Amelia St.

10957. June 18.—Authorizing St. Lawrence Pressed Brick and Terra Cotta Co. to lay a drain under G.T.R. at Laprairie, Que.

10958. June 17.—Authorizing C.P.R. to build a branch across Norman Ave., Toronto.

10959. June 20.—Authorizing C.P.R. to build spur to John Deere Plow Co.'s premises, Saskatoon, Sask.

10960. June 16.—Ordering C.P.R. to revise and reissue its special tariff rates on coal and coke from shipping points on ts Lethbridge, Crow's Nest, and Cranbrook sections, to points west thereof, so as to place rates on a reasonable basis relatively to special rates on coal and coke in force, or as they may be reduced from Lethbridge; the special tariffs of revised rates to be published and filed within 90 days.

10961. June 20.—Authorizing rural municipality of Assiniboia, to construct Aldboro and Westcana Sts., West Winnipeg, across G.T.P.R.; and rescinding order 10543, May 12.

Dominion Atlantic Railway.

Sir Thos. G. Shaughnessy was given a reception in the Board of Trade Building Halifax, June 19, after having completed his trip of inspection. He stated that legislation was necessary before the C.P.R. could take over the D.A.R. The purchase was perhaps sentimental, but he believed it to be the fulfilment of the destiny of the C.P.R. to link up Nova Scotia with the rest of Canada by another railway. This would connect Halifax with a system of 11,000 miles of railway in Canada and with 5,000 miles in the U.S. At almost every eight miles along that mileage is a man soliciting freight and passenger business for that line, and this is particularly important to ports like Halifax and St. John, where the transit of through goods from the rail to the ship is made. Up to the present it was unfortunate that Halifax could not be considered as a point on that line, but it will now, or when the D.A.R. becomes part of the C.P.R. system. With larger steamers the C.P.R. wants to land passengers at its own ports. He would say for the Dominion Government that he thought there was no disinclination to give running rights over the Intercolonial Ry., at a rate per mile or rental, but for carrying through traffic from Halifax to St. John, that arrangement would not be a commercial proposition. "But there is always some settlement possible," said Sir Thomas, "where two parties desire a settlement. We hope the future relations between Halifax and Nova Scotia and the C.P.R. will become stronger and closer."

Georgian Bay and Seaboard Ry.—Work has been started on the Coldwater-Orillia section of the C.P.R. line, which it is expected to have completed within a year. The Toronto Construction Co. has the contract.

The engagement is announced of R. A. R. Sinclair, son of Angus Sinclair, C.E., railway contractor, to Miss Muriel Jarvis, of Toronto.

D. McNicoll, Vice President C.P.R., has written to the Montreal Board of Control on the question of the re-assessment of the Windsor and Place Viger stations, stating that the alterations and extensions to each, will materially improve the appearance of the city, and suggesting that the combined valuation for taxation be placed at $3,000,000.

At a meeting of the shareholders of the Dominion Iron and Steel Co., and the Dominion Coal Co., June 17, directors of the company to take over and unite the two companies, were elected as follows: Sir H. Montagu Allan, G. Caverhill, Hon. G. A. Cox, H. F. Dimock, Hon. L. J. Forget, J. Mason, Hon. R. Mackay, Hon. D. McKeen, W. MacMaster, F. Nichols, Sir Henry M. Pellatt, J. H. Plummer, W. G. Ross, Sir Wm. VanHorne, and J. R. Wilson. It was announced that 18,624,000 shares of Dominion Iron and Steel Co., and 12,806,200 shares of Dominion Coal Co., had been exchanged. The meeting was adjourned to later in the month, when the question of the name of the company will be taken up. The name which it was intended to assume, has been adopted by another company, which, it was stated, it had agreed to take the necessary legal steps to relinquish.

BERRY BROTHERS, Limited

WALKERVILLE - - - ONT.

Award re C.P.R. and G.T.R. Train and Yard Men's Pay.

The award of the board of conciliation which had had under consideration the claims of the C.P.R. and G.T.R. train men for an increase of wages amounting irrespective of new rules as to overtime, detention, etc., to 23% on the C.P.R. and about 45% on the G.T.R. was given out June 22. In Oct. 1909 a movement known as the Eastern Association was formed among the brotherhoods, the object of which was the standardization of the wages of trainmen on all lines within the territory east of Chicago and north of the Chesapeake and Ohio Rivers. The rates paid on the Baltimore and Ohio Rd. were taken as the standard, and after certain negotiations had been carried on the rates were agreed to by about 30% of the U.S. lines, the new rates to take effect at various dates. The demand was put forward on behalf of the men in the employ of the C.P.R., the G.T.R., and the Toronto, Hamilton and Buffalo Ry., in the spring, and a board of conciliation was appointed, consisting of W. Nesbitt, K.C., for the railways; J. G. O'Donoghue, representing the trainmen, and J. E. Atkinson, of Toronto, as chairman. The board began its sittings April 25, so far as the G.T.R. and the C.P.R. were concerned, an understanding being arrived at that the decisions of the board in reference to the claims of the men, would apply to the T.H. and B.R. After a very full hearing of all the parties the arbitrators presented a majority report, and two minority reports—W. Nesbitt dissenting from the findings of the majority so far as it applies to the G.T.R., and J. G. O'Donoghue also dissented from his colleagues in regard to part of the report.

The award, so far as it refers to the G.T.R. says:—

"The majority of the board are of the opinion that the men are justified in asking that the roads in the same territory should standardize their rates of pay and their rules also so far as they may deal with like general conditions of service.

"To enable the standardization of rates of pay on the G.T.R. to be carried out the majority of the board recommend that the company should extend its adoption of the mileage basis of pay to cover not only its through freight service as in the past, but also (1) its passenger services (except for such a list of specified runs as may be agreed upon between the company and its employes); (2) its way freight service, and (3) its mixed and all other train services. Also that whatever rates of pay may be adopted should be applied to all divisions of the railway in the eastern territory.

"The majority of the board believe that the rates of pay upon the G.T.R. should be brought up to the standard paid on roads in the same territory. But inasmuch as to do this at once would place upon the company a heavy increase of its wage list, the majority of the board recommended that standardization should be reached by two increases. It is the opinion of the majority of the board that the first increase should be made to take effect May 1, 1910. Regarding the date of the second increase, the chairman and Mr. O'Donoghue do not agree. Mr. O'Donoghue's opinion is that the men and the company should meet together to arrange a date when the completion of the standardization of rates should take effect. The chairman, however, would give to the company a longer time in which to complete the standardization than Mr. O'Donoghue thinks would be either fair to the men or necessary for the company.

"The majority of the board, from the information presented, believe that the adoption of the rates of pay will give to the employes of the road a substantial part of the difference between present rates and the standard, and by so doing will constitute a measure of justice to the men."

J. G. O'Donoghue, in dissenting from the majority report, so far as it effects the C.P.R., says in part:—"I regret that we have not been able to bring the parties together in this matter, and that I have not been able to agree with the majority of the board as to the rates, etc., that should obtain as between the C.P.R. and the men concerned. I see no reason for differentiating between the C.P.R. and other first-class roads in the eastern part of this continent."

In all freight and mixed train service, he held 100 miles or less, in 10 hours or less, should constitute a day's work. On runs of 100 miles or less overtime should be paid when the run occupied, is in excess of ten hours. And he reported that overtime should be paid on runs over 100 miles in length for excess of time necessary to complete the trip at a speed of ten miles an hour. This overtime should be paid at the rate of 10 miles per hour for the class of service performed. Ten hours or less should constitute a day's work. Trainmen, he contended, should not be compelled to handle express, and if required to handle mail it should be sorted and placed in the car.

W. Nesbitt, in his minority report, recommended for the G.T.R. an all-round increase of 15 per cent., the rules to remain unaltered.

The table on this page gives in concise form the Board's finding. The old difference in rates on the C.P.R. east and west of Cartier is wiped out, a change to which both parties were agreed. The old differences also on the G.T.R. between the divisions east and west of the Detroit and St. Clair Rivers, is removed in so far as trainmen are concerned, but as for yard rates, there is still a difference in favor of the Western division of 1 c. an hour. Chicago yard is not dealt with. Detroit is 1 c. an hour more than first-class yards east of the rivers. Port Huron, Durand, Battle Creek, and Nichols rank as second-class, but receive the same pay as first-class yards east of the rivers. All other yards west get 1 c. an hour more than the third-class rate east of the rivers. In the past, except in through freight service, G.T.R. rates have been on a monthly basis. It is not therefore possible to make a comparison with the new rates in their passenger or local freight services.

On behalf of the C.P.R. men's committee J. Murdock, Vice President of the Brotherhood of Railroad Trainmen, and S. N. Berry, Vice President of the Order of Railway Conductors, addressed the following communication to the Minister of Labor:—"The general committee representing the men employed in the train and yard service on the C.P.R. unanimously request us to advise you that they have received and thoroughly considered the award handed out by the Board of Arbitration in the recent investigation. While thanking the board for its earnest efforts, honest consideration and intent in preparing the award referred to, the committee is compelled to advise you that it is unsatisfactory, being impracticable of adoption, and that it cannot be accepted. For reasons best known to the gentlemen composing the board, standards and comparative differentials existing in the territory and on the C.P.R. have been entirely ignored, or, worse still, reversed, thereby making the award, as handed down, impossible of acceptance. We are this date writing Mr. McNicoll, quoting this telegram, and asking if his company are still indisposed to recognize past and recently revised standards in the territory."

The above position was endorsed by the G.T.R. committee on the following night, June 23, their resolution being specially directed against W. Nesbitt's minority report.

J. W. Leonard, General Manager Eastern lines C.P.R., on June 24 wrote stating that the company had accepted the Board's finding, and were prepared to stand by it, although they regarded it as excessive.

N. J. Holden, of the Holden Co., Ltd., left Montreal in June, with Mrs. Holden, for an automobile trip in Europe.

Angus McMurchy, K.C., local solicitor, C.P.R., Toronto, left June 22 for England to take part in the hearing of the company's appeal against the Board of Railway Commissioners order respecting a viaduct at Toronto.

BALTIMORE ROCHESTER CHICAGO NEW YORK

Dearborn Anti-Scaling Treatment can be Applied at Terminals

We have overcome the greatest objection to the use of a scale reducing treatment direct in the boiler by making preparations that are applied at terminals only, where the people who get the benefit from the use of the treatment can be made responsible for its application. This treatment removes and prevents scale and overcomes all leaking trouble.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central and Hudson Bay Ry. Manitoulin and North Shore Ry.—R. S. McCormick has been appointed Chief Engineer, vice C. N. Coburn, transferred to the Lake Superior Corporation's Mines Department. Office, Sault Ste. Marie, Ont.

Canadian Northern Ry.—A. H. Eager, heretofore Locomotive Foreman, C.P.R., Calgary, Alta., has been appointed Superintendent of Shops and Repair Yards, Winnipeg. This is a new position.

A. McCowan, heretofore Foreman C.P.R., Cranbrook, B.C., has been appointed General Car Foreman, Winnipeg, vice J. H. Morgan, retired.

T. A. Musgrove, heretofore car foreman, C.P.R., Ottawa, has been appointed freight repair foreman, C.N.R., Winnipeg, vice C. A. Wheaton, transferred.

J. Irwin, heretofore Trainmaster, Districts 8, 9 and 10, G.T.R., Liudsay, Ont., has been appointed Superintendent District 5, C.N.R. Office, Saskatoon, Sask.

J. Munro has been appointed car foreman at Saskatoon, Sask.

C. A. Wheaton, heretofore freight Repair foreman, Winnipeg, has been appointed Car Foreman at Edmonton, Alta.

Canadian Pacific Ry.—Pursuant to the bylaws, the offices of Second, Third and Fourth Vice Presidents have been abolished, and the directors have sanctioned the following appointments: Wm. Whyte, heretofore second Vice President, to be Vice President, with the same duties as heretofore. Office, Winnipeg. I. G. Ogden, heretofore Third Vice President, to be Vice President in charge of financial and accounting departments. Office, Montreal. G. M. Bosworth, heretofore Fourth Vice President, to be Vice President in charge of the company's traffic and the ocean steamship lines Office, Montreal.

W. B. Bamford, heretofore District Freight Agent, London, Ont., has been appointed General Freight Agent Atlantic Division, vice H. E. Macdonnell transferred. Office, St. John, N.B.

R. K. Harris, heretofore Chief Engineer Orford Mountain Ry., has been appointed Resident Engineer C.P.R. Orford Mountain Branch. Office, Kingsbury, Que.

H. E. Macdonnell, heretofore General Freight Agent, Atlantic Division, St. John, N.B., has been appointed General Freight Agent Eastern Division, Chalf River and east, also Smith's Falls to Newport, Megantic and Quebec, including branch lines. Office, Montreal.

A. Rutledge, heretofore agent Sleeping, Dining and Parlor Cars and News Service, Montreal, has been appointed assistant Superintendent same service, with office at Glen Yard.

A. M. Jones, Resident Engineer, Ottawa, Ont., is reported to have entered the Government service in connection with the Quebec Bridge construction.

Dr. H. A. Beatty has been appointed Chief Surgeon and Medical Officer Eastern Lines. Office, Toronto.

L. Mulkern, heretofore chief clerk to General Freight Agent, through traffic, Ontario Division, Toronto, has been appointed District Freight Agent, London, Ont., vice W. B. Bamford, promoted.

W. S. Elliott, heretofore District Freight Agent, North Bay, Ont., has been appointed General Freight Agent Lake Superior Division, Chalk River and west to Sault Ste. Marie and Port Arthur, but not including line south of Romford Jct. Office North Bay, Ont.

W. G. Rankin, heretofore on the Claims Adjuster's staff, has been appointed Claims Agent at North Bay. Ont., vice T. Hay, deceased.

In our March issue we said: "The daily press has printed a lot of rumors lately, one being to the effect that in future there would be three general managers, instead of two, for Eastern and Western Lines, as at present. We do not think there is any foundation for this report. The great growth of the territory embraced in the Western Lines will, however, probably necessitate an increase of staff there, and it would not surprise us to see the present three grand divisions, Central, Western and Pacific, increased to four, which would necessitate the appointment of another general superintendent."

Our forecast has proved correct. The Western Lines have been divided into four grand divisions, instead of three, as heretofore. The Central, Western and Pacific divisions have been abolished, and the Manitoba, Saskatchewan, Alberta and British Columbia Divisions established as follows:—

MANITOBA DIVISION.

Fort William terminals.		
First district	486.8	miles
Winnipeg terminals.		
Second district	723.0	"
Third district	523.7	"
Fourth district	582.6	"
Under construction—		
Teulon extension	28.2	"
Virden, north-west	37.0	"
Tilston, westerly	24.0	"
	2,405.3	"

J. T. Arundel, heretofore General Superintendent, Central Division, has been appointed General Superintendent. Office Winnipeg.

SASKATCHEWAN DIVISION.

Broadview to Swift Current	245.2	miles
Outlook section	118.5	"
Portal section	160.3	"
Moose Mountain section	113.4	"
Weyburn branch	37.0	"
Forward branch	25.9	"
Neudorf to Lanigan	148.7	"
Yorkton to Hardisty	432.7	"
Under construction—		
Forward, westerly	25.0	"
Macklin to Outlook	147.7	"
Regina to Bulyea	43.0	"
Craven to Colonsay	110.0	"
	1,607.4	"

J. J. Scully, heretofore Superintendent District 1, Western Division, has been appointed General Superintendent. Office, Moose Jaw, Saskatchewan.

ALBERTA DIVISION.

Swift Current to Field	463.8	miles
Calgary to Strathcona	190.6	"
Wetaskiwin to Hardisty	95.0	"
Lacombe branch	84.6	"
Macleod branch	105.2	"
Dunmore to Kootenay Ldg.	391.7	"
Curzon branch	8.3	"
Kimberley branch	20.3	"
Marysville branch	.9	"
Langdon branch	40.0	"
Carmangay branch	28.0	"
Under construction—		
Irricana, easterly	15.0	"
Carmangay, north	30.0	"
	1.473.4	"

A. Price, heretofore General Superintendent Western Division, has been appointed General Superintendent. Office, Calgary, Alta.

BRITISH COLUMBIA DIVISION.

First district	337.8	miles
Second district	315.7	"
Third district	304.2	"
	957.7	"
Water Routes—		
Kootenay, Slocan, Arrow and Okanagan Lakes	342.0	"

F. F. Busteed, heretofore General Superintendent Pacific Division, has been appointed General Superintendent. Office, Vancouver, B.C.

TOTAL MILEAGE OF RAILWAY LINES.

Manitoba Division	2,405.3	miles
Saskatchewan Division	1,607.4	"
Alberta Division	1,473.4	"
British Columbia	957.7	"
	6,443.8	"

A. W. Clarke has been appointed Fuel Inspector Western Lines, vice T. L. Roberts, resigned.

T. Clegg, has been appointed Air Brake Instructor, Western Lines, vice E. D. Walton, resigned.

C. Battley has been appointed acting Locomotive Foreman, North Bay, vice T. Ross, Locomotive Foreman, promoted.

Brockville, Westport & Northwestern Ry.

The Mackenzie, Mann & Co. interests are acquiring the Brockville, Westport and North-Western Ry., which runs from Brockville to Westport, Ont., 45 miles. The Canadian Northern Ontario Ry.'s Ottawa-Toronto line, the western portion of which is already under construction, will cross the B.W. & N.W.R., and through the latter the C.N.O.R. will obtain access to Brockville and the St. Lawrence River.

The Brockville, Westport and North-Western Ry. Co., which was incorporated in 1903, succeeded the Brockville, Westport & Sault Ste. Marie Ry. Co., whose property was sold under foreclosure in that year. The officers are E. M. Thomas, President; F. T. Lewis, Vice President and Treasurer; C. Heilshorn, Manager and Secretary, all of New York; W. J. Curle, Superintendent, Brockville. From Brockville it connects by ferry at Morristown, N.Y., with the New York Central and Hudson River Rd., also at Brockville with the C.P.R. and G.T.R.

The Steel Company of Canada, Ltd.

The above is the name which has been finally chosen for the merger which will have its headquarters in Hamilton. The new company will have a capitalization of $25,000,000, and it is said the merged companies will be represented by the following amounts of stock:—

Hamilton Steel & Iron Co.	$9,300,000
Canada Screw Co.	4,000,000
Canada Bolt & Nut Co.	2,100,000
Montreal Rolling Mills Co.	7,500,000

Canadian Northern Pacific Ry.—The contract for the construction of the first 60 miles east from New Westminster has been let to the Northern Construction Co.

N. Mooney, General Agent New York Central and Hudson River Rd. and Rutland Rd., has removed his office from 137 to 220 St. James St., Montreal.

V. G. R. Vickers, recently appointed Manager Dominion Ex. Co. foreign department, Montreal, has returned to Canada from Europe, where he has been enquiring into the express situation generally.

J. Lonsdale Doupe, Assistant Land Commissioner, C.P.R., Winnipeg, in renewing his subscription, writes:—"I have moved my residence and would be greatly obliged if you would see that the Railway and Marine World is in future sent to my new address, as I would not like to miss a copy."

Telegraph and Cable Matters.

The Canadian Northern Telegraph Co. has opened offices at Augusville, Hallboro, Shellmouth, Man.; Brock, Fiske, Kindersley, Netherhill and Ridpath, Sask.

The Dominion Government telegraph line through the Peace River country is being pushed. Considerable difficulties have been encountered, due to forest fires. The line has reached the east end of Stave Lake early in June.

The Association of Railway Telegraph Superintendents held its annual meetings at Los Angeles, Cal., June 20 to 24, when papers dealing with wireless telegraphy, education for efficient railway service, protecting telephone lines from lightning and other disturbances, automatic block and highway crossing signalling, telephone train dispatching, testing of telegraph and telephone circuits, telephoning to and from trains and composite telephone blocking were read and discussed.

Telegraph companies have issued a notice to the effect that telegrams destined for a station on the Postal Telegraph Co.'s lines, or other connections, if offered under a frank, or stamp, will not be accepted for free transmission, either in whole or part, unless the frank is countersigned by an official of the connecting company, or a frank of the connecting company also presented as the tariff from the point of connection to destination is never less than from the place of origin.

The Maritime Telegraph and Telephone Co. is planning to include in its system a number of the smaller towns and villages in the Maritime provinces which have no telegraph and telephone facilities. An officer of the company is reported to have stated that it is hoped that the system will be ready for operation in a very short time, arrangements having been made for the use of other companies' wires, where suitable, and preparations have been made for the purchase of a large number of poles and quantity of wire.

Among the Express Companies.

R. H. Jones has been appointed route agent Canadian Ex. Co., Toronto, vice J. P. Hetherman.

L. E. Hertel has been appointed agent Canadian Ex. Co. at Niagara Falls, Ont., vice R. B. Brown.

W. G. Balfour has been appointed route agent Canadian Ex. Co., Montreal, vice G. H. Waterhouse.

W. S. Stout, President and General Manager Dominion Ex. Co., when in Montreal recently, is reported to have said that the work of demolition of the St. Lawrence Hall, was being held over for a short time, waiting for the completion of plans. It is anticipated that work will be proceeded with during July or August.

The Board of Railway Commissioners has ruled, in respect of express charges on millinery and similar light parcels, that parcels, from 70 to 75 ins., external measurement, enclosed in corrugated shipping paper, be charged for as weighing 30 lbs.; from 75 to 80 ins., as 35 lbs.; it being allowed to tie a number of smaller packages together to make one large parcel. Other parcels of less than 70 ins. external measurement, to be securely fastened together, when not crated, be charged at regular merchandise rates on actual weight, but at not less than the following minimum weights based on measurement:—50 to 55 ins., 15 lbs.: 55 to 60 ins., 18 lbs.; 60 to 65 ins., 20 lbs.; 65 to 70 ins., 25 lbs.; parcels measuring less than 50 ins., to be charged on actual weight.

ELECTRIC RAILWAYS.

Canadian Street Railway Association.

PRESIDENT, D. McDonald, Manager, Montreal St. Ry.; VICE-PRESIDENT, J. Anderson, Manager, Sandwich, Windsor and Amherstburg Ry.; SECRETARY-TREASURER, Acton Burrows, Managing Director, Railway and Marine World.

ASSOCIATION'S OFFICE, 157 Bay St., Toronto.

EXECUTIVE COMMITTEE.—P. Dubee, Secretary, Montreal St. Ry.; E. A. Evans, Chief Engineer, Quebec Ry. Light and Power Co.; R. J. Fleming, General Manager, Toronto Ry.; H. M. Hopper, Secretary-Treasurer, St. John Ry.; J. E. Hutcheson, Superintendent and Purchasing Agent, Ottawa Electric Ry.; C. B. King, Manager, London St. Ry.

ASSISTANT SECRETARY, Aubrey Acton Burrows, Secretary and Business Manager, Railway and Marine World.

OFFICIAL ORGAN, THE RAILWAY AND MARINE WORLD.

Canadian Street Railway Association

The annual meeting at Montreal June 9 and 10, was the most successful and largely attended in the Association's history, representatives of member companies being present from Halifax on the east to Vancouver on the west. D. McDonald, Manager Montreal Street Ry and President of the Association, occupied the chair. After routine business the International Transit Co., of Sault Ste. Marie, Ont., was unanimously elected to membership.

The rest of the first morning's session was occupied in the reading and discussion of the report of the Secretary-Treasurer, Acton Burrows, which dealt with the Association's operations during the year in full detail, covering a wide range of subjects and showing that the Association had performed a great deal of important work in the interests of electric railways generally.

Most of the remainder of the two days' meeting was devoted to the reading and discussion of papers on various subjects relating to the construction, maintenance and operation of electric railways, and to a series of topical discussions on matters of vital interest to electric railway officials.

The following officers, etc., were elected unanimously for the current year:

President, D. McDonald, Manager Montreal St. Ry.; Vice President, J. Anderson, Manager, Sandwich, Windsor and Amherstburg Ry.; Secretary-Treasurer, Acton Burrows, Managing Director, Railway and Marine World; Executive Committee, C. E. A. Carr, General Manager, Quebec Railway, Light, Heat and Power Co.; P. Dubee, Secretary, Montreal St. Ry. Co.; H. M. Hopper, General Manager, Secretary and Purchasing Agent, St. John Ry.; C. B. King, Manager London St. Ry.; W. R. McRae, Master Mechanic, Toronto Ry.; J. E. Hutcheson, Superintendent and Purchasing Agent, Ottawa Electric Ry., is ex officio a member of the Executive Committee by virtue of being the immediate past President.

Assistant Secretary, Aubrey Acton Burrows, Secretary and Business Manager Railway and Marine World.

The Montreal St. Ry. management entertained the representatives of member companies attending the meeting in a most hospitable manner. On the first day there was a luncheon at the Windsor Hotel and in the evening the party went on the M.S.R. official car to Dominion Park, where they dined and afterwards enjoyed the attractions. On the second day there was a luncheon at the Forest and Stream Club, Dorval, the party going out to the end of the M.S.R. Lachine line in the official car and then driving to the club. On the following day, after the business had been disposed of, the party visited the Blue Bonnets race course. W. G. Ross, Managing Director, D. McDonald, Manager, P. Dubee, Secretary, and other M.S.R. officials were unremitting in their attentions and kindnesses.

Those who attended the meetings presented P. Dubee, with a handsome sapphire scarf pin surrounded with diamonds, as a wedding present, the presentation being made at the formal opening of the M.S.R. Co.'s St. Denis St. recreation rooms on June 11, D. McDonald expressing the warm feeling of the officials of the various companies towards Mr. Dubee, and W. R. McRae, of the Toronto Ry., making the presentation on behalf of the subscribers.

St. John Railway Report.

The report for the year ended April 30, was submitted to the shareholders at the annual meeting held June 8. After providing for the interest on the bonds and all other charges, the directors reported that there was a net profit of $54,479.85, out of which two half-yearly dividends of 3 per cent., amounting to $48,000, had been paid, leaving a balance of $6,479.85, which had been transferred to profit and loss account. The roadbed, rolling stock, buildings and machinery have been inspected by M. Neilson, the company's Consulting Engineer, who reported that they had been efficiently maintained and were in first class condition. Following is the balance sheet:—

ASSETS.

Cost of property	$1,905,584 14
Accounts receivable	38,091 63
Stores	41,118 82
Cash on hand	1,300 00
Cash in bank	41,562 04
	$2,027,656 63

LIABILITIES.

Capital stock	$ 800,000 00
Bonds	1,000,000 00
Accounts payable	27,724 71
Dibidend payable June 8	24,000 00
Outstanding tickets	2,217 73
Contingent and depreciation	60,853 87
Profit and loss	112,860 32
	$2,027,656 63

The officers and directors for the current year are:—President, Jas. Ross; Vice President, H. H. McLean; other directors: R. B. Emerson, J. Manchester, J. J. Tucker, W. Downie, H. B. Robinson, F. E. Sayre.

New Brunswick Public Utilities Board.

Following the lead of Ontario, Quebec and Nova Scotia, the New Brunswick Legislature has passed an act establishing a 'Board of Public Utility Commissioners," and has appointed the first members as follows:—D.M.L. Vince, D.C.L., K.C., Woodstock, Chairman; G. O.D. Otly, K.C., Hampton; O.M. Melanson, Shediat; with F. P. Robinson, Fredericton, as secretary.

The act defines "public utility" as including any person or association of persons now or hereafter owning any telephone line, or plant for the production and distribution of heat, light, power or water, or which may own any street railway, and any municipality which desires to furnish any of these services to or from any other city or town. Such public facilities are required to furnish reasonably adequate service and facilities, and the act declares "unjust or unreasonable charge for such service" to be "prohibited and declared unlawful." Returns on prescribed forms have to be made to the Board; schedules of rates have to be filed with and approved by the Board from time to time before they become operative; and the Board is to have "the general supervision of all public utilities," and shall "keep itself informed as to the compliance by the said public utilities with the provisions of this law." The Board is given power to hear and determine complaints of overcharges, etc.; to take evidence upon both similarly to the Supreme Court; and to appoint any person to investigate and report upon any matter pending before it; and to make rules for the conduct of the business. An appeal from the Board's decisions may be made out by Lieut.-Governor-in-Council, and it is provided that a penalty of not less than $50 or more than $500 may be enforced against those who refuse to abide by the Board's orders.

Militia vs. Street Cars.

Our issue of July, 1909, contained full particulars of the conviction by the Winnipeg police magistrate of a Winnipeg Electric Ry. motorman for the alleged obstruction of the 90th Rifles on June 1, 1909. The magistrate's decision was appealed to County Judge Walker, who took the evidence over again, but at the request of counsel for the prosecution, who evidently anticipated an adverse decision, the Judge stated a case to the Court of Appeal as to the legal point involved, in regard to which had the right of way, the electric railway or the militia, and the matter came before the Court of Appeal in June. The Winnipeg Electric Ry.'s counsel contended that the County Judge had no jurisdiction to state the case and reserve judgment. The Court of Appeal agreed with this and dismissed the matter. It therefore now remains with Judge Walker to decide on the appeal.

Projects, Construction, Betterments, Etc.

The British Columbia Electric Ry. now has two lines between Vancouver and New Westminster. One of 12 miles, was the original line built by the New Westminster and Vancouver Tramway Co., one of the ines acquired by the B.C.E.R. The second route, 17 miles, is over the C.P.R. branch, known as the Vancouver and Lulu Island Ry. now to Eburne, thence along the north arm of the Fraser River.. The company is desirous of securing a 999 year franchise for a short branch line to connect Eburne with New Westminster, the municipality to receive 10% of the gross receipts under the charter of a subsidiary company—the Vancouver, Fraser River and Southern Ry., the company purposes to build another line from New Westminster, through the Burnaby district and Hastings townsite to the headquarters of False Creek at the eastern end of Vancouver city. Track has already been laid from New Westminster towards Burnaby, about five miles, and it is expected that track will be laid between Burnaby and Vancouver so as to have the whole line in operation this fall.

The Chilliwack line has been completed as far as Cloverdale, and construction is well advanced to Abbotsford. A freight service is being operated but the rolling stock for the passenger service is not ready. At Chilliwack the company has secured land for its terminals, and R. H. Sperling recently wrote the Board of Trade there that the company contemplated the erection of a station and freight sheds, and was not favorable to the erection of a union station with the Great Northern Ry.

The company has purchased about 10 lots in the west end of New Westminster near the junction of the Eburne and Vancouver lines, upon which to lay out freight terminals for all its lines running out of New Westminster. The freight terminals for the Fraser Valley branch will be located on the south bank of the Fraser River, near the end of the Fraser River bridge. The surveys of the property recently acquired there have been completed, and the work of grading and laying out the yards is in progress. It is proposed to erect a repair shop at this point, the plans for which are being prepared. Tenders are under considera-

tion for the erection of the passenger station, and office buildings in New Westminster.

The property owners of the Broadway Ave. W., Vancouver district. have offered to contribute $18,000 towards extending the line along Broadway Ave. W., to Alma Road, work to be started by April, 1911. The owners agree to widen the street from 65 to 86 ft., and not to ask for a permanent pavement for four years.

The Lynn Valley extension has been opened for traffic. It extends from North Vancouver to Hoskins Rd., Lynn Valley.

A deputation waited on R. H. Sperling June 9, urging the building of a line from Vancouver to Ladner and the Delta district generally. In order to make the connection with Lulu Island it will be necessary to build a high level bridge, or to establish a car ferry. Mr. Sperling promised to report favorably of the proposition to the directors in London, Eng.

In connection with the proposals made for building a line through the Saanich peninsula, Vancouver Island, the company has suggested that the property owners should grant a moderate land bonus. (June, pg. 495.)

The Chatham, Wallaceburg and Lake Erie Ry. Co. started last year to build a line to Paincourt, but was unable to complete it owing to the opposition of one property owner. The difficulty having been adjusted the extension is being gone on with and is expected to be completed in August.

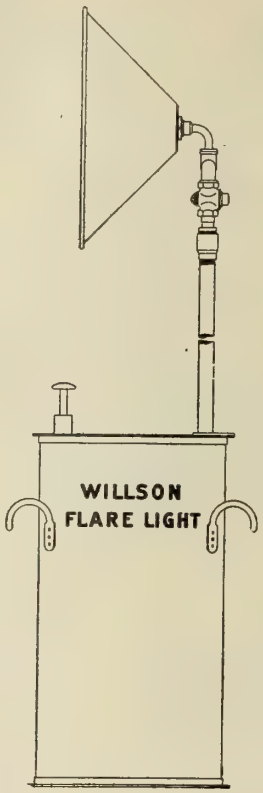
Dominion Power and Transmission Co.—The Hamilton, Ont., city council is considering an application by the company to build a switch on Sanford Ave., between King and Main streets, to serve as a connecting link between the Hamilton Radial Ry. and the Hamilton, Grimsby and Beamsville Electric Ry., with a view to running fruit cars to the canning and preserving company from Oakville and Burlington on the one hand and Beamsville on the other.

Fredericton Street Ry.—The New Brunswick Legislature has incorporated a company with this title to build a single or double track line to be operated by electricity, on the streets of Fredericton, on the streets of other towns in York county, and on highways throughout the county, subject to the consent of the several municipalities and the consent of the Government as to the crossing of bridges. The provisional directors are F. B. Edgecombe, C. F. Seide, J. S. Neill, A. S. Phillips, A. A. Shute, and R. B. Hanson. (April, pg. 310.)

The Halifax Electric Tramway Co. has withdrawn its application to the Halifax, N.S., city council for permission to build a second track on certain streets at an estimated cost of about $70,000. The application was made in March, and the city council has been holding up the matter with a view of getting the company to consent to extend its lines along some other streets. The company pointed out that with the double track proposed, a better service could be given, and that it would then be possible to see where extensions could most profitably be made. The council's railway committee did not see it that way, and as a result the company withdrew its application May 31. (June, pg. 495.)

Hull Electric Co.—Work was started June 1, on the extension of the line along Brewery St., and along Chelsea Road to the tollgate. The grading is well advanced and track laying will be gone on with at once. (Jan. pg. 57.)

Lethbridge, Alta.—Reports have been received and considered by the Lethbridge, Alta., city council in reference to the construction by the city of an



THE WILLSON PORTABLE FLARE LIGHT

Brilliant Powerful Economical

Specially adapted for use in all kinds of construction work.

Its candle power varies from 1,000—8,000 according to the size of apparatus. The cost of 8,000 candle power is less than 6c. per hour.

O'Brien & Fowler, Contractors to the G.T.P., say:—

"During the past two or three years we have used various kinds of lights, but none of them have proved the equal of yours, either in the matter of economy or usefulness. The effectiveness of your light is beyond dispute."

electric railway as a municipal enterprise. The investigations are to be continued before a final decision is reached. (Mar. pg. 231.)

The Moncton Tramway, Electricity and Gas Co., is the title by which under an act passed last session of the New Brunswick Legislature, the Moncton Electric St. Ry. Heat and Power Co. will be known in future. The original act and its amending act are amended in various details, the powers as to the building of a street railway are repealed and new sections inserted. These provide for building a single or double track line in Moncton, with the approval of the city council, and, single and double track lines in Westmorland, Albert and Kent counties, under agreement with the different municipalities. The company is also given power to acquire water powers, develop the same and to distribute electrical energy. (June, pg. 495.)

The Montreal and Southern Counties Ry. is operating a regular car service from Montreal, over the Victoria Jubilee Bridge to Longueuil, Que. The line from Montreal to Montreal South, was put in operation in the fall of 1909. The extension to Longueuil was opened for traffic May 30. An extension from Longueuil to Bouchierville, 6 miles, and another from St. Lambert southerly towards La Prairie, about 9 miles, will be gone on with at once. The old Central Vermont Ry. branch to Richelieu, about 14 miles, is to be electrified by the M. and S. C. R. Co. this year and about a mile and a half of new line will be built to connect the branch with the M. and S. C. R. line in St. Lambert.

A brick terminal station, including waiting and baggage rooms, ticket office, etc., is to be built at once at the north east corner of Youville and McGill streets, Montreal.

Moose Jaw, Sask.—The parties to the agreement with the city of Moose Jaw, Sask., for the construction of an electric railway there, are: J. B. McRae, P. B. Melon, E. J. Daly, A. H. Dion, A. A. Dion, C. E. McCuaig, Ottawa; and J. T. Cashman, Moose Jaw. The franchise is for 20 years from the final passing of the by-law, at the end of which time, in giving six months' notice the city may either assume the ownership of the line or renew the charter for a further 20 years. In the event of the city deciding to take over the line the agreement provides for the appointment of arbitrators and the principles upon which the valuation of the property is to be made. The first three miles of track is to be put in operation within nine months of the passing of the by-law, and to extend along Main St. from Manitoba St. to the exhibition grounds; on High street, from Main St. to Sixth Ave., thence to South Hill. The routes for other lines are to be as mutually agreed upon. The by-law sets out the fares to be charged, and other terms, and provides that for the first five years the company shall not pay any rental; for the second five years a rental of $250 a mile is to be paid for unpaved streets and $500 a mile for paved streets; and during the last 10 years the rental is to be $1,000 a mile for paved and $500 a mile for unpaved streets. The power house, repair shops, etc., are to be located in Moose Jaw, and the pay-as-you-enter type of car is not to be used without special permission. (June, pg. 495.)

Nelson Electric Street Ry.—The extension of 1.25 miles has been completed by the contractor, R.G. Brand. The old tracks and overhead work are being overhauled so that when reopened for traffic the line wil be in good condition. (June, pg. 495.)

Niagara, St. Catharines and Toronto Ry.—We are advised that the location surveys for the extension of the line from Port Colborne to Fort Erie, Ont., have been completed, but it is not expected that any construction will be started on it this season. (June, pg. 495.)

Ontario West Shore Ry.—For about two years the company has been trying to reach an understanding with the Colborne Township council as to the location of a portion of the line through Dutton Village, Ont. There is a building on the line of the right of way, and in order to avoid having to remove this at considerable expense the company desires to carry its line for a short distance along the highway, but the council has refused to grant permission to this to be done. The company put on a gang of men and laid the track during the night of June 3, and on the following day the council sent a gang of men and tore it up. The matter will be taken to the courts by the company. The tracks were subsequently replaced by the company, and on June 4 application was made to the Ontario Railway and Municipal Board, which Board advised a settlement as the crossing was in the right place.

The Goderich, Ont., town council has granted the company permission to lay tracks on streets as follows: On Cambria Road from Gloucester Terrace to Toronto street, and along Toronto street to Huron Road, and thence to Goderich tp. 2nd, along Nelson street from Cambria Road to Maitland Road, and along the latter to Oxford street to Huron Road. (June, pg. 495.)

Ottawa Electric Ry.—We are advised that while the directors have under consideration plans for extending the lines north and south, no definite decision has been reached as to what will be done. It is not likely, that any extensions will be made this year. (June, pg. 497.)

The Quebec Ry., Light, Heat and Power Co. has acquired the charter of the Quebec County Ry., which was incorporated by the Legislature in 1904, with power to build electric railways throughout the county of Quebec. The charter was amended in 1909, and the directors in office at the time of the sale were: Hon. J. Sharples, president; Hon. N. Garneau, J. T. Ross, R. Campbell, of Quebec; and Dr. Lavoie, of Sillery. As reorganized, the board consists of Hon. F. L. Pelletier, N. Belleau, L. C. Webster, R. Campbell and Dr. Lavoie. It is under the charter of this company that the extension to Sillery is being built. The road bed is being prepared to carry a double track, but it is only proposed to lay a single track at present. It is expected that the line will be completed in August. (June. pg. 497.)

Toronto and York Radial Ry.—The City Engineer of Toronto has recommended that an agreement be entered into with the company by which it will be allowed to lay a double track on Yonge street, north of the C.P.R. tracks. The company to pay $600 a year mileage rental, and the city to have the right to discontinue the arrangement by paying the cost of returning to the present condition of a single line at the side of the road. (June, pg. 497.)

Toronto, Niagara and Western Ry.—The Board of Railway Commissioners has authorized the company to build its line across St. Clair Ave., to cross the C.P.R. and the G.T.R. at St. Clair Ave.; to cross the G.T.R. at Davenport Road, and to cross Davenport Road, Toronto. (June, pg. 497.)

The Winnipeg Electric Ry. is carrying out a good deal of betterment work on its various lines. The new line across the Redwood bridge to Elmwood was expected to be opened by June 30; the track at River Avenue and Osborne St. has been reconstructed; a second track is being laid on Selkirk Ave., near Main St., and along Portage Ave., west of Maryland St. (June, pg. 497.)

Toronto Railway Extensions.

Following its judgment, as published in our June issue, pg. 499, on the application of the Toronto Ry. Co. for the approval of the routes selected by the company and submitted to the City Engineer, to enable it to carry out the Ontario Railway and Municipal Board's order of Dec. 8, 1908, the Board issued the following order, June 9:—"Upon the application of the Toronto Ry. Co., upon hearing the evidence adduced and counsel for the applicants and respondents, and it appearing that the Board, under and by virtue of an order of May 17, 1907, ordered the applicants to construct from 10 to 15 miles of double track, and 100 new cars, in order to relieve the overcrowding of their railway cars, and it further appearing that the applicants selected Adelaide St. from Jarvis St. to Bathurst St., Bay St. from Front St. to Queen St., University Ave. from Queen to College St., Richmond St. from Victoria St. to Church St., and Wellington St. from Church St. to York St., in pursuance of their rights under the agreement of Dec. 1, 1901, validated by statute, Vic., chap. 99 (Ontario), and that by the Board's order of Dec. 8, 1908, and the subsequent appeals to the Court of Appeal and the Privy Council, the applicants were found entitled to the said streets for the construction of the tracks of the said railway; and it further appearing that the company further required for the construction of the said 10 to 15 miles of double track of the said railway, Terauley St. from Queen St. across University Ave., through Anderson St., and along St. Patrick St. to Bathurst St.; Victoria St. from Adelaide St. to Wilton Ave.; Wilton Ave. from Victoria St. and across the new bridge over the Don River, to a point east of Broadview Ave.; Shuter St. from Yonge St. to Victoria St., Harbord St. from Spadina Ave. to Ossington Ave., and have selected the said streets for such purposes under the said agreement; and it further appearing that the applicants have filed with the respondents a plan for the construction of the said tracks of their car lines on the said last mentioned streets, and have submitted the same to the City Engineer for his approval, such plan being of the same character as that approved for other portions of the company's railway heretofore built; and it further appearing that the applicants through their solicitor have agreed to amend the said plan and furnish such further details as may be reasonably required by the City Engineer; and it further appearing that under and by virtue of sec. 3 of the Ontario Railway Amendment Act, 1910, the applicants cannot begin the construction of their railway or any extensions of it on the said last mentioned streets, without having first obtained the permission and approval of the Board; the Board orders that the said plan for the construction of the said lines of railway, on the said last mentioned streets be taken as approved, and the same is hereby approved, subject to the applicants amending the same, and giving such further details as the City Engineer may reasonably require; and the Board finds and declares that the construction of the applicants' railway upon the said last mentioned streets, and the permission of the Board to construct their railway, or any extension of it, upon the said streets is hereby given; and the Board further orders that the applicants pay $20 for stamps on this order, and makes no further order as to costs, and the Board reserves further order and directions herein."

The company's Solicitor objected to the terms of the order, and intimated the intention of appealing to the Board against the order as settled by tht sec-

HUDSON BAY RAILWAY.
SASKATCHEWAN BRIDGE.
Notice to Contractors.

SEALED TENDERS, addressed to the undersigned, and endorsed 'Tender for Superstructure of La Pas Bridge," will be received at this office until 12 o'clock noon of the 4th day July, 1910, for the construction and erection of the Superstructure of the Bridge over the Saskatchewan River on the line of the Hudson Bay Railway.

The Bridge will be composed of a Swing Span of 262 feet and four fixed spans of 147 feet each.

Plans, specifications and forms of contract to be entered into may be seen, and full information obtained on and after this date, at the office of the Chief Engineer, of the Department of Railways and Canals at Ottawa, Ont., or at the office of the Chief Engineer of the Hudson Bay Railway at Winnipeg. Man.

Tenderers must submit designs of superstructures with stress sheets, all to be in accordance with the general specifications for steel superstructures of bridges and viaducts of the Department of Railways and Canals of the Dominion Government, 1908. The class of load to be used is that designated "heavy" in the said specifications.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the contract.

Contractors are asked to bear in mind that tenders will not be considered unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of ($10,000.00) made payable to the order of the Minister of Railways and Canals must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work, at the rates stated in the offer submitted.

The cheques thus sent in will be returned to the respective contractors whose tenders are not accepted.

The cheque of the successful tenderer will be held as security, or part security, for the due fulfilment of the contract to be entered into.

The lowest or any tender not necessarily accepted.

By order,
L. K. JONES, Secretary.
Department of Railways and Canals,
Ottawa, 20th June, 1910.

Newspapers inserting this advertisement without authority from the Department will not be paid for it.

Arthur Allen, who has been Master Mechanic Temiskaming and Northern Ontario Ry. for several years, has resigned to take an important position with The Holden Co., Ltd., railway supplies.

2 GRAND PRIZES AND 5 GOLD MEDALS

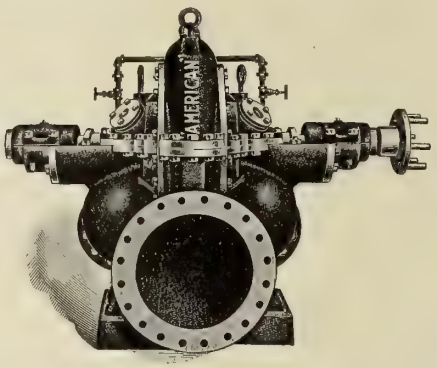
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

retary of the Board, and to have an order issued under the terms of the agreement with the city, and not under the terms of the Ontario Act of last session The chairman of the Board, however, stated that the order as issued, was final and would not be changed.

The following preemptory order, signed by A. B. Ingram, Vice Chairman of the Board, was issued June 17:—It appearing, upon discussion by the parties. relative to the settlement of the order of May 18, that the Toronto Ry. Co. declare they do not intend to proceed with the work, the Board, of its own motion, orders and directs that the Toronto Ry. Co. shall forthwith proceed with the construction of the lines of railway referred to in the said order; and that the Board reserves leave to the Toronto Ry. Co. and to the city of Toronto, respectively, to apply to the Board from time to time for directions relative to the carrying out of this order."

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for April, $247,307; operating expenses $153776; net operating earnings $93,531; renewal funds $17,852; net earnings, $77,679; approximate income from investments $16,500; net income $92,179, against $188,071 gross earnings; $109,267 operating expenses; 378,801 net operating earnings; $13,958 renewal funds; $64,846 net earnings; $13,550 approximate income from investments; $78,396 net income for April 1909. Aggregate gross earnings for 10 months ended Apr. 30, $2,471,631; net earnings, including approximate income from investments, $1,047,717, against $1,900,352 gross and $861,531 net for same period 1908-09.

Halifax Electric Tramway.—Railway receipts for May, $15,673.97, and for two weeks ended June 14, $8,253.58, against $14,620.68 and $7,336.08 for same periods 1909.

Montreal Street Ry.—Passenger earnings for May, $360,480.85; miscellaneous earnings $9,753.28; total earnings $370,234.13; operating expenses $199,-616.79; net earnings $170,617.34; city percentage on earnings $34,900.17; interest on bonds and loans $14,982.37; rent leased lines $552,90; taxes $4,000; total charges $54,435.44; surplus $116,-181.90; expenses per cent of earnings 53.92, against $322,410.83 passenger earnings; $6,928..45 miscellaneous earnings; $329,339.28 total earnings; $181,-147.58 operating expenses: $148,191.70 net earnings; $28,005.30 city percentage on earnings; $14,386.85 interest on bonds and loans; $498.67 rent leased lines; $3,000 taxes; $45,890.82 total charges; $102,300.88 total charges; 55.00 expenses per cent. of earnings for May 1909. Aggregate total earnings for eight months ended May 31, $2,707,235.45; operating expenses $1,607,443.21; net earnings $1,099,792.24; total charges $318,550.03; surplus $781,242.21, expenses per cent. of earnings 59.38, against $2,437.055.68 aggregate total earnings, $1,501,232.92 operating expenses; $935,772.76 net earnings; $284,-556.86 total charges; $651,215.20 surplus; 61.60 expenses per cent. of earnings for same period 1908-09.

Toronto Ry.—Gross earnings for Apr. $328,785; expenses $170,129; net earnings $158,655, against $298,359 gross earnings; $153,595 expenses; $144,664 net earnings for Apr. 1909. Aggregate gross earnings for four months ended Apr. 30, $1,303,049; net earnings $605,-101, against $1,160,026 aggregate gross earnings, and $541,602 net earnings for same period in 1909.

Sherbrooke Ry. and Power Co.—The directors of the reorganized company are preparing to place on the market $600,000 of bonds.

Winnipeg Electric Ry.—Gross earnings for April, $238,054; operating expenses $124,642; net earnings $113,412; against $192,490 gross earnings; $96,979 operating expenses; $95,511 net earnings for April 1909. Aggregate gross earnings for four months ended April 30, $1,051,534; net earnings $509,159, against $827,503 gross and $410,039 net for the same period 1909.

Electric Railway Notes.

F. G. Poulton has been appointed Manager of the Nelson Electric St. Ry., Nelson, B.C.

The Hamilton St. Ry. has decided to introduce the pay-as-you-enter system on some of its large cars.

The Berlin and Waterloo St. Ry., is having three of its cars re-built by the Preston Car and Coach Co.

G. M. O. Peters has been appointed Treasurer St. John Ry., vice A. Seely, resigned. Office, St. John, N.B.

W. J. Reaven has been appointed assistant to the Inspector of the Port Arthur and Fort William Electric Ry.

The Montreal and Southern Counties Ry. has ordered a combination baggage and smoking car and eight trailers, 49 ft. 4 ins. over buffers.

The Calgary St. Ry. has received one pay-as-you- enter car, similar to those it already has in operation, from the Preston Car and Coach Co.

Allan Purvis, heretofore Manager Fraser Valley Branch, B.C. Electric Ry., has been appointed Manager Interurban Lines. Office, New Westminster.

G. H. Franklin has been appointed Local Manager Lulu Island Branch, B.C. Electric Ry., vice D. J. Stewart, transferred. Office, Vancouver.

The wage agreement between the Toronto Ry. and its motormen and conductors, expired June 16, and negotiations for a new schedule are in progress.

The Calgary city council has accepted the advertisement of a brewing company to be printed on the back of the street car tickets and the citizens are objecting.

The Port Arthur and Fort William St. Ry. has received four cars from the Preston Car and Coach Co., and has ordered two similar ones from the same firm.

The Dominion Power and Transmission Co. has under consideration plans for the erection of car shops in Hamilton, Ont., for building and repairing the cars of its several lines.

C. E. Taylor, who organized the muncipal electric railway in Edmonton and has been its Superintendent since opening, was presented with a silver cigar case, suit case and bag by the employes, June 12.

D. J. Stewart. heretofore Local Manager Lulu Island Branch B. C. Electric Ry., has been appointed Local Manager New Westminster Branch, vice D. J. McQuarrie resigned. Office, New Westminster.

D. J. McQuarrie, who recently resigned the managership of the B.C. Electric Ry. city and interurban lines, to enter private business, was presented with a diamond ring, by a number of the employees at Vancouver, recently.

The Nipissing Central Railway Co. has issued a writ against J. W. Fitzpatrick, of Ottawa, to compel the return of a ledger and cash books of the company, alleged to have been wrongfully taken by the defendant.

A Winnipeg Electric Ry. motorman, who stopped his car at the crossing of Main St. and Henry Ave., while some small trouble had tied up the traffic, and who refused to move his car, was fined $10 and costs, June 12. Notice of appeal was given.

F. B. Griffith has been appointed Shop Superintendent Dominion Power and Transmision Co., vice F. H. Foster, resigned. The position is equivalent to that of Master Mechanic of all subsidiaries of the company. Office, Hamilton, Ont.

A passenger on the Montreal St. Ry. was ejected from a car after having refused to pay a fare, the conductor declining to accept an incorrectly punched transfer. He sued for damages and the jury awarded him $50. The company has appealed.

The Ontario Court of Appeal has dismissed the appeal of the Hamilton St. Ry. Co. aginst the Ontario Railway and Municipal Board's order of Nov. 15, 1909, directing it to repair the pavements on certain streets within two feet of the outer rail of the tracks.

The B.C. Electric Ry. employes have been negotiating for changes in their wage schedule, to which the company is reported to be averse. It is said that the matter may be referred to a board of conciliation. The schedule in operation during the past year, expired July 1.

The Ontario Railway and Municipal Board reserved judgment in the recent application to compel the Port Arthur and Fort William St. Ry. to operate the Montreal St. extension. The railway declined to run cars over the route for the reason that there were 12 steam railway tracks to be crossed.

The private sign or marking of Stone and Webster, Boston, Mass., has been affixed to the cars, ferry steamers and other property of the Cape Breton Electric Co., Sydney, N.S. The sign, which is a combination, consists of a triangle within which is a triskelion, is also to be used as a badge by employes.

The Nipissing Central Ry. standard passenger tariff of maximum tolls has been approved by the Board of Railway Commissioners, providing that the local fare in Haileybury, Bucke, Coleman and Cobalt, Ont., respectively, shall be 5c., and between either of these towns, 10c.; from 5.30 a.m. and 12 p.m., and double fare after.

The London St. Ry. and the Water Commisioners are discussing the interpretation of the agreement between them as to the amusement privileges at Springbank Park. The company desires to add other attractions at the park, but the commissioners contend that such attractions can only be provided by outsiders with the concurrence of the city and the company.

The Edmonton Radial Ry. has received two double-end, semi-convertible, pay-as-you-enter cars from the Ottawa Car Co. They are 42 ft. long overall, 28 ft. over bodies, with monitor, bull-nose roof, extra broad with 10 sashes on each side, vestibules 6 ft., equipped with doors operated by the motorman; 12 reversable pedestal cross seats with stationary foot rests and one longitudinal stationary seat 34 ins. long in each corner, and with electric heating equipment; bodies mounted on 27-G-1 trucks.

An inquest into the death of a Toronto Ry. conductor, who fell from the footboard of an open car recently, while collecting fares, the jury, in returning a verdict of accidental death added a rider condemning the use of a running board on open cars. J. F. H. Wyse, Engineer Ontario Railway and Municipal Board, stated in evidence that two years ago he had investigated the running board question and found that centre aisle cars in Toronto were impossible owing to the narrow devil strip. The expenditure necessary to modify this would run into the millions.

When the Boss "Wants to Know"

You won't have to "guess," "suppose," "think," or "believe," if you have had the training given by the International Correspondence Schools. It is the ability to furnish the right information at the right time that raises salaries and wins promotions. The best evidence of the salary-raising power of the I. C. S. is the monthly average of three hundred letters voluntarily written by students reporting increases in salary and position as the direct result of I. C. S. help.

How many untrained men are constantly watching the "want" columns of the newspapers—only to be painfully reminded of the positions they can't fill and the work they can't do! Engineers are wanted; Electricians are wanted; Machinists are wanted; Draftsmen are wanted; Bookkeepers are wanted; Advertising Men are wanted; and the Government is offering big pay to those qualified for Civil Service positions. But there is seldom a chance for the untrained man.

Let the I. C. S. tell you how to become a trained man—a skilled workman—a foreman, superintendent, or manager. The training can be secured in spare time at home. **Mark and mail the coupon NOW!**

Dominion Marine Votes for 1910-11.

The Dominion Parliament at its last session voted large sums for purposes connected with the marine interests. In addition to making provision for the establishing of a navy and the maintenance of the dockyards at Halifax, N.S., and Esquimalt, B.C., for which $3,000,000 was voted, there were the usual subsidies for ocean going mail, passenger and freight steamers; coastal services in the different provinces; the construction and maintenance of lighthouses, and other aids to navigation; maintenance and improvement of canals, construction, repair and maintenance of piers, wharves, etc., and all the other miscellaneous services connected with the marine interests. The votes were granted on account of the Departments of Trade and Commerce, Agriculture, Marine and Fisheries, Railways and Canals and Public Works, some of the votes being on capital account, and others on income account. Among the miscellaneous works brought together under the different provinces in the votes on account of harbors and rivers, there are a large number of revotes. Following are the several votes:—

NAVAL SERVICE:—	
Purchase and maintenance of vessels, maintenance of Halifax and Esquimalt dock yards, etc.	$3,000,000
Fisheries protection service	281,500
Hydrographic surveys, including survey of Hudson Bay	320,000
To provide for a steamboat to replace La Canadienne (revote $25,000)	75,000
MAIL SUBSIDIES AND STEAMSHIP SUBVENTIONS:	
Mail, passenger and freight services to ports in Great Britain	$ 642,500
Do., to Australia	180,509
Do., to New Zealand	169,000
Do., to South Africa	146,000
Lines to Mexico, Atlantic and Pacific Coast	141,666
Lines to Cuba, West Indies and S. America	109,500
Lines to Newfoundland	49,000
Steamships to China and Japan	48,666
Steamships to United States Pacific ports	15,470
Miscellaneous steamship services, as follows:—	
Between ports in P.E.I. and mainland	$ 18,625
Between ports in Nova Scotia	47,120
Between Nova Scotia and New Brunswick	6,240
Between Nova Scotia and Quebec	4,875
Between ports in New Brunswick	49,500
Between New Brunswick and Quebec	23,625
Between ports in Quebec	51,020
Pelee Island service, Ont.	375
Between ports in British Columbia	11,350
To provide for extra services	10,000
LIGHTHOUSE AND COAST SERVICE:—	
Agencies, rents, etc.	$ 50,000
Lightkeepers' salaries and allowances	400,000
Lighthouse maintenance and repairs	749,000
Construction of lighthouses, etc.	950,000
Lighthouse and buoy steamer, Pacific Coast	200,000
Lighthouse and buoy steamer, St. Lawrence	175,000
Wireless stations, building and maintenance	140,000
Icebreaking on Thunder Bay	40,000
Pilot steamer, Eureka, maintenance, etc.	35,000
Signal service	12,000
Miscellaneous services	55,000
OCEAN AND RIVER SERVICE:—	
Maintenance and repair of steamer	$710,000
Life saving, rewards, etc.	40,000
Patrolling northern waters	60,000
Wrecking plants	30,000
Removal of obstructions	20,000
Investigation of wrecks	15,000
Examination of masters and mates	11,500
Tidal service	42,500
Schools of navigation	2,000
Miscellaneous services	24,500
ST. LAWRENCE SHIP CHANNEL:—	
Various works	$600,000
Dredging plant (new)	187,500
Purchase of yard property, Sorel	22,500
Permanent piers, Lake St. Peter, etc.	37,500
CANALS:—	
Surveys and inspections	$ 3,000
Staff and repairs	1,106,460
Statistical officers	37,506
Quebec canals generally	54,500
ST. OURS LOCK: New stable, etc.	1,200
CHAMBLY:—Improvements	20,000
" Extensions of wharves, etc.	8,720
LACHINE:—Improvements	27,000
" Entrance pier	60,000
" Concrete vertical wall	165,000
" Wharf and basins	135,000
" Allowance to family of late foreman	1,000
ST. ANNE'S LOCK:—Improvements	2,960
SOULANGES:—Stopping leaks, etc.	100,000
" Miscellaneous works	7,750
CORNWALL:—Entrance lock 17	55,000
" Wall above lock 18	25,000
" Piers at lock 27	24,000
" Miscellaneous works	21,500
WILLIAMSBURG CANALS:—Derrick scow	3,000
CARLETON AND GRENVILLE CANALS:—	
Repairing gap in Carleton dam	12,000
Macadamizing road, etc.	7,000
RIDEAU:—Swing bridges at locks	3,000
Timber piers at bridges	4,000
TRENT:—Improvements	62,500
To pay damages by flood	30,000
Construction	1,750,000
WELLAND:—Heavy repairs	20,000
Stone protection to banks	10,000
Steel gate lifter	12,000
Widening canal, Welland	20,000
Land purchase, etc.	2,500
Straightening channel lock 2	10,000
Dock south of Welland	2,500
Port Colborne, improvements	153,000
Do., elevator	66,000
Surveys, etc., for new canal	25,000
SAULT STE. MARIE:—Construction	70,000
Repairs of break	175,000
Rebuilding north entrance pier	60,000
Iron mooring posts	2,000
ST. PETER'S, N.S.:—Repairs	25,000
HARBORS AND RIVERS:—	
Generally	$ 12,000
Timber for Maritime Provinces	20,000
Construction of wharves, piers, repairs to same and general improvements to harbors and navigable rivers at:—	
19 points in Prince Edward Island	96,950
170 points in Nova Scotia	685,650

Surveys of Richelieu and Yamaska Rivers—St. Lawrence-Lake Champlain route	6,500
To replace steamers Argus and Challenger in the Quarantine service, three votes totalling (revote $39,000)	69,000
Hydrographic geodetic and other surveys	265,000
Marine hospitals, shipwrecked and distressed mariners	69,750
Steamboat Inspection	53,300
Graving docks	40,100

Navigable Water Protection Act

Regulations have been approved by the Government General in Council, governing draw or swing bridges, other than railway bridges, over navigable waters, and also the establishment and use of cable ferries in navigable waters, as follows:—

Bridges.—Every swing or draw bridge over a navigable water shall be marked at night by a white light on each side of the navigable channel, by a white light on each end of the swing protection, and by a lantern surmounting the swing span showing a red light up and down the channel when the passage is closed, and green when the swing is open. If the passage on both sides of a swing span is navigable, vessels must keep to the starboard opening, and the white lights on each side of the navigable channel must show only in the directions in which they are to be utilized. The signal to be given by a steamer to have a swing opened shall be two long followed by two short blasts of the whistle. Every draw shall be in charge of some competent person whose duty it shall be upon being notified by whistle or in any other manner, that a vessel desires to pass through the bridge, to open the same as promptly as possible, and no vessel shall pass through the bridge until the swing or draw is fully open. Every violation of any of these regulations shall make the party guilty of same liable in the penalty fixed and determined by the law.

Ferries.—No cable ferry shall be established across any navigable water until full details of the proposed scheme have been submitted for the consideration and approbation of the Minister of Marine and until his consent in writing has been obtained. Every cable ferry shall be indicated by a beacon placed as close as possible to one end in such a position as to be conspicuously visible for at least 600 yds. on each side of the ferry. In daytime this beacon shall consist of two squares of stiff material, each not less than two feet square, one pure white and the other bright red, hung on a mast. At night these boards shall be supplemented or replaced by lamps, red and white respectively. Such beacon shall indicate whether or not the ferry cable actually forms an obstruction to navigation; if it forms an obstruction, the red sign shall be above the white one, if not, the white sign shall be uppermost. The lamps at the beacon shall be lighted and kept burning brightly from ½ hr. before sunset until ½ hr. after sunrise. It shall be the duty of the party operating a ferry to see that the beacon be properly fixed and maintained in good working order, and that appropriate signals be shown, during day and night, in accordance with the present regulations. The party operating any such ferry shall, to ensure the safety of small craft, and allow their passage at all times, cause the cable to be suspended either at a sufficient height to leave at least two feet clearance from the water where the water is at least 3 ft. deep and 30 ft. from the banks towards the middle of the passage, or he shall cause said cable to be kept sunk to the bottom. During the night, that is to say from ½ hr. before sunset to ½ hr. after sunrise, all ferry cables shall be kept lowered to the bottom, except when required for actual use. Except when sunk a ferry cable shall be deemed to be a raised cable, whether in actual use or not, and to form an obstruction to navigation. Any raised cable shall be lowered to the bottom, at any time it is required, so as to allow any vessel to

pass in safety. During the time that any such cable is raised, there shall be some competent person in charge of such ferry and present thereat, whose duty it shall be, upon being notified by whistle, or bell, or in any other manner, that a vessel is approaching, as soon as possible to lower such cable to the bottom so as to allow said vessel to pass in safety. The signal to be given by a steamer to have a ferry cable lowered shall be two long followed by two short blasts of the whistle. Before a ferry cable is so raised, and while it remains raised, whether in actual use or not, the signal at the beacon shall be set at danger, that is the red sign above the white one. No vessel shall proceed to pass a ferry while such signal at the beacon is set at danger. Every violation of any of these regulations shall make the party guilty of same liable in the penalty fixed and determined by the law.

Vessels Removed from the Register.

The following vessels were removed from the register during April and May, for the reasons assigned:—Steam: Alva D., Midland, 10 tons, wrecked; Angler, Port Dover, 14 tons, broken up; D. D. Calvin, Kingston. 483 tons, burnt; E. B. Eddy, Quebec, 38 tons, broken up; Island Belle, Sarnia, 31 tons, broken up; Majestic, Peterboro, Ont., 53 tons, broken up; Minnie M., Montreal, 276 tons, sold to U. S.; Rosey May, Port Arthur, 2 tons, broken up; Salaberry, Belleville, 142 tons, broken up. Sailing: Anne Prudence, Quebec, 24 tons, out of existence, Argosy, Lunenburg, 84 tons, stranded; Ellen L. Maxner, Lunenburg, 93 tons, sold to foreigners; Gaspe, Liverpool, 249 tons, transferred to Newfoundland; Golden Rule, St. John, 55 tons, foundered; Golden Seal, Halifax, 32 tons, unseaworthy; H. F. Church, Sarnia, 306 tons, broken up; Herald, Barrington, 42 tons, sold to foreigners; J. B. Young, Lunenburg, 100 tons, stranded; Lady May, Halifax, 25 tons, transferred to Newfoundland; Maggie Wilson, Halifax, 36 tons, transferred to Newfoundland; Scotia, Lunenburg, 78 tons, transferred to Newfoundland; W. L. Lohnes, Lunenburg, 38 tons, out of existence; Willie H. Crosby, Halifax, 65 tons, broken up; Vivian B. Walters, Lunenburg, 86 tons, stranded.

Notices to Mariners.

The Department of Marine has issued the following:—

41. May 19.—103. Ontario, Lake Ontario, entrance to Presqu'ile bay, Salt point, shoal water in channel, caution. 104. Ontario Lake Ontario, off mouth of Niagara River bell buoy replaced by gas and bell buoy. 105. Ontario, Lake Huron, north channel, depths of shoal east of Turnbull island. 106. United States of America, Lake Huron, Detour passage, gas buoy established on the eastern side of Watson reef.

42. May 23.—107. British Columbia, Vancouver island, east coast, Saanich inlet, Patey rock, beacon light established. 108. British Columbia, Lowe inlet, David point, day beacon. 109. British Columbia, Edye passage and approaches, rocks. 110. British Columbia, Chatham Sound, Porpoise harbor entrance, buoy established.

43. May 25.—111. New Brunswick, St. John River, Belleisle bay, Greys point, light improved. 112. New Brunswick, Chaleur bay, Pokesudie island, light improved. 113. Nova Scotia, west coast, Tusket River, Big Fish island, change in character of light. 114. Newfoundland, east coast, Cape Spear, change in fog alarm. 115. Newfoundland, east coast, St. Johns harbor entrance, Fort Amherst, change in characteristic of fog alarm.

44. May 30.—116. Quebec, Gulf of St. Lawrence, Magdelen islands, Entry island, change in position of light.

45. May 31.—117. Quebec, River St. Lawrence, Beaujeu bank, dredging completed, change in position of gas buoys, buoys discontinued. 118. Quebec, River St. Lawrence ship channel, off St. Thomas de Montmagny, gas buoy established.

46. June 2.—119. General, Canadian list of lights and fog signals, new edition. 120. Quebec, Chaleur bay, north side, Bonaventure point, intended change in character of light. 121. Quebec, River St. Lawrence, Bersimis River, range lights again in operation.

47. June 4.—122. Nova Scotia, south coast, approach to Halifax, change in color of outer gas and whistling buoy. 123. Prince Edward Island, northeast coast, off East point, whistling buoy established. 124. New Brunswick, Northumberland Strait, Shediac harbor range, daymarks. 125. New Brunswick, Northumberland Strait, Richibucto harbor, harbor range lights, additional information.

48. June 4.—126. British Columbia, Vancouver Island, Alberni canal, Stamp harbor, Somass River, beacon light to be established. 127. British Columbia, Burrard Inlet, Vancouver harbor, first narrows, signals established. 128. British Columbia, Chatham Sound, Lucy island, hand fog horn at light station.

49. June 4, 129. Ontario, River St. Lawrence, Thousand Islands, Fiddler's Elbow, south channel between Wood Island and Dashwood Island temporarily closed, caution. 130. Ontario, Lake Erie, Long Point, change in position of life saving station, 131. Ontario, Lake Erie, Pelee passage, Grubb reef, wreck disappeared. 132. Ontario, Georgian Bay, Penetanguishene harbor, change in color of range lights.

50. June 14. 133. Quebec, Straight of Belle Isle, western end. Greenly Island, change in characteristic of fog alarm. 134. Newfoundland, north end. Cape Bauld, change in characteristic of fog alarm. 135. Labrador, Straight of Belle Isle, Amour Point, change in characteristic of fog alarm.

Statistics of Canadian Shipping.

The total number of vessels, of all kinds, on the Canadian register at Dec. 31, 1909, was 7,768, representing 718,533 tons, an increase of 166 vessels and 16,229 tons over the previous year. The steam vessels numbered 3,229, having a gross tonnage of 513,962, and with an assumed value of $30 a ton, the value of the net registered tonnage would be $21,556,590. The number of new vessels built and registered in Canada during the year was 327, with a net tonnage of 25,306, and estimating the value at $45 a ton, the total value would be $1,138,770. During the year 246 vessels were removed from the register, for a variety of causes, details of which were given in our issues throughout the year, in addition to lists of vessels as registered each month. It is estimated that 36,430 employes were engaged on Canadian registered vessels during 1909. In a list of tonnage owned by all the maritime nations of the world, Canada holds tenth place, as before. During 1909, Prince Rupert was constituted a port of registry for vessels. The number of vessels and their tonnage, according to provinces, is as follows:—

	Sailing ships and steamers.	Steamers.	Gross tonnage of steamers.	Net tonnage of sailing ships and steamers.
Ontario	2,061	1,507	209,814	208,652
Quebec	1,432	449	113,338	175,370
Nova Scotia	2,058	249	35,828	160,286
Brit. Columbia	1,020	715	87,436	92,746
N. Brunswick	937	190	52,279	62,984
P. E. Island	150	20	4,465	10,154
Manitoba	90	82	7,308	5,087
Yukon Dist.	16	14	3,213	2,984
Saskatchewan	4	3	281	290
Totals	7,768	3,229	513,962	718,553
Totals, 1908	7,602	3,084	483,031	702,324

The ports of registry are distributed as follows:—Ontario, 38; Nova Scotia, 21; New Brunswick, 7; Quebec, 6; British Columbia, 4; Prince Edward Island, Manitoba, Saskatchewan and the Yukon, one each, while in Alberta, no provision has, as yet, been made for the registration of vessels. The ports having a net tonnage of 10,000 and over, are as follows:—

	Vessels. Sailing.	Steam.	Net tonnage.
Montreal	471	265	126,949
Victoria, B.C.	109	176	50,585
St. John, N.B.	224	105	46,899
Quebec, Que.	458	159	42,483
Toronto	75	310	38,475
Ottawa	154	257	32,661
Windsor, N.S.	70	14	32,523
Vancouver, B.C.	124	431	32,430
Lunenburg, N.S.	274	12	22,869
Halifax, N.S.	328	87	22,260
Kingston, Ont.	66	137	19,175
Parrsboro, N.S.	85	7	17,942
Collingwood, Ont.	5	78	15,797
Hamilton, Ont.	3	40	15,565
Yarmouth, N.S.	274	30	15,547
Midland, Ont.	5	26	12,231
Charlottetown, P.E.I.	130	20	10,154

Of the 246 vessels which were removed from the register during the year, 14 were sold to foreigners, 27 were wrecked, 17 stranded, 12 lost, 75 broken up, seven abandoned at sea, two sunk in collision, one missing, eight foundered, 33 burnt, nine condemned, 13 transferred to Newfoundland, six transferred to Barbadoes, 21 reported out of existence, and the register of one was surrendered. During the same period, the names of 33 vessels were changed by orders-in-council.

The new vessels built during the year and added to the register, according to Provinces, were as follows:—

	Vessels.	Tons.
Ontario	73	7,973
Nova Scotia	75	6,007
Quebec	66	5,895
British Columbia	93	4,068
Manitoba	5	692
New Brunswick	14	666
Prince Edward Island	1	5
Totals	327	25,306

Inland Navigation Companies' Stocks.

Jaffray, Cassels & Biggar, stock brokers, Toronto, issued a circular recently respecting inland navigation companies' stocks, from which the following are extracts:—

Broadly, it may be said that the ordinary marine risks do not attach to the operations of these companies on our lakes, especially to the Richelieu and Ontario, or the Niagara Co., and experience has shown that this risk is small, even in the cases of the two other companies operating in the more open waters of Lake Superior. These companies carry insurance, so that even the risk of loss of a vessel is not a capital risk. Such loss would bring in insurance, so that the shareholders' capital would remain intact, although the money might not earn so well as a vessel. The accounting methods of the companies are not entirely similar, so that a direct comparison is not possible. In the statements given below, the item "written off" is made to include all special amounts charged against the profit and loss account for that year.

NIAGARA NAVIGATION CO.—The operations of this company do not involve the usual risks. It is in effect a ferry company operating between Toronto and Lewiston. The shortness of the trip eliminates the usual risks, as shown by the company's history. The company is operating four large boats on this service, the Chippewa, Corona, Cayuga and Chicora, and has a small boat, the Ongiara, in service on the Niagara River. The company does a large business in excursions, and its relations with the railway companies connecting with it are satisfactory. It has been free from opposition of late years. An indication of the sound management is found in the fact that a large portion of the cost of the new steamer, Cayuga, was provided out of surplus funds. In 1907, when this boat was added to the fleet, the steamer account was increased by over $270,000, but capital account had been increased only by about $110,000. In the last five years, $144,000 has been written off steamer account. In the following statement the interest on the 4½% debentures has been deducted from the profits shown before showing the earnings. In explanation of the earnings shown it is necessary to point

THE NORTHERN NAVIGATION CO. operates lines of steamers from Lake Huron and Georgian Bay ports to Sault Ste. Marie and Fort William, and does a local traffic along the eastern and northern shores of Georgian Bay. The control of the company was changed after the unsatisfactory operations of 1902 and 1903. Under new management, with the late H. C. Hammond as president, the condition steadily improved, and the methods introduced by him still inspire the management. The rate of operating expenses has been steadily reduced, while gross business has increased. The outlook for the company is a bright one, and with the completion of the G.T. Pacific line from Port Arthur to Winnipeg and the West, a still larger business should result, since the company has a contract with the G.T.R. until Jan., 1919. Last year the new steamer Hamonic was employed. She proved a successful venture, since her cost, $542,040, was a large venture, considering the company's total capital. At the last shareholders' meeting a by-law was passed increasing the capital to $1,500,000, but this has not been issued yet. The reports show:—

	Stock.	Gross.	Operating Rate.	Net.	Rate of Capital.	Written off and approp'd.	Balance equal on stock.	Div.	Rate.	Surplus and spl. funds.
1909	$1,000,000	$649,297	77.80	$140,089	14.00	$52,350	8.77	$80,000	8	$169,284

[1]Settlement of litigation with the J. J. Long estate brought in about $28,000, which was also appropriated to special purposes, and is not included in this amount.

[2]Up to this year the reports had shown $90,000 as a reserve fund. The new management appropriated $42,480 as a reduction of steamers' valuation and expended $14,340 upon reconstruction and repairs, leaving $33,180 in reserve fund.

[3]It was afterwards charged by the new management that the former management had misrepresented these earnings as being $30,000 too large, and $27,500 was recovered on this charge, as shown in note 1.

The range of price of the stock in recent years has been:—

	1909.	1908.	1907.	1906.	1905.	1904.	1903.	1902.	1901.
High	123¾	105¼	104	110¼	83	81⅜	148	172¾	109

THE ST. LAWRENCE AND CHICAGO NAVIGATION CO. conducts a freight service on the Upper Lakes. At the close of last season it had five steamers, the G. R. Crowe, E. B. Osler, Algonquin, Iroquois and W. D. Matthews. In many seasons the boats have been employed in carrying iron ore down the lakes, winding up the season with the movement of the Canadian wheat crop from Fort William to Georgian Bay ports. In a season such as that described the early business has in a general way about paid the year's expenses, leaving the grain business as the season's profits. Now that the Western grain crops are increasing and the railways fail to move them to lake ports before the close of navigation, this company's boats are finding active employment in the grain trade in the early part of the season. Increasing competition is of course to be expected, but the company's affiliations with the grain trade have been steadily strengthened during its 19 years of existence, and, further, those engaged in the carrying trade are understood to have learned from experience that there is a point below which it is not profitable to depress freight charges. In 1902 the company had but two steamers engaged. Additions to the fleet have been made through new stock issues. The dividend declaration is not made until the end of the season. The extra distribution in 1902 of $40,000, although charged to reserve fund, was immediately replaced in the treasury by a new issue of $150,000 stock. The figures of the company's reports for the years specified were:

	Stock.	Earnings.	Charges.	Balance.	Equal on Stock. %	Written Off.	Balance Equal on Stock. %	Div'd.	Rate.	Surplus.
1909	$860,000	$112,930	$13,507	$99,423	11.56	......	11.56	$68,800	8	$182,007

RICHELIEU & ONTARIO NAVIGATION CO.—In dealing with that company's affairs, Jaffray, Cassels & Biggar made several errors, such for instance as stating that the company had acquired the three steamboats plying between Toronto and Hamilton, which was not the case. It was also stated that "a new service along the south shore of Lake Ontario had been mooted, but that nothing official had been announced. This was of course incorrect, as the establishment of a service between Youngstown and Ogdensburg, New York, has been arranged for as announced by us some weeks since. We drew the attention of the R. & O. N. Co.'s management to Jaffray, Cassels & Biggar's circular and as the result of correspondence between one of the officials and the brokers the latter corrected the errors pointed out. It may be added that the company's figures are not very satisfactory for comparitive purposes, owing to some changes in its method of bookkeeping, which, while it is claimed they do not affect the general result, are somewhat confusing in regard to the item of operating expenses. Following is Jaffray, Cassels & Biggar's analysis of the statements:

	Capital.	Bonds.	Gross Earnings.	Operating Ratio.	Net Earnings.	Rate.	Written Off and Special Appropns.	Balance Equal on Stock. %	Dividend.	Rate.	Surplus and Special Funds.
1909	$3,132,000	$1,183,573	$1,238,044	68.00	$257,562	8.22	$ 72,566	6.10	$156,000	5	$535,747
1908	3,132,000	956,786	1,241,748	69.00	256,741	8.00	85,233	5.28	156,600	5	458,967
1907	3,132,000	293,946	1,305,004	78.70	261,423	8.34	89,930	5.47	156,600	5	413,396

The Toronto Harbor Commission.

The Toronto Harbor is governed by the Commissioners of Toronto Harbor, a corporate body constituted under chap. 10 of the statutes of 1850. There are five Commissioners, four of whom are elected annually, two by the Toronto Board of Trade, and two by the Toronto city council, the fifth, who is usually elected Chairman, is appointed by the Dominion Government during pleasure. The present commissioners are: F. S. Spence, chairman, appointed by the Dominion Government; J. T. Mathews and W. H. Pearson, nominated by the Board of Trade; J. T. V. May and A. Welch, nominated by the city council. The chairman is, and has been during the number of years he has held the office, a member of the board of control or a city alderman; and with the exception of J. T. Mathews, not one of the commissioners has anything to do with marine matters. The board's officers are: C. W. Postlethwaite, harbormaster and secretary; a deputy harbormaster who is also lighthouse keeper and inspector, and a consulting engineer, who is C. H. Rust, the city engineer.

The commissioners passed a set of by-laws in 1886 for regulating "the use of the works and property vested in them or placed under their control, and for the government of all parties using the same, and of all vessels and floats coming into or using the said harbor;" such by-laws still being in force, with the addition of one regulating the speed of vessels, passed in 1909, sec. 8 of the by-laws of 1886.

The Commissioners issued a balance sheet Dec. 31, 1909, which showed that they were administering wharf property valued at $43,073.72, and were in possession of $19,000 of Toronto city bonds and had $13,852.15 in bank. The income for the year was made up of $6,446.21 harbor dues, $4,000 from the C.P.R. and $2,000 from the city, the rest of the $24,730.29 being made up of cash in bank, $10,807.75; interest on deposits and bonds and miscellaneous rents, fines, etc. The commissioners expended $6,308.57 in dredging, $528.41 on lights, buoys and beacons; $2,540 on salaries and $300 on commissioners' fees, the balance being made up of miscellaneous items and the cash balance carried forward to the current year of $13,854.95. The number of vessels arriving in port during last year was 2,939, their tonnage being 1,480,293, a decrease of 492 vessels and 40,872 tons, as compared with 1908. While the expenditures show that the commissioners during 1909 expended on dredging a sum largely in excess of what they had done in previous years, they have not done anything to relieve the congestion at the wharves, by utilizing the $30,000 or so invested in Toronto city bonds, and cash deposited in the banks, to provide additional space.

Rhode's Directory of Passenger Steamers.—The compilation of a list of passenger carrying steamships of the world is a task of considerable magnitude, but in this directory, the publishers have succeeded to a remarkable degree. This is not the first issue of the work, but it speaks forcibly for the improvement which it shows over its predecessors when it is noted that the number of vessels described has been almost doubled. There are two lists given, one a list of lines arranged alphabetically under each line, being given, also alphabetically, a list of its vessls, cross entries showing the different names under which line is known and a grouping of lines or fleets indicates the controlling factor in several fleets. Thus the British and North Atlantic Steam Navigation Co. is the Dominion Line, as also is the Mississippi and Dominion Steamship Co., and the controlling power of the Dominion Line is the International Mercantile Marine. The second list is one of the vessels, arranged alphabetically, and extending over 325 pages. The particulars given include the name, owners, builders, date of construction, and particulars of hull, engines, passenger accommodation, and special equipment. Of the vessels listed 260 are equipped with Marconi wireless telegraphy and emergency apparatus, and a large number with a submarine signalling system. The compiler is inaccurate in including among passenger lines, and listing as passenger steamers the vessels of the following concerns:—J. C. Gilchrist, the Gilchrist Transportation Co., and the Pittsburg Steamship Co., of Cleveland, Ohio. The 91 vessels owned by these three companies are steel bulk cargo carriers principally engaged in the ore carrying trade on the Great Lakes. With the exception of these vessels, and the C.P.R. Great Lakes and B.C. River steamers, none of the passenger steamers on the inland waters of Canada are noted. Thomas Rhodes & Co., 29, 30 Charing Cross, London.

Quebec as a Port.—A special committee which has been considering the position of the port of Quebec with a view of its development, has passed a resolution recommending the formation of a joint stock company "as being the most practical means of exploiting commerce in the port of Quebec." The committee pointed out that the great difficulty in building up a big trans-Atlantic business at Quebec was the difficulty of securing export cargoes, and it will be the business of the proposed company to secure for Quebec an adequate share of Canadian export business.

During April, four deaths occurred amongst navigation employes, in the course of their work, all due to drowning, and four were injured, three by machinery, and one by falling material.

The Crown of Castile Accident.

L. A. Demers, acting Wreck Commissioner, has given the following decision, concurred in by F. Nash and A. Angers, assessors, in reference to the accident to the s.s. Crown of Castile, on May 27: —"The court, after having carefully weighed the evidence adduced, finds that the damage sustained by the Crown of Castile at Cap-a-la-Roche, at some place between buoys 91 and 93 Q, is due to an error of judgment on the part of the pilot for not allowing sufficiently for the current which was then materially affecting the ship's course; but, owing to the praises of the master of the ship, with reference to his conduct, previous, during and after the accident, the court warns him to be more careful in the future and to remember to be guided in his work by the principal aids to navigation and ascertain for himself the bearings of distances and not rely implicitly on the information which he may receive as regards those bearings, though they may be given in all good faith, as it would appear in this case."

Atlantic and Pacific Ocean Marine.

The Canadian Northern Steamships' s.s. Royal George, arrived in Montreal on her maiden trip from Avonmouth, Eng., June 3. She was considerably delayed by fog in the Gulf.

The s.s. Ben Cruachan, which was wrecked near Louisburg, N.S., recently, was floated, June 15, and temporary repairs affected, after which she was to be taken to Halifax for thorough examination.

The Dominion Government is calling for tenders for the mail service between Canada and Australia and New Zealand, for Canada and Australia, sailings to take place every four weeks from Vancouver, with several alternative routes.

Press reports state that the Canadian-Australian Line and the Matson Line are making arrangements for the transfer of Australian passengers, bound to California, at Honolulu, thus avoiding carrying them through to Vancouver.

The Dominion Government s.s. Gulnare sailed from Quebec, June 11, with a party on board, under charge of W. B. Dawson of the Tidal Survey, for the examination of the currents and tides in the lower parts of the St. Lawrence River and the Gulf.

The White Star Dominion Line s.s. Southwark has been chartered by the Allan Line, to take the place of the s.s Grampian, which has been docked for examination, following on its grounding in the St. Lawrence, at Cap a la Roche, recently.

The widow of C. Fournier is suing the Donaldson Line for $15,000 for the death of her husband, while working in the hold of the s.s. Kastalia, when a longshoreman, who, it is alleged, was intoxicated, fell on him from the first deck.

W. Mackenzie, President Canadian Northern Steamships Ltd., on his return from England, June 2, is reported to have stated that the company was considering the placing of a third vessel on the route between Montreal and Avonmouth.

The arrangements of the Canadian and U. S. Governments, as regards the control of railway rates, will, it is stated, be followed by a similar arrangement between Canada, Great Britain and the U. S., for the joint control of trans-Atlantic passenger and freight rates.

Sir James Mills, of the Union Steamship Co., of New Zealand, who was visiting in Canada during June, while on his way to great Britain, is reported to have said in Vancouver, that the Canadian service with the antipodes would be improved shortly, by the addition of at least one vessel.

Montreal press reports state that the Canada Line, which operates vessels between Canada and Germany, will replace its present fleet of three vessels, by four larger ones, each over 18,000 tons, in order to cope with the increasing passenger and freight business offering.

The Donaldson Line s.s. Saturnia, recently constructed at Glasgow, Scotland, for the Canadian service, on her trials maintained a mean speed of 15½ knots an hour. She is, however, only intended for a 13½ knot speed when in service. She arrived at Quebec, on her maiden trip, June 11.

J.E. Furness, Manager Furness, Withy & Co., who is in England, is reported to be arranging for the extension of the company, which operates the Thomson passenger trade. It is stated that it is the intention to run a fast line of passenger vessels into Quebec and Montreal in the summer and to Halifax in the winter.

The Cairn Line of Steamships, Ltd., has placed on the market, £250,000 of 5% mortgage debentures, for the general development of its business. The company, which operates the Thompson Lines and other vessels, between Canada and Great Britain, was established in 1892, and has paid dividends averaging 8% annually, on its ordinary shares.

The Postmaster General was reported to have said, in Montreal, June 10, that no arrangements had then been made with other companies for the conveyance of mails, but he expected that such would be made in the near future, so that three mails would leave for Great Britain each week. The present contract with the C. P. R. and the Allan Line does not expire until 1912.

W. Lyall, who acted as one of the arbitrators in the recent enquiry into the disputes between the Montreal shipowners and the longshoremen, was entertained to a luncheon there by a number of those interested in shipping, June 13, and presented with a silver flower stand and flower trays, in appreciation of his successful efforts to settle the matter.

Representatives of various shipping companies in Montreal, were received by the Premier June 8, respecting the proposed addition of a new clause to the immigration bill, dealing with the examination of U. S. settlers passing through Canada. A written protest has been sent, an estimate of the loss that would accrue to Canadian companies being placed at $1,000,000 a year.

The Canadian Northern Steamships' s.s. Royal Edward, which sailed from Avonmouth, Eng., June 9, arrived at Quebec, June, 16, having, it is claimed, lowered the record by two hours.

The official record shows that she left Avonmouth, June 9, at 8 p.m., and completed the trip to her dock at Quebec, in 5 days, 23 hrs. 30 mins. The previous record from port to port, is quoted as 6 days, 1 hr. 45 mins.

The Canadian-Mexican Pacific Steamship Co., Ltd., has been organized, for the purpose of taking over the Canadian-Mexican Line, which operated vessels between B.C. ports and Mexico. The chief officers are: President, E. H. Heaps, President A.B.C. Elevator Co.; Vice President and General Manager, T.H. Worsnop. The first sailing by the new company was announced to take place at the end of June, by the s.s Henley. It is also stated that the company has been appointed agent for the Canadian Northern Steamships' Ltd., and a number of other shipping companies. The vessels to be operated are the Lonsdale and Henley; the Georgia, which the old company ran, being returned to England, her charter having expired.

A. A. Allan and T. Robb, President and Manager of the Shipping Federation of Canada, waited on the Minister of Marine recently on the subject of the alleged dangers to navigation in the Cap a la Roche channel. The damage recently caused to the steamships Grampian and Crown of Castile, by apparently striking some hidden obstruction while passing through this channel, has given some ground for the belief that a submerged rock or other obstruction is menacing the safety of navigation. The Minister of Marine, immediately on hearing of the damage to the latter vessel gave instructions for the sweeping of the channel, which work was carried out May 29, with the result that the channel was found to be clear. He also announced that the machinery for the new rock crusher and dredger, now under construction at Sorel, has arrived, and as soon as the vessel was completed, it would be set to work in the channel, and if any obstruction was discovered, it would be dealt with.

Maritime Provinces and Newfoundland.

D. Johnson, a well-known ship builder of River John, N.S., died at Pictou, recently, aged 91.

The Newfoundland Government has awarded a contract to Bowring Bros., St. John's, for the construction of a public wharf at Placentia.

The dredge Triton, which the Dominion Government has purchased in the U. S., was built in 1900, and is of the suction type, 479 tons register. It is said that she will be operated in St. John harbor and the Bay of Fundy.

The New Brunswick Legislature has authorized the city of St. John to grant to the Imperial Dry Dock Co., or other company, any interest it may have in any site for the construction of a dry-dock, exempt the dry-dock plant and machinery from taxation, except water, and pay the company a bonus of $5,000 a year for 20 years from the completion of the dock.

Press reports from Newfoundland state that the Reid Newfoundland Co., has taken exception to the judgment recently delivered by Capt. Lugar, after his inquiry into the causes of the collision between the R.N. Co.'s s.s. Invermore and a French trawler, and will appeal to the Admiralty Court. The judgment held that both vessels were to blame for the accident, and that perjury had been committed by some of the witnesses, but it was impossible to decide by whom.

Province of Quebec Marine.

The Levis Ferry Co., is stated to have placed contracts for the construction of winter ferry boats in Levis.

The Department of Public Works received tenders June 29 for the construction of a wharf and approach at Tadousac harbor.

The Dominion Government has decided to build a dam on the St. Charles River, at a cost of about $1,000,000, to make the river nagivable for over a mile from its mouth at any tide.

Sir H. Montagu Allan arrived in England early in June, where it is stated he is making arrangements for the early construction of the works in connection with the proposed dry dock at Levis, Que.

The Governor-in-council has approved the Quebec Harbor Commissioners' by-law providing for the payment of not

WOVEN WIRE FENCING
ARE YOU INTERESTED IN THIS FEATURE OF RAILWAY WORK?

While we are not the only people who make a good wire fence, we are the only firm in Canada who make the best "wrapped stay" fence. Our "Safe Lock" is so constructed that we don't require to kink the strand wires to prevent stays slipping, therefore, the whole strength of the wire is preserved in the "Safe Lock" Fence.

Our "Monarch" is a "stiff-stay" fence similar to others of this style with the most of their objectionable features eliminated.

The Continental Dredging Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000 and office at Montreal, to carry on a general dredging, contracting and construction business and in connection therewith to own and operate steam and other vessels.

V. W. Forneret, acting Superintendent Engineer of the St. Lawrence ship channel has been appointed Superintendent Engineer, by order in council. He is a member of the Canadian Society of Civil Engineers and has been connected with many of the important works on the St. Lawrence, between Montreal and Father Point.

The Acme Transportation Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and offices at Montreal, to acquire all, or part of the plant and business of Haney, Quinlan and Co., and Haney, Quinlan and Robertson, Montreal, to own and operate steam and other vessels, and to conduct a general transportation business.

The Quebec and Levis Ferry Co., has appealed to the Court of the King's Bench against two judgments of the Superior Court refusing it evocation from the Circuit Court in cases brought by A. Bernier, (Levis Ferry. Ltd.,), and moved to have proceedings in the several cases, suspended until the decision of the Court of Appeal.

The Department of Public Works will receive tenders to July 5, for the construction of a deep water wharf at Levis. The work is to consist of a horizontal bed for the cribs, prepared by dredging to 35 ft. below low water level, for the whole length, the construction of nine timber cribs, 903 ft. long, 40 ft. wide at the base, and 18 ft, wide at the top, a crib retaining wall behind the western end, 32 ft. long, 27 ft. 6 ins wide at base, 16 ft. 2 ins. wide at the top and superstructure of concrete blocks, 30 to 35 ft. long, 16 ft. wide at base, 4 ft. wide at top, with the necessary ladders, steps and mooring rings

Ontario and the Great Lakes.

The Niagara Navigation Co. has declared a dividend of 4% for the half year payable July 2.

The Pere Marquette Rd. is reported to have decided to operate a line of steamboats across Lake Erie, from Port Stanley, daily.

The St. Lawrence and Chicago Steam Navigation Co. has transferred its steamboat G. R. Crowe from the British to the Canadian register.

The Lake Carriers' Association is recommending that the draught of the Canadian and U. S. Locks of the Sault Ste. Marie canals, be made 18½ ft.

The Port Colborne steam tug Golden City, was struck by the Parry Sound Lumber Co.'s steamboat Seguin, and sunk in the Welland Canal, June 13.

The Inland Line's s.s. Donnacona ran ashore on the Devil Island shoals, near Tobermory, June 12, and after having her cargo lightered, was released on the following day.

Jno. Bell has been appointed General Agent, Inland Lines Ltd., Toronto, vice H. J. Truscott. General Agent Inland Navigation Co., which now forms part of the Inland Lines, Ltd.

The Merchants' Mutual Line, Ltd., incorporated under the Dominion Companies Act, has been licensed to carry on its business in Ontario, with J. S. Lovell, Toronto, as its attorney.

The North Channel Towing Co., Ltd., which was recently incorporated, with a capital of $25,000, and office at Cutler, Ont., owns the steam tugs Andrew J. Smith, W. H. Seymour and Alert.

The Cadwell Dredging Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of $50,000 and office at Windsor, to carry on a general dredging, contracting and sand business.

The Rainy River Navigation Co., has announced that it will operate the steamboats Keenora and Agwinde, this year, on the Kenora-Fort Frances route. No vessel was operated by this company last season, owing to the low water at the mouth of the Rainy River.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamboat Lakeside, which operated between Toronto and Port Dalhousie last season, is being thoroughly overhauled, and will probably be put into service again on the same route.

Wm. Lawlor, recently transferred from the Toronto office of the Inland Lines, Ltd., to the Montreal office, is reported to be missing. He is said to have had a considerable sum of money in his possession at the time, and it is feared that he met with foul play.

The s.s. A. E. McKinistry, which recently arrived on the Great Lakes from Scotland, will be operated by Interlake Transit Ltd., in the bulk freight trade. Her dimensions are, length, 250 ft.; breadth, 42¾ ft.; depth, 20½ ft; capacity, 118,000 bush.

The Department of Railways and Canals has awarded the contract for the improvements to the Port Colborne entrance to the Welland Canal, to M. J. Hogan, Port Colborne. The work comprises the widening of the 22 ft. deep water channel along the west pier and the building of a timber and concrete mooring dock west of the elevator.

The U. S. Lake Survey reports the levels of the Great Lakes, for May, in feet above tidewater, as follows: Superior, 601.74; Michigan and Huron, 580.46; Erie, 572.57; Ontario, 246.42. As compared with the average May levels for the past 10 years, Superior was 0.55 ft. below, Michigan and Huron 0.38 ft. below, Erie 0.04 below and Ontario 0.27 ft. below.

The G.T.P. Coast Steamship Co.'s s.s. Prince Rupert, which arrived on the coast early in June, reached Vancouver, June 10, after having been overhauled at Esquimalt subsequent to her trip around the Horn from England. She was considerably delayed on the voyage by bad weather, and owing to her wireless telegraph equipment getting out of order, some anxiety was caused.

The Lake and River Rapid Transit Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $50,000 and office at Ottawa, to own and operate steam and other vessels, wharves, docks, etc., and to conduct a general transportation business. The provisional directors are, E. W. Grange, S. D. Dafoe, J. Muir, C. F. Hamilton and C. A. Matthews, Ottawa, and J. A. Currie, Toronto.

Representations, emanating from Minnesota are being made to the Dominion and U.S. government for the betterment of navigation on the Rainy River, and for the opening up of the Lake of the Woods. The plan suggested, involves the construction of a canal with three locks, connecting the Rainy and Pigeon Rivers, thus forming a connection between Hudson Bay and Chicago and New York, by way of the Great Lakes, Chicago canal and the Mississippi River.

Hall and Eligh, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $99,000 and office at Ottawa, to carry on the business of operating and owning passenger, freight and towing steamers, with power to build or otherwise acquire steam and other vessels, wharves, docks, piers, elevators, etc. The provisional directors are: E. A. Hall, L'Orignal; W. J., and J. H. Hall, and P., and E. W. Eligh, Ottawa.

Press reports from Montreal state that a merger of lake navigation companies with a capital stock of $15,000,000, is under negotiation, by which "practically every inland navigation boat of importance, plying between the Gulf of St. Lawrence and the port of Chicago on Lake Michigan," will be placed under one management. Among those mentioned, are the Richelieu and Ontario Navigation Co., Merchants' Montreal Line, Montreal and Lake Erie Steamship Co., Montreal and Great Lakes Steamship Co., Ottawa River

CINCINNATI, O.

Navigation Co., Montreal Transportation Co., and the Northern Navigation Co., while it is also stated that the C.P.R. and G.T.R. are favorably disposed towards the project.

The Toronto Ferry Co.'s ferry steamboat Trillium was launched from Polson Iron Works, Toronto, June 18, the christening ceremony being performed by Miss Phyllis Osler, granddaughter of E. B. Osler, President Toronto Ferry Co. The vessel, which has been built on the same general lines as the company steamboat Bluebell, has these dimensions: length, 150 ft. beam, over guards, 45 ft., depth, molded, 8 ft. 4 ins. The machinery consists of inclined compound paddle wheel engines with cylinders 17 and 34 ins, diar., by 48 ins. stroke, supplied with steam by a Scotch marine boiler, 10½ ft. diar., by 11 ft. long, at a working pressure of 160 lbs. She is also equipped with a turbine electric generating set, for 350 16 c.p. lights and masthead and running lights. She was expected to be in operation by July 1.

The Keystone Transportation Co.'s steamboat Keystorm, which recently arrived on the Great Lakes, will be engaged in the bulk carrying trade between Cleveland, Ashtabula, Erie and other Lake Erie points and Montreal. She was built in England, and in the main, is similar to the steamboats Keywest and Keyport, also built in England for the same company, the chief difference being in regard to her boilers. The Keystorm has been constructed with one large boiler instead of two smaller ones, and has a slightly reduced carrying capacity, but with increased speed. She is of full canal size with a draught of 14 ft., and has been built to the highest class in the Classification of the British Corporation for the Survey and Registry of Shipping. She is equipped with triple expansion engines. Her dimensions are, length, 250 ft., beam, 42½ ft., and she will carry 2,300 tons on light draught. On her trial trip she attained a speed of about 10 knots an hour.

Manitoba, Saskatchewan and Alberta.

H. J. Truscott, heretofore General Agent Inland Navigation Co., Toronto, has been appointed Contracting Agent Inland Lines Ltd. (which was taken over by the Inland Navigation Co.,) at Winnipeg.

The s.s. Mikado, arrived in Winnipeg from Selkirk, June 10, being, it is said, the first steamboat plying on Lake Winnipeg, to go up to the city. During the trip, surveys of the river at various points were, made, which will prove of benefit to other vessels making the trip for the first time.

The Dominion Government has decided to make a survey with a view of ascertaining the possibility of establishing a navigable water route between Winnipeg and Edmonton, by way of the North Saskatchewan River and Lake Winnipeg. It is believed that waterway of 8 ft. depth can be cleared at a moderate cost. L. R. Boligny, who was one of the party which made surveys on the Georgian Bay Canal route, is reported to have been placed in charge of the work, which will be undertaken during the summer.

The Hyland Navigation and Trading Co., contemplates the construction of dock accommodation at Winnipeg, 324 by 40 ft., and also intends building two barges and a steam tug. The company is operating the steamboats Bonnitoba and Winnitoba, the former on the Red River and the latter on the Red River and Lake Winnipeg. The officers of the vessels for the current season are, Bonnitoba, captain, G. Fortney; chief engineer, G. Hicks; Winnitoba, captain, E. McDougall; chief engineer, G. King.

A joint meeting of the Winnipeg special wharf committee and the city council was held recently, when the matter of the construction of wharves at various points along the Red River was discussed. It was stated that with the opening of the St. Andrews lock, a large increase of traffic on the river and lake was probable, and that steps should be taken to construct the facilities necessary for the economical handling of passengers and merchandise. H. N. Ruttan, City Engineer, said that the question was a large one, but that some extravagant ideas had been entertained on the matter and some projects mooted that would cost millions. The St. Andrews lock and dam would have the effect of raising the water level several feet, and though there were no fundamental difficulties in the way of establishing a large trade between the city and the lake, wharves or steamboat landings would have to be protected against the spring ice flow. It was decided to obtain the views of the leading shippers in Winnipeg and other Red River ports as to landing accommodation, and later, call a meeting of ship owners, the city council and the board of trade.

B.C. and Pacific Coast Marine.

The barkentine Everett G. Griggs, of Victoria, has been equipped with a wireless telegraph installation.

GOLDSCHMIDT THERMIT CO.

THE THERMIT WELDING PROCESS

Repairs broken sternposts of steamships, locomotive frames, and all other wrought iron and steel sections in the shortest possible space of time and at less expense than by any other welding process. We make the welds without removing the broken sections from their position. Marine repairs may usually be made in 48 hours or less, while locomotive frames are welded in 12 hours or less.

Write for Pamphlet No. 20N.

James Hutton & Co., Montreal

The Victoria Dock Co., Ltd., has applied to the Governor-General-in-Council for the approval of plans and site for works to be constructed in Victoria harbor, lot 5, block 70.

The Imperial Car, Shipbuilding and Drydock Co., of Vancouver, is applying for a subsidy of 3½ per cent. on an outlay of $2,500,000 for the construction of a dry dock at Vancouver.

The White Pass Navigation Co.'s steamboat White Horse, was reported to have left White Horse for Dawson, Y.T., June 8, this being several days earlier than is usual for the opening of navigation on the river.

The Kootenay Ry. and Navigation Co.'s steamboat Kaslo, while endeavoring to berth at Ainsworth, during a storm, struck on a pier, and eventually sank in 14 ft. of water. The service has been continued by the C.P.R. steamboat Kokanee.

The Malahat Tug Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $25,000, to own and operate steam and other vessels, and to enter into contracts for the conveyance of passengers, cattle and merchandise by its own vessels, railways, etc., or by those of others.

The s.s. Bruno, recently purchased by the Grand Trunk Pacific Coast Steamship Co., as mentioned in our last issue, has had some alterations made, in addition to being generally overhauled, at Vancouver, and the name has been changed to Prince Albert, to conform to the company's policy regarding names. She is being operated between Prince Rupert, Portland Canal and Queen Charlotte Islands, connecting with the s.s. Prince Rupert in both directions.

The Grand Trunk Pacific Coast Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with a capital of $100,000 and office at Montreal, to own and operate steam and other vessels, wharves, docks, piers, elevators, etc., and to conduct a general navigation and transportation business. The provisional directors are: C. M. Hays, W. Wainwright, W. H. Biggar, Montreal; E. J. Chamberlin, Winnipeg, and C. H. Nicholson, Vancouver; all of whom are connected with the G.T.R., G.T.P.R., or G.T.P. Steamships.

The Grand Trunk Pacific Ry. has purchased the ocean going tug, Escort No. 2, and the car ferry, Georgian No. 2, from Mackenzie Bros. Ltd., Vancouver, B.C., to operated in transferring rails and other equipment between Vancouver and Prince Rupert in connection with the construction of the Mountain Division. The tug Escort was built in 1182, at Coos Bay, Ore., and is a screw driven vessel, with engine of 61 n.h.p. Her dimensions are: length, 95 ft., breadth, 24 ft., width, 13.5 ft., tonnage, 192 gross, 131 register. The Georgian No. 2, is 187 ft. long by 39 ft. beam. The G.T.P. Coast Steamship Co., has also purchased the steamship Henriette and the schooner North Bend, from the same frm, the former being intended for general freight purposes where required, and the latter to be utilized as a coal barge. The Henriette, which was formerly a sailing vessel, is equipped with engine of 32 n.h.p., driving a screw. Her dimensions being: length, 152.6 ft., 30 ft., depth 18. ft., tonnage, 762 gross, 518 register. The schooner North Bend was built at Coos Bay, Ore., in 1877, her dimensions being: length, 152.6 ft., breadth 32 ft., depth 11 ft., tonnage, 392 register.

The Department of Public Works will receive tenders to July 20 for the construction of a steel bow-well twin screw barge loading dredge for use in British Columbia. The specifications calls for a

QUEBEC BRIDGE.

Tenders for Superstructure.

Notice to Contractors.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Quebec Bridge Superstructure," will be received at this office until 12 o'clock noon, not later than September 1st, 1910, for the superstructure of a bridge across the St. Lawrence River near the City of Quebec.

Plans and specifications may be seen and forms of Tender obtained on and after July 1st 1910 at th office of the Quebec Bridge Board of Engineers, Canadian Express Building, Montreal, and at the Department of Railways and Canals, Ottawa.

Parties tendering will be required to accept the fair wages schedule prepared or to be prepared by the Department of Labour, which schedule will form part of the sontract.

Contractors are requested to bear in mind that tenders wil not be considered, unless made strictly in accordance with the printed forms, and in the case of firms, unless there are attached the actual signature, the nature of the occupation, and place of residence of each member of the firm.

An accepted bank cheque for the sum of $500,000.00 made payable to the order of the Minister of Railways and Canals of Canada must accompany each tender, which sum will be forfeited if the party tendering declines entering into contract for the work at the rates stated in the offer submitted and in accordance with the terms stated in the form of Contract accompanying the Specifications.

Cheques thus sent in will be returned to the respective contractors whose tenders are not accepted.

The lowest or any tender not necessarily accepted.

L. K. JONES,
Secretary.

Department of Railways and Canals,
Ottawa, 17th June, 1910.

vessel with these dimensions: length, between perpendiculars, 199 ft., breadth, molded, 36 ft., 6 ins., depth, moulded, 13 ft., 6 ins.; speed, in working condition with 100 tons of coal and 50 tons of fresh water in feed tanks, eight knots an hour, on a mean draught of about 9 ft. 6 ins. It is required to be of the barge-loading bucket centre ladder type, fitted with chain of 39 buckets of 24 cub. ft. capacity. The hull is to be of steel throughout, built under Lloyds' rules for an A1 steel dredge class, sub-divided into eight water tight compartments, and with accommodation for the crew. The machinery is to consist of two sets of compound surface condensing engines, driving direct on the screw shaftings, and to operate the dredging machinery by gearing, admitting of disconnection, with two boilers of the latest marine cylindrical type for a working pressure of 125 lbs., tested to 250 lbs.; steam hoisting gear and warping winch, 3-ton hand derrick, etc. The engines to have cylinders 18 and 36 ins. diar., by 24 ins. stroke and the boilers to be 12 ft. 9 ins. diar. by 10 ft., with Morrison. or other corrugated furnaces, 3 ft 9 ins., internal diar., with a total heating surface of 2,856 sq. ft. The auxiliary engines for driving the hoisting gear to be of horizontal two cylinder high pressure type with cylinders 13 ins. diar., by 15 ins. stroke. The electric light plant to consist of steam engine, generator, switchboard, searchlight, etc.

The Union Steamship Co.'s s.s. Cheslakee, which was launched at Dublin, Ireland, recently, is intended for coastwise service in British Columbia. She is of the awning deck type and has been built to the highest class of the British Corporation Registry, with dimensions: Length, 132 ft.; breadth moulded, 28 ft.; depth, moulded, to awning deck, 17.9 ft. The machinery, which is being installed at Belfast, consists of triple expansion engines, with cylinders 13½, 22 and 36 in. diar., by 20 in. stroke, supplied with steam by an extra large single-ended boiler. The general equipment includes the usual steam auxiliaries on deck, electric light installation and powerful searchlight, life-saving and fire-extinguishing apparatus, to meet the requirements of both the Canadian and British Board of Trade authorities. Although she is chiefly intended for the passenger trade, there will be a limited capacity reserved for the quick transport of perishable freight.

The Fort George Lumber and Navigation Co., Quesnel, is operating the following vessels, Chilco, captain, J. H. Bonser; chief engineer, J. McInnis. Chillcoten, H. Fraser, captain, —. Ritchie; Quesnel, captain, A. F. Dougherty; chief engineer, S. A. Dean.

Improvements in Locomotive Boilers.

By H. H. Vaughan, Assistant to the Vice President Canadian Pacific Ry.

A. Boilers with smoke tubes; precautions in constructing and maintaining tubes and tube plates.

THE TYPE OF BOILER generally used in Canada is that with a round top fire-box of what is termed the extended wagon top style, in which the diameter of the circular portion of the fire box and the rear portion of the barrel is larger than that of the front portion of the boiler. Usually the course of the boiler next the fire-box and the front course of the boiler are both cylindrical in form, joined together by a middle taper course. The dome is usually placed on the course next the fire box.

Representative examples of this type of boiler are illustrated in fig. 1, showing a boiler used on the Lake Shore and Michigan Southern Ry., and fig. 2, showing a boiler used on the Union Pacific Rd. They may be regarded as good examples of recent boiler designs in Canada and the U.S. A few of the largest administrations, such as the Pennsylvania Lines including allied roads, and the Great Northern, are using the Belpaire fire-box, while others, such as the Illinois Central and Canadian Pacific Railways, have used the Belpaire more or less extensively, but in each case the latest engines have been equipped with round top boilers.

Examples of recent design in Belpaire boilers are shown in fig. 3, illustrating a boiler used on the Pennsylvania Rd., and fig. 4 showing one used on the C.P.R. These drawings also show a boiler barrel of the tapered form illustrated in the two examples of round top fire-box boilers. This form of barrel is not, however, in universal use, as several roads are using barrels of the parallel or straight top type, the courses usually being rolled cylindrically, and varying in diameter by the thickness of the plates alone. The type of barrel used is largely determined by the conditions governing the permissible weight of the boiler, but, with the same limitations as to the water space around the sides of the fire-box, the number of flues that may be placed in a boiler is limited by the diameter of the boiler at the fire-box end, and it is possible for the diameter of the boiler at the front end to be somewhat smaller without affecting this number. A lighter boiler with the same amount of heating surface can thus be obtained than is possible where a parallel form of barrel is used.

On roads on which the weight of the engine is limited by the weight per axle, the additional weight entailed at the front end of the engine by the use of a straight or parallel barrel, makes but little difference, but, where the weight of the engine is limited by the strength of the bridges over which it has to run, which is usually the case, the tapered boiler barrel has enabled the weight of a boiler with a given heating surface to be somewhat reduced, and it is consequently in general use. This question has also been affected by the tendency to increase the distance between the flues, and the amount of water space between the inner and outer fire box sheets at the sides. The latter, especially, has been an important factor in the more extended use of the tapered barrel, as with a small water space the saving in weight obtained by reducing the diameter of the barrel at the front end would not be as great as is the case with the wider spacing in recent use.

Guy Tombs

General Freight and Passenger Agent Canadian Northern Quebec Ry., and Quebec and Lake St. John Ry.

The extensive use of the round top fire-box is explained by the results obtained from it being on the whole, satisfactory. The Belpaire form of box has no doubt an advantage in the fact that the stresses in the various plates and stays can be accurately determined by calculation, whereas in the round top boiler, especially one of the radial stayed type, these stresses cannot be determined with the same degree of accuracy. The service, however, of many thousands of round top boilers has fully demonstrated the safety of this type when properly constructed and maintained, and has proved the correctness of the calculations by which their strength is determined. The Belpaire fire-box is somewhat more expensive to construct than the round top, and adds a certain amount to the weight of the boiler without a corresponding increase in the heating surface; hence the largely preponderating use of the simpler round top type. Although the round top type has proven entirely safe and somewhat cheaper to construct than the Belpaire, it is open to question whether its extensive adoption is justified from the standpoint of cost of maintenance.

The Belpaire fire-box has given a certain amount of trouble not found in the other type by the cracking of the throat sheet in the O. G. shaped portion between the upper corners of the fire-box and the boiler barrel. The cause of this is not entirely plain, but it is possibly due to the connection between the fire-box and the barrel of the boiler, in the ordinary type of Belpaire, being rigid only at the points where the straight or curved sides and top of the fire-box joint directly to the barrel. This weakness has been remedied in the design shown in fig. 3, in which it will be noticed that the sides of the fire-box are curved to conform to the shape of the barrel for a considerable distance, and fig. 4, in which the same arrangement has been extended to both top and sides, so that the connection at this point has been considerably strengthened, and, experience shows that this difficulty has been to a large extent overcome.

With this exception the maintenance of Belpaire fire-boxes has been less than that on round top types, on account of the more equal distribution of the stresses. In the round top radial stayed type the staybolts at the upper corners of the inside firebox are required to transmit a considerable strain in a horizontal direction through the crown sheet, in order to prevent the outer fire-box sheet from moving outward on account of the pressure in the boiler, and in fact there is little doubt that a certain amount of movement outwards occurs. This has lead to a considerable breakage of staybolts along the upper rows of the fire-box, and consequently to the introduction of staybolts of a flexible type which can accommodate themselves more freely to the relative movement of the inner and outer fire-box sheets. There is little doubt, from the experience obtained on

THE JOHN BERTRAM & SONS CO., LIMITED

DUNDAS, ONTARIO, CANADA

Sales Agents: The Canadian Fairbanks Co., Ltd. Offices: Montreal, Toronto, Winnipeg, Vancouver, Calgary, St. John

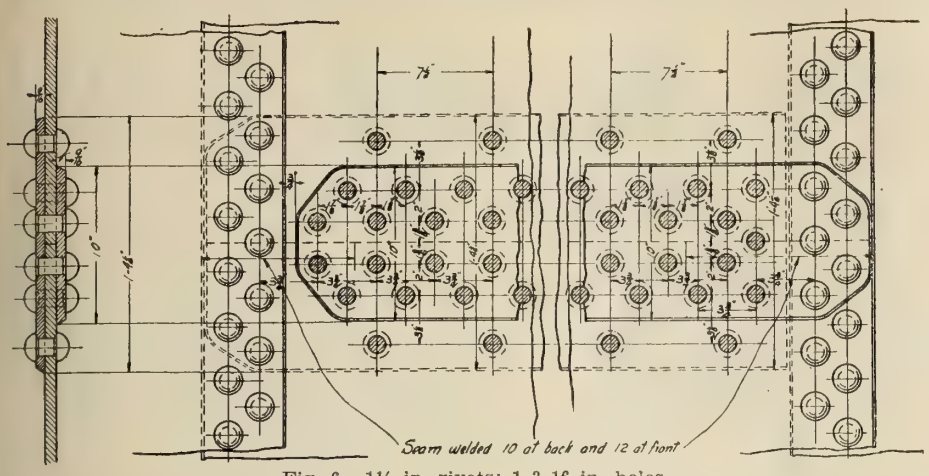

Fig. 6. 1⅛-in. rivets; 1 3-16 in. holes.

a large number of engines, that the Belpaire boiler, especially in bad water districts, is more free from breakage of staybolts than the round top boiler, and there is a certain amount of evidence to show that better service is also obtained from the inner fire-box sheets. While therefore the common use of the round top fire-box is justified from the point of view of first cost and safety, the

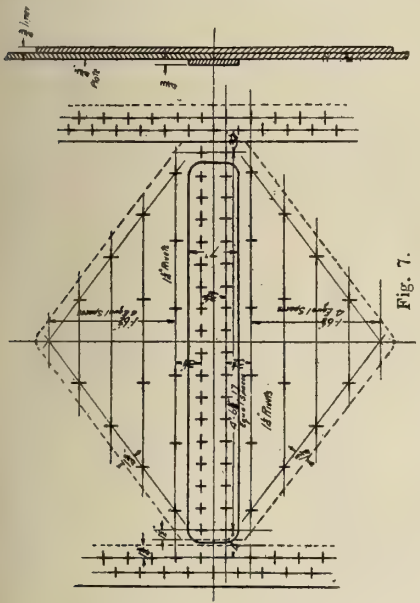

Fig. 7.

use of the Belpaire fire-box may also be justified, at any rate, on districts where the water is of poor quality, from the point of view of the lower cost of maintenance.

The boilers illustrated in figures 1, 2, 3, and 4, have the usual type of fire-box employed for bituminous coal on large modern engines. This fire-box is from 5 to 6 ft. wide, and extends over the frames, and, excepting on engines on which the fire-box is placed back of the driving wheels, over the driving wheels. wheels.

The grate area varies with the size of the boiler, but is usually from 45 to 50 square feet. Where anthracite coal is used the Wooten type of fire-box is generally employed, and fig. 5 shows a boiler recently built by the Central Rd. of New Jersey. This design of boiler affords a large area of grate surface and admits of small grades of anthracite coal being burnt at the rate necessary for locomotive service. The fire-box of these boilers is radially stayed, and owing to its form, a certain amount of difficulty has been experienced with the breakage of staybolts, and flexible bolts are therefore employed quite largely in its construction.

BOILER SEAMS.—The longitudinal boiler seam in general use is shown in fig. 6. It is of the triple rivetted butt joint design with inner and outer welt plates, the outer welt plate being narrower than the inner. This joint has a calculated efficiency of about 85% and has proven satisfactory, especially with respect to the avoidance of the grooving which occurs in boiler plates along the edges of the welt plates. A number of administrations have adopted the practice of welding the boiler plates together for 9 ins. at the end of each seam. This practice has been introduced to avoid the necessity for caulking or plugging the ends of the seam between the boiler plates themselves, which project beyond the ends of the outer welt plate and enables the seam to be made perfectly tight by caulking the edges of the outer welt plate and the rivet heads on the outside of the seam. The administrations using this practice report it as satisfactory and while it is not universal it is becoming general.

The seam shown in fig. 7, which is known as the diamond pattern of seam, is used by some administrations. This seam has an exceedingly high efficiency, about 95%, but owing to its being a patented seam it is not in general use. The circumferential seam which is in universal use is a double rivetted lap seam as shown in fig. 8. and this seam is also used for the joints between the throat sheet and the barrel, and the outside fire-box sheet and the back sheet of the boiler.

MUD RINGS are almost universally double rivetted, two administrations in the U.S. and one in South America alone reporting a preference for single rivetting, and in those cases additional rivetting is shown at the fire-box corners. The usual practice is shown in fig. 9, which shows a double rivetted mud ring corner, in which a portion of the fastenings of the outside sheet to the mud ring is provided by means of tap bolts, the remaining fastenings being by rivets through both inside and outside fire-box sheets. This design is used by the majority of administrations replying, but a few employ the design shown in fig. 10, in which the fastenings at the corner are entirely tap bolts, the through rivets being omitted. One administration prefers the design shown in fig. 11, in which the fire-box corners are triple rivetted, the remainder of the rivetting through mud ring being of the ordinary double rivetted style. There is no doubt that a certain amount of difficulty is experienced in obtaining a permanently

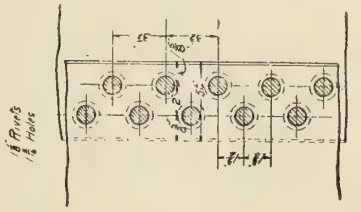

Fig. 8.

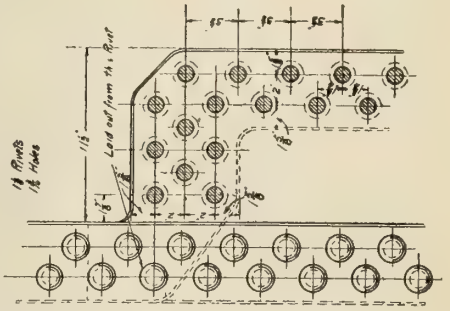

steam-tight joint at the front corners of the fire-box, and the triple rivetted design shown assists in overcoming this difficulty, on account of the short length of rivets used at that point.

BOILER DOMES.—The connection between the dome and the boiler barrel in universal use is shown in figs. 1 and 4, and consists of a heavy flanged collar on the outside of the boiler and a reinforcing plate on the inside. This connection has proven entirely satisfactory

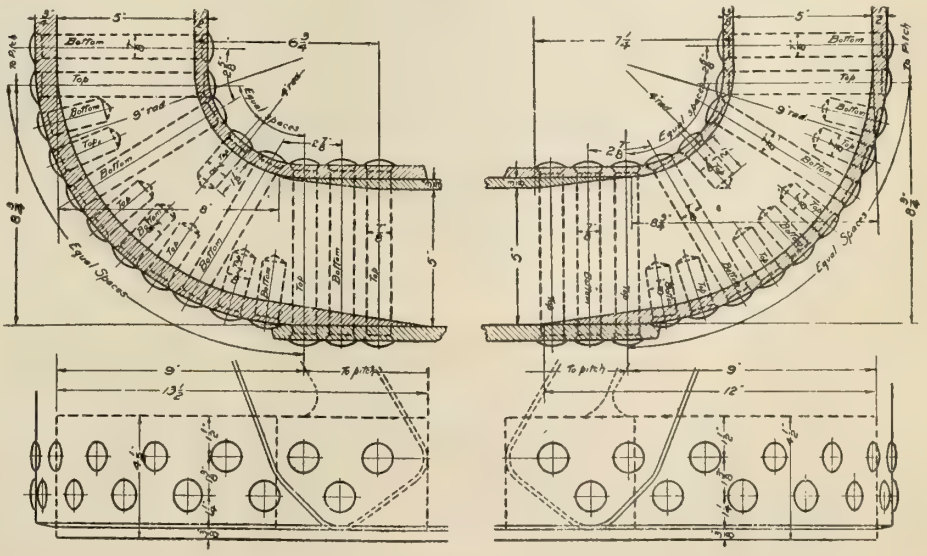

Fig. 9.

Labour-Saving Machine Tools

MANUFACTURED BY **ALFRED HERBERT, LTD.,** COVENTRY ENG.

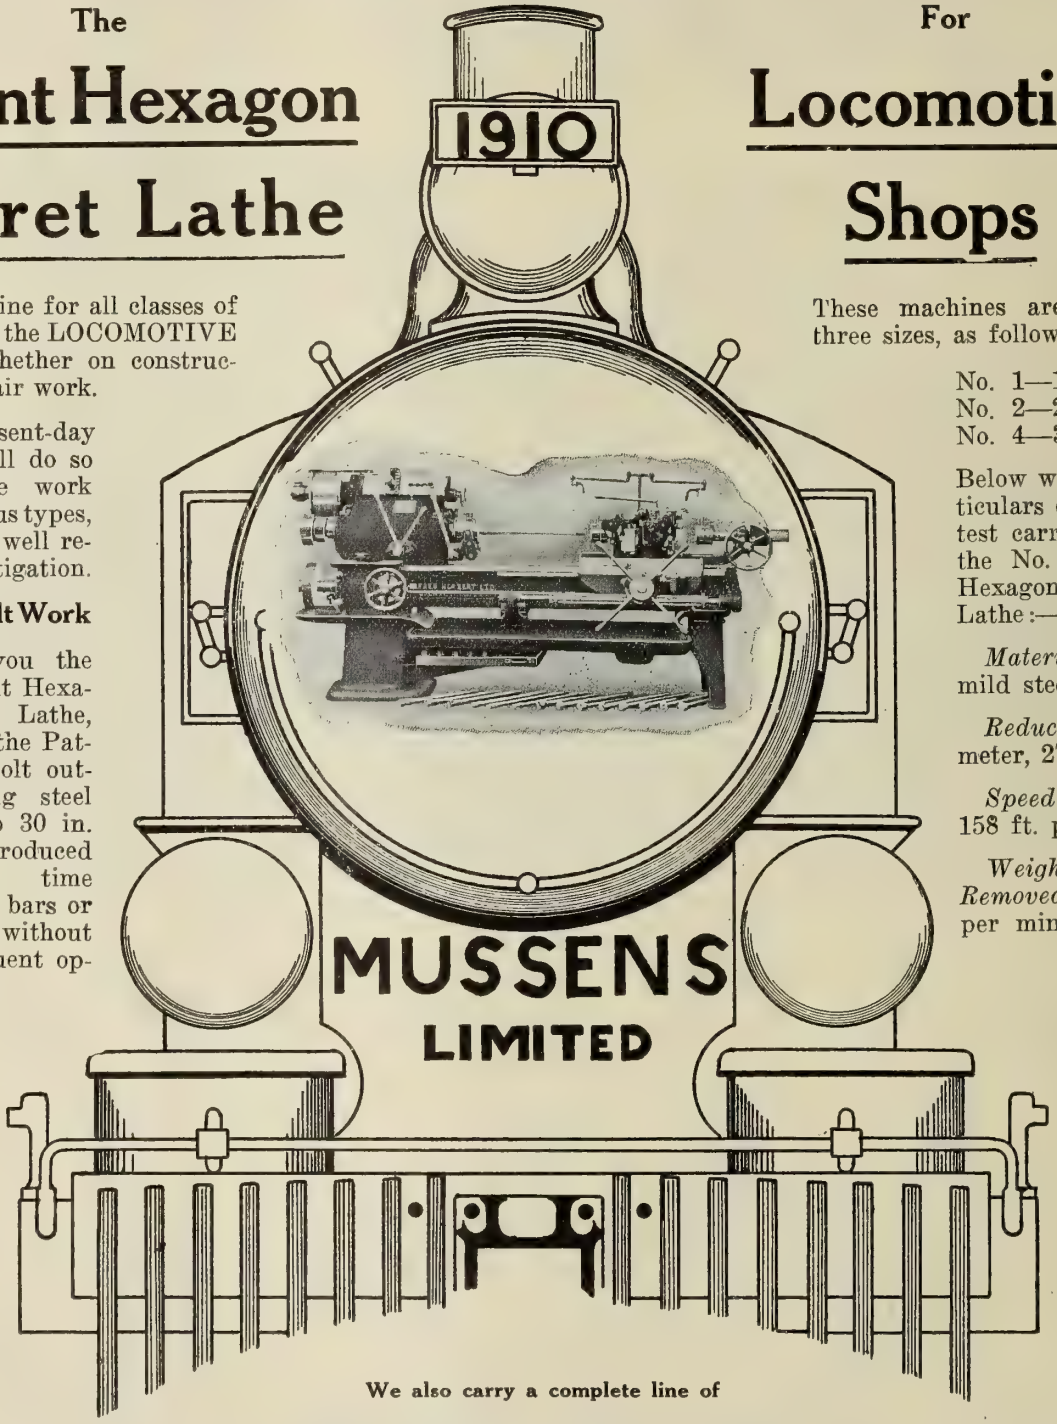
The **Patent Hexagon Turret Lathe**

is the machine for all classes of bar work in the LOCOMOTIVE SHOPS, whether on construction or repair work.

The present-day machine will do so much more work than previous types, that it will well repay investigation.

On Stay Bolt Work

we offer you the No. 2 Patent Hexagon Turret Lathe, fitted with the Patent Stay Bolt outfit, enabling steel stays up to 30 in. long to be produced in record time either from bars or forgings without any subsequent operations.



For **Locomotive Shops**

These machines are built in three sizes, as follows:

No. 1—1½" x 21"
No. 2—2¼" x 30"
No. 4—3½" x 42"

Below we give particulars of a recent test carried out on the No. 2 Patent Hexagon Turret Lathe:—

Material—30-ton mild steel.

Reduction in diameter, 2" to ¾".

Speed of Work—158 ft. per minute.

Weight of Metal Removed—7¾ lbs. per minute.

FULL PARTICULARS FREE ON REQUEST

We will be pleased to give a guarantee of output on receipt of samples or sketches

We also carry a complete line of

Machine Tools and High-Speed Steel

MUSSENS LIMITED MONTREAL

COBALT	TORONTO	WINNIPEG	CALGARY	VANCOUVER
Opp. Right of Way Mine	73 Victoria St.	259-261 Stanley St.	Crown Block, First St. E.	Mercantile Building

and has practically superseded all other designs. The dome barrel is rivetted into this collar and to the top flange. This is usually of pressed steel, although cast steel is occasionally used. In some cases the plate forming the body of the dome is welded in place of being rivetted, and the administrations using this practice report satisfactory results. A modification which varies slightly from this design is shown in the drawing of the boiler used by the Pennsylvania Rd, fig. 3. In this case the entire dome is of pressed steel, the collar joining the dome to the boiler barrel and the flange at the top being in one piece. While this design is evidently exceedingly satisfactory, it is not in general favor with locomotive builders who are constructing engines for a number of different roads, and to whom the built up design of dome is preferable on account of their being able to use the same flange blocks for varying heights of domes without expensive alterations.

A further instalment of this valuable and interesting paper, which was written by Mr. Vaughan for presentation at the International Railway Congress Association's meeting at Berne, Switzerland, in July, will be published in our next issue.

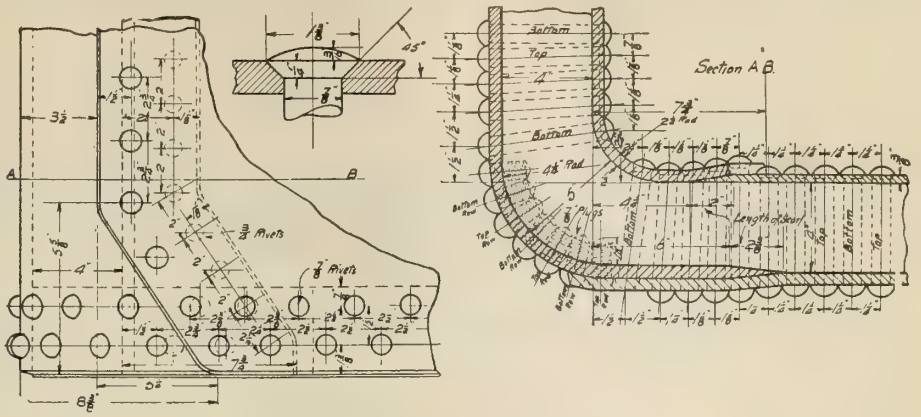


Fig. 10.

August Birthdays.

Many happy returns of the day to—

W. E. Bishop, Manager Hamilton Steamboat Co., Hamilton, Ont., born at Brantford, Ont., Aug. 10, 1868.

J. F. Chapman, General Freight and Passenger Agent Bay of Quinte Ry., Thousand Islands Ry., Oshawa Ry., and Deseronto Navigation Co., Deseronto, Ont., born at Frankford, Hastings Co., Ont., Aug. 25, 1863.

C. H. N. Connell, Engineer of Maintenance of Way Canadian Northern Quebec, and Quebec and Lake St. John Rys., Quebec, born at Woodstock, N.B., Aug. 26, 1876.

F. Barlow Cumberland, Vice President Niagara Navigation Co., Port Hope, Ont., born at Portsmouth, Eng., Aug 5, 1846.

C. D. Fisher, Superintendent District 3 Canadian Northern Ry., Dauphin, Man., born at Athens, Ont., Aug. 24, 1867.

G. H. Ham, head office staff C.P.R., Montreal, born at Trenton, Ont., Aug. 23, 1847.

W. P. Hinton, General Passenger Agent G.T.P.R., Winnipeg, born at Hintonburg, Ont., Aug. 30, 1871.

R. Kerr, Passenger Traffic Manager C.P.R., Montreal, born at Toronto, Aug., 1845.

J. D. McDonald, District Passenger Agent G.T.R., Toronto, born there Aug. 27, 1855.

T. McHattie, Superintendent of Motive Power and Car Department Central Vermont Ry., St. Albans, Vt., born at Dufftown, Banffshire, Scotland, Aug. 8, 1854.

C. Montgomery, Assistant Master Mechanic Pere Marquette Rd., St. Thomas, Ont., born near London, Ont., Aug. 29, 1860.

W. E. Mullins, General Manager Costa Rica Rd., and Northern Rd. of Costa Rica, San Jose, born at Stratford, Ont., Aug. 13, 1870.

F. H. Phippen, K.C., General Counsel C.N.R., Toronto, born at Belleville, Ont., Aug. 26, 1862.

W. M. Porteous, Freight Agent C.P.R., St. Louis, Mo., born at Edinburgh, Scotland, Aug. 3, 1857.

J. F. Richardson, Superintendent Telegraph Eastern Division C.P.R., Montreal, born at Granby, Que., Aug. 23, 1861.

W. G. Ross, Managing Director Montreal St. Ry., Montreal, born there, Aug. 6, 1873.

W. Le B. Ross, Local Treasurer G.T. Pacific Ry., Winnipeg, born at Ottawa, Ont., Aug. 9, 1868.

F. C. Salter, European Traffic Manager G.T.R., and Canadian Ex. Co., London, Eng., born at Sarnia, Ont., Aug. 31, 1863.

C. R. Scoles, General Manager Atlantic and Lake Superior Ry., New Carlisle, Que., born at Grantham, Lincoln, Eng., Aug. 27, 1856.

W. Stitt, General Passenger Agent C.P.R. Eastern Lines, Montreal, born in Kircudbrightshire, Scotland, Aug. 3, 1855.

J. F. Sweeting, Industrial Agent C.P.R. Western Lines, Winnipeg, born at Worthing, Eng., Aug. 20, 1872.

W. F. Taylor, General Storekeeper I.C.R., Moncton, N.B., born at Hillsboro, N.B., Aug. 20, 1855.

W. B. Way, Assistant Superintendent C.P.R., Chapleau, Ont., born at Bowmanville, Ont., Aug. 22, 1867.

Correction.—The birthday of Geo. Collins, General Manager Central Ontario Ry., Trenton, Ont., was incorrectly stated in our last issue. He was born at Kingston, Ont., July 20, 1860.

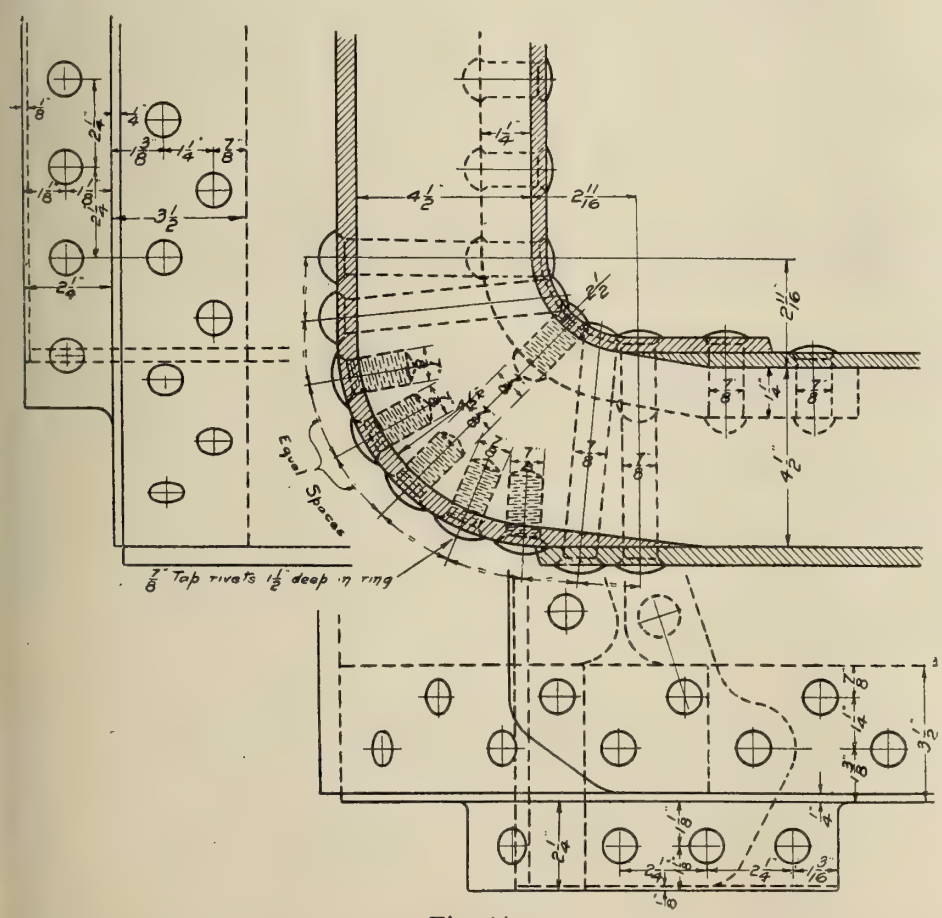

Fig. 11.

Intercolonial Ry. Branch Lines.—During his recent trip to the Maritime provinces, from which he returned to Ottawa, July 4, the Deputy Minister of Railways inspected a number of the branch lines which it is proposed to take over under the provisions of the act passed last year. The lines inspected were the Caraquet Ry., and its extension the Gulf Shore Ry.; the Kent Northern Ry.; the Hampton and St. Martins Ry.; the Elgin and Havelock Ry.; the Buctouche and Moncton Ry.; the Cumberland Ry. and Coal Co.'s line, and the Cape Breton Ry. The information collected is being considered by the members of the Government Railways Managing Board, and a report with recommendations will be prepared.

A. R. Creelman, K.C., General Counsel C.P.R., sailed from Quebec early in July for England, accompanied by his two daughters and Miss Helen McNicoll.

Galena-Signal Oil Company

Franklin, Pa., and Toronto, Ont.

Sole manufacturers of the celebrated GALENA COACH, ENGINE and CAR OILS, and SIBLEY'S PERFECTION VALVE and SIGNAL OILS.

GUARANTEE COST per thousand miles for from one to five years, when conditions warrant it.

Maintain EXPERT DEPARTMENT, which is an organization of skilled railway mechanics of wide and varied experience. Services of Experts furnished free of charge to patrons interested in the economical use of oils.

STREET RAILWAY LUBRICATION A SPECIALTY

Galena Railway Safety Oil

Made especially for use in Headlights, Cab, Classification and Tail-lights, and for Switch and Semaphore Lamps. Burns equally well with the long time as with the one day burner, with or without chimney, as the burner requires.

Is pure water white in color; high fire test; low cold test, and splendid gravity.

Please write to home office for further particulars.

CHARLES MILLER,

PRESIDENT

Canadian Northern Ry. Earnings, Etc.

Gross earnings, working expenses, net profits, increases or decreases from 1908-09, from July 1, 1909:

	Earnings.	Expenses.	Net Earnings.	Net Increase or Decrease.
July	$ 843,500	$613,900	$229,600	$ 26,700+
Aug.	807,100	602,700	204,400	18,300+
Sept.	1,076,800	765,300	311,500	60,400+
Oct.	1,384,200	903,500	480,700	60,600+

Inc.	$16,418,505.55	$6,363,613.35	$10,054,892.20	.....

Approximate gross earnings for June, $8,404,000, and for two weeks ended July 14, $3,950,000, against $6,354,000 and $3.232,000 for same periods 1909.

DULUTH, SOUTH SHORE AND ATLANTIC RY.—Operating revenue for May, $298,112.11; expenses $223,999.76; net revenue $74,112.35, against $246,847.24 operating revenue; $177,-066.90 expenses; $69,780.34 net revenue for May, 1909. Aggregate operating revenue for 11 months ended May 31, $2,999,166.48; expenses $2,065,618.67; net revenue $933,547.81, against $2,449,854.05 aggregate operating revenue; $1,774,649.66 expenses; $675,204.39 net revenue for same period 1908-09. Approximate gross earnings for June, $301,887, and for two weeks ended July 14, $132,889, against $280,151 and $131,771 for same periods 1909.

MINERAL RANGE RD.—Operating revenue for May, $63,899.54; expenses $66,424.64; deficit $2,525.10, against $66,119.32 operating revenue; $61,464.71 expenses; $4,654.61 net revenue for May, 1909. Aggregate operating revenue for 11 months ended May 31, $763,762.09; expenses $680,973.68; net revenue $82,788.41, against $755,806.46 aggregate operating revenue; $635,-909.21 expenses; $119,897.25 net revenue for same period 1908-09. Approximate gross earnings for June, $65,278, and for two weeks ended July 14, $24,471, against $66,026 and $31,441 for same periods 1909.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RY.—Operating revenue for May, $1,196,049.50; expenses and taxes $794,406.03; operating income $401,643.47, against $987,063.73 operating revenue; $702,234.84 expenses and taxes; $284,-828.89 operating income for May, 1909. Aggregate operating revenue for 11 months ended May 31. $14,068,812.18; expenses and taxes $8,175,472.02; operating income $5,893,340.16, against $11.536,672.70 aggregate operating revenue; $7,301,110.60 expenses and taxes; $4,235,-562.10 operating income for same period 1908-09. Approximate earnings for June, $1,926.866, and for two weeks ended July 14, $902,191, against $1,636,189 and $798,037 for same periods 1909.

CHICAGO DIVISION.—Operating revenue for May, $798,060.82; expenses and taxes $566,774.84; operating income $231,285.98, against $611,-977.76 operating revenue; $476,571.01 expenses and taxes; $135,406.75 operating income for May, 1909. Aggregate operating revenue for 11 months ended May 31, $8,132,662.84; expenses and taxes $5,680.835.93; operating income $2,451,826.91, against $6,902,391.73 aggregate operating revenue; $5,012,404.50 expenses and taxes; $1,889,987.23 operating income for same period 1908-09.

Grand Trunk Ry. Earnings, Expenses, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T. Western Ry., and D.G.H. and M. Ry., separately, for Apr., as compared with Apr., 1909:—

GRAND TRUNK RAILWAY.

	1910.	1909.
Earnings	$2,856,200	$2,481,600
Expenses	1,827,600	1,554,700
Net earnings	$1,028,600	$926,900

CANADA ATLANTIC RAILWAY.

Earnings	$176.600	$154,600
Expenses	157,500	135,900
Net earnings	$19,100	$18,700

GRAND TRUNK WESTERN RAILWAY.

Earnings	$533,000	$461,300
Expenses	445,100	331,100
Net earnings	$87,900	$130,200

DETROIT, GRAND HAVEN AND MILWAUKEE RY..

Earnings	$165,900	$142,200
Expenses	151,600	114,300
Net earnings	$14,300	$27,900

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to June 30:

	1910.	1909.	Inc.
Grand Trunk	£3,318,809	£2,864,776	£454,033
Canada Atlantic.	194,243	166,093	28,150
G. T. Western..	642,384	553,860	88,524
D.G.H. & M.	195,843	160,325	35,518
Totals	£4,351,279	£3,745,054	£606,225

Approximate gross earnings for June, $3,965,-062, and for two weeks ended July 14, $1,800,-407, against $3,465,054 and $1,558,155 for same periods 1909.

A Railway to Hudson Bay.

We are officially advised that the bridge which is to be erected across the Saskatchewan River at Le Pas, Sask., will be of the through Pratt truss type. consisting of four fixed spans of 147 ft. each, and one swing span of 262 ft. It is designed to comply with the Dominion Government specifications for heavy class loading, and provision is also made for carrying a highway on cantilever brackets. The abutments and piers are to be of concrete. The depth of water in the river at the point of crossing is about 20 ft. at low water level, with a flood rise of 20 ft. above that level. The river bottom is of boulders and clay.

An Ottawa dispatch, July 6, says a contract has been given for the superstructure and that the work will be completed this year, in order that work may be started on the railway in the spring.

Reports reaching Ottawa July 12, from the survey parties in the field state that a line with a maximum gradient of 0.4% has been located, which is rather better than it was thought would be obtained. The new route is to the south of Nelson River, which will obviate the construction of a bridge across it. The further reports also strongly favor the settlement of Port Nelson as the terminal on Hudson Bay, but this will not be finally decided upon until after the return of the hydrographic survey parties. These left Halifax July 2 on board the s.s Halifax, and on the schooner Chrissie G. Thomey, which sailed about a week previously. The Stanley will pick the schooner up and tow her to the Nelson River, in the vicinity of which she will cruise during the summer, while the Stanley will return to Fort Churchill, and make surveys in the deeper channels. (July, pg. 535.)

Quebec Railway Acts.—The acts of the Province of Quebec, relating to railways, the taxes payable by railway companies, and to the repayments of railway subsidies, taken from the Revised Statutes of Quebec, 1909, with a table showing the subsidies of all kinds which have been granted and paid on account of provincial railways, have been printed in both English and French in the same volume, having been compiled by J. A. Lefebvre, Secretary of the Railway Branch of the Department of Public Works and Labor, Quebec. The book is for sale by the compiler at $2.

A Graphical Record for Road Tests.

By G. I. Evans, Chief Draftsman, Locomotive Department, C.P.R., Montreal.

A great many railways, from time to time, test some of the numerous devices put on the market for use on locomotives and cars. Such devices are generally not amenable to laboratory tests, and must be put into actual service before any idea can be obtained as to their usefulness, and, as one or more may be applied on different locomotives running on different divisions of a railway, and may be in service any length of time from one to 12 months or more, and, as results are noted and reported by master mechanics and other operating officials, considerable correspondence accumulates before any definite conclusions may be arrived at.

Given a sufficient number of such tests, a man will spend much more of his time than he can spare in wading through files of correspondence, trying to get an idea how matters stand, and having just this condition, the writer some time ago devised the combined record and chart which is shown on page 619, as a convenient way for following up road tests. The record is kept on letter size cards (8⅛ in. by 10¼ in.) outlined as shown, and printed on both sides. These cards are filed apart from the correspondence, consecutively, in a vertical file, and as they take up but small space, a large number can be retained in the file, forming a permanent record of all tests made. The correspondence file, which is bulky, is regularly weeded out, and all closed tests are removed to the storage file.

The first portion of the card gives a complete record of the application of the device, when reports are to be sent in, and to whom the final report is to be submitted, while the chart shows at a glance how these instructions are being carried out, and what results are being obtained. The chart is divided into two main horizontal sections, the one above the heavy line is for reports favorable to the device under test, and the lower for those unfavorable; each of these main divisions is again subdivided into three sections, each of which represents a degree of excellence or unsuitableness as compared with some standard which has been previously assumed, thus, a report may be received saying that a certain device is giving as satisfactory service as the one which it is intended to supersede. This would naturally be a no. 1, unfavorable, but if the report had shown that the performance was slightly better than the standard, it would be a no. 2 favorable, etc. Unfavorable reports are recorded in a similar manner, slightly inferior to the standard constituting a no. 1 unfavorable, etc. When entering the report a dot is made opposite the month in such a position as to represent approximately the date received and the curve is drawn through these points, a letter representing the division is placed close to the dot showing from where the report came. By noticing whether the dates on which the reports are received correspond with the dates on which they are expected, a check can be kept on who is behind with reports. On the back of the card is a short summary of each report received and finally the date on which the test was closed and the recommendations made as to the advisability of adopting the device.—American Engineer and Railroad Journal.

The Railway Mail Clerks' Association at its recent convention in Kansas City, Mo., adopted a resolution asking the Government to prohibit railways from using wooden mail cars between locomotives and steel cars, or between steel cars.

RECORD OF TEST NO. 50 ON Piston Rod Lubricator

Applied to engine 1191 . Eastern Division, Oct. 10 1909 ; Reports expected every two weeks

" " 866 " Division, " 30 1909 ; Reports expected " "

" " _____ . _____ " _____ 19 _____ , Reports expected _____

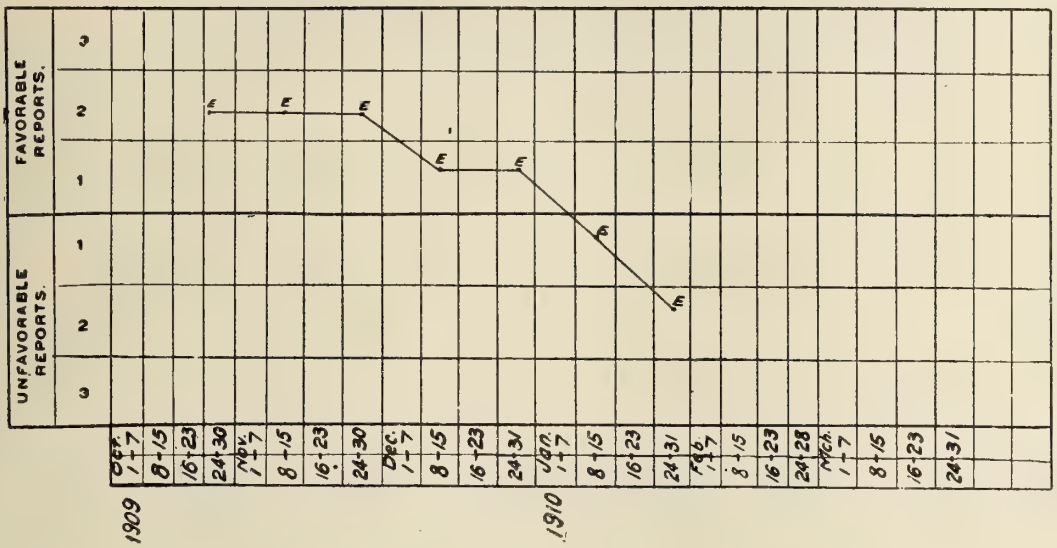
" " _____ . _____ " _____ 19 _____ ; Reports expected _____

" " _____ . _____ " _____ 19 _____ , Reports expected _____

" " _____ . _____ " _____ 19 _____ . Reports expected _____

Authority for test Supt. Motive Power, letter Oct. 1st 1909 Final report to be sent to Asst. to Vice President & Supt. Motive Power

Remarks as to application This lubricator is intended to oil the piston rods and works as a displacement lubricator when throttle is open, and as a syphon oil cup when throttle is closed. It must be shut off when engine is standing.



Face of card for keeping a graphical record of road tests.

SUMMARY OF REPORTS.

Oct 25th lubricator on 1191 oiling rod satisfactorily, engineer reports more satisfactory than swabs

Nov. 12th lubricators on 1191 & 866 satisfactory, same condition as previous reports

" 27th " " " " " " " " " " "

Dec. 12th considerable oil being used

" 28th " " " "

Jan. 10th entirely too much oil being used, when engine is drifting and cup is working as syphon all oil is drawn out in a short distance

Jan 28th lubricator becomes inoperative in cold weather owing to fine feed which is necessary

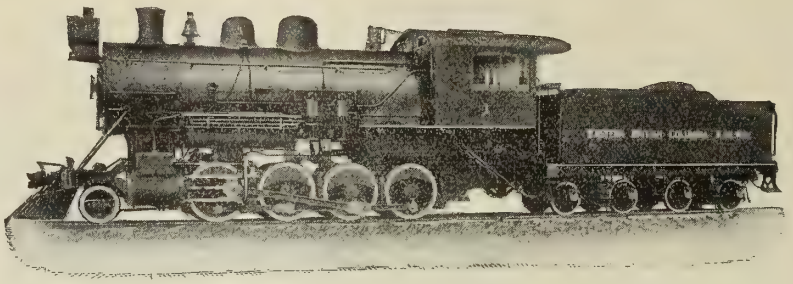
RECOMMENDATIONS.

TEST CLOSED Feb. 1. 1910 RESULT Owing to construction of lubricator it was difficult to apply to existing cylinder heads, it used excessive amounts of oil and froze up in cold weather.

Papers filed in Test Fyle, T 50.

Reverse of card for keeping a graphical record of road tests.

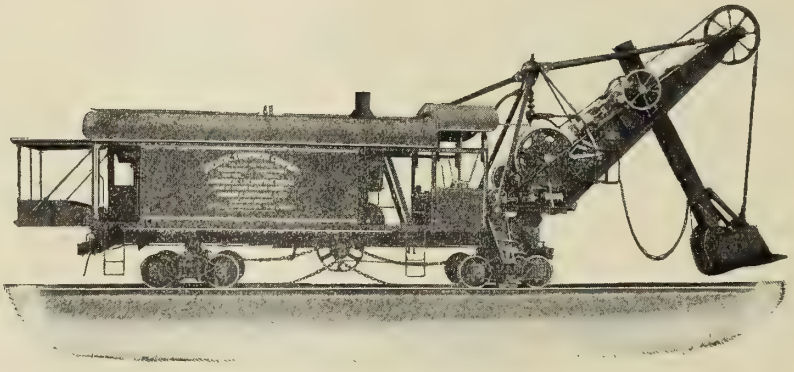
LOCOMOTIVES FOR ALL CLASSES OF SERVICE



Consolidation Type Freight Locomotive, Built for Eastern British Columbia Railway.

Total weight of engine in working order, 186,310 pounds. Weight on driving wheels, 166,100 pounds. Diameter of driving wheels, 51 inches. Boiler pressure, 210 pounds. Cylinders, 20 x 28 inches. Maximum tractive power, 39,200 pounds.

ATLANTIC STEAM SHOVEL



Direct wire rope hoist with but one sheave, instead of chain hoist with from five to seven sheaves, reduces delays and loss of time due to breakdowns, increases the efficiency of the engines, and reduces repair bills as well as fuel consumption.

Finished, interchangeable spare parts always on hand at works.

MONTREAL LOCOMOTIVE WORKS, LIMITED

BANK OF OTTAWA BUILDING, MONTREAL, CANADA

C.P.R. Betterments, Construction, Etc.

St. John, N.B.—D. McNicoll, Vice President, had a conference with the city aldermen at St. John, N.B., July 7, with respect to the transfer of the west-side slip. He stated that the company desired the west-side slip, believing it would be a valuable asset in the development of a business, the limits of which were as yet unknown. There was ample room for all kinds of developments on the west side, and the company was not therefore troubling about the problem of getting to Courtenay Bay. In the course of an interview, he was asked if the taking over of the Dominion Atlantic Ry., meant that Halifax would be favored as to the C.P.R. ocean steamship business to the detriment of St. John and replied that St. John people seemed to be very suspicious; why should St. John be jealous of Halifax, or Halifax of St. John?

Lachine Bridge.—A contract is reported to have been let to the Foundation Co., Montreal, for the enlargement of the piers which carry the present bridge over the St. Lawrence at Lachine, so that they will be large enough to carry a second track, and to construct two additional piers. Another report states that a contract has been placed in the U. S. for 10,000 tons of structural steel for the erection of the superstructure.

We are officially advised that it is proposed to extend the masonry piers down stream to provide for an additional track. The spans in general will be of the same length as at present, except that the four northerly truss spans will be shortened from 240 to 120 ft., and four additional piers constructed. An order for the structural steel has been placed with the Dominion Bridge Co., Montreal.

Hull Station.—The Hull, Que., Board of Trade is representing to the company the necessity for the provision of a larger freight and passenger station there.

Georgian Bay and Seaboard Ry.—A mortgage dated Jan. 1, 1910 made between the G.B. and S. Ry., the Royal Trust Co., and the C.P.R., has been deposited with the Secretary of State at Ottawa.

Toronto City Ticket Office.—The company has leased the building, 3 King St. East, adjoining its present city offices, and it is reported that a large office building will be erected on the site of the two properties.

North Toronto Tracks.—Objection has been made by property owners at different points along the route of the old Ontario and Quebec Ry. through North Toronto, to the plan of the viaduct which the C.P.R. proposes to construct in order to do away with level crossings. Cottingham St. property owners ask that that street be depressed to run into the Yonge St. subway, as Dufferin St. runs into the Queen St. subway, so that the residents of the district served will not have to take a circuitous route to reach the cars. Avenue Road property owners also protest against the company's plans, and ask that alternative plans for depressing the present street grades at Avenue Road and Yonge St. be prepared and considered.

North Parkdale Station.—The new station building at North Parkdale, now being built, will be one story brick walls on a concrete founda tion, with slate roof. It will have a frontage along the track of 100 ft. 8 in., with a depth of 32 ft. At each end of the building there will be a covered area 28 by 25 ft. The waiting rooms will be 59 ft. by 31 ft. 4 ins. from which is taken a space 16 by 18½ ft. for the office. Adjoining the waiting room is a baggage room 20 by 30 ft., and next to that an express room of similar dimensions. Provision is made for lavatory accommodation off the waiting room. The waiting room and office will be 15 ft high, finished in burlap to a height of 5 ft., and plastered above that height. Provision is made for a basement under the entire building, but at present the basement will only be provided under the baggage and express rooms. The contractors are Wells and Gray, Toronto.

St. Mary's and Western Ontario Ry.—An appeal to the Divisional Court at Toronto against the recent decision of Chief Justice Mulock. to quash the Blanshard tp. by-law granting a subsidy of $20,000 to the company, was made, and judgment delivered June 30, under which an order has been made quashing the by-law, with costs against the municipality. This is the third time the bylaw has been quashed, on some ground or other

Kaministikwia River Bridge.—Tenders were received to July 15 for the construction of piers, abutments and pedestals for the new bridge over the Kaministikwia River at Fort William, Ont. It will be approached on wooden trestles, on a gradient of 1 in 20, and the bridge proper will be 330 ft. long, of which the actual opening of the bascule span will be 180 ft., with 40 ft. for the swing. There are to be in all, 13 pieces of concrete work to be put in position for abutments, piers and pedestals, of which six sets will be for the portion of the bridge over the river. Piers 8, 9 and 10 are for the bascule span, and of these piers 8 and 9 will be 72½ ft by 14 ft. and 24 ft above foundations, while pier 10 will be 45 ft. 10½ in., by 14 ft. 4½ in., and 28½ ft. in height above foundations. The swing part of the span will be carried on piers 8 and 9. The pedestals for the other spans will be 5½ ft. square. The substructure will be of concrete, piles to be used in the foundations where necessary. The superstructure will be of steel, carried on steel pillars, and will have a total length of 330 ft. between the trestle approaches.

McPhillips St. Subway, Winnipeg.—Construction is being proceeded with at a satisfactory rate with the building of subways under the C.P.R. tracks at this point, Winnipeg. There are five tracks crossing the street, and these are connected to another track by a switch. About onehalf of the excavation, estimated at 35,000 cubic yards, has been removed since May 1. The steel superstructure will be carried on 13 concrete pedestals. The excavation runs back to Logan Ave., and for a corresponding distance on the north side of the subway. It is expected to have the work completed by the fall. John Gunn & Sons have the contract.

Bridge at Brown and Brant St., Winnipeg.—A contract has been let by the city council for the steel superstructure of a bridge across the C.P.R. tracks at Brown and Brant streets, Winnipeg, at a cost of $205,160.

Winnipeg-Brandon Second Track.—In connection with the building of a second track between Portage la Prairie and Brandon, Man., we have been officially advised that J. G. Hargrave and Co., having completed the grading for the second track from Winnipeg to Portage la Prairie, have been allowed to continue grading on towards Brandon. The plans for the present season only included the work, including track laying, to Portage la Prairie.

Branch Line from Bassano, Alta.—Press reports state that engineers have made surveys for a line to be run from Bassano, Alta., north-easterly to a junction with the Didsbury and Kininvie line in the irrigation district.

Calgary Improvements.—The re-arrangement of the yard accommodation at East Calgary, Alta., will provide storage for 1,000 additional freight cars. The yards will include a hump distributing track, and will be available in the fall. An 18-stall roundhouse, and a new machine shop are also under construction. The freight warehouse accommodation is being doubled, and the enlarged station is expected to be ready for occupation in Nov.

Strathcona-Edmonton Bridge.—Tenders were received to July 20 for the erection of the substructure of the bridge across the North Saskatchewan River at Edmonton, Alta. It will have a total length of 2687 ft. from face to face of ballast walls. It will be approached from the Strathcona end on a curve of 6 deg. 7 min., near Legal Ave., and cross Soullier and Angier Aves., and will be carried on 29 sets of pedestals to the Edmonton shore, where it will cross the Canadian Northern Ry., Sackatchewan Ave., Hardisty Ave., McKay Ave., and Victoria Ave., the Edmonton approach being on a 2 deg. curve, a total of 1888 ft., 7 in., being on a tangent. The approaches to the bridge will provide for the C.P.R. tracks, with one track for the street railway on either side, a 23 ft., roadway with an 8 ft. sidewalk on either side. About half way between Soullier and Angier avenues the roadway and sidewalks will be carried to a lower level. and carried across the river beneath the floor of the bridge carrying the steam and street railway tracks, near Saskatchewan Ave. Concrete pedestals will be built in groups of four, with foundations carried to hard pan, piles to be used only if necessary, to carry the superstructure over the land. Upon these pedestals will be erected steel work of the same character as that used in the Belly River bridge, to carry the double deck, rail level at the highest point being 140 ft. above ground. This portion of the bridge is on the Strathcona side. and the superstructure will consist of seven spans of 49 ft. 5 in., alternating with six spans of 97 ft. 8 in., and one of 99 ft. exclusive of the approach spans. The river will be crossed on three spans, carried on concrete piers. two of 291 ft., 10½ in, and one of 293 ft. 3 in. The foundations of the four piers carrying these spans are to be carried down to a solid foundation, concrete piles to be used if necessary, and are to be constructed so as to carry nine tons to the square foot. The two centre piers are to be protected against ice, etc., in the usual way. Two spans on the Edmonton side on pedestals will carry the bridge over the Hudson Bay reserve and the C.N.R. right of way. The height of the floor of the railway deck will be 14 ft. clear from the roadway, which will be 23 ft. clear, the sidewalks being carried on a bracket work. The railway track deck, will be 35 ft. wide.

Kootenay Central Ry.—We are officially advised that a contract has been let to Foley, Welch and Stewart, for the construction of the first 25 miles of this projected line from Wardner to near Fort Steele, B.C.

Beavermouth to Revelstoke, B.C.—C.P.R. engineers started out from Beavermouth recently to follow the Columbia River around the Big Bend to Revelstoke, B.C., and press reports state that the object is to secure a route for a line which will connect up with the Kootenay Central Ry.

Kamloops Improvements.—Work has been started on the re-arrangement of the yard accommodation at Kamloops, B.C. A new machine shop and roundhouse is to be constructed, and the existing buildings are to be removed. McDiarmid and Co., Winnipeg, are the contractors.

Phœnix Spur Tracks, Etc.—Large gangs are reported to be employed in raising the 10 miles of track between Phœnix and Eholt and in laying it with

80-lb. steel. The spur tracks to the Granby, Snowshoe, Jackpot and Denoro mines are also being improved.

Vancouver to Port Moody, B.C.—A press report says the C.P.R. is starting to build a second track from Vancouver to Port Moody, B.C.

Esquimalt and Nanaimo Ry.—A press dispatch says it has been announced in Victoria, B.C., that a branch line will be constructed forthwith from Duncan to Cowichan, Vancouver Island. This announcement followed the reported sale to the American Finance and Securities Co., of 50,000 acres of timber lands round Cowichan Lake, to open up which the company agreed to build a 25-mile line. (July, pg. 533.)

Great Northern Ry. Lines in Canada.

Midland Ry. of Manitoba.—It is said to have been decided for the present to abandon the intention to build a line from Emerson, at the International boundary, into Winnipeg, an arrangement having been made for running rights over the Canadian Northern Ry. between these two points. The M.R. of M. will build a line from Fort Whyte Jct., at the south-west corner of the city limits, to the freight terminals on Ross St. This line, which will be used for freight purposes only, the passenger trains being run to the Fort Garry union station, will run parallel with the C.P.R. Gretna line from Fort Whyte, on the east side, to Elgin Ave., where it will turn eastward to Ross St. The tenants of the property on Nena St. were all required to vacate by July 15, in order that the different premises might be pulled down. J. Fisher K.C., the company's solicitor, recently said an engineer and party were preparing plans and as soon as they are sufficiently matured work would be started. The first work to be taken in hand will be the subways.

Offices have been opened in the Oris Block, Nena St., with A. Jackson, of the G. N. Ry. engineering staff, St. Paul, Minn., in charge.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The amended plan and profile and book of reference of the company's proposed line from the east line of sec. 15, tp. 16, to the west line of tp. 26, New Westminster district, 18.3 miles, certified by the Board of Railway Commissioners, has been deposited in the New Westminster city land registry office.

Application is about to be made to the Board of Railway Commissioners for authority to build a spur track to the Vancouver-Prince Rupert Meat Co.'s plant at Sapperton, B.C., and a connection with the C.P.R., as shown on plans deposited in the Land Registry office at New Westminster.

The construction of a bridge at Broadway East, Vancouver, is recommended by Assistant Chief Engineer Stewart, in connection with the False Creek reclamation and development plans. The bylaw confirming the agreement as to this property, referred to in our last issue, was voted on June 28, and was carried by a vote of 2717 against 657, or 692 more than necessary. A. E. Howard, on behalf of the company, said steps would be at once taken to buy out or expropriate the other owners of riparian rights around the head of the creek, and the company would then go ahead, file plans, and start work immediately on their approval. The work would go ahead fully as soon as the city had secured from the Dominion and Provincial Governments a relinquishment of their rights over the tide flats in the creek.

Two new tracks for passenger traffic and two for freight are being added to the company's present yard terminals in Vancouver. (July, pg. 537.)

Cost of Operating Railways.

The accompanying diagram supplied by a railway official, shows how the gross earnings of Canadian and United States railways for the year ended June 30, 1909, were spent. The figures in the inner circle are for Canadian railways, those in the outer circle for U.S. railways. The dotted lines show the extent to which the cost of labor would ultimately be increased and its consequent effect upon betterments and finances of the railways, on the basis of the recent awards of the boards of concilliation in the trainmen's disputes with the companies. The official referred to has also supplied the following memorandum:

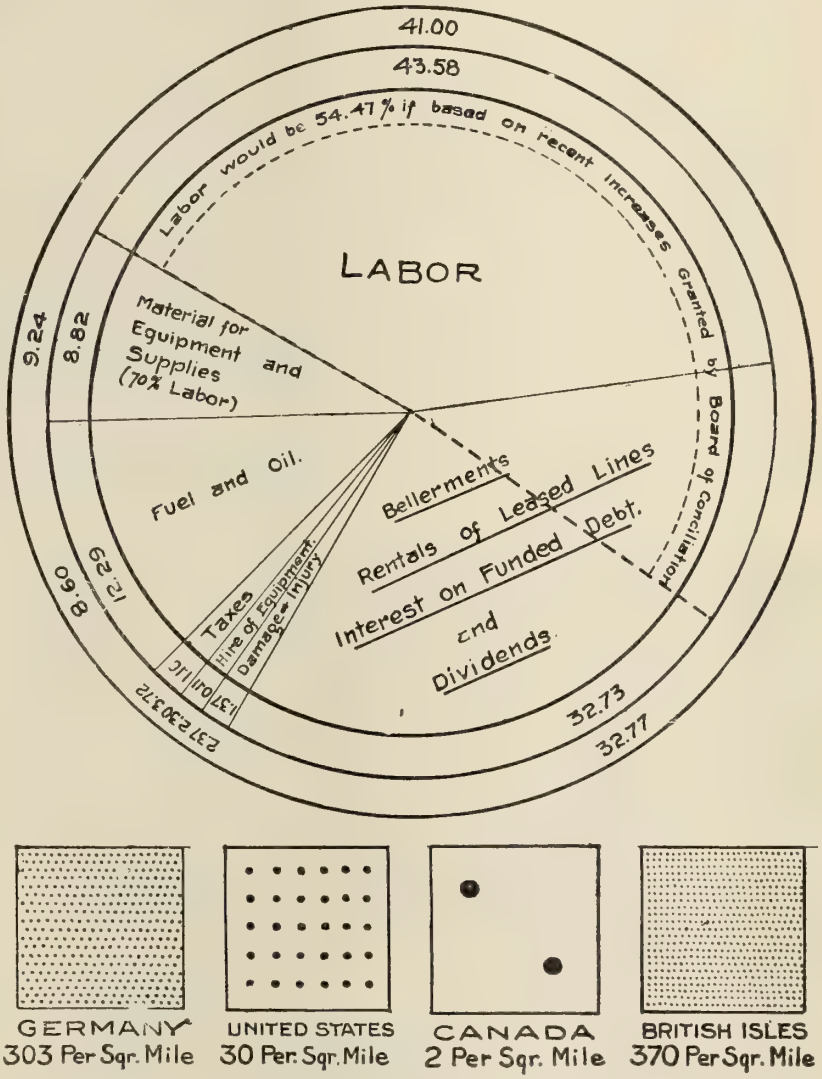
"The diagram should prove interesting to the general public, to railway managers and employes. It should be of some help also to conscientious statesmen who are often asked to throw the harpoon into the railways before the latest wound has healed. It will surprise some people to learn that according to Government reports, 43.58% of the gross earnings of Canadian railways goes to labor direct, as compared with 41% paid on the same account by United States roads. This is largely due to the climatic conditions and to the lower earning power of the Canadian railways. Moreover, U.S. roads, covering about the same territory as Canadian roads cover, operate through a settled country, serving 87,000,000 people, while Canadian roads have only 7,000,000 to serve.

"In addition to the 43% of gross paid for labor, 75% of the money paid on account of fuel and oil, representing 9.7% of gross earnings, goes to the men who mine coal and boil oil. This brings the amount paid to labor directly and indirectly up to 52.65% of the earnings. The cost of upkeep, material, equipment and supplies eats up 8.82% of the gross earnings, 6.02% of which goes to the men who work with their heads and hands to produce these items and articles. So we find that the railway pays out for labor close to 60% of every dollar taken in.

"The fact that Canadian railways pay considerably more of each dollar on this account than is paid by their U.S. competitors refutes the argument that U.S. manufactures come to Canada in order to secure cheaper labor. Naturally our winters being longer and harder and our days shorter than the winters and days are farther south our railways get less out of the day's work.

"Another point against our railways is that nearly every U.S. line running east and west passes through or near some vast coal field. Canadian roads have not only to haul their coal great distances, but in addition have to pay a heavy duty on every ton of coal they import, a serious handicap.

"The tendency in Canada, as in the States for the past decade, has been to raise taxes and at the same time reduce the rates, to reduce the earning power and increase the fixed charges. In the meantime during the past 10 years the wages of railway employes in Canada have been increased by nearly 30%. So all things considered Canadian rail-



Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results

The latest Russel Machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending the skidding sheaves. They are hung from a vertically hinged jib or triangle the outer end of which is guyed by two lines, one on each side, which are power tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with either skidding or loading.

The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from the tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks.

Built for 2 or 4 lines with stiff or swinging boom. Constructed entirely of steel, except loading boom.

IS WITHOUT QUESTION THE STRONGEST AND FASTEST MACHINE OF THE DAY

LOGGING CARS AND DUMP CARS

RUSSEL WHEEL & FOUNDRY CO.

Detroit, Mich., U.S.A.

ways make a splendid showing from most any viewpoint, and they unquestionably have in many respects a harder row to hoe than have the U.S. lines, with whom for transcontinental traffic they must compete."

Algoma Central & Hudson Bay Railway.

The following are extracts from a circular issued by the directors to the Lake Superior Corporation's shareholders, recently:—

The most vital and pressing remaining object now sought to be attained is the completion of the A.C. & H.B. Ry. to a connection with the C.P.R. main line, making a total mileage of 225 miles, of which at present only 90 miles are in operation. In its present incomplete condition, implying as it does the isolation of the steel plant from its ore supply during five months of the year, the earnings of the railway company are small and stationary. Through its completion the railway would secure many advantages. The railway revenues, based on careful estimates made by your officers and the board, would much more than suffice to cover the interest on cost of construction. Canadian iron ore of proved quantity and quality will be made available, and, with the railway in operation, the ore can be delivered at Sault Ste. Marie at a cost considerably below the price now being paid for similar ore from the U.S. The opening up of the timber lands will also naturally be of value to the lumber and pulp industries. A valuable land grant of 1,665,000 acres under the Ontario Government land grant will be secured, including timber and mineral lands of great potential value, and to secure which it is a Government condition that the railway be completed by Dec. 31, 1911. This implies the necessity for immediate progress in construction, for which everything is in readiness.

Briefly stated, the plan for the completion of the construction of the railway, which has been unanimously approved by your directors, is as follows: The railway as it exists to-day is sold for the equivalent of $3,000,000 under the powers given in the first collateral trust mortgage of the Lake Superior Corporation and $3,000,000 bonds issued under that mortgage will be cancelled, thereby reducing the amount of the first mortgage collateral trust bonds of the Corporation outstanding to $7,000,000. The railway company will be re-capitalized as follows: 50-year 5% first mortage redeemable gold bonds (limited to $30,000 per mile of completed road), $6,750,000; five per cent. non-cumulative preferred stock, $5,000,000; common stock, $5,000,000. The proceeds of the sale of securities under the above capitalization together with the cash subsidies to be earned from the Dominion Government will give sufficient funds for the completion of the road. In consideration of a guarantee of the principal and interest of the $6,750,000 first mortgage bonds of the railway company by the Lake Superior Corporation, the latter will receive the whole of the $5,000,000 common stock and will hold $1,125,000 of the preferred stock for the benefit of the railway.

The directors are glad to have this opportunity of reporting that, so far as the affairs of the Corporation generally are concerned, most satisfactory progress is being made. The construction of the new furnace, merchant mills and coke ovens is proceeding rapidly, and, so far as can be seen, most of these plants will be entirely completed by the end of the year, whilst the estimated cost is not likely to be exceeded. The board has been especially desirous of placing the steel department in an independent position so far as its necessities in raw material are concerned, exploration for ore has been strenuously carried on for some time past and their efforts have already met with a large measure of success. It is confidently believed that when the railway extensions are completed the steel plant will be in an independent position both in regard to basic and bessemer ores. A permanent supply of limestone of exceptional quality and of very large extent has been secured on extremely favorable terms. Negotiations have practically been completed by which the Corporation will secure and control its own ore areas. Some of the smaller industries, which heretofore have been operated at a loss and have been a drain on the Corporation's resources, have been disposed of on satisfactory terms, to independent operators. Negotiations have been completed for the introduction of new industries to be established by parties with independent capital. The operations of the existing plants have been almost continuous; the reputation of the quality of rails has been maintained, and orders are on hand which will keep the steel plant fully occupied during the next six months, whilst the prospect for future business is excellent.

The A.C. & H.B.R. Co. issued a prospectus in England early in July of £770,000 five per cent. first mortgage 50 year gold bonds, being the approximate equivalent as part of exchange of $3,750,000, the balance of $3,000,000, out of a total issue of $6,750,000, having been taken for issue in France. The prospectus states that the bonds will be a specific first mortgage upon the company's railways terminals and docks, and a general floating charge upon the rest of the assets and undertaking, present and future, including the lands to which the company will become entitled from the Ontario Government.

The company is authorized to construct a line from Sault Ste. Marie, Ont., to the C.P.R., including a branch from Michipicoten Harbor to the main line, and from the C.P.R. north to James Bay, intersecting the National Transcontinental Ry. under construction, and the projected line of the Canadian Northern Ry. The Dominion has granted a cash subsidy of $6,400 a mile for the 225 miles from Sault Ste. Marie to the C.P.R. main line, including the Michipicoten Branch. The Province of Ontario has granted about 1,665,000 acres in respect of the 225 miles. These lands will be granted in freehold, and carry all minerals and all timber free of all charges, except the pine, upon which stumpage charges are to be paid. 1,439,300 acres of this land grant have been selected already by the company, and have been set aside by the Government.

The railway is already in operation for some 80 miles. The company owns extensive terminals and deep-water docks at Sault Ste. Marie, fully equipped for the rapid loading and unloading of ore, coal, steel rails, lumber, etc., and also owns the harbor at Michipicoten. The company owns and operates on the Great Lakes a freight steamship line with a tonnage (including a steamboat under construction) of 15,600 tons.

Part of the proceeds of the bonds will be used to pay for $3,000,000 bonds of the Lake Superior Corporation which have been cancelled, in order to absolutely free the Algoma Central Ry. Company from all encumbrances other than that of its own first mortgage bonds now being issued, and the balance of the proceeds, together with other available funds of the railway company, and the cash to be received by way of subsidies from the Dominion Government will be more than sufficient to cover the expenditure required for the completion and equipment of the road to the C.P.R. main line.

The net earnings from the 80 miles completed, and from the steamship line for the year to June 30, 1909, were £26,700. The net earnings of the 10 months of the present year show an increase of fully 50% over the same period last year. As soon as railway connection is made, the Algoma Steel Co. is prepared to take a minimum of 300,000 tons of iron ore per annum from the Magpie mines; and the railway company will also get the whole freight on the shipments of iron ore from the Helen mine amounting to at least 200,000 tons a year, so that the railway is assured 500,000 tons of freight per annum from these two mines alone.

The estimated gross earnings of the line for the first year after its completion to the C.P.R., taken on a conservative estimate are	£293,600
Less 70% operating expenses	£205,520
Estimated total net earnings	£88,080
Add estimated net earnings—steamship department	£15,000
Total estimated net earnings	£103,080

The amount required to pay the interest on the $6,750,000 of the company's first mortgage bonds is £67,500. No account has been taken in the above figures of any profit which may be derived from the lands, through the sale of timber, ore, or of the lands themselves.

Information as to construction on the A.C. & H.B.R. will be found under the head of Railway Development, on another page.

Ontario Railway and Municipal Board.—The annual report for 1909 issued recently, shows that 261 applications were made of which 183 were in form, and 78 informal. Of the formal applications 171 were heard and disposed of and 12 were carried over into 1910. Of the informal applications some were settled by correspondence, and others disposed of without a hearing. In about 20 cases the parties were referred to the Board of Railway Commissioners as the matter to be disposed of came under the Dominion law. The report gives details of the orders made, and a good deal of information as to railway and municipal matters in the province, especially in reference to the municipal control of public utilities.

One of the very few houses that was left standing after the fire which practically wiped out Campbellton, N.B., July 11, was that of Superintendent Price of the Intercolonial Ry. I.C.R. station and other buildings were burned, and a large quantity of rolling stock destroyed, the loss being put at upwards of $100,000.

The report of the Ontario Department of Public Works, which has just been issued, covers the ten months ended Oct. 31, 1909. To be of service to the public these reports should be issued more promptly, or at any rate be made accessible at the time they are presented to the Legislature. The report states that 260.23 miles of new railway were opened for traffic in the province during the 10 months, and that there was then a total of 8,660.42 miles of railways in operation within the province.

During May, 25 employes were killed and 39 injured, in the course of their work on Canadian railways. Of the fatalities, eight were due to being run over, five to collisions, four to falls, three to being caught between cars, two each to explosions and to derailments, and one to falling material, while of the other accidents, 11 were due to collisions, six to being caught between cars, five each to being run over and to falls, four to derailments, three to falling material, two to explosions, and one each to machinery, to flying material and to being struck by an object in passing.

ROCKFORD, ILL. CHICAGO, ILL.

RAILWAY DEVELOPMENT.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—The Royal Commission investigating the circumstances surrounding the granting of the charter to this company practically completed its work July 5. The report will be presented to the Legislature next session.

E. A. James, General Manager, stated in an interview July 6, that the capital received by the sale of the bonds was held in trust in the banks. The company would open negotiations with the new government as to the contract. He considered the project was a thoroughly practicable one.

The Edmonton Bulletin states that the failure of the A. & G.W.R. Co. to meet the first instalment of interest on the bonds, due last week, eliminates the company from the project. The Province of Alberta had to meet the obligations and did so. This leaves the province with $7,400,000 with which railway construction may be secured in what sections seem best. So far, the arrangement has cost the province $55,500.

Algoma Central and Hudson's Bay Ry.—Tenders were received to July 30 for 250,000 ties to be delivered on the main line between the crossing of the Montreal River and the Michipicoten River. Good progress is being made with the building of the connection between the Michipicoten branch at Hawk Lake Jct., and Hobon, Ont., on the C.P.R. transcontinental line. The work has been pretty well opened up, clearing gangs are making good progress and contractors are constructing their camps at various points. It is hoped to have 1,000 men at work by Sept. 1.

We are officially advised that 150,000 of these ties are to be used for the completion of the main line, the contract for which has been let to the O'Boyle Bros. Construction Co., and is now under way. Track laying from the north and south ends was expected to be started before the end of July. From the south end track will be laid through to the crossing of the Batchewana River, between which point and the Montreal River there are several structures to be built. The object is to push through to the Montreal River in order that the construction of that bridge may be got under way. Meanwhile, the track will be going down from the north, and it is hoped to have it reach the Montreal River by the time the bridge is completed, so that there will be no delay in construction. The other 100,000 ties will be used for the Hawk Lake-Hobon section. (July, pg. 547).

British Columbia and Alaska Ry.—A recent dispatch from Victoria, B.C., stated L. M. Rice, of Seattle, Wash., had returned from completing a reconnaissance survey for this company for a line from near Vancouver through Central British Columbia. (July, pg. 547).

Comox Ry. and Logging Co.—The plans for the route of this projected railway from Comox to Campbell River, Vancouver Island, were approved by the B.C. Government July 4. Part of the route belongs to the Comox and Campbell Lake Tramway Co., the rights of which the C.R. & L. Co. was authorized by its act of incorporation to acquire. (June, pg. 447).

Ha Ha Bay Ry.—We are advised that grading on the first 20 miles is expected to be completed by the middle of August, and the whole line from St. Alphonse to St. Jonquieres, 24 miles, by Sept. 15. It is expected to begin track laying by Aug. 1, and to have the line open for traffic Nov. 1.

We were advised July 11 that grading is expected to be completed at an early date, and that three miles of track have been laid. A cargo of steel rails was expected to be delivered by the end of July, and it is hoped to have the track laying on the whole line completed by Sept.

Halifax and Eastern Ry.—The provisions of the charter, issued under the terms of sec. 13, chap. 1, of the Nova Scotia Statutes of 1906, incorporating a company with this title, have been published in N.S. Royal Gazette. The incorporators are J. B. Bartram, Toronto; T. B. Fogg, Toledo, Ohio; G. H. Raw, S. Hirsch, London, Eng.; and the company is given power to build a line from the Intercolonial Ry. at Dartmouth to Guysboro, and Mulgrave; from New Glasgaw on the Intercolnial Ry. to the Dartmouth-Guysboro line; a branch from near Cross Roads, Country Harbor to the deep waters of Country Harbor, and such other branches and extensions as the Lieutenant-Governor-in-Council may approve, and to own any line of railway which may be acquired under the provisions of the charter. The company is authorized to build telegraph and telephone lines, to own steam and other vessels; to carry on an express business, and to contract with other railway and steamboat companies; and also to engage in other business as connected with the development of the country through which the line will pass. The company is granted a free right-of-way over Crown lands, and to take from Crown lands adjacent to the line any materials available and required for construction; has power to issue bonds for $20,000 a mile; is bound to grant traffic arrangements to the Government and other lines connecting with it; and the lines of the company, right-of-way, stations and other buildings are to be "forever free from taxation by any city, town or municipality, corporation or other similar authority, for any purposes whatsoever."

The contract calls for a start being made on construction by Sept. 1, and for the completion of the lines by Sept. 1, 1913. The main line from Dartmouth to Guysboro will be 164 miles long; the branch to New Glasgow, 40 miles, and that to Country Harbor 12 miles, a total of 216 miles. The construction is to be carried on under Government supervision, and the company is to pay for patrols, appointed by the Government for fire protection during construction. The contract gives the company permission to build a bridge across the narrows of Halifax harbor, so as to enable it to run its trains into Halifax. The Provincial Legislature has granted a subsidy of $6,400 a mile, and there is also available a Dominion subsidy of $3,200 a mile, increasing to $6,400 according to the cost of construction. The company has deposited $50,000 as security. The contract was signed on behalf of the company by J. B. Bartram, President; and G. E. Boak, Halifax, Secretary pro tem. The other officers and directors are: Vice President and General Manager, T. B. Fogg; S. Hirsch, and Duncan Cameron of Halifax, N.S. It is reported that a contract has been entered into with a construction company in London, Eng., for the building of the line, and that the company's representatives will, as soon as the location plans have been approved by the Government, proceed to let sub-contracts.

We were officially advised July 16 that sub-contracts are not likely to be let until late next autumn or the spring of 1911.

At a meeting of the Dartmouth town council, July 2, the question of locating the company's terminals in that town was discussed with D. Cameron and G. E. Boak. The latter informed that council that a free right-of-way had been secured in Halifax and Pictou counties, in addition to cash bonuses of $12,000. It was proposed to locate the company's terminals and machine shops in Dartmouth, and he read a letter from T. B. Fogg, V.P. and G.M., as to the land requirements. An area of 20 acres was required having a water frontage of from 1,200 to 1,500 ft.; and a site for a freight and passenger station situated near the ferry. Mr. Cameron said the company asked for a bonus of $50,000 preferably to providing free sites. The company's terminals in Dartmouth would be used by the Intercolonial Ry., and it would use that line to get out of Dartmouth.

The Dominion of Canada Trust Co. of London, Eng., which has been recently formed, is interested in the placing of the company's securities on the market. C. T. Part, (press reports, say he is director of Barclay & Co., bankers, London, but his name does not appear in the published list of directors) and S. Hirsch, sailed from Rimouski, June 30, after completing their business with the Government.

The same interests have acquired the Dickie lumber areas in Nova Scotia, covering altogether 464,000 acres, for the opening up of which the railway is to be constructed. The lumbering interests will be operated by the Eastern Canada Lumber Co. (July, pg. 547).

Howe Sound and Northern Ry.—A meeting of shareholders was held in Vancouver July 4, to pass a resolution authorizing the directors to borrow $4,200,000 at 4% and to issue debentures secured upon the assets, to be repaid in 30 years. The proceeds will be used for construction. (July, pg.. 547).

Hudson Bay and Pacific Ry.—A prospectus of the H.B. and P. Ry. and Development Co., has been issued from the office, 56 Moorgate St., London, Eng., signed by J. E. F. Greville, (Chairman); V. Williams, E. T. Pearce, J. Kerry, Colonel Jos. Harris, C.E.; J. Weston, of London. Eng., and C. Mannesmann, Ramscheld, Germany. The capital is £150,000 in £1 shares, which are being offered at a premium. It is stated that the company has secured the H.B. and P. Ry. charter subject to the reservation of a 44% interest. It is also stated that the H.B. and P. Ry. Co. which has a share capital of $8,000,000, is authorized to issue 4% gold bonds, guaranteed by the Dominion, both as to principal and interest, to the amount of $20,000 a mile; that it is entitled to a grant of 5,000 acres of land a mile, and to subsidies estimated at $6,000 a mile. The length of the lines authorized is 1,800 miles, and the prospectus states that the estimated cost of construction will be $15,000 a mile. The profits on the construction of the line are estimated at £14,560,000, of which the Development Co. is to receive 56% or £8,209,600, equal to £54 on each £1 share. The first section of the line to be constructed will, it is said, be from Fort Churchill via Pas Mission to Prince Albert, Sask., and thence to Edmonton, Alta., 700 miles, and on this section the prospectus says the 56% of profit coming to the Development Co. will be £3,010,000 or equal to a return of £20 per £1 share. A further statement is to the effect that "the financial requirements for the construction of the line have been arranged, and that considerable profits should be divided as the line is built."

Under the act incorporating the H.B. and P. Ry. Co., as amended it has power to issue $8,000,000 of common stock, and bonds for $20,000 a mile of line, but the Dominion Parliament has not yet authorized the Government to affix any guarantee to the bonds. The Dominion Parliament has not authorized the granting of any cash subsidy for the construction of such a line, and the only land grant authorized for such a line is

that made by sec. 7 of the Dominion Lands Amendment Act, chap. 25, of the first session of 1884. This section authorized the Government to grant 6,400 miles of land for each mile of a railway in Manitoba, and 12,800 acres of land for each mile from the northern boundary of Manitoba to Hudson Bay, in aid of the construction of a line from the C.P.R. to Hudson Bay. No company in particular being named. (July, pg. 547).

Intercolonial Ry.—The exact route of the deviation of the I.C.R. into Chatham, N.B., was finally decided upon during a recent visit of the Minister of Railways. The contractors, Morrison & Clarke, had 60 men working on the route near Nelson, July 1, and expected to have gangs at work at both ends of the deviation two weeks thereafter. (July, pg. 549).

Kettle Valley Lines.—The arbitrators appointed to fix the value of the grade built between Midway and Rock Creek, B.C., by the old Midway and Vernon Ry., which is to be taken over by the Kettle Valley Lines as a part of the new line to the Fraser River, have been at work since the end of June. The board consists of R. F. Green, Victoria, B.C., appointed by the Provincial Government; L. M. Rice, Seattle, Wash., appointed by the K.V. Lines, and Judge Form, Nelson, B.C., chairman. J. J. Warren, of Toronto, President, K.V.L., A. McCulloch, and H. B. Smith, the two latter being engineers, attended at the inspection of the grades. The amount fixed by the arbitrators will be paid by the K.V.L. to the creditors of the old Midway and Vernon Ry., who, to quote sec. 3 of the act. "did work or supplied materials, including goods and merchandise in connection with the actual building of said grade." This excludes from the list of creditors to be paid those who did survey work, or provided supplies for the survey camps between Rock Creek and Vernon.

J. J. Warren, President, who is the Manager of the Trusts and Guarantee Co. in Toronto, stated in a recent interview in Vancouver, that construction on the extensions would be commenced early in July, and that it was expected to have the line completed from Midway to Merritt within three years. He made a further statement to the Vernon town council, June 25, to the effect that a construction gang would be set to work in the city as soon as arrangements could be made for lake shore frontage and a right of way. The right of way, and a site for a yard and roundhouse would be purchased, but he asked the council to provide 1,100 ft. of lake shore frontage for a station. The company proposed to build a wharf 900 ft. long there, at a cost of about $50,000. The principal division point on the line would be at Penticton.

Arrangements are being made for starting construction on the line, and contractor's outfits were being unloaded at Midway, July 1. The work between Midway and Vernon will be heavy, as the route traverses two important summits, the Kettle River-Okanagan divide, and that of the Okanagan-Coldwater. In the case of the former the maximum gradient of 1.5% is encountered for a short distance, and in the latter the maximum gradient is 1%. The alignment is generally satisfactory. The Dominion Minister of Railways has before him an application for the approval of the route from Coldwater, across the Hope Mountains to Ruby Creek. This shows a line following the Coquihalla River to Hope and thence across the Fraser River, following the north bank from Hope to Ruby Creek, where a junction is effected with the C.P.R.

A contract has been entered into between the company and the Dominion Government under the act granting subsidies to certain railways, for building a line from near Grand Forks for 50 miles up the north fork and the east or west fork of the north fork of the Kettle River.

A Vancouver press report, July 8, states that a contract has been let to Macdonnell, Gzowski & Co., Vancouver, for building 30 miles of line from Merritt, a station on the C.P.R. line between Spences Bridge and Nicola, and the headquarters of the Coldwater River. The contractor's plant was reported in process of delivery, and a start was said to have been made on the work July 9. The contract with the British Columbia Government called for work to be started on the line by July 10. This 30 miles of line will carry the line to the summit between the Coldwater and the Coquihalla rivers. Eastward from this point the line will be built to Penticton, and at Rock Creek, 10 miles north-east of Midway, it will join on to the route of the old Midway and Vernon Ry., which will be utilized to Midway, where connection will be made with the existing Kettle Valley Lines. (July, pg. 549).

Manitoulin and North Shore Ry.—Tenders were received to July 23, for the construction to subgrade of a section of this line from the north side of Goat Island channel, near Little Current, northerly to the White Fish River, about 18 miles. This will practically complete the portion of the line between Sudbury and the lake front, opposite to Little Current. (June, pg. 451).

Matagami River Line.—An application has been made to the Ontario Government by private interests for permission to build a line from mileage 229 on the Temiskaming and Northern Ontario Ry., to the Matagami River. Those interested in the application are:—A. Ferland, C. Richardson, R. W. Gordon, A. E. Burdette, W. C. Chambers of Haileybury, Ont., all of whom are interested in the development of what is known as the Porcupine country.

Nanaimo to Wellington, etc.—Application will be made to the British Columbia Legislature to incorporate a company to build a railway to be operated by steam, electricity or any other motive power, from Nanaimo, northwesterly to Wellington, B.C., six miles, and from Nanaimo southerly to Ladysmith, 20 miles, with branch lines not to exceed 10 miles in any one instance. Taylor and Harvey, Vancouver, B.C., are solicitors for applicants.

The Northern New Brunswick and Seaboard Ry. from Black's Cut, on the Intercolonial Ry., to the iron ore mines at the confluence of the Austin brook with the Nipisiguit River, Northumberland County, N.B., has been practically completed, some ballasting being all that is required to permit it being opened for traffic, which it is expected to be by Aug. 15. The contractors were Wheaton Bros., and J. J. Taylor was engineer in charge of construction. J. J. Drummond, E. McDougal and W. F. C. Parsons, of the Canada Iron Corporation, which owns the mines and railway, recently made a visit of inspection to the property. The ore dock at Newcastle, which is being built by Reid and Archibald, is expected to be ready for operation Sept. 1. The spur line from the Intercolonial Ry. to the ore dock at Newcastle has been completed. (July, pg. 549.)

Ottawa, Rideau and Brockville Ry.—Recent press reports state that the work of building this line is to be started near Oshawa in the fall, and that the surveys are being made. (May, pg. 353.)

Pincher Creek, Alta.—The Pincher Creek district of Southern Alberta is proving an attractive field for the railway promoter. At present Dominion charters for building lines through it are held by the following companies:—Alberta, Peace River and Eastern Ry.; British Columbia and Manitoba Ry.; Canadian Western Ry., Northern Empire Ry., and Southern Central Pacific Ry., and in addition other charters have been granted by the Provincial Legislature, but how far they are controlled by those interested in the above mentioned charters is uncertain.

According to press reports another company is to be incorporated, composed of St. Paul, Minn., men, who are reported to have purchased a large coal and iron area in the vicinity of Cowley. The railway which they propose to construct for the development of their property, as well as for general traffic, is said to have been located from Butte, Mont., across the Milk River towards Pincher, following the Old Man River into Livingstone range, thence running west paralleling the iron and coal deposits north of Cowley. It will cross the C.P.R. Calgary and McLeod branch near Minnapore and have its terminus in South Calgary.

Pine Pass Ry.—Application was made July 6, to the Department of Railways for the approval of the route of this projected railway. The map shows a route from Edmonton to Pearl River Landing, thence up Pine River to its headwaters in Pine Pass; down the Misinchinchi River to the crossing of the Parsnip at or near Trout Lake, and on to the Pack River; following up Pack River to McLeod Lake; along Lake River to Carp Lake; westerly to the Swamp River, a tributary of the Little Salmon; following the Little Salmon to its mouth, about 22 miles above Fort George; thence crossing the Fraser River on to the metals of the G.T.P. Ry. and down the Fraser to Fort George. (May, pg. 353).

Portland Canal Short Line Ry.—We are advised that if the proposed extension, referred to in our last issue, is built it will have to go through Alaska for about 11 miles, and about 5 miles further into British Columbia before the Salmon River mining camp is reached. It has not been decided whether the extension will be built at all; everything depends on how the mines, which are in an undeveloped state at present, turn out.

Contractors' plant and camp supplies, with 100 men left Victoria, for Stewart, B.C., June 30, in connection with the construction of this line from Stewart, at the head of the Portland Canal. The manager of the Westholme Lumber Co., which has the contract, is quoted as saying that as many men as can be obtained will be set to work so as to have the line completed with all the dispatch possible. S. Cameron, Prince Rupert, B.C., has been given a sub-contract on the line.

The Provincial Minister of Public Works on his return from a visit recently made to Stewart, said it was the distributing centre for a large area of mining country. The Government had authorized the expenditure of $12,500 for roadmaking in the district, and he was prepared to recommend the granting of $20,000 for sanitary improvements in Stewart, if the citizens raised $10,000.

A dispatch from Stewart, B.C., July 7, says:—Big construction camps and supply depots have been established at Stewart, and at Bitter Creek and substantial permanent camp buildings erected at the former. A large force is busily engaged in clearing right of way and carrying in supplies, a freight depot for the railway has been erected on the site chosen for the station. Railway supplies are being stored there for the construction period. Pile-driving is being pushed for the wharf and the long approach across the mud flats, and very

soon grading will be going ahead on the line as far at least as Bitter Creek. The work is being done under sub-contract by the Westholme Lumber Co., Saul Cameron being in charge. Before the season closes the first 10 miles of the line should be in operation.

Joliette and Lake Manuan Ry.—We were advised July 15 that a contract for building this line has been let to the Enterprise Construction Co. of New York, of which H. O. Hener of that city is President; J. M. Patton, Notre Dame St., Joliette, Que., is Chief Engineer for the railway. The company is arranging to place an issue of bonds upon the market in London, Eng.

Port Moody, Indian River and Northern Ry.—This line which is being built in British Columbia, starts at the western boundary of district lot 256, and skirts the shore line around the head of the inlet and connects with the C.P.R. main line at the Emerson Lumber Co.'s mill, a distance of about four miles. The line is to be completed, according to an agreement, with the property owners, by Sept. 1. The line, is said to be an expensive one to construct, and a great deal of secrecy is being maintained as to the purpose for which it is being built, and by what company it will be operated. One report states that it will be operated by the C.P.R., and that grain elevators will be erected on the waterfront for transferring grain from the trains to ocean going vessels. (July, pg. 549).

Prince Edward Island Ry.—In an interview at Charlottetown, P.E.I., during his recent inspection trip, the Deputy Minister of Railways said it was the first time he had come personally in contact with the question of operating a car ferry across the strait to the mainland, although he had heard about it in Ottawa. While not going into the merits or demerits of the proposition he would state that its adoption would mean the actual rebuilding of the whole railway on the island as the gauge would have to be changed from narrow to standard. (June, pg. 451).

Quebec Central Ry.—J. H. Walsh, General Manager, was in Quebec July 9, conferring with the mayor with regard to sites for station, freight sheds, etc., which it is the purpose of the company to erect as soon as an entrance can be secured into the city over the Quebec bridge. In an interview, Mr. Walsh stated that the President and some of the directors were coming from England to make an inspection of the line. He expected that as a result of the visit, arrangements would be completed for supplying capital to extend the line to Quebec, and to build some branches. (Feb., pg. 111).

Reid Newfoundland Co.—W. D. Reid, President, in an interview July 4, said that grading on the new Bonavista branch was being proceeded with at a satisfactory rate, and that track had been laid 28 miles. Snow fences and station buildings were being put up as construction proceeded, and rolling stock supplied, so that when the last mile of track was laid the branch would be fully equipped and ready for operation.

A press report states that the company is planning to erect a foundry and machine shop in connection with its dry-docks and works at St. John's, Nfld. The new shops will be built to carry out the agreement made last year with the Government, that cars and locomotives for the line be built in Newfoundland.

St. John Valley Ry.—E. A. Stone, head of the New Brunswick School of Engineering, has been appointed chief of a staff of engineers sent out by the Provincial Government to make a survey for an alternative route between Walsford and the city of St. John. The Chief Engineer for the whole of the survey work is D. F. Maxwell. (July, pg. 549).

Temagami and Ontario Northern Ry.—An action has been entered in the Ontario courts by the Sovereign Bank against A. B. Craig of London to recover $9,575.56 on rates made by the company and guaranteed by Craig. The company has a Dominion charter having been incorporated in 1898 as the Temagami Ry., and has power to build a line from Sturgeon Falls or Verner station on the C.P.R. northerly. Extensions of time were granted for construction in 1900, 1902 and 1904. In 1905 the company's title was changed to the Temagami and Ontario Northern Ry., and construction of a line from Sturgeon Falls southwesterly direction to the mouth of French River near Pyng Inlet, Ont., was authorized. No construction has been done. (Mar., 1905, pg. 95).

Temiskaming and Northern Ontario Ry.—The new station at Cobalt has been completed, and the staff took possession of the offices July 1.

It is said that next session of the Ontario Legislature the Commissioners will apply for power to reconstruct the line from North Bay to Matheson, cutting out curves, reducing gradients, and bringing that portion of the line up to the standard of construction adopted between Matheson and Cochrane.

The Commission's engineers are engaged in making surveys for a line to the Porcupine gold fields, but according to a recent statement by the Chairman this is only in line with the general policy, to be ready for anything. He also stated that the mining camps at Gowganda and the Porcupine had yet to prove their worth, and until they did so, the Commissioners would not do anything in the way of building the lines asked for, either now or in the near future.

It is proposed to build a retaining wall along the bluff at Lang St., Cobalt, and Chief Engineer Clement was there July 8, in consultation with the mayor on the subject. (June, pg. 453.)

Toronto, Hamilton and Buffalo Ry.—The Hamilton city council has under consideration the company's application for permission to build three branch lines from near Grant Ave. to east of Sherman Ave., to which there is considerable opposition on the part of the citizens in the neighborhood affected. The council desires to be fully informed as to the company's intentions before taking any definite action. The question of what the council will do when the application comes up for consideration before the Board of Railway Commissioners is also under consideration. (July, pg. 551).

Western Canada Power Co.—The railway which the company is building starts from Ruskin, B.C., on the C.P.R. transcontinental line, and runs northerly to the company's power plant on Stave River, about six miles. Construction is being proceeding with, and it is expected to be completed by the middle of Sept. The line is to be used at present for hauling to the power house the heavy machinery, the contracts for which have been let. Steam will be used at first, a locomotive and some cars having been purchased. Later on electricity will be used for the operation of the railway. (July, pg. 551).

Passenger Agent,—Here are some post card views along our line, perhaps you would like them.

Traveller.—No, thank you, I rode over your line last week, and have views of my own.

Transportation in Northern Alberta

The Athabaska Landing Board of Trade has issued a pamphlet from which the following extracts are taken:

"As a transhipping town no town of the same size shows greater activity than Athabaska Landing, and few towns larger. To find a greater distributing centre one must turn to the cities. The routes, both overland and water, to the northern districts branch out, from Athabaska Landing. In summer the traffic to and from the north is carried on by flat boats, wagons and steamers operating from this point, in winter by sleighs.

"During the entire summer about 400 men are employed in the transportation business conducted from this point, and about the same number are employed during the winter. For 26 years this has been the undisputed distributing point for the entire north, including the Peace River district on the west and the Mackenzie River district to the north. This point has been most peculiarly favored in its natural position to command northern traffic. The railways are now turning towards the north, and Athabaska Landing is destined to become the distributing point by rail for the north in the same manner as it has been over land and water routes in the past. The Canadian Northern Ry. is now engaged in construction work on its lines to this point from the south and also from the east.

"The building of flat boats for transhipping supplies to the northern districts has been a great industry of Athabaska Landing for over 25 years. As the cargoes coming out of the north are small in bulk compared to those taken in, but few boats are brought back to this place. This necessitates the building of new boats annually. The average number of boats built annually is about 75, but owing to the great attention the north is receiving at present this year's output will number nearly 100. These boats are all built from native lumber and afford employment to a large number of men. In addition to the flatboats that are yearly constructed here the Northern Transportation Co. has made Athabaska Landing its headquarters, and its three steamboats were all constructed here. Its largest steamboat which operates on the Athabaska River is 120 ft. long. Last year the company constructed in its yard a small steamboat for use during the period of low water in the Athabaska River. The entire fittings of this boat, except the engines, were made here. The 40 h.p. water tube boiler was built by the company's local engineers."

Railway Lands Patented.—Letters patent were issued during April and May, covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Pacific Ry	22,183,983
Canadian Pacific Ry., Souris Branch	269,389.40
Canadian Pacific Ry. roadbed and station grounds	7.00
Grand Trunk Pacific Ry. ...	341.77
Total	291,922.153

The Ruskin Logging Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $100,000, to carry on a general lumber and logging business, and in connection therewith to build and operate single or double track, or aerial or other tramways, with the necessary side tracks, turn-outs, etc., and to own and operate steam and other vessels for the carriage of passengers and merchandise.

CAR CASTINGS, FORGINGS AND REPAIR PARTS

The National Transcontinental Railway Shops near Winnipeg.

Our issue of August, 1909, contained some preliminary particulars of the shops, near Winnipeg, and also an isometric view of them. Now that their construction is well advanced the following complete description will undoubtedly prove of great interest:

The locomotive and car shops now under construction about six miles east of Winnipeg on the National Transcontinental Ry. are intended to look after the general repairs for 1,800 miles of operating line. The plans developed with this capacity in view, and the layout were approved and detailed plans worked out for the various buildings constituting the plant. The site chosen for the shops is on the prairie, and in order to be above all possibility of flooding in the spring freshets, the floor level of the shops was raised about 4 ft. above the existing prairie level by a heavy gravel fill over the whole site occupied by the buildings.

The buildings were grouped as closely as possible in order that the distances between them might be short; as during the winter the cold makes communication difficult if the buildings are much spread out. The various buildings are arranged about a midway, which runs north and south across the property, and are served by a series of standard gauge service tracks branching off from the yard tracks to the south. Communications between the buildings is obtained by means of narrow gauge industrial tracks and the overhead travelling crane which runs the whole length of the midway, thus serving the various shops. The buildings constituting the locomotive shop plant are located on each side of the midway and south of the through track, passing north of the power house, while the car shop plant is north of that line. The grey iron foundry and forge shops, of course, serve both branches of the work. The power house is located centrally, thus doing away with long runs of piping and wiring feeders. The whole plant is laid out so that each building may be extended 100% in the future when increased space is required.

The buildings, with the exception of the storehouse, oil house and stores platform are of steel construction with self-supporting steel frames, concrete foundations and walls up to the windows. The balance of the superstructure masonry is brick, and it is carried up into a parapet wall, all around the building, capped with a concrete coping. The roof drainage is carried down inside the buildings from receiving hoppers in the roof and through running traps to the sewers. The roofing on all the large buildings is a built up roofing composed of felt and asphalt covered with gravel. All window glass throughout the plant is ⅛" thick ribbed glass and the skylights are glazed with ⅜" wire glass of best quality. The skylights are carried on steel ribs with rolled copper sheathing to carry the glass. Copper is used throughout for all flashing gutters and ventilators. The shops when completed, will have a total floor space of a little over 17 acres.

The system of general interior illumination is to be on the mercury lamp principle, with lamps and reflectors hung high in the shops. This form of illumination has been found most satisfactory, giving an easy, even light and no sharp shadows. There will be plug receptacles in all buildings at frequent intervals in order that lamps on cables may be carried to any definite point or into boilers, etc. Ample window areas and wide skylights have been laid out in order to obtain the maximum of illumination, and as the interiors of the shops are all painted white, the light is exceptionally good.

High and low pressure steam, water, compressed air and drinking water are distributed throughout the various buildings, with numerous outlets. Fuel oil is distributed under pressure from the storage tanks to the furnaces in the boilshops, while an accumulator gives the necessary hydraulic pressure for operating the various hydraulic machines.

The electric travelling cranes throughout the plant are equipped with alternating current motors and are operated directly from the three phase circuits from the power house.

The piping distribution system is carried up and down the midway from the power house in a tunnel of sufficient size to permit of passage alongside the pipes, and branches to the various buildings are run from this tunnel in tile conduit packed with asbestos sponge. On entering the building the piping is carried on the trusses and steel work of the shop. The shops are protected from fire by an extensive system of yard piping and fire hydrants, with hose houses at convenient spots.

LOCOMOTIVE DEPARTMENT.

THE LOCOMOTIVE, MACHINE AND ERECTING SHOP consits of three bays 70, 60 and 40 ft. wide respectively and 613 ft. long. The 70 ft. bay has a height from floor to bottom chord of truss of 50 ft. and is laid out with 25 engine pits arranged across the house. There are two entrance tracks for bringing in locomotives and the 120 ton crane which spans the 70 ft. bay, lifts the locomotive and carries it up or down the shop to whichever pit is ready for it. Under the 120 ton crane, is a 10 ton crane spanning the bay for general work and handling material. Each pit is furnished with plug connections for electric light and valves for steam, water and air, and there is a wall bracket crane on the column between alternate pits. The 60 ft. bay is used for the heavy individual motor driven machinery and is spanned by two ten ton cranes for handling material. The lye vat and the fire furnace and floor are also in this bay. The last 72 ft. of this bay is used as a flue shop and is equipped with all the necessary furnaces, cleaners, etc., for this work.

The 40 ft. bay is devoted to the lighter machine work on bolts, rods, motion parts and general departments, and the apparatus is grouped and driven from line shafts, each group being handled by a single motor. At the east end of this bay is the rivetting tower equipped with a 20 ton crane for handling boilers. Overhead in the 40 ft. bay is a balcony running the whole length of the shop and on it are located the indirect heating plants, locker rooms, lavatories, tin shop and light repair and brass departments.

The building is heated by indirect radiation, exhaust steam being furnished from the power house to the heating coils and the air drawn through these coils is driven by fans through the underground concrete ducts and delivered into the building at floor level through outlets along both walls, under the windows.

A 3 in. wooden floor spiked to sleepers bedded in bituminous concrete is used throughout the shop. The balcony floor is of concrete. The compressed air for this shop is furnished by two motor driven air compressors, thus making this shop independent of the central plant air compressor in the power house. Standby connections are made with the general air distribution in case of emergency. Across the end, and forming part of the same building, is the

BOILER AND TANK SHOP, which consists of four bays, 60, 50, 30 and 65 ft. respectively, 180 ft. long and 36 ft. from floor to bottom chord of truss. The 60 ft. bay is for general boiler work and is served by a 30 ton travelling crane. There is an inspection pit at the north end of the bay for testing purposes. The 50 ft. bay is devoted to heavy machinery, both individual motor driven and group driven, hydraulic flanging press, etc., and is spanned by a 10 ton crane for handling material. The 30 ft. bay is used for light group driven machinery, and over 100 ft. of it is a balcony on which is carried the indirect heating apparatus for this building, also the locker rooms and lavatories. The balance of the bay is served by a 5 ton electric travelling crane. The 65 ft. bay is laid out with tracks for accommodating tenders and has a capacity for 9 tanks. A 20 ton crane spans this bay and handles the various materials.

This building also is heated by indirect radiation, a system of ducts and outlets similar to those in the locomotive shop being used. A three inch wood floor also of similar construction is used throughout the shop. An individual motor driven air compressor is installed in this shop for supplying the necessary compressed air for use with the various pneumatic tools. Standby connection is made with the locomotive shop pipe line. The motor driven hydraulic pumps and accumulator for supplying hydraulic pressure for the plant are located in the north end of this shop.

THE FORGE SHOP is 260 ft. by 100 ft., spanned by a single truss giving clear space for the location of equipment. Most cranes with jibs swinging from furnaces to hammers handle the heavy materials, while a line of double forges along the south side of the building look after the lighter work. The spring department is located in the southwest end of the shop and is equipped to look after the spring work for both locomotive and car departments. This apparatus is driven from line shafting driven by three 40 h.p. motors carried on wall brackets and is arranged with ample floor space close by for storage of raw and finished material. A motor driven blower furnishes the necessary blast for the furnaces through underground and overhead piping. The steam to the hammers and exhaust return the oil, and hydraulic piping are carried in concrete ducts through the shop and to the various machines. The building is heated by indirect radiation from coils along the walls under the windows. The locker room and lavatory are in a small two-story annex on the south side of the building.

THE FORGE STORES AND SCRAP BINS are close by the forge snop in a frame structure 30 by 220 ft. on light concrete foundations. The east 100 ft. is built as a roofed platform with the floor 4 ft. above grade for handling material conveniently to cars. This platform is divided into bins for sorting and storage of scrap. The western portion is completely enclosed with plank lining inside and drop siding outside, and forms storage for coke, coal and iron stock. The iron stockroom is arranged with an extensive rack system for storing the different stock sizes for use in the forge shop. The coal and coke storage bins are arranged with roof hatches, in order that cars may be unloaded by a clam shell and crane from car and the coal and coke dropped through the roof. Industrial tracks are laid out so that the materials and supplies can be run into the forge shop on small cars.

THE FROG AND TRACK SHOP was laid out with the intention of looking after all repairs to frogs, switches, interlocking plants, etc., and is 60 by 100 ft. and 24 ft. from floor to truss. The shop is spanned by a 10 ton electric travelling crane and is equipped with machinery for handling the above class of work. Saws, light hammers, drills, planers, etc., make up most of the equipment, while a couple of

WIRE ROPE

Why experiment continually with wire rope you know is not up to "**Dominion**" quality—quality that means better material, better construction and better service?

Material—All our ropes are made from the best quality of wire, specially drawn to our rigid specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

Construction—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years' experience in manufacturing wire ropes enables us to offer the best to be had anywhere.

Service—Every length of "Dominion" Rope gives satisfaction, because it is serviceable and dependable.

All Lengths and Sizes Carried in Stock for Immediate Shipment

The Dominion WIRE ROPE Company Ltd., MONTREAL

groups of small machines driven from line shafts look after the lighter rod and bolt work. The lavatory and locker room is located in the southeast corner of the building, being surrounded by a cement wall on expanded metal 8 ft. high, thus allowing the crane to pass over it. The shop floor is 3 in. wood spiked to sleepers, bedded in bituminous concrete. Direct radiation by means of coils along the walls, is used to heat this building owing to its comparatively small size. Close to this shop is the

CRUDE OIL STORAGE, a concrete building, 25 by 60 ft. The building is mostly underground, the floor being 8 ft. below grade, the side walls only projecting 2'6" above ground. A concrete roof carried on steel beams closes in the building, making it fireproof in every way.

Inside, on concrete foundations, are four iron storage tanks each with a capacity of about 8,000 gallons of crude oil. Compressed air connections are made to these tanks, and the oil is forced out and distributed to the various buildings requiring it.

The tanks are arranged so that the pressure can be cut off and the tanks filled by gravity from tank cars standing on sidings alongside the building. Piping connections to the outside of the building, fitted with lock-up valves being supplied for this purpose.

THE STORE HOUSE, which is across the midway from the locomotive erecting shop, consists of a large reinforced concrete platform 4 ft. above grade in order to bring it to car platform level for handling supplies from the storehouse to the various buildings. On the platform is a brick building 60 by 260 ft. with reinforced concrete roof carried on concrete posts. The front portion of this building is fitted up for offices for the store keeper and clerks and has a fireproof vault. The balance of the building is equipped with an extensive system of shelving, racks, reels, etc., suitable for arranging the varied stock of materials which the store house contains. Side doors along both sides of the building give ready access to the interior from the loading platforms. The building is lighted with incandescent lamps and is heated by a system of direct radiation coils. The office portion of the building has ample flooring throughout and the balance has a cement finished top of the reinforced concrete the same as the rest of the platform. From the west end of the store house platform, a connecting platform at the same level and also of reinforced concrete joins the store house platform to the oil house platform 100 ft. away.

THE OIL HOUSE consists of a platform, 50 by 70 ft., rising 4 ft. above grade, and of similar construction to the store house platform. In this case there is a basement below the platform with a headroom of 10 ft. In the basement, carried on concrete foundations, are the 9 storage tanks for holding the various various kinds of oil in stock. An additional tank for holding gasolene is buried outside the building with a pump connection into the building. The tanks are filled either by gravity from tank cars standing alongside the building through fill pipes, or else from barrels poured into fill boxes set in the platform floor and connected to the tank fill pipes. A system of draining pipes is arranged for cleaning out the tanks, the oil is handled upstairs, in the pump room, by a row of Bowser measuring pumps, each pump connected to one of the tanks. On the top of the platform is a small brick building 30 ft. long, with concrete roof and divided into two rooms by a concrete wall. One room is the pump room and the other is used for storing oilcans, waste, etc. There is a hydraulic elevator from the basement to the platform level outside the house for handling barrels, etc., from the storage in the basement. There is a stairway to the basement inside the building and there is also a pump running down from the outside. The building and basement are heated by direct radiation coils and the floor is the same as the balance of the platform. The building is made as fireproof as possible and the windows are glazed with ¼ in. wire glass.

THE STORES PLATFORM, alongside and to the north of the store house and separated from it by two tracks, consists of a large platform similar to the store house platform and of reinforced construction 56 by 180 ft. carried on concrete posts and open below. It is also at an elevation of 4 ft. above grade.. The platform projects into the midway 15 ft., enabling the midway crane to handle material from the platform to the other buildings. On this platform is erected a light steel framework, enclosed on the sides and ends with corrugated iron and furnished with a roof covered with prepared roofing. A five ton hand operated crane spans the building and has a runway the whole length on the building and a wide crane door at the front permitting the crane to run out over the platform in front of the building with its load and exchange loads with the midway crane. Access to the building is furnished by four doors on the sides, and one on each end, opening out to the platform. The building is lighted with incandescent lamps in groups with reflectors. The store platform is intended to be used as a storage for large, heavy material, such as castings, pipe, etc., and thus act as a relief to the general store house for this class of material which will be protected from the weather by the light structure and will be conveniently handled by the small crane.

THE LOCOMOTIVE CARPENTER AND PATTERN SHOP, to the north of the stores platform, is a two-story building 70 by 100 ft. with a self-supporting steel frame on concrete foundations. The first floor is of reinforced concrete and is carried on concrete columns, and the roof is also of reinforced concrete, making the first floor practically fireproof as all communications with it are protected with fire doors, etc. The ground floor has a 3 in. wood floor, and is used as carpenter and pattern shop, being equipped with light wood working machinery driven from line shafts. The carpenter shop is intended to look after the necessary woodwork incidental to locomotive repairs and the pattern shop for the manufacture and repair of patterns. The lavatory and locker room is on the north side of the shop and communication with the pattern storage upstairs is by an enclosed stairway, or by an elevator running in a concrete enclosed elevator shaft equipped with fire doors. The elevator is for handling patterns to and from the pattern storage room. The first floor is equipped with shelving and racks for the storage of patterns, the windows are glazed with wire glass and the room made as fireproof as possible. The heating of both floors is by indirect radiation coils.

THE GREY IRON FOUNDRY is a large building 130 by 200 ft. with a cleaning room annex 60 by 80 ft. The main foundry has a central bay 70 ft. wide and two side bays each 30 ft. wide. The central bay is used for the general moulding floor, and is spanned by a 15 ton electric travelling crane equipped with a 5 ton auxiliary hoist for light lifting. There are also small jib cranes attached to the columns for handling flasks, etc. The 30 ft. bay on the north side has the moulding floor for scrap castings at the west end and the core room and core ovens at the east end, each served by one ton hand operated travelling cranes. There are three core ovens, two with shelves and rack cars for general small cores and one large oven with platform car for cylinder cores and similar large work. This core oven with platform car for cylinder and portion of core room is served by a 5 ton bracket crane. Between these two departments on the north side is the cupola room with two cupolas, one 84 ins. and one 72 ins. in diameter. The scale room for weighing charges and the blower room on an elevated steel platform are also in the cupola room. The core ovens are fired from the cupola room, thus keeping all the ash, etc., in one place.

The loaded cars, after weighing, are handled by pneumatic elevator to the charging floor and are handled by pneumatic charging machines. The charging floor has a steel plate floor and is laid out with a transfer truck and storage tracks for keeping loaded cars on hand ready for charging while the cupolas are running. The cupola room and charging floor are 30 by 40 ft. The 30 ft. bay on the south side of the building has the brass foundry at the west end, and enclosed with expanded metal screens 10 ft. high. This small foundry is equipped with brass furnaces and regular brass foundry equipment and is served by a one ton operated travelling crane. The lavatory and locker rooms are also in this bay and the heating apparatus for the indirect radiation heating system. The cleaning room is at right angles to the main building and is spanned by a 5 ton electric travelling crane. In this annex are the tumblers, grinders, etc., and a service track runs right through the room, enabling cleaned castings to be loaded right on the cars for shipment. The moulding sand is stored in bins on the south side filled from cars on the service track and distributed by industrial tracks inside the building.

Along the north side of the building between the service track and the foundry is a long galvanized iron shed, roofed in and divided into separate compartments. Here are stored direct from cars, the coke, pig and scrap iron under cover and these are brought into the foundry on cars running on industrial tracks also under cover between the bins and the building. Having both material and handling tracks under cover is a great point in the handling of materials in the cold winter weather. The grey iron foundry is intended to supply the demands of both the locomotive and car departments. Besides the above equipment, a gravity moulding machine and a brake shoe moulding machine are installed.

THE MOTIVE POWER OFFICE BUILDING, south of the locomotive erecting shop and opposite the store house, is a brick structure with a steel interior frame. The floors are of maple on spruce joists carried on the walls and steel work. The building is 60 by 68 ft. and consists of two stories and basement. The basement is devoted to a large testing laboratory, lavatories and storage. The ground floor has offices for the officials and clerks for the department, while on the first floor is the drafting room, file room and blue printing room. A vault is carried up from the basement to roof with vaults on each floor. The building is plastered throughout and the halls and stairs have a wood wainscotting.

The building is heated by direct radiation coils and has incandescent electric lighting fixtures.

CAR DEPARTMENT.

THE COACH SHOP repairs are carried out in a building 115 by 260 ft. There are four working tracks down the centre of the shop with a standing capacity of 12 standard coaches. An industrial service track runs between each pair of tracks for handling material. Along each side is a balcony 16 ft. wide with a light wall enclosing it from the floor of

The Longest Continuous Double Track Railway in the World under One Management and the only Double Track Line Between Montreal, Toronto, Niagara Falls, Detroit and Chicago.

the balcony to the roof of the building. There are windows in this partition giving light from the shop as well as the windows on the outside wall. Material is handed up to these balconies by large hoists; one at each corner of the building. The north balcony is devoted to cabinet work and is laid out with a line shaft operating various light working tools such as scroll and band saws, lathes, drills, surfacers, etc. On the main floor directly below this north balcony are a number of heavier woodworking tools, most of them individual motor driven, such as rip saws, planers, mortisers, matchers, etc., for preparing the lumber before it is sent upstairs to the cabinet shop. One of the ideas in putting the cabinet work upstairs, was to get the work in a dry spot where it would not be affected by dampness, etc., as it would be if on the ground floor. The south balcony is divided into several departments; the east end is used for the upholstering repair work, then the tinsmith shop, then a varnishing room, and the west end is devoted to a small brass shop, with lathes, a small shaper, drill, etc., and a couple of buffing machines and a lacquer oven. On the main floor below this balcony are located the nickel plating department with its tanks, buffing wheels, etc., the sash washing sink, and in the centre are the lavatories, locker rooms and indirect heating apparatus. The building has a wooden floor and the balconies have concrete floor. The heating is by indirect radiation. Cars are handled right through the shop, entering it at the east end, passing through the shop and undergoing the necessary repairs and then going straight across the midway and entering the

Coach Paint Shop, a building 67 by 340 ft. with four through tracks for painting cars and two industrial service tracks. This shop has a standing capacity for 16 standard coaches. The lavatories and heating apparatus are in an annex on the south side. The building is heated by indirect radiation and has a concrete floor draining between the tracks. The cars enter at the east end, either direct from the coach shop, or else from yard tracks with cross over connections, and pass through the shop and out at the west end.

The Freight Car Shop is south of the coach paint shop. It is the second largest building in the plant and is 200 by 600 ft. with nine through tracks having a standard capacity for 108 standard freight cars. The building is divided into three equal bays 65 ft. wide, and there are three car repair tracks with two industrial supply tracks to each bay. Cars enter the east end and are repaired and pass on to the west, where they are painted and stencilled, and then pass out of the west end of the building into the yard. The two side bays have a clear height to bottom chord of truss of 20 ft., while the centre bay has a clear height of 30 ft. and is spanned by a 20 ton electric travelling crane with a 5 ton auxiliary. This centre bay is intended for the handling and repairing of steel cars in the future when required. The locker rooms and lavatories are in small annexes on each side of the building, and the two sets of indirect heating apparatus are housed in small annexes on the north side of the building with tile distributing ducts throughout the shop. The floor is 3 in. wood throughout the shop and concrete in the lavatories and heating annexes. On each side of the freight car shop are platforms, racks and bins for the storing of prepared rods, bolts, etc., for work on freight cars. These bins, etc., are served by industrial tracks running through the shop.

Paint Stores Building, north of the freight car shop and between it and the coach paint shop, is a small building 30 by 40 ft., and is used for storing, mixing and delivering paint, etc., to the two paint shops, and is conveniently located and connected to them by a direct industrial track. The building is fitted up with tanks for the various oils and varnishes, bins for dry colors, glass racks, stencil racks and washers, and a color grinder and putty mixer. Barrels of oil, etc., are handled from the platform which surrounds the building by a small telpher hoist which runs around the interior of the shop. The telpher trolley runs on a trolley beam supported from the roof trusses.. A standard service track passes the building, so material is economically delivered and handled.

The Scrap Platform is alongside the paint stores and just north of the freight car shop. It is built of wood and with the platforms at the car floor level. This large floor, 30 by 200 ft., is divided into bins for the sorting and classification of scrap from the car repair shop. It is served by industrial tracks and has a standard service track passing along the north side for shipping the scrap.

The Car Department Office Building near by and close to the midway is similar in every respect to the motive power office building described above, only in this case it houses the officials, clerks and offices of the car department.

The Dry Kiln is a small concrete and brick building about 40 by 50 ft., divided lengthwise into two kilns. There are two large entrance doors at each end and tracks running through the kilns to run in the loaded trucks. The doors at the ends are double with an air space, and the walls are also constructed with an air space. The coils for heating are distributed on the floor, which is of concrete and arranged to drain to a gutter. After the doors are shut, the kilns are controlled from a small cabinet at the west in which are the steam and the return control valves, lighting switches and recording thermometers, the sensitive bulbs of which are several feet along the wall inside the kilns. In this way, once the kiln is closed, a complete record of the process is obtained in the control cabinet.

Lumber Shed.—After passing from the lumber yards through the dry kiln, the lumber, if it is to be stored, is taken to the lumber shed, which is close alongside and is 60 by 165 ft. with standard and industrial service tracks running through it. It has a wood floor well laid on sleepers and gives a storage for dried or dressed lumber protected from the weather.

Planing Mill.—From the lumber shed or dry kiln, the lumber enters the east end of the planing mill, which is 100 by 300 ft., and is arranged so that standard cars of material can be run in at the east end and the material unloaded right at the machines. The north side of the shop is devoted to the still work, and here the machines are arranged in order so as to take the rough sill as it enters the building and dress, cut off, mortise, tenon and bore it and pass it out of the west end of the shop all ready to be run into the coach shop alongside of the freight car shop across the midway. The south portion of the shop handles the flat work for flooring, sheathing, etc., and in the same way the material entering the building is handled by the saws, planers, matchers, cut off saws, etc., and is shipped to the shop where it is to be used. At the west end of the shop is a department for door and sash work, with the necessary planers, saws, sanders, etc., for this work. A small line shaft drives the grinders, saw menders, etc. On the south side at the centre is located the lavatory and locker room, and on a steel platform above them there is arranged the indirect heating apparatus. On the same platform are arranged the exhauster fans for handling dust, chips, etc., from the various machines and driving them through pipes to the power house, where they are used under the boilers. Most of the machines are driven by individual motors. The floor of the building is of wood and the heating is by indirect radiation.

The Wheel Foundry is close to the grey iron foundry and served by the same service tracks.. It is some 70 by 150 ft. laid out in the straight line floor principle with 4 floors of 25 wheels each giving a capacity of 100 wheels a day. This building like all the others can be extended when required. There are 32 annealing pits and two pitting cranes. Wheels are cleaned and loaded on to cars from platform at pit top level. The cupola room, the core room, and charging floor are at the north end of the building and are equipped with pneumatic elevator, scale room, pneumatic machine blower. storage tracks and all necessary details for operation. The building is heated by indirect radiation. The stock storage sheds are arranged on the same principle as those for the grey iron foundry, and everything is handled under cover. These sheds and those for the grey iron foundry are laid out on the same lines and may be extended and made one long storage when occasion demands. There is a wheel breaker in connection with the wheel foundry and a ball weight casting breaker between the wheel and grey iron foundry.

Wheel and Machine Shop.—When the wheels leave the wheel foundry, they are taken to the wheel and machine shop building, 70 by 160 ft., spanned by a 10 ton electric travelling crane and equipped wheel press, wheel lathes, tire furnace, etc., for all wheel work, and with arch bar drills, engine lathes, planners, drills, nut tappers, grinders, etc., for general car shop machine work. The building has a wood floor and is heated by indirect radiation. The lavatory and locker rooms are on the south side of the shop. In front of the building is a storage space for mounted wheels convenient to the freight car shop across the midway.

The Power House is 110 by 150 ft., divided lengthwise by a brick fire wall into two rooms, 45 and 60 ft. wide respectively. The boiler room 45 by 150 ft. is laid out to receive 10 water tube boilers in units of about 400 h.p. Two of the these boilers are arranged with Dutch ovens for burning shavings, etc., and refuse from the planing mill while the balance of the boilers are equipped with chain grate stokers. The ash pits are furnished with chutes which run the ashes into the conveyor and they are carried up to the ash hopper and thence through the wall by means of a chute into the waiting ash car outside the building The boiler room and basement floors are of concrete and all shafting, etc., for driving the stokers is carried along the ceiling of the basement.

The engine room 60 by 150 ft. has a pump pit 16 ft. wide and 8 ft. deep running along the whole length of the fire wall. The pit is bridged by gangways from the boiler room to the engine room floor. In the pump pit, is located the air receiver for the compressor, the vacuum pump, the fire, boiler, service and well pumps and the feed water heater. The water and exhaust and other lines are carried along the walls of the pit with all connections from apparatus. The floor and retaining wall of the pump pit are of concrete. In the engine room are located three 500 k.w. a.c. generators driven at 150 r.p.m. by direct connected cross compound corliss engines, one 250 k.w. a.c. generator driven by simple engine, and two 150 k.w. d.c. generators, one driven by simple engine and the other by motor. Two exciter units for furnishing the necessary excitation for the generators are also driven by simple engine. A 1,500 c. ft. capacity

ADDITIONAL SAFETY AND ECONOMY IN

BOWSER

SYSTEMS FOR RAILWAY OIL STORAGE

are backed up by twenty-five years of experience in the manufacture of Self-measuring Pumps and Tanks.

The Tanks are made of any capacity, either cylindrical or rectangular, may be buried underground and connected with the pumps which are placed any distance away, wherever most convenient. No danger from FIRE.

The Pumps measure accurately, and by means of a Gallon Meter, keep an accurate record of all oil drawn. ABOUT ONE HUNDRED AND FIFTY RAILROADS ARE USING BOWSER EQUIPMENT. Drop a card for BULLETIN 18.

S. F. BOWSER & COMPANY, LTD.

TORONTO, ONT.

corliss engine steam driven air compressor completes the engine room apparatus. Along the north is located the switchboard with generator, totality and feeder panels. All connections from generation to switchboard are underground in conduits. From the switchboard to the various buildings and cables are carried in tile ducts laid in concrete. All wiring distribution between power house and other buildings being made underground.

The engine room is spanned by a 10 ton hand-operated travelling crane for handling heavy apparatus, etc. The finished floor of the engine room is polished maple laid on a false floor carried on sleepers, bedded in bituminous concrete. A concrete chimney 11 ft. diameter and 200 ft. high alongside the power house, furnishes the necessary draught for the boilers, while a tank with 100,000 galls. capacity elevated 125 ft. above the grade gives pressure for general water service distribution. A smaller tank of 10,000 galls. capacity is hung just below the larger tank giving storage and distributing pressure for drinking water which is piped to drinking fountains throughout the shops.

WATER SUPPLY.—In order to obtain a soft water supply at the shop site, a pumping station is erected on the bank of the Red River just above the city of Winnipeg. The pump house has suction pipes running out into deep water of the river connected to vertical triplex high speed pumps with a capacity of 1,000,000 imperial gallons in 24 hours. These pumps are direct connected to gas engines by friction clutches. A duplicate gas producer plant is installed and cross connected in every way in order to render a shut down practically impossible. From the pump house, the water is conveyed six miles to the shops through 12 ins. diameter wire wound wooden stave piping; pipe line being fitted with valves, access, access boxes, etc. At the shop site, the pipe line empties into one end of a storage settling reservoir with a storage capacity of 2,000,000 imperial gallons. This reservoir is constructed of concrete and is 60 by 270 ft. long and 25 ft. deep with a dividing wall running lengthwise dividing it in halves. The surrounding walls and floor are of mass concrete and the centre dividing wall is of reinforced concrete, designed so that one half of the reservoir may be emptied for cleaning, while the other half remains full. The reservoir is roofed over with a double plank roof carried on steel beams and a prepared rofing over all. This roof is to keep the dirt and drifting snow out. Close up under the roof are hung a number of pipe coils for heating in winter to prevent the ice forming too thick on top of the water and thus interfering with the outlet pipes, etc. The water is drawn off from the opposite end from that at which it enters, thus giving a good opportunity for the dirt to settle. The reservoir is arranged with by-pass piping by which it can be emptied by the pump and also with overflow outlets to prevent flooding. Water is drawn from this reservoir for the high level tank and connections are also made to the fire pumps in the power house.

SEWAGE SYSTEM.—As there is no municipal sewer to drain the shops into, it has been necessary to instal a sewer system for them, and as there is not sufficient fall from the shops to the Red River for a gravity flow sewer, it has been necessary to put in a pumping station to force the sewage to the river. A gravity system of tile collecting pipes runs through the shop site connecting with roof downspouts, sanitary sewers and all drains. This sewer line is arranged with manholes, surface drains, vents, etc., and discharge into a concrete pump forming the basement of the pump house. The next floor carried the volute centrifugal pumps of 16,000 galls. per minute capacity with suction pipes running down into the sumps and shafts running up to the floor above where are located the vertical shaft motors for driving. These motors are controlled by an automatic starter, which is operated by a float in the sump below, adjusted to start and stop the pumps when the water in the sump reaches certain levels. The pumps and motor are in duplicate to have a steady increase of breakdown and the control is so arranged that if one motor fails to start the other will be started before the water reaches a dangerous level. Under heavy rain conditions, the flow from the shops and the grounds, is estimated at approximately 16,000 galls. a minute, so pumps of that capacity have to be installed. The pump house is a small reinforced concrete building located about 1,400 ft. from the midway. The two pump discharges run into a single 36 ins. diameter banded wood stave pipe which runs from the pump house to the Seine River, into which it discharges close to its junction with the Red River. The sewer pipe line is carried from the shops to the river along the N.T.R. right of way.

The details of the shop plant were developed and the actual construction carried out under the supervision of Frank W. Walker, M.E., Superintendent of Terminal Shops for the National Transcontinental Railway.

G.T.R. Betterments, Construction, Etc.

Southern New England Rd.—In connection with the application of the G.T.R. through its controlled company the Central Vermont Ry., to build a line between Southbridge and Palmer, Mass., so as to give it with a line in Rhode Island, a route to Providence, application has been made to the Massachusetts Railroad Commission, by the New York, New Haven and Hartford Rd., to build the same line. The G.T.R. states that it will build the line whether permission is given to the other company or not, but the N.Y., N.H. and H. Rd., states that it will build only if given an exclusive franchise. The case was further argued June 29, but no decision has been announced.

A press dispatch from Boston, July 12, says that the Massachusetts State Railroad Commission has given the company the necessary permission to construct the line in question from Palmer, Mass., to the Rhode Island State line, and that the application of the New York, New Haven and Hartford Rd., to build the same line had been refused. In an interview at Montreal, July 14, President Hays, said "The G.T.R. has no intention of building into Boston, as our agreement with the Boston and Maine Rd. is eminently satisfactory." This statement was made after a deputation from Boston, had waited on him to urge the building of such a line.

Allandale Freight Shed Burned.—The freight sheds and weigh scales house at Allandale, Ont., were burned July 1. There was a large quantity of freight in the shed, which was all burned, as well as 12 cars and their contents.

Tiffin to Wyevale.—A contract has been let to the Midland Railway Construction Co., a company controlled by Jas. Playfair, Midland, Ont., for the construction of nine miles of line from Tiffin, on the old Midland Ry., southerly to three miles south of Wyevale, on the Penetanguishene branch. The work is expected to be completed this year. The construction of the line will enable the company to run trains from Toronto and western points to Tiffin and Midland by a shorter route than the present line via Orillia.

Toronto Improvements.—The company has acquired all the land required along its right of way between Dufferin St. and Sunnyside, for the doing away with level crossings, with the exception of four pieces, to secure which expropriation proceedings are being taken. A definite start upon the work is expected to be made at an early date. The improvement will give the company four tracks between Toronto and its Mimico yards, and will do away with a dozen protected level crossings.

Erie St. Bridge, Stratford.—The new bridge, across Erie St., Stratford, Ont., on the line to Goderich, was put in position June 30, without disarranging the traffic. It has been built in connection with the improvement of the line to carry the heavier locomotives and trains now being operated over it. (July, pg. 537.)

Railway Commissioners' Traffic Orders.

Summaries of other traffic orders are given on another page under "Orders by Railway Commissioners":—

COAL RATES FROM LUNDBREK, ALTA.

10960. June 16.—Re complaint of Galbraith Coal Co., Ltd., of Spokane, Wash., and Lundbrek, Alta., complaining that the C.P. Ry.'s special tariffs on coal and coke, C.R.C. nos. W414 and W1296 (the latter since superseded by C.R.C. no. W1359), unjustly discriminate against shipments from Lundbrek in favor of shipments from Lethbridge, Alta. It is ordered that the railway company revise and re-issue its special tariff rates on coal and coke from the shipping points on its Lethbridge, Crows Nest, and Cranbrook sections, to points west thereof, so as to place the said rates on a reasonable basis relatively to the special tariff rates on coal and coke at present in force, or as they may be reduced, from Lethbridge; the said special tariffs of revised rates to be published and filed within 90 days from date of issuance of order.

International Traffic Rates.—We mentioned in our July issue the appointment of J. P. Mabee, Chairman of the Dominion Board of Railway Commissioners as Canadian representative in connection with the discussion of an arrangement for the joint control of international traffic rates between Canada and the United States. The U.S. Government on July 14, appointed M. A. Knapp, chairman of the Inter-State Commerce Commission as its representative. It is understood that Messrs. Mabee and Knapp will meet and discuss the whole matter, and will draw up a report with recommendations, either separately to their own governments or jointy to both governments, and that following the report some legislative action will be taken in both countries.

W. C. Norris, a lawyer of Marcus, B.C., and one of the original directors of the Kettle Valley Lines, has been convicted of stealing $125,000 from the Oregon Trust and Savings Bank, of which he was cashier. He brought an action to have the charter of the railway in the U.S. confiscated on the ground that practically the whole of the stock was held by Canadians.

The Grand Trunk Pacific Transfer Co., Ltd., has been incorporated under the B.C. Companies Act, with a capital of $100,000, to carry on a general transfer business, and in connection therewith to own and operate steam and other vessels, self-propelled and other vehicles of every description, wharves, warehouses, etc., and to conduct the general businesses of shipowner and baggage contractor.

Orders by the Railway Commissioners.

Beginning with June, 1904, we have published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearing took place and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the date assigned to them.

Orders 10778 to 10797 were omitted from our July issue, the summaries of them not having been dispatched from Ottawa in time.

10778. June 4.—Authorizing C.P.R. to build bridges 77.82, Chapleau section, Lake Superior Division; 116.78, Chapleau section, Lake Superior Division; 69.3, Boundary section, Pacific Division.

10779. June 4.—Authorizing C.N.O.R. to build between lots 28 and 29, con. A., Haldimand, tp., at station 330.30.

10780. May 23.—Authorizing C.N.O.R. to build bridge to carry Don Mills road over its line at station 26.85.

10781. June 4.—Authorizing C.N.O.R. to build between lots 21 and 22, con. A., Haldimand tp.

10782. May 23.—Ordering G.T.R. and C.P.R. to provide gates and watchman at Royce Avenue crossing, Toronto.

10783. June 2.—Authorizing C.P.R. to use natural gas for lighting passenger cars, subject to terms and conditions made, and a penalty of $100 for failure to comply therewith.

10784. June 2.—Dismissing application regarding protection at G.T.R. crossing, west of Stanfold station, Que.

10785. June 4.—Extending time provided in order 9114, within which C.P.R. was required to complete subway at Iberville St., Montreal, to July 15, and rescinding order 10571, May 16.

10786. June 4.—Authorizing C.P.R. to build across highways on its Lethbridge-Aldersyde Branch at mileage 5.10, 8.90, 11.20, 17.60 and 19.60.

10787. June 6.—Authorizing C.N.O.R. and C.P.R. to operate trains over crossing at mileage 56.6, west from Hawkesbury, without first being brought to a stop.

10788. May 23-25.—Dismissing town of Brampton's application for order directing G.T.R. to provide commutation tickets between Brampton and Toronto, similar to those granted between other suburban points and Toronto, such as Oakville, Streetsville, Whitby and Oshawa, Ont.

10789. June 6.—Approving Vancouver, Fraser Valley and Southern Ry. location in New Westminster, B.C.

10790. June 6.—Authorizing city of Brantford, Ont., to build temporary level crossing over Western Counties Electric Ry. canal, Brantford and Hamilton Electric Ry. and G.T.R., pending the building of bridge on South Market St.

10791. June 6.—Authorizing Montreal Light, Heat and Power Co., to place wires across G.T.R. at 16th Ave., Lachine, Que.

10792. June 6.—Authorizing Ontario Hydro-Electric Power Commission to place wires across Bell Telephone Co.'s wires at lot 127, Thorold tp.

10793. June 7.—Ordering M.C.R. to divert crossing between cons. 6. and 7. along north side of its line to town line road between Tilbury east, and Raleigh tps., crossings to be protected by an electric bell.

10794. June 7.—Approving C.N.O.R. location through Ledger, Purdom, Booth, and Nipigon tps., Thunder Bay district, mileage 480 to 500 from Sudbury Jct.

10795. June 7.—Authorizing C.P.R. to build extra track between secs. 1 and 2, and between secs. 12 and 11, tp. 21, r. 1, w. 5 m., near Erskine station, Macleod branch, Alta.

10796. June 6.—Recommending to Governor-in-Council for sanction, Bedlington and Nelson Ry. bylaw, re spitting in cars, etc.

10797. June 6.—Authorizing C.P.R. to build bridge 84.1 over Little Creek, Windsor section, Ontario Division.

10962. June 20.—Ordering C.P.R. within 90 days to install an electric bell at Norman St. crossing, near mileage 2, Kenora section, Ont.

10963. June 21.—Ordering G.T.R. within 90 days to install an electric bell at Ottawa St. crossing, Hamilton, Ont.

10964. June 21.—Ordering C.P.R. within 90 days to install an electric bell at crossing on north half of sec. 5, tp. 3, r. 5, Morden station, Man.

10965. June 21.—Authorizing C.P.R. to build three additional tracks across King St., Virden, Man.

10966. June 21.—Authorizing city of Port Arthur, Ont., to lay main under C.P.R. at 2nd Ave.

10967. June 21.—Amending order 6750, Mar. 30, 1909, which directed Columbia and Western Ry. to protect Riverside Ave. crossing, Grand Forks, B.C.

10968. June 21.—Extending to July 20, time within which C.P.R. was required by order 10273, Apr. 21, to install electric bell at Martin St. crossing, Milton, Ont.

10969, 10970. June 20.—Authorizing Ontario Public Works Department to build Sudbury-Soo tunk wagon road across C.P.R. Sault Ste. Marie branch at grade, lot 7, con. 11, Long tp., and lot 9, con. 6, Lorne tp.

10971. June 20.—Ordering M.C.R. to divery crossing three-quarters mile west of Fletcher station, Tilbury east tp., Ont., which when completed relieves the company of the necessity of keeping a watchman there.

10972. June 22.—Authorizing M.C.R. temporarily and pending final determination of the matter, to operate trains over Malden Road crossing, 0.71 mile west of Woodslee station, Ont., at greater speed than 10 miles an hour, provided that it maintain a watchman there.

10973. June 22.—Authorizing C.N.R. to connect its Maryfield Extension and Moosejaw Branch, in ¼ sec. 24. tp. 6, r. 18, w. 2, m., Sask.

10974. June 18.—Approving location of C.N.O.R. station grounds at Brighton.

10975. June 22.—Authorizing C.P.R. to build two additional tracks across Lacrosse St., Virden, Man.

10976. June 22.—Approving plans of G.T.R. station at Nixon, Ont.

10977. June 22.—Approving location and plans of G.T.R. station at Hepworth, Ont., and re-location of track crossing highway to the south.

10978, 10979. June 21.—Authorizing G.T.R. to build branch to premises of Goldie and McCulloch Co., Galt, Ont., and John Dick, Toronto.

10980. June 20.—Amending order 10752, May 19, which directed G.T.R. to divert highway and build bridge between cons. 1 and 2, King tp., Ont., by providing that the bridge be maintained by railway and the roadway and fences on each side of approaches by the municipality.

10981. June 22.—Authorizing Hamilton Cataract Power, Light and Traction Co. to place wires across Bell Telephone Co.'s wires at lots 14 and 15, con. 6, Barton, tp., Ont.

10982 to 10987. June 23.—Authorizing Esquimalt and Nanaimo Ry., to build across highways at mileage 133.2, 132.62, 134.10, Argyle St., Port Alberni, mileage 131.5, 131, and 132.18, from Victoria, B.C.

10988. June 23.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. to build spur to Prudential Investment Co.'s premises, Vancouver, B.C.

10989. June 25.—Authorizing C.P.R. to build spur to Quaker Oats Co.'s premises, Peterboro, Ont.

10990. June 24.—Ordering that cost of building and maintaining M.C.R. and P.M.R. interchange track at Leamington, Ont., be divided equally.

10991. June 23.—Declaring that P.M.R. crossing immediately east of its Leamington Ont., station is protected to the Board's satisfaction.

10992. June 23.—Extending to July 10, time within which rates on petroleum and its products from Toronto, Petrolia, Sarnia, and Wallaceburg, shall become effective, as required by order 10356, Apr. 25.

10993.—June 25.—Authorizing Ontario Hydro-Electric Power Commission to place wires across C.P.R. telegraph wires, lot 55, con. 1, Ancaster tp.

10994. June 24.—Authorizing Laval Electric Co., to place wires across C.P.R., near Mascouche station. Que.

10995. June 23.—Authorizing town of Fraserville, to maintain water pipe across Temiscouata Ry. at Riviere du Loup, Que.

10996. June 24.—Authorizing R. Forbes Co. to lay pipe under G.T.R. at Hespeler, Ont.

10997. June 23.—Authorizing W. J. Aikens, to lay pipe under Toronto, Hamilton and Buffalo Ry., at Cainsville, Ont.

10998. June 27.—Authorizing city of Toronto to lay a sewer under C.P.R., G.T.R., and C.N.R. at Riverdale Park.

10999. June 27.—Amending order 9977, Mar. 23, made on application of Alberta Central Ry., approving its location from Red Deer, by cancelling approval of line from Red Deer to west side of sec. 8, tp. 38, r. 27, w. 4 m.

11000. June 27.—Approving Alberta Central Ry. location from mileage 2, sec. 3, tp. 38, r. 27, w. 4 m., to mileage 20.

11001. June 27.—Authorizing C.P.R. to build additional track across road allowance at east boundary of sec. 33, tp. 9, r. 25, w. p.m., Routledge, Man.

11002 to 11013. June 25.—Authorizing Atlantic, Quebec and Western Ry. to build across highways at 12 points in Gaspe county, Que.

11014. June 27.—Approving form of permit allowing the use on M.C.R. of a railway bicycle.

11015. June 28.—Authorizing National Transcontinental Ry. to cross C.P.R. Emerson Branch overhead at St. Boniface, Man.

11016 to 11018. June 27-28.—Temporarily approving, pending final determination of Bell Telephone Co.'s tariff of tolls and form of agreement with other companies, agreements with C.N.Q.R., June 13, People's Telegraph and Telephone Co., June 8, and Wolford Rural Telephone Co., May 17; providing that it be not taken to authorize any higher tolls than were authorized previous to May 13, 1906.

11019. June 27.—Relieving C.P.R. from providing further protection at crossing between lots 19 and 20, Blandford tp., Ont.

11020.—June 28.—Approving C.N.R. location through tps. 26-23, r. 24, w. 5 m., Alta., mileage 212.83 to 257.32 from junction line at Vegreville.

11021. June 28.—Approving James Bay and Eastern Ry. location northwards from Roberval, through Roberval, Quiatchuan, Ashuapmuchuan, Demeules and Dufferin tps., Que.

11022. June 29.—Extending, for two months from date, time within which C.P.R. shall erect gates at Louis St. crossing, Farnham, Que., as required by order 10450, Apr. 28.

11023. June 28.—Authorizing C.N.O.R. to build a siding across concession road at Sudbury Jct. between cons. 4 and 5, Neelon tp.

11024. June 28.—Authorizing C.N.O.R. to build bridge over Goforth's Creek, and to carry its tracks across public road at mileage 214.28 from Ottawa.

11025. June 28.—Authorizing city of Toronto to lay pipe at Davenport Road, under G.T.R.

11026. June 29.—Ordering M.C.R. to divert Medora and Thomas Sts. and combine the two crossings, west of Essex station, Ont.

11027. June 29.—Approving plans showing interlocking signals and switches to be installed by G.T.R. at Alford Jct., Ont.

11028. June 29.—Approving plans of C.P.R. bridge over Kaministikwia River, Fort William, Ont.

11029. June 29.—Rescinding order 8110, Sept. 14, 1909, authorizing Vancouver Power Co. to cross with its railway the New Westminster and Southern Ry, and providing for installation of full interlocking plant, by ordering that the crossing be protected by double-armed semaphore operated by trainmen making crossing.

11030. June 29.—Authorizing C.P.R. to operate a branch across road allowance and on Bardsley's premises, n. e. ¼ sec. 4, tp. 2, r. 7, w. 2, m., at Shand, Sask.

11031 to 11033. June 29.—Authorizing Saskatchewan Government Telephones to place wires across C.P.R. at three points.

11034. June 29.—Authorizing Ontario Hydro-Electric Commission to carry wires across G.N.W. Telegraph Co.'s wires at lot 120, Thorold tp.

11035. June 28.—Authorizing city of Lachine, Que., to lay pipe under G.T.R. Lachine Wharf Branch, at Notre Dame St.

11036. June 29.—Authorizing city of Toronto to lay pipe under G.T.R. at St. Clair Ave.

11037. June 30.—Authorizing Montreal Rolling Mills Co., to build automatic coal handling railway over G.T.R. Lachine Canal Bank branch, on St. Ambroise St., St. Henri, Que.

11038. June 2.—Authorizing Lincoln Paper Mills Co. to lay water main under Niagara, St. Catharines and Toronto Ry., in Merritton, Ont.

11039. June 21.—Rescinding order 10798, June 7, which authorized a diversion of M. C.R. crossing at Fletcher station, Ont.

11040. June 29.—Authorizing C.P.R. to build a subway at Cornelia St. and overhead bridge at George St., Smiths Falls, Ont.

11041. June 27.—Ordering that all railways subject to the Board's authority, file with the Board not later than Aug. 15, supplements to their official distance tables, issued in compliance with order 5954, Dec. 21, 1908, showing names of points at which freight traffic may be interchanged with connecting railways; names of railways with which freight may be interchanged at such points; whether freight traffic which may be so interchanged consists of c. l. or l. c. l. or both; whether the interchange is by switch connection or by cartage.

11042. June 23.—Authorizing Lachine, Jacques Cartier and Maisonneuve Ry. to cross Montreal Park and Island Ry, at Bagg Ave.

11043. June 24.—Authorizing Matsqui municipality to build highway across C.P.R. Mission Branch at Matsqui, B.C.

11044. July 2.—Authorizing C.P.R. to build spur for Nichols Chemical Co., Hungerford tp., Ont.

11045. July 5.—Relieving G.N.R. from providing further protection at Government Ave. crossing, Weston, B.C.

11046. June 30.—Authorizing C.N.O.R. to build across road between Hope and Hamilton tps.

11047. June 30.—Authorizing the C.N.O.R. to close and divert road through lot 20, con. B, Murray tp.

11048. July 5.—Authorizing C.P.R. to use 21 bridges.

11049. June 24.—Dismissing application of Montmorency village, Que., for order directing Q.R.L. and P. Co., to provide crossings there.

11050. June 23.—Dismissing application of Board of Trade of Three Rivers, Que., alleging excessive freight rates and defective service of the G.T.R. between Three Rivers and St. Celestin.

11051 June 23.—Dismissing application of St. Valere de Bufstrode parish, Que., for order directing G.T.R. to reconstruct its part of Black River bridge.

11052. June 5.—Approving plans of drain to be built under P.M.R. in Harwich tp., Ont.

11053, 11054. June 30.—Approving locati of C.P.R. stations at Ruskin and Chase, B.C.

11055. June 30.—Authorizing C.P.R. to build additional track across road allowance at Coleman, Alta.

11056 to 11059. June 30.—Authorizing C.P.R. to build additional siding across road allowance between secs. 3 and 4, tp. 10, r. 22, w. p. m.; additional track across road allowance between secs. 17 and 18, tp. 10, r. 21, w. p. m., and across Dundee St., Alexander; additional siding across road allowance between secs. 14 and 15, r. 27, near Hargrave Station, and additional siding across road allowance between secs. 31, and 32, r. 1, w. 2, m., near Burrows station, Man.

11060, 11061. July 5.—Authorizing C.P.R. to build spurs to premises of Woodhall Metal Co. and McClary Mfg. Co., Calgary, Alta.

11062, 11063. July 5.—Authorizing G.T.R. to build a branch to premises of Ontario Asphalt Co., Walkerville, C. Kreutziger, Waterloo, Ont.

11064. July 5.—Authorizing G.T.R. to build branch from its line from Toronto to North Bay 820 feet distant from m.p. 37 to the canal lands north of side road running west from road between cons. 1 and 2, East Gwillimburg, tp., Ont.

11065. June 29.—Authorizing Ontario Hydro-Electric Commission to place wires across G.N.W. Telegraph wires at lot 55, con. 1, Ancaster tp.

11066, 11067. July 5.—Authorizing Queen City Oil Co. to lay a pipe under G.T.R. and Kingston and Pembroke Ry., Kingston, Ont.

11068. July 6.—Recommending to Governor-General-in-Council for sanction, agreement of sale of May 19 between Royal Trust Co., and Quebec Oriental Ry. Co.

11069. June 24.—Dismissing application of city of Quebec, for order directing Q.R.L.H. & P. Co. to cross C.P.R. main line at Lesage Ave.

11070. June 23.—Dismissing application of city of Three Rivers, Que., regarding condition of Plaisance St. crossing over C.P.R.

11071. June 24.—Adding Bell Telephone Co. as a party to St. Maurice and Champlain Telephone Co.'s application for order directing Portneuf Telephone Co. to carry out an agreement.

11072. July 5.—Extending until Sept. 15, time within which C.P.R. was required by order 8992, Dec. 17, 1909, to complete work at crossings in Artemesia tp., Ont.

11073. July 5.—Approving W.E. & L.S.R. Ry.'s bylaw 102, authorizing A. Eastman, General Manager, to prepare and issue tariffs of tolls.

11074. July 5.—Approving location of G.T.P.R. Melville-Regina Branch from mileage 33 to 91.24. Sask.

11075. July 5.—Approving change of location of C.P.R. station building from Lanoraie to Joliette Jct., Que.

11076. July 5.—Authorizing C.P.R. to build under Bell Telephone Co.'s wires between cons. 2 and 3, lots 6 and 7, Etobicoke tp., Ont.

11077, 11078. July 5.—Authorizing Ontario Hydro-Electric Power Commission to place wires across Bell Telephone Co.'s wires at two points.

11079. July 6.—Authorizing city of Winnipeg to build conduit under C.P.R. at King St.

11080. July 8.—Authorizing city of Ottawa to lay sewer under C.P.R. on Beech St.

11081. July 5.—Authorizing C.P.R. to build spur to Calgary Paving Co.'s premises, Calgary, Alta.

11082. July 6.—Ordering M.C.R. to divert crossing between cons. 6 and 7 along the north side of its line to town line road between Tilbury East and Raleigh tps., Ont.

11083. July 6.—Amending order 10819, June 6, by substituting Millbank for Mornington, in lines 3 and 4 of the recital.

11084. July 5.—Relieving T.H. & B. Ry. from providing further protection at Canboro Road crossing near Fenwick station, Ont.

11085. July 4.—Ordering C.N.R. to comply with order 9293, Jan. 17, within two months from date and in event of its failure to do so, it shall be liable to a penalty of $25 a day for every day after work remains uncompleted.

11086. June 23.—Ordering G.T.R. to provide station for freight and passengers with agent at Three Rivers, Que., and furnish improved train service between Doucet's Landing and Victoriaville.

11087. July 6.—Authorizing Atlantic, Quebec and Western Ry. to open for traffic the portion of its line between Port Daniel and Grand Pabos, Que., mileage 20¼ to 35.

11088. June 30.—Authorizing C.N.O.R. to cross overhead between lots 20 and 21, con. 1, Cramahe tp.

11089. July 7.—Authorizing Seymour Power and Electric Co. to place wires across Bell Telephone Co.'s wires at lots 22 and 23, Thurlow tp., Ont.

11090, 11091. July 7.—Recommending to Governor-in-Council for sanction, Algoma Central and Hudson Bay Ry. and Manitoulin and North Shore Ry. bylaws re spitting in cars.

11092. June 27.—Dismissing Grand Valley Ry. application to cross Brantford and Hamilton Electric Ry. at Murray St., Brantford, Ont.

11093. June 28.—Authorizing Toronto, Niagara and Western Ry. to build across 24 highways in Toronto.

11094. June 27.—Dismissing Grand Valley Ry. application to cross H. & B. Ry. at Cayuga st., Brantford, Ont.

11095. June 27.—Dismissing C.P.R. application re protection at Dundas and Waterloo road crossing, Galt, Ont.

11096. June 27.—Authorizing Toronto, Niagara and Western Ry. to take certain portions of lot 35, con. 3, and part of lots 14 to 24, inclusive, Toronto.

11097. June 27.—Dismissing Grand Valley Ry. application for authority to cross Western Counties Electric Co.'s canal at Murray st., Brantford, Ont.

11098. June 27.—Dismissing application of Colchester South municipality, Ont., alleging inadequate passenger and freight service furnished by P.M.R.

11099. June 27.—Dismissing Hamilton Radial Electric Ry. application for order directing city of Hamilton to provide safety appliances and to erect overhead crossing at east end of city's bridge on east side of Sherman Inlet.

11100. June 28.—Authorizing Canada Southern Ry. to take certain lands of F. Pawloski in Windsor, Ont.

11101. June 27.—Dismissing city of Toronto's application for order directing G.T.R. to provide protection at its Woodbine ave. crossing.

11102. June 30.—Dismissing Grand Valley Ry. application for approval of location of proposed terminal connecting G.V.R., Brantford & Hamilton Electric Ry. and T. H. & B. Ry. with the Holmedale factory district, Brantford, Ont.

11103. June 27.—Ordering C.P.R. to install an electric bell at Weston road crossing, York tp., Ont.

11104. July 9.—Ordering C.N.R. to forthwith erect stop-order boards, placed 100 ft. on each side of Pembina st. crossing, Winnipeg; that all C.N.R. trains be brought to a full stop before being flagged over the crossing, and ordering Winnipeg Electric Ry. to forthwith build a single track under C.N.R. there.

11105. July 8.—Amending order 10998, June 24, authorizing R. Forbes Co. to lay water pipe under G.T.R. at Hespeler.

11106. July 12.—Authorizing city of Winnipeg to build conduit under C.P.R. on King st. and Higgins ave.,

11107. July 8.—Authorizing Lincoln Paper Mills Co. to lay water main under G.T.R. in Merritton, Ont.

11108. July 7.—Authorizing city of Ottawa to lay water main under C.P.R. at Beechwood ave. crossing, near St. Patrick st. bridge.

11109, 11110. July 7.—Authorizing city of Peterboro, Ont., to lay sewer under G.T.R. at Dalhousie and Ware sts.

11111. July 12.—Authorizing United Fuel Supply Co. to lay pipe under M.C.R. at Main st., Brigden, Ont.

11112. July 6.—Declaring that C.P.R. crossing at Dundas st., Woodstock, Ont., is protected to the Board's satisfaction.

11113. July 8.—Ordering C.P.R. to provide farm crossing for W. Hutchin, Brownsburg, Que.

11114 to 11116. July 7.—Authorizing C.N.Q.R. to build between lots 20 and 21, Ste. Foye parish; between lots 2363 and 2365, Little River parish; and across Gros Pin road, lot 4144, Limoilou parish.

11117. July 7.—Extending to Dec. 1 time within which G.T.P.R. Branch Lines Co. was required by order 10613, May 12 and 13, to install interlocking plant at its crossing of C.P.R., at Alix, Alta.

11118. July 12.—Authorizing the New Brunswick Southern Ry. to build bridges 50.54, at Pocologan River, and 30.5, at Linton stream.

11119. July 9.—Authorizing G.T.P. Branch Lines Co. to divert road between secs. 20 and 21, tp. 33, r. 23, w. 4 m., South Alberta District.

11120. July 12.—Authorizing C.P.R. to build bridges, 125.2, at Hastings, B.C., and 45.3, at Alliston, Ont.

11121, 11122. July 12.—Authorizing C.P.R. to build spurs across Champagne ave. and Ducharme st., Outremont, Que., and for city of Winnipeg to connect with Winnipeg Electric Ry.'s easterly gas house spur.

11123. July 12.—Authorizing C.P.R. to build bridges, 62.8, Goat River, Sirdar section, Western Division; 37.4, Toronto section, Ontario Division; 120.79, Chapleau section, and 107.92, Cartier section, Lake Superior Division.

11124. July 7.—Authorizing B.C. Lands and Works Department to operate interlocking plant and signal apparatus on Fraser River bridge at New Westminster.

11125. July 9.—Authorizing Laval Electric Co. to place wires across other wires near Mascouche station, Que.

11126. July 12.—Authorizing city of Lethbridge, Alta., to lay sewer and water main under C.P.R. between secs. 4 and 5, tp. 9, r. 21.

11127. July 12.—Authorizing St. Marys Wood Specialty Co. to lay drain under C.P.R. in St. Marys, Ont.

11128. July 12.—Authorizing city of Lethbridge, Alta., to lay water main and sewer under tracks at Westminster road.

11129. July 7.—Authorizing C.N.Q.R. to divert road on lots 1 and 3, Portneuf parish.

11130. July 11.—Approving Anglo-American Telegraph Co.'s tariff of tolls in Prince Edward Island and New Brunswick and between these provinces. C.R.C.I.

11131. July 12.—Approving C.P.R. Sault Ste. Marie Branch revised location as constructed at Desbarats station, and authorizing C.P.R. to build across Huron ave., Desbarats, Ont.

11132. July 12.—Approving C.P.R. location from Sedgewick to sec. 30, tp. 44, r. 12, w. 4 m., mileage 0 to 3.65, Alta.

11133. July 12.—Authorizing C.N.R. to build across 16 highways in tp. 2, r. 19 to 21, w. p. m., Man.

11134, 11135. July 12.—Extending to Aug. 8 time within which C.P.R. was required by orders 10524 and 10523, May 9, to install electric bells at William st. and Colborne st. crossings, London, Ont.

11136. July 8.—Relieving C.P.R. from providing protection at Zorra st. crossing, Beachville, Ont.

11137. July 12.—Authorizing Montreal St. Ry. to connect with C.P.R. on Sanguinet st.

11138. July 8.—Authorizing Robert McNair Shingle Co. to build crossing over C.P.R. right of way one mile west of Port Moody, B.C.

11139. July 12.—Authorizing C.P.R. to build additional track between secs. 5 and 6, tp. 2, r. 25, w. p. m., at Waskada, Man.

11140. July 8.—Authorizing C.P.R. to build spur for Saskatoon Brick and Supply Co., Saskatoon, Sask.

11141. June 27.—Authorizing G.T.R. to build two additional sidings on and across St. Clair ave., Toronto.

11142. July 6.—Dismissing application of proprietors of Russell House, Ottawa, for order fixing terms of contract for installation of room telephone service.

11143. July 12.—Authorizing C.P.R. to reconstruct bridge 53, over Maitland River, on its Teeswater Branch, Ont.

11144. July 12.—Authorizing C.P.R. to build two spurs for Frank Lime Co., at Hillcrest, B.C.

11145, 11146. July 12.—Authorizing town of Maisonneuve, Que., to lay pipes under C.N.Q.R. at Aird ave., and Aird st.

11147. July 12.—Authorizing C.P.R. to build spur to Western Dry Dock and Shipbuilding Co.'s premises, Port Arthur, Ont.

11148. July 13.—Amending order 11087, July 6, by striking out "Grand Pabos" in recital and operative parts and substituting "Newport."

11149. July 13.—Relieving Quebec, Montreal and Southern Ry. from providing protection at Chemin de Ligne crossing, Sorel, Que.

11150. July 13.—Relieving P.M.R. from providing protection at crossing at Cedar Springs, Ont.

11151. July 13.—Relieving C.P.R. from providing protection at crossing between cons. 2 and 3, Lobo tp., Ont.

11152. July 5.—Relieving Dominion Atlantic Ry. from providing protection at crossing of second highway west of Middleton station, N.S.

11153. July 12.—Approving G.T.P. Telegraph Co.'s tariff of tolls, C.R.C. 9, filed May 18, 1909.

11154. July 13.—Approving Vancouver, Fraser Valley and Southern Ry. location from eastern boundary of city of Vancouver to False Creek, B.C.

11155. July 13.—Authorizing C.N.O.R. to build across Vale st., Colborne.

11156. July 11.—Authorizing G.T.P. Branch Lines Co. to connect its Yorkton Branch with C.N.R. in s.w. ¼ sec. 26, tp. 30, r. 4, w. 2 m., at Canora, Sask.

11157. July 12.—Ordering that C.N.R. prohibit whistling by locomotives operating within the city of Winnipeg; such whistling to be allowed only where it shall be deemed necessary, by those in charge, to prevent accident, and ordering that any person offending against this regulation be liable to a penalty of $50 for each offence.

11158. June 24.—Authorizing Quebec Railway, Light, Heat and Power Co. to cross C.P.R. at St. Valiers st.

11159. July 13.—Ordering that all portions of Hudson's Bay Co.'s reserve in Edmonton, Alta., west of 16th st. and south of C.N.R. right of way, as a strip between two lines parallel with and perpendicularly distant 25 ft. from G.T.P.R. centre line of the G.T.P.R., and containing 1.8737, more or less, be released from operation of plan originally filed.

11160. June 27. Ordering G.T.R. to build a branch about five miles north of Georgetown, Ont.

Railway Finance, Meetings, Etc.

Alberta Ry. and Irrigation Co.—Traffic receipts for June, $34,175, against $22,284 for June, 1909. Cumulative traffic receipts for 12 months ended June 30, $389,252, against $310,226 for same period 1908-09.

Alexander Gibson Ry. and Manufacturing Co.—A settlement was effected July 12, in the case of the Royal Trust Co. and others, representing the bondholders, against the company, Alex. Gibson, the Bank of Montreal and others. The property consists of cotton mills, 450,000 acres of timber limits, railway equipment and other property, upon which the Bank holds a first charge of $689,848; and there are other charges aggregating about $1,000,000. The settlement provides that all the properties to be sold, and to be distributed among the creditors, Alex. Gibson to be paid an annuity of $5,000 and to have the use of his house and grounds at Marysville, N.B., for life. The estate formerly owned the Canada Eastern Ry., and the Fredericton Ry. Extension and Bridge Co., which were taken over some years ago by the Dominion Government, and are now operated as part of the Intercolonial Ry.

Canadian Collieries (Dunsmuir) Limited.—The final payment was made to the Dunsmuir estate, June 16, and the Mackenzie, Mann & Co. interests took final possession of the collieries, railway and other property. The offices are being transferred to Vancouver, B.C., where offices have been taken in the Burns Building, Hastings St. W. L. Coulson, has been appointed General Manager of the collieries. A. D. McRae is Managing Director.

Canada Southern Ry.—A dividend of 1½%, payable Aug. 1, has been declared for the past half year. Up to the present time the dividends have been at the rate of 2½%, but under the lease to the Michigan Central Rd., made in 1903, the rate was to be increased to 3% in 1910.

Central Vermont Ry.—A Boston, Mass., dispatch of July 4, stated that the New York, New Haven and Connecticut Rd.., was purchasing the C.V. Ry. E. H. Fitzhugh, Vice President, said the story was "utterly absurd and without a shadow of foundation in fact. The C.V. is not for sale." The G.T.R. owns over $2,000,000 of the C.V.R. authorized capital stock of $3,000,000, and guarantees the interest of its bonds under a traffic agreement.

Cumberland Ry. and Coal Co.—A lease of the company's coal areas in Cape Breton has been granted to the Dominion Coal Co., with an option of purchase for $500,000 at any time during the currency of the lease.

D'Israeli Asbestos Co.—The differences between the directors of this company, which has some railway building in view, have been settled by the election of a new board as follows:—President, S. Wood; Vice President, L. A. Codere; other directors: L. D. Morton, A. H. Marquis, T. Sherman, —. Peters, F. R. Beckwith, S. A. Warrell, F. Campbell, R. Gagnon. In consequence of the arrangement the conspiracy charges against former directors and officers have been dropped.

Grand Trunk Pacific Ry.—A London, Eng., cable, July 15, states that arrangements are being made for the issue of £2,000,000 of 8% G.T.P. Ry. bonds at £82 10s., for construction purposes.

Intercolonial Ry.—The returns for the first three months of the financial year are being made up, and an Ottawa dispatch July 11, states they indicate a surplus of about $125,000, in spite of heavy outlays on renewals in the spring charged to current account.

Lake Superior Corporation.—At the June meeting of the directors it was reported that the Cannelton Coal and Coke Co. in West Virginia, had been acquired in order to provide fuel for its various undertakings. The reports of the earnings for the company's railways and industrial plants for ten months ended April 30, were stated to be satisfactory.

London and Port Stanley Ry.—The report of the London, Ont., City Auditor on the accounts of the L. and P.S. Ry., for 1909, shows that the earnings from operation by the Pere Marquette Rd., increased $9,732.72 over 1908; the passenger business decreasing $345.52 and the freight traffic increasing over $10,000. The tolls received from the Michigan Central Rd. decreased $77.65, and the express business fell off $191.56.

London and South Eastern Ry.—Following are the officers and directors for the current year:—President, W. J. Reid; Vice President, T. H. Smallman; Secretary-Treasurer, J. W. Little; other directors: J. Labatt, J. A. Campbell, M. Masuret, and the Mayor of London, Ont., ex-officio.

The Midland Terminal Ry. two miles in length, operated in connection with the blast furnaces at Midland, Ont., carries freight only. The company owns two locomotives and eight flat cars. The total cost of the railway is reported at $20,742.67; of rolling stock, $12,622.20, and of land and buildings $228,980.14, and it is also reported that on June 30, 1909, there was a balance of $3,262.36 at credit of profit and loss account, making total asets of $265,608.37. The liabilities were: capital stock, $250,000, which is held by 12 shareholders; and $15,608.37 of loans and notes payable to the Canada Iron Corporation. The earnings for the year ended June 30, 1909, were $12,330.54, and the operating expenses $13,334.63, a loss of $1,004.09. The officers and directors are: President, General Manager and Superintendent, J. J. Drummond, Midland; Treasurer, A. K. Fish, Montreal; other directors: G. E. Drummond, C. E. Gudewell, R. Milton, Montreal; F. Leeming, Brantford, Ont.; clerk, A. C. Adams, Midland; General Counsel, W. J. White, K.C., Montreal.

New York Central and Hudson River Rd.-Michigan Central Rd.—There has been deposited with the Secretary of State at Ottawa, a lease dated June 8, by the Guaranty Trust Co. of New York, trustee, to the New York Central and Hudson River Rd. Co.; the Lake Shore and Michigan Southern Ry. Co.; the Michigan Central Rd. Co.; the Cleveland, Cincinnati, Chicago and St. Louis Ry. Co., and the Chicago, Indiana and Southern Rd. Co., in pursuance of chap. 38 of the Statutes of Canada, 1907.

Quebec and Lake St. John Ry.—An action has been brought in the Quebec courts by C. A. Hanson of London, Eng., against the company to recover £250,000, being the value of prior lien bonds held by him. C. A. Hanson is head of the brokerage firm in England, with which the Montreal firm of Hanson Brothers is associated.

Quebec Central Ry.—Gross earnings for May, $98,945.56; expenses, $64,907.50; net earnings, $34,038.06, against $85,612.49 gross earnings; $58,402.20 expenses; $27,210.29 net earnings for May, 1909. Aggregate gross earnings for 11 months ended May 31, $985,019.94; expenses, $677,443.14; net earnings, $307,576.80, against $929,555.20 aggregate gross earnings; $658,230.41 expenses; $271,324.79 net earnings for same period 1908-09.

Temiskaming and Northern Ontario Ry.—Total revenue for May, $113,926.43; expenditure, $83,704.50; balance, $30,221.93; less hire of equipment, $1,116.15; net earnings, $29,105.78; percentage of expenses to earnings, 73.4.

Canadian Freight Association.

The summer meetings were held at Penetanguishene, Ont., July 6 and 7. Most of those attending, a number of whom were accompanied by lady members of their families, left Toronto on July 6 by special G.T.R. train at 9 a.m., reaching Penetanguishene a little after noon. J. Pullen, Assistant Freight Traffic Manager G.T.R., who came through from Montreal to Toronto on a special car with a nmber of other eastern members, and J. D. McDonald, District Passenger Agent G.T.R., Toronto, were assiduous in their attentions to the party. Other members reached Penetanguishene by other routes and there were altogether about 100 in the party.

The freight, classification and executive committees met during the afternoon of July 6, the Association's general meeting being held the following morning. The summer meeting, is the only one at which there are any social features and these were very enjoyable. Sailing on the Penetanguishene bay was much enjoyed. On the morning of July 7 the ladies of the party and a number of men guests who had not to attend the general meeting were taken by the Penetanguishene town council on the steamboat John Lee, through the beautiful Georgian Bay islands to Honey Harbor and Minnicoganashene. In the afternoon there was a baseball match between teams composed of eastern and western members of the Association, the latter winning by a considerable score. On July 8 the party went to Minnicoganashene on the yachts of J. S. Playfair, of Midland, and P. Paton, of Collingwood, and were the guests of Mr. and Mrs. Playfair at a most enjoyable luncheon at the Minnicoganashene There were dances at the Penetanguishene hotel both evenings.

The arrangements for the trip, including the location of the rooms at the Penetanguishene hotel, were admirably carried out by the Association's Secretary, T. Marshall.

The Northern Navigation Co. extended an invitation for a trip on the steamboat Waubic from Penetanguishene to Parry Sound and return, of which a number of the party availed themselves.

THE "ROYAL" LINE

Sailing fortnightly from

MONTREAL and QUEBEC to BRISTOL

Triple Turbine Express Steamships

"ROYAL EDWARD"

and

"ROYAL GEORGE"

Triple Screws, 12,000 tons, Marconi Wireless, Deep Sea Telephones, Passenger Elevators, 6 Passenger Decks. :: :: ::

The twin ships, the "Royal Edward" and the "Royal George," are the fastest triple screw turbine boats in the Canadian service. The British port is Bristol (two hours nearer London than Liverpool). Special Royal Line Trains within 110 minutes of London. The steamers are driven by the newest type of turbine engines, insuring a maximum of speed and minimum of vibration. Their equipment is the finest ever seen in the St. Lawrence—large state-rooms, spacious social apartments, sheltered promenade decks, artistic furnishings, perfect service, and ventilation by thermo-tank system, the fresh air being warmed or cooled, as required.

Railway Rolling Stock Notes.

The C.P.R. is reported to be in the market for one steam shovel.

The G.T.P.R. is reported to be in the market for one rotary snow plow.

The Intercolonial Ry. has received three postal cars from the Silliker Car Co., Halifax, N.S.

The G.T.P.R., has received 560 box cars, nos. 311325 to 311884, from the Canadian Car and Foundry Co., Montreal.

The Northern New Brunswick and Seaboard Ry., has received one consolidation locomotive from the Canadian Locomotive Co., Kingston, Ont.

Williard Kitchen Co., Ltd., National Transcontinental Ry. contractors, Grand Falls, N.B., has added to its equipment ten 12 yard air dump cars built in the U.S.

The seven Intercolonial Ry. locomotives which were in the recent fire at Campbellton, N.B., have been taken to the shops at Moncton, where they will be rebuilt.

The C.P.R., between June 26 and July 14, received the following additions to rolling stock,—six sleeping cars, five first class suburban cars, two first class cars, three baggage cars, one box baggage car, 45 freight refrigerator cars, 10 box cars, four vans and three D10 locomotives, all from its Angus shops, Montreal.

The Ha Ha Bay Ry., has three locomotives, 49 flat cars and one steam-shovel. One of the locomotives was purchased from the Montreal Locomotive Works, one, and the steam-shovel from Taylor and Arnold, Montreal, and the remaining locomotive from a railway contractor. It proposes to purchase one combined coach, eight or 10 box cars and two cabooses.

The C.P.R., between May 12 and June 25, received the following additions to rolling stock: 20 wooden box cars, one official car, three observation sleeping cars, five first-class cars, four second-class cars, 18 vans, eight baggage and express cars, seven G.2 locomotives, one D. 10 locomotive, two tank locomotives, from its Angus shops, Montreal; and 18 ballast cars and two steam shovels.

Following are the chief particulars of the 1,500 box cars, which the G.T.R. has ordered from the Canadian Car and Foundry Co., Montreal:—

Capacity	30 tons
Under frames	Steel
Length inside	36′ 0″
Width inside	8′ 6″
Height inside	8′ 0″
Couplers	Janney
Air brakes	Westinghouse

The Canadian Northern Ry., between June 15 and July 15, received the following additions to rolling stock,—380 flat cars, 15 stock cars, four parlor cars, from the Crossen Car Mfg. Co., Cobourg, Ont.; 15 box cars from the Silliker Car Co., Halifax, N.S.; 115 box cars, 60 steel ore cars and one dining car from the Canadian Car and Foundry Co., Montreal.

N. Curry, President Canadian Car and Foundry Co., Montreal, said in a recent interview:—"So great is the railway development in the Dominion that the output of cars from the works of the various Canadian concerns this year will exceed that of any preceding year by fully 50%. During the present year we will turn out 12,000 cars, even if we should book no further orders. Of this number, 4,000 have already been delivered. The value of the Canadian Car & Foundry Co.'s output from its three plants, amounts to $1,200,000 a month."

Following are the chief details of the 300 flat cars nos. 361300 to 361599, which the G.T.P.R. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:

Capacity	60,000 lbs.
Length over end sills	36′ 9 ¾″
Width over side sills	9′ 0 ¾″
Width over floor	9′ 3 ¾″
Height top of rail to top of floor	4′ 1 ¼″
Journal boxes	Grey iron.
Axles	Steel.
Wheels	M.C.B.
Brake beams and bolsters	Simplex.
Couplers	Janney.
Air brakes	Westinghouse.

The C.P.R., between May 12 and June 25, ordered the following rolling stock: 15 D.10 locomotives, five 280% Mallet locomotives, three first-class cars, one second-class car, one flanger, one pile driver, 1081 wooden box cars, one refrigerator car, three stock cars, 22 flat cars and 22 vans, from its Angus shops, Montreal; three steel coal cars and 100 steel automobile cars, from the Canadian Car and Foundry Co., Montreal; 10 consolidation locomotives, part of the 35 mentioned in our June issue, from the Montreal Locomotive Works, and one 70-ton steam shovel, one 90-ton steam shovel and one 60-ton-pull unloader.

Following are the chief details of the 200 box cars, nos. 312325 to 312524, which the G.T.P.R. is having built by the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:

Capacity	60,000 lbs.
Length inside	36′ 0″
Width inside	8′ 6″
Height inside, floor to carlin	8′ 0″
Width at eaves	9′ 7 ⅛″
Height top of rail to running board	13′ 5 ½″
Centre to centre of trucks	26′ 9 ¾″
Journal boxes	Grey iron.
Axles	Steel.
Wheels	Cast iron, M.C.B.
Brake beams and bolsters	Simplex.
Couplers	Janney.
Air brakes	Westinghouse.
Inside roof	Metal.

Following are the chief particulars of the 1,000 twin hopper coal cars, which the G.T.R. has ordered from the Canadian Car and Foundry Co., Montreal:—

Capacity	50 tons
Centre to centre of trucks	21′ 9″
Height, top of rail to centre of coupler	2′ 10½″
Height, top of rail to top of body	10′ 0″
Height, top of rail to top of brake mast	10′ 6 11-16″
Length inside	30′ 0¼″
Length over end sills	31′ 6″
Width inside	9′ 6″
Width over side stakes	10′ 1½″
Couplers	Janney
Air brakes	Westinghouse
Draft gear	M.C.B. twin spring
Axles	Steel
Truck bolsters	Simplex
Brake beams	Simplex

Following are the chief details of the double ended locomotive, 2-4-2-T-80 type, which the Ha Ha Bay Ry., has ordered from the American Locomotive Co., as mentioned in our last issue, and which will be built by the Montreal Locomotive Works:—

Cylinders	14″x22″
Driving wheels	44″
Boiler, diar	43 ¾″
Boiler pressure	165 lbs.
Firebox	44 3-16″x44 ¾″
Tubes, no. and diar	160—2″
Tubes, length	11′ 8″
Wheel base, driving	7′ 0″
Wheel base, total	22′ 6″
Weight on driving wheels	58,000 lbs.
Weight on leading truck	9,000 lbs.
Weight on trailing truck	13,000 lbs.
Heating surface, tubes	643 sq. ft.
Heating surface, firebox	54 sq. ft.
Grate area	14.2 sq. ft.
Maximum tractive power	13,740 lbs.
Factor of adhesion	4.22
Tanks	2 on each side.
Capacity, water	1,200 gals.
Capacity, coal	2 tons.

Following are the chief details of passenger equipment, which the G.T. Pacific Ry. has ordered from the Canadian Car and Foundry Co., Montreal, as mentioned in our last issue:—

12 FIRST-CLASS CARS.

Length over end sills	73′ 0″
Length over buffers	81′ 0¼″
Truck centres	57′ 0″
Total wheel base	67′ 6″
Width over all at eaves	10′ 0¼″
Width between deck sills	5′ 6″
Height top of sill to bottom of plate	6′ 10″
Height over roof boards	14′ 1⅞″
Vestibules	Pullman wide type C, both ends.
Platforms	Standard steel.
Inside finish	Mahogany.
Deck	Full Empire.
Heating	Safety Car Heating and Lighting Co.'s combination steam and hot water.
Lighting	Pintsch gas.
Brakes	Westinghouse P1612.
Trucks	Standard.
Journals	5″ x 9″
Journal boxes	Cast iron.
Wheels	38″, steel tired.

THREE DINING CARS.

Length over end sills	74′ 0″
Length over platforms	82′ 0¼″
Width over side sills	9′ 8″
Width over all at eaves	10′ 0¼″
Width between deck sills	5′ 6″
Height top of sill to bottom of plate	6′ 10″
Height over roof boards	14′ 1⅞″
Vestibules	Pullman, wide.
Platforms	Standard steel.
Heating	Safety Car Htg. & Ltg. Co.'s combination steam and hot water.
Lighting	Electric and Pintsch gas.
Air brakes	Westinghouse P1612.
Trucks	Standard six wheel.
Wheels	38″ steel tired.
Journal boxes	Cast iron.

23 COLONIST CARS.

Length over end sills	67′ 6″
Length over buffers	75′ 6¼″
Trucks centre to centre	51′ 6″
Total wheel base	59′ 6″
Width over sills	9′ 8″
Width over all at eaves	10′ 0¼″
Width between deck sills	5′ 0″
Height top of sill to bottom of plate	6′ 10″
Height over roof boards	14′ 1⅞″
Vestibules	Pullman wide type C.
Platforms	Standard steel.
Heating	Safety Car Htg. & Ltg. Co.
Lighting	Pintsch gas.
Brakes	Westinghouse P1612.
Trucks	Standard four wheel.
Wheels	38″ steel tired.
Journals	5″ x 9″
Journal boxes	Cast iron.

THREE SECOND CLASS CARS.

Length over end sills	68′ 0″
Length over platform	76′ 0¼″
Truck centres	53′ 8″
Total wheel base	61′ 8″
Width over side sills	9′ 8″
Width over all at eaves	10′ 0¼″
Width between deck sills	5′ 6″
Height top of sill to bottom of plate	6′ 10″
Height over roof boards	14′ 1⅞″
Vestibules	Pullman wide type C, both ends.
Platforms	Standard steel.
Inside finish	Mahogany.
Lighting	Pintsch gas.
Brakes	Westinghouse P1612.
Trucks	Standard four wheel.
Journals	5″ x 9″
Journal boxes	Cast iron.
Wheels	38″ steel tired.

FIVE TOURIST CARS.

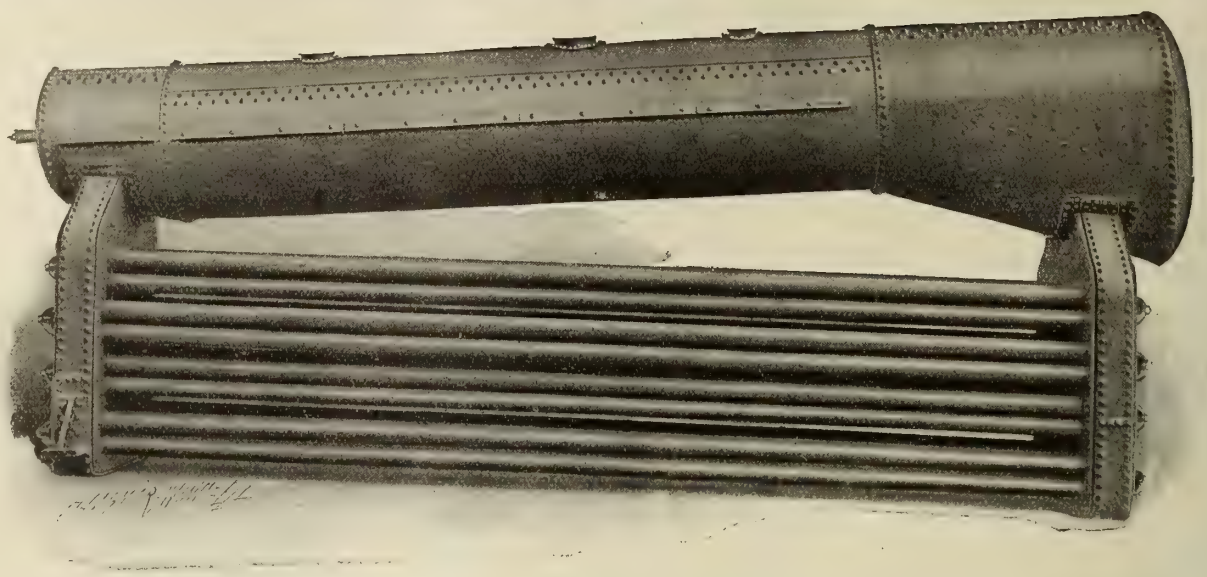
Length over end sills	67′ 6″
Length over buffers	75′ 6¼″
Truck centres	51′ 6″
Total wheel base	59′ 6″
Width over side sills	9′ 8″
Width over all at eaves	10′ 0¼″
Width between deck sills	5′ 0″
Height top of sill to bottom of plate	6′ 10″
Height over roof boards	14′ 1⅞″
Platforms	Standard steel.
Heating	Safety Car Htg. & Ltg. Co.
Lighting	Pintsch gas.
Brakes	Westinghouse P1612.
Trucks	Standard four wheel.
Journals	5″ x 9″
Journal boxes	Cast iron.
Wheels	38″ steel tired.

FOUR MAIL AND EXPRESS CARS.

Length over end sills	60′ 0″
Length over buffers	63′ 1¼″
Truck centres	44′ 0″
Total wheel base	52′ 0″
Width over side sills	9′ 8″
Length inside express end	29′ 5″
Length inside mail end	29′ 6″
Width over all at eaves	10′ 0⅝″
Width between deck sills	5′ 0″
Height top of sill to bottom of plate	6′ 7″
Vestibules	Pullman dummy at both ends.
Platforms	Standard steel.
Inside finish	Poplar sheathed.
Heating	Safety Car Htg. & Ltg. Co.
Lighting	Pintsch gas.
Brakes	Westinghouse P1412.
Trucks	Standard four wheel.
Journals	5″ x 9″
Journal boxes	Cast iron.
Wheels	38″ steel tired.

WATER-TUBE BOILERS

VERTICAL AND HORIZONTAL



Side view of Erie City Single Drum Water-Tube Boiler ready to ship.

We are Canadian Manufacturers of the Erie City Water-Tube Boilers. If you want a boiler that is "SAFE," "DURABLE," "ECONOMICAL" and "EFFICIENT," let us figure on your requirements.
Catalogue, prices and full particulars sent upon request.

Canadian Northern Ry. Construction, Etc.

Canadian Northern Quebec Ry.—W. Mackenzie, President, and D. B. Hanna, Third Vice President, C.N.R., were present at a private meeting of the Quebec city council, July 7, to discuss the question of the location of the company's shops there. The city has been threatening to sue for the recovery of the $200,000 bonus paid to secure the location of the shops in Quebec. Mr. Mackenzie stated that Quebec has always been held in view as the eastern terminus of the C.N.R., and when the line is in order this will be her destiny. The shops would have been built by this time had it not been for the entanglement of the affairs of the C.N.Q.R. and the Quebec and Lake St. John Ry. The latter company owned the land upon which it was proposed to build the shops, and until the existing trouble was got rid of no definite move towards the erection of shops could be made. In addition to building the shops in Quebec the company proposed to build a bridge across the St. Charles River so as to be independent of other companies, and to replace the burned grain elevator. As a result of the conference the city council decided to suspend action for some weeks.

The question of terminals in Montreal is still under consideration, and it is said that an official announcement as to the company's proposals will be laid before the city council at an early date. Local reports state that the property acquired embraces the area between St. Catherine and Sherbrooke streets, running west nearly as far as Aylmer St. and east to the property facing Bleury St.

Grading has been started on the new line from Hawkesbury, Ont., to Montreal, for which a contract has been let to J. P. Mullarkey, Montreal. As originally surveyed this line follows the Carillon and Grenville Ry., and from Grenville continues in an almost straight line to St. Eustache through St. Andrews and St. Benoit. The Cache river is to be crossed near Ste. Genevieve, but the route on Montreal Island has not been definitely settled.

Canadian Northern Ontario Ry.—W. Mackenzie, President, had a conference with the mayor of Ottawa, July 8, regarding the entrance of the company's Hawkesbury-Ottawa line into the city. The line at present stops just inside the city limits by reason of the refusal of the Board of Railway Commissioners to allow a level crossing of the Hurdman road. The matter was discussed in a general way and it is said that a proposal will be made for a slight diversion of the Hurdman road, so as to obviate the level crossing, and permit of a junction somewhere near Varsity oval with one of the existing lines by which entrance to the central station will be made, and that application will be made to the Board of Railway Commissioners in Sept. for approval of the route.

The question of the route of the Toronto-Ottawa line at Cobourg, was under consideration by the Board of Railway Commissioners' engineers, July 8. After a thorough examination of the whole matter and hearing what was said by the C.N.O.R., the G.T.R. and the town officials, the Board's Chief Engineer stated that it had been decided to recommend the following for the approval of the Commissioners: "That the changes proposed by the G.T.R., as per plan filed with the board and the town, be sanctioned with the exception of the spur track projecting northward from the north track, which would be disallowed so as to enable the C.N.O.R. to approach the Division street subway over the G.T.R. property close to the G.T.R. north track, as indicated on the C.N.O.R. plan presented."

Beyond Trenton, to which point construction is at present in progress, the final location of the route is being rapidly made. The question of the route to be followed in the vicinity of, and through Belleville is under the consideration of the Board of Railway Commissioners' engineers. The plans show that the route will cross the Frockville, Westport and Northwestern Ry., (which has been acquired by Mackenzie, Mann & Co., Ltd., in the interests of the company) near Newboro. The line would have been carried through Westport, but for engineering difficulties in the way at Crow Lake. A divisional point will be located at the point of crossing the B.W. and N. Ry.

In a recent interview W. Mackenzie, President, said:—"Forty miles of new track will be built this summer westerly from Selwood, and it is our present intention to begin building easterly from Port Arthur next spring, and keep the work up continuously until through connection is made.

Nepigon Ry.—We are advised that surveys are being made for this line from Nipigon Bay, crossing the C.P.R. transcontinental line near Nipigon station, northerly towards Lake Nipigon. It is not likely that construction will be started this year.

Duluth, Winnipeg and Pacific Ry.—We are officially advised that a contract has been let for the construction of a line from Duluth to Virginia, Minn., 75 miles, to Foley, Welch and Stewart, St. Paul, Minn. The contract covers the completion of the line, the company furnishing to the contractors the steel bridges and the track material. The work must be completed by Sept. 1, 1911. The line will pass through a rough country interspersed with a good deal of muskeg, necessitating a lot of rock blasting and filling. The right of way has been secured, and a good deal of the land required for terminals and wharfage accommodation in Duluth has been purchased. H. T. Hazen, Chief Engineer, returned to Duluth, from Toronto, July 11, in company with the contractor's representative. The work will be started at once. The location, said Mr. Hazen, of the passenger and terminal yards, roundhouse, repair shops, coal sheds, etc., will be in West Duluth, and arrangements will be made with some other roads for the use of trackage to the centre of the city. The location of docks is not yet determined, but an early settlement of this question is expected.

Canadian Northern Ry.—As a result of the recent inspection of the line by the President and the General Manager, orders have been given for extending the round house at Port Arthur, and it is said that an additional unit will be added to the railway plant there. The contract for the erection of the new shed, 600 by 40 ft. at the wharf has been let to Vigars & Co. A deputation representing the city asked the President as to the establishment of car shops, and Mr. Mackenzie said this would be taken into consideration just as soon as the eastern and western lines were linked up.

The extensive bush fires which raged along the Rainy River Valley early in July did considerable damage to the railway company's property. It is stated that 30 buildings, including stations, freight sheds, and water tanks were destroyed, besides $50,000 worth of yard material, and 125 box cars.

The betterments being made on the line between Winnipeg and Edmonton includes the fencing of all the lines in Alberta; the relaying of the track with 80 lb. rails, and reballasting the line. Twelve steam shovels are at work in the gravel pits west of Winnipeg getting out ballast. The 60 lbs. rails which are being released are being utilized on branch lines, and new lines in the west.

A contract is reported let to Jas. McRae, Gladstone, Man., for the grading of the extension of the Oakland branch, for about 12 miles. The grading is now completed to a short distance beyond Totogan, on the west side of Lake Manitoba, and it is intended to extend it so as to link up with the spur from Ochre River on the line to Rose du Lac. The completed portions of the line are being ballasted, but it is not yet known when the gap between Sandy Bay and Rose du Lac will be closed up.

We were advised July 18, that tenders are to be called for at once for the erection of a hotel and station building at Brandon, Man.

In connection with the press report referred to in our last issue that surveys were being made for a line to run from North Portal to Melville, and on to Hudson Bay Jct., Sask., we are advised that this is not a C.N.R. line.

Judgment was delivered June 30 upon the application of the C.N.R. to have the injunction, restraining it from trespassing on C.P.R. lands near Stettler, Alta., dissolved. The application was granted upon the C.N.R. undertaking to comply with all the statutory requirements and both companies must go to the Board of Railway Commissioners to have present and future difficulties as to crossing lands, irrigation ditches, etc., adjusted. It was expected that it would take about three weeks to adjust matters so as to enable construction to be proceeded with. The track laying gang reached Stettler at the end of June, and the work on the line is being pushed forward towards Calgary as fast as possible.

General Manager McLeod is quoted as having stated in a recent interview that engineers were engaged in surveying a proposed line from a point on the Vegreville-Calgary line, south of Stettler, parallel to the C.P.R. line, to cross the Calgary and Edmonton Ry. at Lacombe. This piece of line is evidently that intended to open up the Brazeau coal fields, as we were officially advised July 7, that the company's survey parties were then in the field locating a line from near Stettler to the Brazeau coal fields.

We were advised July 18, that a contract had been let for the construction of a line from a point about six miles south of Stettler westerly to Rocky Mountain House, and that it is expected to grade about 30 miles this year.

Canadian Northern Alberta Ry.—We are officially advised that the first section of the main line from Edmonton, Alta., is now under construction. It starts from St. Albert, a station on the Edmonton and Slave Lake Ry., 10 miles north of Edmonton, and proceeds westerly in the direction of the Yellowhead Pass. The work at present in hand is a 70 mile stretch extending to the Pembina River. The grading contract has been sub-let to McMillan Brothers, press reports state, and it is expected to have track laid by the end of the year.

Canadian Northern Pacific Ry.—The contract between the company and the British Columbia Government was formally completed June 24, at Victoria, when the Attorney General gave his certificate. A contract for grading the first 60 miles from Port Mann easterly has been let to the Northern Construction Co., of Winnipeg. A start was made clearing the right of way June 30, C. V. Cummings having charge of the work. For the first few miles the new line will parallel the Great Northern Ry. Co.'s line, on through the Chilliwack district to Matsqui Prairie, then on to Hope near where the present contract ends. The profile, plans and specifications for the route from Port Mann to Matsqui

THE ELECTRIC HEADLIGHT

The following letter was received under date of May 8, 1908, from Mr. J. W. Cleary, Travelling Engineer Pyle-National Electric Headlight Co.:

"I learn from_____the Master Mechanic here, that an engineer running between_____ and_____discovered a broken rail with the Pyle-National Electric Headlight and made the stop without ditching his train. One or two pairs of wheels got off, but that was a small affair to what it would have been where a foot of the rail was broken off. Also an engineer running east of here found some cars shoved out on the main line. He saw them with the 'Electric' and made the stop without hitting them."

Or any agent of the company.

Prairie, described as mileage 59 to 91, were approved by the Government, July 4.

The plans for the Port Mann-Matsqui section of the line show that there will be four stations between the terminals, one midway between Bon Accord and Langley, the second outside the townsite of Langley, the third just east of Cromarty Slough, and the fourth near the Mission bridge. The line will be carried across the Government trestle to Bon Accord. Near Mount Lehman the line will leave the river, crossing the C.P.R. Sumas line about a mile-and-half from the Mission bridge.

Application has been made to the Kamloops council for a grant of land to secure the line entering the city. The company asks the city to give it the land lying between lot 8, block 2, and Ratchford's store, and a way out east of the town and in return the company would place its station and yards on this site; build a traffic and railway bridge across the South Thompson, immediately commence the line, yards and shops, and make Kamloops the centre of its construction operations in each direction. It might require certain yards on the Indian Reserve for its through freight in addition to this. The matter is under consideration.

An additional survey party has been sent out to locate a line in the north part of Vancouver Island. (July, pg. 553).

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers to distinctly understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

W. Chase Thomson, M.Can.Soc.C.E., resigned his position as assistant engineer of the Dominion Bridge Co., Montreal, at the end of June and assumed charge of the Canadian office of the Cleveland Bridge and Engineering Co., Ltd., of Darlington, Eng., in the Canadian Express Building, Montreal.

The Fairbanks-Morse Canadian Mfg. Co., Ltd., has completed a warehouse building 135 by 80 ft., basement and four stories, on Bloor St. West, Toronto, to store goods so that orders may be promptly filled from stock. It is intended to increase the machine shop output 75%, to double the foundry capacity and to install a brass foundry, for the purpose of manufacturing gas tractors.

The Silliker Car Co., Ltd., Halifax, N.S., is increasing its capital stock to $750,000 by the issue, at par, of $250,000 7% cumulative preference stock, one half of which has been offered to the public. The prospectus states that the company has on hand "large contracts for freight cars, first-class passenger cars and sleeping cars for the Canadian Northern, the Intercolonial and other railways, and is turning out an average of three freight cars daily." A car wheel moulding department has been added to the plant.

Cammell, Laird & Co., Ltd., Sheffield, Eng., which is represented in Canada by F. H. Hopkins & Co., Montreal, rolled recently at its Grimesthorpe Steel Works, what is claimed to be the largest mild steel plate ever produced in England. The ingot utilized weighed 120 tons, its dimensions being 9 ft. by 5 ft. 10 ins. by 18 ft. 1 in., and the charge was obtained from three furnaces. The ingot was stripped the following day after casting, taken from the casting pit, and within one hour charged into a horizontal re-heating furnace. The ingot was slabbed down under a 4,000-ton press to 12 ft. 9 ins. by 9 ft. by 40 ins., re-heated and rolled into a plate 18 ft. by 10 ft. 9 ins. by 25⅛ ins., the latter operation occupying 45 minutes. When the scrap was removed and the plate machined at Cyclops, the approximate finished weight was 65 tons. Transit between the two works was by road, three heavy traction engines being required for the purpose.

THE QUEBEC BRIDGE.

In speaking at Fort William, Ont., recently, Hon. G. P. Graham, Minister of Railways, gave the following facts:—

	Quebec Bridge.	Forth Bridge.
Total length of cantilevers	2,930 ft.	5,349.5 ft.
Number of channel spans	1	2
Length of longest channel span	1,758 ft.	1,710 ft.
Roadways on bridge	2 elec. railway tracks. 2 highways. 2 sidewalks.	2 ry. tracks.	2 railway tracks. ....
Load per lineal foot bridge is designed to carry exclusive of its own weight	13,340 lbs.	4,480 lbs.
Total weight of bridge	72,000 tons.	57,000 tons.
Weight per lineal foot for cantilever only	49,150 lbs.	21,360 lbs.
Greatest depth of piers below high water	93 ft.	87 ft.

The caisson for the north pier of the Quebec bridge is 180 by 56 ft. square, and over 60 ft. high, requiring approximately 3,000,000 ft. of timber, 90% of which is 12x12 in. Southern pine. Nearly 70 tons of bolts are required in its construction. At the lower depths to which the caisson will be sunk the men are working under a pressure of about four atmospheres. At this depth men can only work for about two one-hour shifts in the 24 hours, for which they receive a full day's pay. The north pier will be built entirely new and carried down some 60 ft. below the bed of the river to rock. For the south pier the old foundation will be utilized and enlarged, but will not rest on rock, as the present foundation has been found good. Work will go on night and day, and a force of about 2,000 men required. The caisson for the south pier will be built this winter and sunk next season. Between 40,000 and 50,000 barrels of cement will be required in the construction of the north pier alone, and about 125,000 barrels for the entire work.

The weight per lineal foot of steel in the Quebec bridge is 2.30 times as great as that of the Forth bridge.

The load for which the Quebec bridge is designed is 2.98 times as great as that for which the Forth bridge was designed.

The Forth bridge has 4.77 lbs. of carbon steel for every pound of live load it is designed to carry. The Quebec bridge has 3.90 lbs. of nickle steel for every pound of live load it is designed to carry.

The prescribed test load for the Quebec bridge is 4 1-3 times heavier than that used for the Forth bridge. Test pieces of the compression chord of the old Quebec bridge broke at 26,850 lbs. per square inch. Test pieces of similar chords for the new bridge broke at 56,800 lbs. per square inch. The new chords are therefore more than twice as strong per square inch as the old ones.

The maximum section of the compression chords of the old bridge was 843 square inches; in the new bridge the maximum section is 2,037 square inches. According to the tests the old chords would break under a pressure of 22,634,000 lbs., and the new ones under a pressure of 115,701,000 lbs. The new chords are therefore more than five times as strong as the old ones, although the live load of the new bridge is only about twice as heavy as the live load of the old bridge.

Dominion Subsidy Contract.—On July 5, a contract was entered into under the act granting subsidies in aid of the construction of certain railways, between the Dominion Government and the Kettle River Valley Ry., for the construction of a line from the company's existing line near Grand Forks, B.C., along the north fork, and the east and west fork of the north fork of the Kettle River, for 50 miles.

The Canadian Northern Ry., has acquired a third interest in the railway's building at the Toronto exhibition grounds.

The C.P.R. floral department, has offered a series of prizes for the best kept gardens at stations, roundhouses, etc., in each grand division, and special prizes for the best photographs of gardens at the stations.

The first daily passenger train of the G.T. Pacific Ry. reached Edmonton, Alta., July 4. The schedule time for the trip from Winnipeg is 30 hours. A fast freight service has also been inaugurated, the run occupying 60 hours.

Vancouver Island Logging Railway.—A 20,000 acre timber area near Port Renfrew, on Vancouver Island, B.C., has been purchased by St. Louis, Mo., parties. It is intended to build a logging railway in order to develop the property, Port San Juan being the point on the water front to which the line will be built. C. C. Michener, President of the Red Fir Lumber Co., Nanaimo, B.C., is interested in the new company.

The assessment of the Canadian Northern Ry. property at Port Arthur, Ont., has been fixed at $125,000, by the court of revision.

There has been listed on the New York stock exchange $2,510,000 additional first mortgage 5% 50-year bonds of the Cuba Rd., making the total amount now listed $11,310,000.

The motor car service which the C.P.R. recently inaugurated between Brandon and Minnedosa, Man., and other points has been abandoned, the power it is reported not being powerful enough to overcome the gradients.

The British Columbia courts have dismissed the action brought by M. Frewen and others against C. M. Hays and the G.T. Pacific Townsite and Development Co., for specific performance to sell 1,000 lots at Prince Rupert.

A. Labond, brought an action in the Quebec courts to recover $12,000 from the C.P.R., alleging that the value of his property on St. Paterick St., Montreal, had been depreciated to that extent, by the building of the C.P.R. branch to the Canada Sugar Refining Co.'s premises. The action was dismissed, the court holding that Labond had failed to prove any material damage.

VANADIUM

Contrary to the custom of things, Vanadium won immediate success in the highest branches of Metallurgy—in the manufacture of armor plate, marine forgings, locomotive and automobile parts.

Tests tell; and the tests which instantly admitted Vanadium Steels to these important fields are revolutionizing results all over the metal world.

This space is too short for the story. It is a story that vitally affects the success of every man, every machine, and every mill that uses iron, steel, brass, bronze or aluminum.

Vanadium, the "Master Alloy," is now in use all over the world. Get the complete story from our books.

Ontario Lines secured by Mackenzie, Mann & Co.

The Ontario and Ottawa Ry. Co. was incorporated last session of the Dominion Parliament to construct a railway from the Canadian Northern Ry. near Lake Couchiching, easterly to Snowdon tp., Haliburton county, Ont., and from Herschell tp., Hastings county, easterly to Renfrew, thence crossing the Ottawa River and continuing generally southeasterly to Hull, Que., or recrossing the Ottawa River to Ottawa. The company is authorized to enter into agreements with the various Mackenzie, Mann & Co. lines, and also with the Central Ontario Ry., the Marmora Ry. and Mining Co., the Thousand Islands Ry., the Bay of Quinte Ry., the Brockville, Westport and North Western Ry., and the Bessemer and Barrys Bay Ry., and to issue consolidation stock in respect of the lines acquired.

As stated in our last issue, the Brockville, Westport and Northwestern Ry., extending from Brockville to Westport, Ont., 45 miles, has been secured by the Mackenzie & Mann interests for amalgamation with the Canadian Northern Ontario Ry.

The Ontario Legislature in 1870 incorporated the Brockville and Westport Ry. Co. to build a line between these two points, and the act was amended in 1873, but nothing appears to have been done under it. In 1884 the Brockville, Westport and Sault Ste. Marie Ry. Co., was incorporated by the Ontario Legislature and amending acts were passed in subsequent years. The Dominion Parliament in 1885 voted a subsidy for the construction of 45 miles from Brockville to Westport which was re-voted in 1889, and the unpaid balances were revoted in subsequent years, but were not paid, as the company never brought the line up to the standard. After some years the company got into difficulties, and the line was sold by the bondholders. The new owners secured a charter from the Dominion Parliament in 1903 for the Brockville, Westport and North Western Ry., and the line was brought up to the Government standard, an arrangement being made under which the new company paid about $200,000 to satisfy judgment creditors of the old company for construction supplies, before the balance of the subsidy was paid in 1906. The company has power to extend its line northerly, and to connect with U. S. lines at Morristown, N.Y., by means of a bridge or ferry.

The company owns 45 miles of single track main line laid with steel rails, with two miles of yard track and sidings. There is one steel bridge having a 69-foot span, 31 wooden bridges, the longest span being 65 feet; 19 short combination bridges, and two trestles, one of 575 feet and one of 700 feet, on the line. There are 35 level crossings, and the line is carried under one bridge which is 325 feet above rail level. The company's rolling stock at June 30, 1909, included four locomotives, 20 freight cars, one car in the company's service, and 10 passenger cars.

The capital outstanding, June 30, 1909, was: Common stock, $900,000; bonds, $450,000. The company has received by way of subsidies, $140,800 from the Dominion and $116,000 from municipalities.

A special meeting of shareholders has been called to be held at Brockville, Ont., Aug. 8, for the purpose of considering and, if thought fit, of accepting the resignation of some or all of the officers and directors of the company; of filling up any vacancies so created, and of transacting such other business as may be transacted at an annual general meeting.

At a meeting at Brockville, Ont., July 13, F. T. Lewis, C. Heilshorn, and A. P. Van Tuyl, of New York, resigned from the directorate and two other directors having disqualified themselves by the transfer of shares. D. B. Hanna, F. H. Phippen, J. D. Morton, G. G. Ruel, B. C. Vaughan, and R. P. Ormsby, were elected in their places. Subsequently D. B. Hanna was elected President; J. D. Morton, Vice President, R. P. Orsmby, Secretary, and L. Mitchell Treasurer. All the new directors and officers are connected with the Canadian Northern Ry. The old directors who remain on the board are W. H. Comstock, J. Cumming, R. Bowie, W. C. Fredenburg and W. S. Buell of Brockville.

The Irondale, Bancroft and Ottawa Ry. had been acquired at the time the act was passed, and since then the Brockville, Westport and North Western Ry., and the Central Ontario Ry., with its leased line—the Marmora Ry. and Mining Co.—have been acquired. These lines have a total length of 242.73 miles with legislative authority to extend, for which extensions there are subsidies available. The provisional directors of the company are:—G. G. Ruel, G. F. Macdonnell, R. H. M. Temple, A. J. Reid, R. P. Ormsby. Notice has been given that application will be made to the Board of Railway Commissioners by the companies named for a recommendation to the Governor-in-Council to sanction agreements for conveying to the Ontario and Ottawa Ry. Co. the four several railways. It is understood that the O. and O. Ry. Co. as soon as the amalgamations have been properly ratified, will issue consolidated stock in respect of the mileage, and that in time the lines will become part of the Canadian Northern Ontario Ry.

The Prince Edward County Ry. was incorporated by an act passed by the Ontario Legislature in 1873, and its name was changed to that of the Central Ontario Ry. in 1882. In 1884 the company's railway was declared to be a work for the general advantage of Canada. Various other acts have been passed by the Dominion Parliament, as well as by the Ontario Legislature,, granting various powers to the company, and extending the time within which it might construct its authorized lines. The lines constructed by the company extend from Pictou to Trenton Junction, 32.17 miles; from Trenton Junction to Coe Hill, 72.60 miles, and from Ormsby Jct. to Maynooth, 35.36 miles; total 140.13 miles. The company has under construction an extension from Maynooth northerly towards Whitney station, on the G.T.R. Canada Atlantic branch. The company also operates under lease the Marmora Ry. and Mining Co.'s line, 9.60 miles, to which reference is made further on. The whole of the 149.73 miles is laid with steel rails. It has 15.50 miles of yard track and sidings, and operates over half a mile of another company's yard tracks. There are 11 iron bridges aggregating 1,134 ft. in length, the longest being 490 ft., and the shortest 34 ft., and one wooden bridge of 45 ft. on the line; together with 116 unguarded level crossings, and one bridge carrying a highway over the track. The company owned June 30, 1909, one switching and 15 passenger locomotives; 12 passenger cars; 53 box cars. 181 flat cars, 11 stock cars, 10 coal cars, and four cars in the company's service. The amount of common stock outstanding June 30, 1909, was $3,340,000, and there were also $1,000,000 of bonds oustanding. During the construction period the company received aid as follows: Dominion, $179,466; Ontario, $263,000; municipal, $93,500.

The old Parliament of Upper Canada incorporated the Cobourg, Peterborough and Marmora Ry. Co. In 1868 the Ontario Legislature passed an act recognizing and extending the company's powers, and in the following year another act was passed legalizing the amalgamation of the railway company with the Marmora Iron Co., the title of the concern being the C., P. and M. Ry. and Mining Co. Other acts were passed and in 1887, after the sale of the company's bonds under an order of the chancery court, the Dominion Parliament incorporated the Cobourg, Blairton and Marmora Ry. and Mining Co. to take over the property, etc., acquired, and to build the railway, and in 1889 the town of Cobourg was authorized by the Ontario Legislature to aid the company in the construction of its railway. There was another re-arrangement of affairs and in 1891 the Ontario, Belmont and Northern Ry. was incorporated by the Ontario Legislature, and a line authorized to be built from Hastings to Marmora, about 31 miles. In 1900 the Legislature authorized the company to change its name to the Marmora Ry. and Mining Co. The line constructed and opened for traffic in 1896 extends from Central Ontario Jct., to Wanston, 9.60 miles, and when it has been operated it has been under lease by the Central Ontario Ry. It does not own any rolling stock, and no information is available as to its stock and bond indebtedness, or in regard to the result of its operations, the latter figures being included in those of the Central Ontario Ry. An old report places the capital stock at $250,000 of which there had been paid in $115,421 out of $130,000 subscribed, and $100,000 of 6% bonds; in addition to which there was a floating indebtedness of $4,218. The cost of the line was given as $265,291, towards which there had been bonuses as follows:—Dominion, $30,720; Ontario, $19,149. The same report gave the officers as follows: President, C. A. Masten, Toronto; Treasurer, C. A. Millener, Deseronto, Ont.; Trustee for the bondholders, J. A. McGillivray, Toronto.

The officers and directors of the Central Ontario Ry. are: President, C. E. Ritchie; Vice President, J. J. Warren, General Manager, G. Collins; other directors, J. H. Moss, E. B. Stockdale; Treasurer, J. D. Rowe; Chief Engineer, J. D. Evans; Superintendent, G. A. Hoag. The chief offices and operating headquarters are at Trenton, Ont.

The Irondale, Bancroft and Ottawa Ry., which has latterly been operated under a temporary lease by the Central Ontario Ry., by G. Collins, General Manager, was acquired by the Mackenzie, Mann interests some time ago, as detailed in our issue for Dec., 1909, pg. 897.

New York Central and Hudson River Rd.—An issue of $22,500,000 of 4½% equipment trust certificates has been sold in New York. A large amount of the long term notes were bought for London, Eng., and of the short term notes for Paris, France.

White Pass and Yukon Ry.—Gross earnings for May, $150,737, and for 11 months ended May 31, $1,098,475.

Sir John Murray, of deep sea exploration fame, who visited Canada recently, is a brother of the late James Murray at one time Superintendent C.P.R., at Winnipeg.

The Ontario courts have dismissed an action brought by the C.P.R. to recover money paid on account of the death of one man, and the injury of another in a railway accident. The men were travelling on passes at the time of the accident in charge of horses belonging to Burns & Sheppard of Toronto, and the company claimed that its contract protected it against damages. A settlement was expected at the time of the accident, and the company afterwards sought to recover from the men's employers the amount of money paid under the settlement.

The Quick Way of Issuing Orders

Intercommunicating telephones afford the quick way of doing things in transportation work—for both big and little companies. They keep all the departments in touch with each other—the passenger, freight, baggage and all other branches of the organization are welded together—and each and all are under the direct supervision of the executive. They save time—do away with running back and forth for information—and pay for their installation and maintenance in proportion to the size of the institution. The "Northern Electric" Intercommunicating Way is the Quick Way.

Why not look into this—why not know for yourself in exact dollars and cents just what such a system would cost and save you daily, monthly, yearly?

Do you know what lost time is costing you now? No? You can easily figure it out. Have a clerk keep a record of it for a day or two. Its dead load of expense will amaze you.

We will be glad to tell you our side of the story on request. Ask for Bulletin No. 713.

WINNIPEG—599 Henry Avenue.

To Engineers and Others

Have the stations on your line name signs placed conspicuously? They should have, for the comfort of your passengers alone, if for no other reason. You know how aggravating it is, when the train pulls up at the platform, to have to crane your neck or leave your seat, endeavoring to see what station you are at. Besides it is good advertising for the line.

Enameled iron has proven the best sign for station purposes. It never fades or cracks.

Made in any colors with mileage figures if desired.

RICE LEWIS & SON LIMITED, - TORONTO

MAINLY ABOUT PEOPLE.

H. J. Squier, Assistant Sales Agent Dominion Coal Co., died at Sherbrooke, Que., June 30, after a short illness.

Sir Wm. C. Van Horne, has been appointed a member of the Boulevard Commission for Montreal.

H. H. Morse, formerly Manager Levis County Ry., at Levis, died at Southbridge, Mass., July 4.

J. T. Arundel, General Superintendent Manitoba Division, C.P.R., returned to Winnipeg, July 11, from Great Britain.

H. R. Charlton, General Advertising Agent G.T.R. and G.T.P.R., is on a trip over the G.T.P.R., west of Edmonton.

A. D. Cartwright, Secretary Board of Railway Commissioners, and his family, are in Prince Edward Island for the holidays.

A. W. Smithers, Chairman G.T.R., London, Eng., has been elected a director of the South Eastern and Chatham Ry. there.

R. Forget, M. P., has given $25,000 towards the fund of $500,000 which it is proposed to raise for the Notre Dame Hospital, Montreal.

Mrs. C. Breithaupt, who died at Berlin, Ont., July 6, was mother of W. H. Breithaupt, President Berlin and Bridgeport Electric St. Ry.

Lady Shaughnessy and the Misses Shaughnessy arrived at their summer residence, St. Andrews-by-the-Sea, N.B., July 6, for the season.

A number of boy scouts sailed from England in July, for Canada, at the invitation of Sir Thos. G. Shaughnessy, for a few weeks camping tour.

Judge Leboeuf of the Montreal Circuit Court, is reported to have declined the offer of a membership of the Government Railways Managing Board.

J. W. Loud, Freight Traffic Manager G.T.R., who left May 28 with his wife and two daughters for a holiday trip to Europe, returned to Montreal July 1.

The Hudson Bay Co.'s shareholders at the recent annual meeting in London, Eng., decided to present to Lord Strathcona, a portrait of himself in oils.

L. A. Vallee, Chief Engineer of the Department of Public Works, Quebec, has also been appointed engineer of the Quebec Public Utilities Commission.

J. W. Morris, of the Reid Newfoundland Co.'s electrical department, St. Johns, Nfld., was married to Miss M. T. Robeley, at Truro, N.S., July 11.

Miss F. M. Stephens, daughter of C. E. Stephens, secretary-treasurer Northern Navigation Co., was married at Collingwood, Ont., recently, to R. P. Findlay.

Lord Strathcona has given £300,000 to the Barnardo Homes for Destitute Children, London, Eng., the interest of which is to be used in bringing children to Canada.

Jas. Ross, Montreal, ex-President Dominion Coal Co., and his family, are spending the summer at his seaside residence, Sydney, N.S., having left Montreal July 4, on his yacht, Sheelah.

Hon. L. J. Forget, C.P.R. director, was taken seriously ill while on a holiday trip on the Bonaventure River, July 4, and was removed to his summer residence at Senneville, Que.

S. Shackell, who was in the G.T.R. executive office for a number of years, and since his retirement has been engaged in the real estate business, died in Lachine, Que., July 7.

F. C. Meyers, local agent Great Northern Ry., at New Westminster, B.C., disappeared June 27. His books have been audited and found correct. No apparent cause exists for his disappearance.

J. D. Landers, who was appointed Trainmaster for the C.P.R. at Brandon, Man., in 1882, and for many years has been a conductor in the company's service, died at Hot Springs, Ark., June 28.

Hon. H. R. Emmerson, ex-Minister of Railways and Canals, has been appointed trustee under the will of Mrs. J. de W. Spurr, St. John, N.B., of which he and each of his four children are beneficiaries.

J. A. McKinnon, who has been appointed Superintendent of the Wilmar Division of the Great Northern Ry., at Wilmar, Minn., is a native of Pictou, N.S., and was at one time in the Intercolonial Ry. service.

R. H. Munns, for over 20 years in the I.C.R. storekeeper's office at Moncton, N.B., was presented with an address, suit case and umbrella, by the staff, recently, on leaving the service, to take up his residence in Vancouver, B.C.

Frank Smith, for many years a resident of Sarnia, Ont., who died there June 30 after being ill for nearly a year, had been a director of the Sarnia St. Ry. for the past 10 years and was largely instrumental in securing its success.

A London cablegram says that the Chapter of the General Order of St. John of Jerusalem has awarded C.P.R. Conductor T. Reynolds a silver medal for his bravery in the Spanish River disaster last winter.

An incendiary, who has been giving some little trouble in the neighborhood of Midland, Ont., attempted to set fire to the residence of Jas. Playfair, President Inland Lines, Ltd., there, July 9.

L. Black, assistant resident engineer National Transcontinental Ry., Barrington, N.S., who was seriously injured by falling from a locomotive, as mentioned in our last issue, died July 14, at Moncton hospital, aged 23.

J. A. Grant, of Grant Bros., railway contractors, Los Angeles, Cal., and Mrs. Grant, after spending some time in their native place in Glengarry county, Ont., sailed from New York, July 20, for a European tour.

Lord Strathcona has subscribed $1,000 to the fund for the erection of a South African memorial at Toronto, which contribution will enable the committee to complete the monument on the lines originally outlined.

C. L. Wellington, Traffic Manager Colorado and Southern Rd., Denver, Col., who died there, July 8, was for some time in the late seventies, in the service of the Chicago and Grand Trunk Ry., now part of the G.T.R. system.

J. Loomis, roundhouse foreman Michigan Central Rd., St. Thomas, Ont., was presented with a set of carvers and some pieces of silver, by the company's employes, at St. Thomas, on the occasion of his marriage, recently.

J. F. Richey, who died at Mount Clemens, Mich., recently, was for some years connected with the C.P.R. fuel department, but since 1907 has been associated with the Hosmer Mines, Hosmer, B.C.

The firm of Reid Brothers has been constituted with head office in Montreal. It comprises W. D., H. D. and R. G. Reid, sons of the late Sir R. G. Reid, and controls the Reid Newfoundland Co., and looks after the varied Reid estates and interests.

A. Allan, Master Mechanic Temiskaming and Northern Ontario Ry., was presented with a cabinet of silver by the locomotive drivers at a dinner at North Bay, July 1, on his leaving the service. He was also presented with a grandfather's clock by the office staff.

R. W. Leonard, C.E., who had charge of a good deal of construction work on the C.P.R. between Montreal and Ottawa, and Toronto and Ottawa, has been appointed a member of the Board of Governors of Toronto University, Vice Goldwin Smith deceased.

S. H. Chapman, President and General Manager Ontario Wind Engine and Pump Co., Toronto, was presented with a silver service recently, by the directors and office staff, on the occasion of his fiftieth birthday, and the completion of his twenty-fifth year of service with the company.

Hon. Maurice Gifford, C.M.G., director B.C. Electric Ry., British Empire Trust Co., and Canadian Northern Prairie Lands Co., died at Hoddesdon, Eng., recently. He served with the French scouts in the Riel rebellion and also with distinction in the last Matabele rising, where he lost an arm.

S. O. Greening, President of the B. Greening Wire Co., Hamilton, Ont., who was some time ago operated on at the Mayo Hospital, in Rochester, Minn., for internal trouble, returned home recently. He is considerably improved in health, but will spend the balance of the summer recuperating in Muskoka.

As a memorial to the late E. Fisher, Superintendent, the Toronto, Hamilton and Buffalo Ry. Co. is furnishing a ward to be called the Fisher ward, in Hamilton City Hospital. The Governors, while accepting the gift, stated that they could not reserve the beds in the ward specially for the use of the company's employes.

G. I. Evans, whose appointment as Mechanical Engineer C.P.R., is mentioned on another page, entered C.P.R. service Apr. 1, 1900, since when he has been, to Mar., 1902, draughtsman; Mar., 1902, to Jan., 1907, Assistant Chief Draughtsman; Feb. to Aug., 1907, Locomotive Inspector; Sept., 1907, to June 30, 1910, Chief Draughtsman.

H. Croft, who built the Lenore and Mount Sicker Ry., and who married a daughter of the late Robt. Dunsmuir, of Victoria, B.C., has entered an action against Jas. Dunsmuir, and the other heirs of the Dunsmuir estates to recover $4,600,000, for damages arising out of dealings with certain mineral lands in the Esquimalt and Nanaimo Ry. land belt.

C. Forrester, who has been appointed Trainmaster Buffalo and Goderich District G.T.R., was born Mar. 5, 1876, at Wanstead, Ont., and entered G.T.R. service June 20, 1891, since when he has been, to Aug. 20, 1899, operator; Aug. 20, 1899 to Aug. 20, 1906, train dispatcher, London, Ont.; Aug. 20, 1906 to Oct. 1, 1907, Night Chief Dispatcher, London, Ont.; Oct. 1, 1907 to July 1, 1910, Chief Dispatcher, London, Ont.

Andrew Halkett, who has been appointed Assistant Trainmaster District 2, British Columbia Division, Kamloops, was born at Ottawa, Nov. 11, 1876, and entered C.P.R. service Nov. 21, 1897, since when he has been, to Jan. 13, 1902, brakeman, Cascade Section, Pacific Division, Vancouver, B.C.; Jan. 13, to Apr. 4, 1902, brakeman, District 3, Pacific Division, Nelson, B.C.; Apr. 4, 1902, to June 1, 1910, conductor, Nelson, B.C.

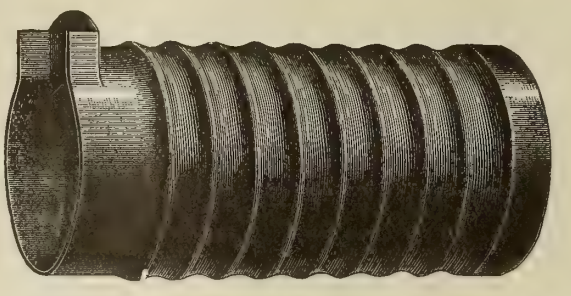
C. E. Friend, who has been appointed General Auditor Canadian Northern Ry., Winnipeg, was born at Brighton, Eng., Oct. 12, 1871, and entered Canadian railway service Jan., 1894, since when he has been, to Oct., 1896, private secretary to Traffic Manager C.P.R., Winnipeg; Oct., 1896, to June 1, 1901, assistant to Superintendent Canadian Northern Ry., Winnipeg; June 1, 1901, to July, 1910, Auditor Canadian Northern Ry., Winnipeg.

J. Irwin, whose appointment as Superintendent District 5 Canadian Northern Ry., Saskatoon, Sask., was announced in our last issue, was born at Clinton, Ont.,

MORISON Suspension Furnaces

The Universally satisfactory record of "THE MORISON" proclaims it the best furnace made.

With Plain Ends or Flanged to any required shape.



For Land and Marine Boilers

Uniform Thickness, Easily Cleaned, Unexcelled for Strength, Unsurpassed for Steaming Capacity.

Manufactured by

THE CONTINENTAL IRON WORKS, WEST AND CALYER STS. BOROUGH OF BROOKLYN. Near 10th and 23rd St. Ferries. NEW YORK

May 28, 1866, and educated at Clinton public and high schools, Pickering college and Galt Collegiate Institute. He entered railway service, Jan. 1, 1883, since when he has been, to 1884, clerk G.T.R., Clinton, Ont.; 1884 to 1885, clerk in Audit Office Missouri Pacific Ry., St. Louis, Mo.; 1885 to 1886, brakeman Wabash Rd., St. Louis, Mo.; 1886 to 1896, conductor, same road; 1896 to 1901, Trainmaster, G.T.R., at Belleville, Ont., Richmond, Que., Detroit and Durand, Mich., consecutively; 1901 to 1902, Trainmaster Southern Pacific Ry., Truckee, Cal., and Assistant Superintendent Denver and Rio Grande Rd., Salida, Cal., consecutively; 1902 to 1903, Trainmaster G.T.R., Stratford, Ont.; 1903 to May 31, 1910, Trainmaster G.T.R., Lindsay, Ont.

Ernest Walton, who has been appointed Master of Transportation Eastern Division G.T.R., Montreal, was born at London, Ont., Sept. 29, 1878, and entered G.T.R. service as messenger at Stratford, Ont., July 1, 1891, since when he has been from Mar., 1893, to July, 1896, stenographer to Master Mechanic, London, Ont.; July, 1896, to May, 1899, stenographer to Superintendent, Toronto; May, 1899, to Mar., 1901, secretary to Vice President and General Manager Central Vermont Ry., St. Albans, Vt.; Mar., 1901, to Feb., 1902, secretary and assistant to President Southern Pacific Rd., San Francisco, Cal.; Feb., 1902, to July, 1903, secretary to Vice President and General Manager Central Vermont Ry., St. Albans, Vt.; July, 1903, to Jan., 1905, chief clerk to Vice President and General Manager Central Vermont Ry., St. Albans, Vt.; Jan., 1905, to Sept. 30, 1909, chief clerk to Third Vice President G.T.R., Montreal; Sept. 30, 1909, to July 16, 1910, Travelling Car Service Agent Eastern Division - G.T.R., Montreal.

G. W. Babbitt, Chief Train Dispatcher Michigan Central Rd., St. Thomas, Ont., died somewhat suddenly at his summer residence Port Stanley, Ont., July 12, aged 67. He was engaged in telegraph work during the U.S. civil war, and subsequently entered railway service with the Chicago, Burlington and Quincy Ry., leaving that company for the Michigan Central Rd. After becoming Chief Dispatcher at Jackson, Mich., he spent some time in Mexico, but returned to the Michigan Central Ry. in the early eighties, and was made Chief Train Dispatcher on the Canada Southern Ry., when it was taken over by the M.C.R., in Nov., 1883. He was one of those engaged in drawing up the standard operating rules which have just been put in force in Canada by the Board of Railway Commissioners; and a few days previous to his death received notification from the Commission that he was about to be appointed an examiner in the train rules for the Board. He was President of the Railroad Hospital Association, and a director of the Railway Y.M.C.A. at St. Thomas.

R. S. McCormick, whose appointment as Chief Engineer Algoma Central and Hudson Bay Ry., and Manitoulin and North Shore Ry., we announced in our last issue, was born at Quaker City, Guernsey co., Ohio, June 22, 1873, and entered Flint and Pere Marquette Ry., service at Saginaw, Mich., in 1890, since when, he has been, to Oct. 1894, chainman, rodman and general assistant to the Chief Engineer, consecutively, F. & P.M.R., Saginaw, Mich.; Oct. 1894 to May 1897, assistant and draughtsman, Division Engineer's office, G.T.R., Battle Creek, Mich.; May 1897 to Feb. 1900, Assistant Engineer Maintenance of Way G.T.R., Detroit, Mich.; Feb. 1900 to Apr. 1903, locating engineer Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; Apr. 1903 to Jan. 1904, Assistant Engineer Maintenance of Way, Pere Marquette Rd., Saginaw, Mich.; June to Aug. 1906, engineer on barge canal construction, Rochester, N.Y.; Oct. 1906 to June 1909, Assistant Engineer in charge of construction of 50 miles G.T.P.R. Lake Superior branch and Locating Engineer G.T.P.R. Regina north branch; July 1909 to May 1, 1910, Division Engineer in charge of surveys Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.

P. G. Flaherty, who has been appointed Trainmaster District 3, Eastern Division G.T.R., Richmond, Que., was born in Newberry county, Va., in 1866, and entered railway service in 1881, since when he has been, to Dec., 1883, operator Allegheny Valley Rd., New Bethlehem, Pa.; 1883 to 1886, dispatcher Buffalo, Rochester and Pittsburg Ry., Buffalo, N.Y.; 1886 to 1891, dispatcher Union Pacific Ry., Evanston, Wyo.; and subsequently dispatcher at different points in Mexico on the Mexican International and Mexican Central Rds.; 1891 to 1898, dispatcher G.N.R. Kalispiel, Mont., and West Superior, Wis.; 1898 to 1899, dispatcher G.T.R., Battle Creek, Mich.; 1899 to 1901, dispatcher G.N.R., West Superior, Wis.; 1901 to Feb., 1903, dispatcher G.T.R., Island Pond, Vt.; Feb. to Sept., 1903, dispatcher Pere Marquette Rd., Grand Rapids, Mich.; Sept., 1903, to Oct., 1905, dispatcher G.N.R., White Fish, Mont.; Oct. to Dec., 1905, Night Chief Train Dispatcher Oregon Rd. and Navigation Co., Tekoa, Wash.; Jan., 1906, to Feb., 1908, Chief Dispatcher G.N.R., Spokane, Wash.; Feb., 1908, to 1909, Chief Dispatcher G.T.R., Montreal; 1909 to July 16, 1910, Acting Master of Transportation G.T.R. Eastern Division, Montreal.

H. B. Sims, whose appointment as Assistant Division Engineer C.P.R., Moose Jaw, Sask., was announced in our last issue, was born at Philadelphia, Pa., Nov. 19, 1871, educated at Upper Canada College and School of Practical Science, Toronto, and entered railway service May, 1895, since when he has been, to June, 1896, rodman Toronto, Hamilton and Buffalo Ry.; June to Sept., 1896, draughtsman, Chief Engineer's office C.P.R.; Sept. to Dec., 1896, Masonry Inspector C.P.R.; Dec., 1896, to Oct., 1897, draughtsman, Chief Engineer's office C.P.R.; Oct. to Dec., 1897, Bridge Inspector C.P.R.; Dec., 1897, to Mar., 1898, draughtsman Chief Engineer's office C.P.R.; Mar. to Nov., 1898, leveller, Toronto - Sudbury location, C.P.R.; Nov., 1898, to Sept., 1899, in Chief Engineer's office C.P.R.; Sept. to Oct., 1899, Bridge Inspector C.P.R.; Oct. to Dec., 1899, in charge of repairs to Sault Ste. Marie bridge, C.P.R.; Dec., 1899, to Apr., 1900, instrument man, Construction Department Abbotsford to Hope, B.C. location; Apr. to Oct., 1900, in Chief Engineer's office, C.P.R.; Oct., 1900, to May, 1902, Bridge Inspector C.P.R.; May, 1902, to Dec., 1903, Assistant Engineer Ottawa Northern and Western Ry.; Dec., 1903, to Apr., 1904, Resident Engineer District 5, Central Division C.P.R.; Apr., 1904, to Mar., 1907, Resident Engineer District 4, Central Division C.P.R.; Mar. to Dec., 1907, Resident Engineer District 5, Central Division C.P.R.; Dec., 1907, to July 1, 1910, Resident Engineer District 1, Western Division C.P.R.

Inverness Railway and Coal Co.

Following are extracts from the report for the year ended June 30, 1909, and submitted under the signature of Wm. Mackenzie, President, at the annual meeting in Toronto recently.

"For the year the output of your colliery was 277.394 tons, compared with 282,639 tons in the previous year. Your directors regret to report that labor conditions in Nova Scotia were during the year and still are, far from satisfactory. The difficulties which your company has had to face in common with the other great coal companies in Nova Scotia, and which culminated in the strike declared in June 1909, brought about largely increased costs, although the output of the mines has not for some months been interferred with. The operations of your colliery show a surplus for the year of only $4,324.49. The gross earnings of your railway show a decrease as a result of the falling off in coal shipments. To efficiently maintain the physical condition of your railway it required somewhat heavier disbursements on account of rolling stock, track, structures, etc., and in consequence the net revenue of your railway shows a material decrease. During the year various accounts of the company have been closely scrutinized, and in order to make allowance for the conditions and bad debts, the full amount of the contingency account provided a year ago has been absorbed. The underground workings of the mines have, as usual, been regularly inspected by the Provincial Government Inspector, and are in good condition. The physical condition of your railway is being fully maintained.

GENERAL SALES AGENTS

National Transcontinental Railway.

In the course of an interview at Quebec recently, S. N. Parent, chairman of the Commissioners, said the line between Moncton and Winnipeg would be completed by the end of 1912, and that while waiting for the completion of the Quebec bridge a car ferry would be used to take trains across the river. The plans for the construction of terminals in Quebec would be prepared as soon as the contract with the city for the purchase of the Champlain market site had been signed. A Quebec dispatch says that the deeds transferring this property will be signed Sept. 1. Mr. Parent, further stated in his interview that Cap Blanc and all the houses along the river front between Champlain market and Sillery would have to disappear; the marine department shops would also have to go, and these would probably be rebuilt at Sillery. If the plan is at all feasible the union station will be so built that it will connect by the roof with Dufferin Terrace.

Referring to the work done on Division B, which extends from the New Brunswick boundary to 330 miles west of Quebec, a total of 507 miles, A. E. Doucet, Division Engineer, said July 6, that with the exception of a few breaks, such as the bridge over the Jacques Cartier River, and the yards at Cap Rouge, track has been laid for 188 miles from west of the Quebec bridge site to the St. Maurice River; and from eight miles east of Waymontachene as far west as the Hudson's Bay post. Grading has been completed for 78 miles west of that point, and it is expected that by the end of the season track will be laid to the crossing of the Gatineau River, about 235 miles west of Quebec. All grading has been completed south of the St. Lawrence to the New Brunswick boundary, and a considerable mileage of track has been laid. The work of bridge construction and filling is being proceeded with, and as soon as this is finished track laying will be completed. Of the total of 507 miles in the division there are only 60 miles upon which grading has not been done.

Tenders will be received by the Department of Railways to Sept. 1, for the superstructure of a bridge across the St. Lawrence River at Quebec. The tenders must be accompanied by a certified bank cheque for $100.000 as security that a contract will be entered into if the tender be accepted. The firms tendering are to accept the fair wage schedule prepared or to be prepared by the Department of Labor, and to state when they can complete the work. The total length of the bridge will be 3,232 ft., with a main span of 175 ft., against a length of 3,220 ft., and a main span of 1,800 ft. in the bridge which collapsed; while the width of the floor will be 88 ft. against 63 ft. The floor will provide for two railway tracks, two electric railway tracks, a highway, and a sidewalk. The steam railway tracks will be laid in the middle of the bridge, and on either side will be a highway, single electric railway track and sidewalk. While the cantilever plan of construction is favored by the Commissioners, the firms tendering can submit a price for a suspension bridge. A Montreal dispatch of July 13 stated that M. Fitzmaurice, of London, Eng., and R. Modjeska, Chicago, Ill., had resigned from the Commission on account of friction between the members, but the Deputy Minister of Railways, the same day, gave the story an emphatic denial.

The work of demolishing the approach spans of the collapsed bridge is being proceeded with, and the steelwork being taken out is being tested to determine its suitability for use in bridges elsewhere. The removal of the debris of the collapsed span is also going on, over 4,000 tons of steel having already been handled by the contractor.

The caisson for the main pier of the new bridge was launched at Point Pizeau, July 7. It is 180 by 55 ft., and weighs about 1.800 tons. It was subsequently towed to position and sunk.

Sir Wilfrid Laurier, on the occasion of his present trip to Western Canada travelled from Fort William, Ont., over the Lake Superior Branch of the G.T.P. Ry., and thence to Winnipeg over the completed section of the National Transcontinental Ry. The special train carrying the party is stated to have been the first passenger train over the line. A regular passenger service is to be put on early in August. The divisional point on the line between Lake Superior Jct. and Winnipeg is seven miles west of the junction, which has been named Graham, after the Minister of Railways. The town is situated on the shore of Pelican Lake, and the terminal yards cover an area of 100 acres, upon which it is proposed to lay out 17 miles of tracks. In an interview the Minister of Railways said:

"There seems to be no reason why the line cannot be used for hauling the grain crop of this season. Moreover, the line from Quebec east will practically be open for traffic, and possibly portions of it in Quebec. We find this portion of the roadway in better condition and nearer completion than anticipated. There is no difficulty in travelling 35 miles an hour. A good deal of track is absolutely completed. Parts will need another lift of ballast for the alignment of the track. Contractor McArthur will be finished in September. A permanent bridge has to be built over the Sturgeon River, but a substantial trestle bridge is doing service now. We further expect to effect arrangements by which trains will be hauled into St. John and Halifax this autumn. No one who has not travelled over this line has any idea of the difficulties which have been met and conquered. There are huge rock cuts, bridge construction and tunneling. Ballast had to be hauled great distances. One sink hole required vast supplies of dirt at a cost of $200,000."

Referring to the arbitration as to classification on this section of the line, the preliminary report presented to the Government, June 29, shows that in section E, the overclassification amount is less than $25,000, and on section F, to about $200,000, against which it is claimed the Government is protected by the percentage of the amount of the contracts held back.

In the course of this recent visit to Winnipeg C. A. Young, a member of the Commission, met the Winnipeg Electric Ry. directors and discussed the diversion of their power line near Lac du Bonnet where it comes in connection with the National Transcontinental Ry. right of way.

Tenders have been received by the Commissioners for the supply of air, steam, water and oil piping system; the yard water system and pipe tunnels and wiring ducts required in connection with the shops near Winnipeg; and also for the construction of a sewer from the pump house and terminal yards there to the Seine River.

The substructure for the bridge over the Red River at Winnipeg has been completed, and the Dominion Bridge Co. is preparing to put up the superstructure, which is expected to be completed by Sept. The substructure consists of two abutments and six piers. These piers are 72 by 22 ft. at the foundation, resting on solid rock, and are 65 ft. high, the dimensions at the top being 40 by 12 ft. The shore span, over navigable water, is to consist of a lift span. A piece of line is being constructed from the river to the Canadian Northern Ry. freight shed on Water St. where the G.T. Pacific Ry. and the National Transcontinental Ry. lines meet. The method of building this piece of road bed is to go down 10 ft. and drive 45 ft. piles. The wide excavation is then filled with concrete, and high retaining walls are built to an elevation of approximately 20 ft. These walls are reinforced with steel, and are filled with gravel and concrete. The finished roadway has the appearance of a line of solid concrete 20 ft. high and 38 ft. wide. On this the G.T. P. Ry. trains will be carried from the river to the union station, which they will enter at the second floor. Over the city streets the trains will be carried on steel trusses, which will be supported by steel arches in the centre of the streets. For some distance from the river there will also be steel trestles to carry the trains.

GRAND TRUNK PACIFIC RY.

President Hays returned to Montreal, July 6, from a trip to the West, and in an interview said: "The General Manager is of opinion that the line will be completed through to Prince Rupert by the end of 1912. It is all a matter of labor. It is a matter of astonishment to see how quickly all the newcomers disappear. Trainload after trainload of immigrants are continually arriving in Winnipeg, yet within 48 hours they are all swallowed up, and what is more their coming does not appear to affect the labor market. When I was in Vancouver we wanted 100 laborers and offered 27½c. an hour, but I found that 30c. an hour was the lowest that would be considered."

A round house is to be built at the Mission, Fort William, Ont. Peare Bros. have the contract for the piling.

A train service has been put on the branch line from Melville to Yorkton, Sask.

The bridge over the McLeod River, west of Edmonton, was expected to be completed July 15, and it is hoped that track laying will be completed to Prairie Creek, if not to the crossing of the Athabasca River, this year.

A supplement to the deed of trust of June 24, 1909, dated June 30, 1910, made by the Grand Trunk Pacific Branch Line Co. to the Royal Trust Co., as trustee, and the Saskatchewan Government, as guarantors, securing 4% first mortgage sterling bonds share 1939, issued and to be issued under chap. 5 of the provincial statutes of 1909, was deposited with the Dominion Secretary of State, July 5.

G. C. Emerson, a G.T.P.R. engineer from Prince Rupert, B.C., is reported to have stated in Toronto, July 12, that the construction gangs had reached 100 miles east from Prince Rupert, when he left, and it was expected that a train service would be placed in operation over it this year.

President Hays, during his recent visit to Vancouver, said several sites had been offered for terminals in that city, but nothing definite had been done nor had anything definite been done in regard to the negotiations for property at North Vancouver, or the Hastings Mill site. It was reported that the company had acquired a block of property in Vancouver for office and terminal purposes, but Mr. Hays said in Montreal, July 6, that the company had not acquired any property for terminals there. All the energies of the company were being centred on the completion of the line to Prince Rupert. Wharves were, however, being built at Seattle and Victoria for the steamship traffic. It was also the company's intention to build hotels at the principal points on the line, but nothing had been done in regard to one for Vancouver.

Rapid progress is being made with

ATTENTION, MASTER CAR BUILDERS!

The M. C. B. rules of interchange provide for the use of THE STEEL BACK BRAKE SHOE on your freight equipment.

The use of OUR STEEL BACK SHOE will mean a saving in brake shoe maintenance, brake heads and brake beams.

THE STEEL BACK BRAKE SHOE is an economy on all railway equipment.

LET US PROVE IT TO YOU

Dearborn Treatment Saves Fuel

15,000,000 tons of coal are annually wasted by the 51,000 locomotives in use on American Railroads, simply because insufficient attention is paid to treating the boiler waters. Scale formation entails a loss of heat and a consequent increase in fuel consumption. In other words, the minimum coal consumption is possible ONLY when the boilers are free from scale.

Startling figures, these, and the more hard to realize when the loss is figured in hard cash, as a fair estimate would place it at $25,000,000.00.

To illustrate how Dearborn Treatment prevents unnecessary coal consumption and increases the efficiency of locomotives generally, we may state a case in point:

On a round trip of 286 miles, through a bad water district, a saving in fuel amounting in dollars and cents to $7.20 was effected at a total expense of $1.50 for Dearborn Treatment. In addition, foaming was eliminated entirely and the service of the locomotive was doubled.

Parallel cases are reported every day. Why not use our scientific methods in overcoming your bad water troubles?

DEARBORN DRUG & CHEMICAL WORKS

ROBERT F. CARR, President

General Offices, Laboratories & Works - - Chicago

the construction of the branch line from Tofield to Calgary, Alta. Several grading outfits are at work between the crossing of the C.P.R. Langdon branch near Irricana, and Calgary; and the whole of the grading has been completed between the Battle and the Red Deer rivers. The high level bridge across the Battle River was reported to be practicaly completed July 16. The only other bridge of any size on the route is that over the Red Deer river south of Alix. It is expected that by the time this bridge is completed grading will have been finished right into Calgary. The branch it is expected will be completed and in operation by the end of the year.

Quebec Public Utilities Commission.

This Commission has recently had several cases affecting railways before it and has given the following decisions:

COMMUTATION OF FARES ON Q. & L. ST. J. RY.

Re T. Hamel vs. Quebec and Lake St. John Ry. and Canadian Northern Quebec Ry. Following is the decision: Complaint is made that the Q. & L. St. J. Ry. has unwarrantably increased the price of commutation tickets between Quebec and Lorette, from $3.30 for 55 trips in 1909 to $6, the tickets being only good for one month, and without any order by the Lieutenant-Governor-in-Council permitting of such increase. It is also incidentally urged that the freight rates charged are too high. In this complaint the Canadian Northern Quebec Co. is impleaded as ostensibly operating the railway in question. The complainant asks for reimbursement of the excess paid by him and for enforcement of penalties. The Q. & L. St. J. Ry. in effect answers that the increased rate was necessary to prevent loss, and in the course of the proof endeavors to show it was practically agreed upon for the sake of an extra train leaving Quebec at 6.15 p.m. and returning the following morning. The C.N.Q. Ry. objects to the Commission's jurisdiction upon the ground that it comes under the jurisdiction of the Dominion Parliament. There being no evidence that the railway in question is owned, operated, or in any wise controlled by the C.N.Q. Ry. Co., no order will go as to that company.

From the proof made it appears that the present or summer schedule of trains is as follows:

QUEBEC AND LAKE ST. JOHN RAILWAY.

9.10 a.m.—Daily except Sunday for La Tuque, Roberval, Chicoutimi, etc.
11.45 a.m.—Daily except Saturday and Sunday for Lake St. Joseph, La Tuque, Roberval, Chicoutimi, etc.
9.15 a.m.—Sunday only for St. Raymond.
1.45 p.m.—Saturday only for St. Raymond.
1.45 p.m.—Sunday only for Lake St. Joseph.
5.10 p.m.—Daily except Sunday for St. Raymond.
6.15 p.m.—Daily except Saturday and Sunday for St. Raymond.
10.00 p.m.—Saturday only for Roberval, Chicoutimi, etc., with sleeping car for Chicoutimi.

The conditions of number of trains, times of arrival and departure, are in general satisfactory, and no complaint is in evidence as to the tolls charged, except for fifty-five trip, monthly commutation tickets. Lorette is only some 8½ miles from Quebec, while the above trains are run through to St. Raymond, 35 miles from Quebec, although from 70 to 90% of the passengers are not carried further than Lorette. The running of other than through trains beyond Lorette is contended by the railway to be justified upon the ground of want of terminal facilities at Lorette and the accommodation of passengers going to points beyond. The publication of a proposed schedule of trains in April last, from which the second evening train at 6.20 or 6.15 was omitted, caused a protest from summer residents, and a delegation of them went to complain. At the interview it was understood with the railway management an increased rate would be charged if the second train was put on. As a result an increase of from $3.30 to $6 went into effect from May, while the extra train only commenced running from June 27. While a receiver has been appointed to the railway and its financial condition cannot be declared to be satisfactory, it is by no means in evidence that this state of affairs is materially attributable to the prices charged for commutation tickets in the past or would be seriously affected by the increase from $3.30 to $6. The statements submitted showing general loss from the operation of the suburban trains in question is very far from attributable to the service to and from Lorette. Considering that all tolls are subject to the Commission's approval and that it has authority to alter, fix and revise such tolls, R.S.Q. 6607 & 740d, and the question of their having been approved or otherwise by other authority is not now material to the matter. Considering that a suburban service such as provided by the railway is a reasonable and proper one under the circumstances, such as is customary and habitual, and to be expected of a railway enjoying the charter privileges of the Q. & L. St. J. Ry., and to the building of which the public money has been largely contributed. Considering that no sufficient cause has been shown for the increase to $6 as above, nor that under the circumstances the expiry period of such 55 trip commutation tickets should be extended. Considering that for the service as rendered, and under all the circumstances of the case the following schedule of rates for 55 trip commutation tickets, good for one month from date of issue, would be reasonable and proper, and is directed to go into effect from the present date and continue until further order is made for cause shown, and in any case such tickets not to be good after Nov. 1, at the company's option, to wit:

Miles.	
3.0—Charlesbourg	$2.75
5.9—Charlesbourg Ouest	3.75
8.5—Lorette	4.50
16.5—Valcartier	7.00
21.0—Ste. Catherine	8.40
22.8—Lac St. Joseph	8.40
27.7—Lac Sargent	9.50
30.2—Bourg Louis	10.50
34.3—St. Raymond	11.55

As to the remainder of the complaint respecting freight rates and charges, no order is presently made, but the same is reserved for further consideration.

Re A. Boissonneault & al vs. Quebec & Lake St. John Ry. Co. The following is the decision: Complaint is made that the Q. & L. St. J. Ry. sells books containing 10 tickets each for all points on its line from Quebec to St. Raymond, which tickets are good for the whole year except those for Lac Sargent and St. Raymond which are good only from May 1 to Oct. 31. The complaint sets forth that this is an unjust discrimination and asks that the books issued and sold for Lac Sargent be good from Jan. 1 to Dec. 31. Considering that the said application appears reasonable and well founded and that further it was agreed to at this sitting by the Q. & L. St. J. Ry., through its representatives. The Commission orders that the books of 10 tickets issued by the Q. & L. St. J. Ry. from Quebec to Lac Sargent be good from Jan. 1 to Dec. 31 of each year. As to the remainder of the complaint no order is presently made, as it has been decided in the case of Hamel vs. the Q. & L. St. J. Ry. Co.

Train Dispatching by Telephone.

The following information relating to the mileage over which trains are operated by telephone on Canadian railways, Canadian owned or controlled railways operating in the U.S., and U.S. railways operating in Canada, is taken from a table containing similar details in regard to American railways generally, compiled by the Telegraph and Telephone Age:—

Canadian Northern Ry.	3,355	443	.....	2,912
Canadian Pacific Ry.	9,608	633	.....	8,963
Central Vermont Ry.	586	....	.....	586
Delaware and Hudson Co.	845	....	.....	845
Duluth, South Shore and Atlantic Ry.	714	....	.....	714
Grand Trunk Ry.	4,745	310	.....	4.435
Great Northern Ry.	7,100	1,835	35	5,230
Intercolonial Ry.	1,448	....	.....	1,448
Maine Central Rd.	925	....	.....	925
Minneapolis, St. Paul and Sault Ste. Marie Ry.	2,451	....	.....	2,451
Pere Marquette Rd.	2,356	....	.....	2,356
Wabash Rd.	2,515	....	.....	2,141

Of the companies mentioned, the C.N.R., C.P.R., D. and H. Co., G.T.R., G.N.R., M.C.R and W.R., contemplate further extensions of the system.

Quebec and Lake St. John Ry.—Total earnings for June, $54,295.83, against $51,991 for June, 1909. Aggregate total earnings for six months ended June 30, $267,370.67, against $278,021.56 for same period 1909.

The Intercolonial Ry. telegraphers have applied for the appointment of a board of conciliation, to deal with the questions of wages and hours.

W. Z. Earle, who resigned the managership of the St. John, N.B., Railway, a short time ago, has been appointed District Engineer Dominion Public Works Department, Winnipeg, succeeding A. R. Dufresne, who has been appointed Assistant Engineer in place of Gillmor Brown, deceased.

C.P.R. Steel Frame Box Cars.

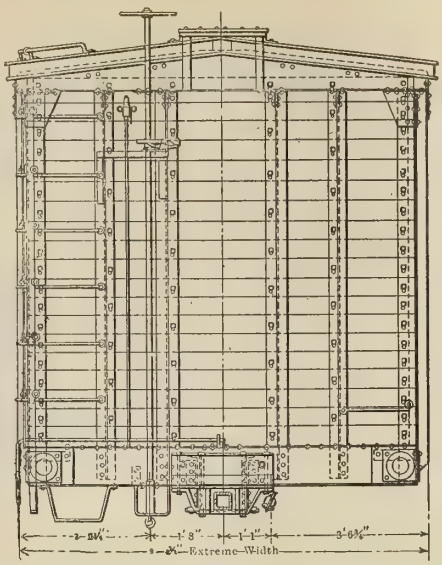
In our issue of January last, we published a description of 500 steel frame box cars built for the C.P.R. by the Dominion Car and Foundry Co. Subsequent orders have increased the number to 2,500, and the following additional information is now available in regard to them.

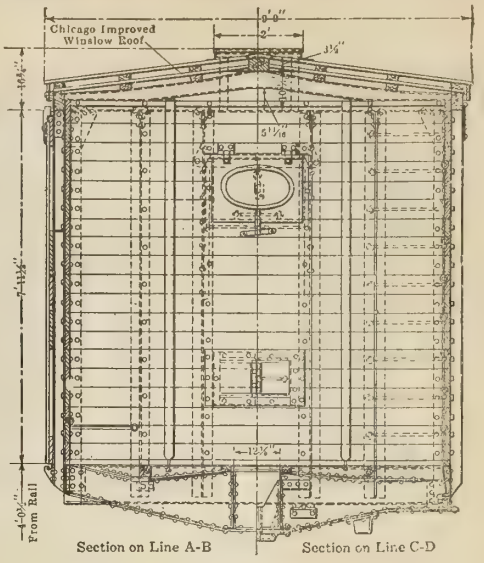
They are 36 ft. inside length and have a steel underframing and steel side and roof framing, the floor, side sheathing and roof covering being of wood. They weigh 36,700 lbs. Two 15 in. channels set 12⅞ in. apart and continuing from end sill to end sill, form the centre sills. The side sills are 8 in. channels and are set with their top face 1½ in. above the level of the top flange of the centre sills. The other longitudinal sills in the first order of 500 cars were 4 in. Z bars located mid-way between the side and centre sills and resting on top of the bolsters and cross bearers. In the next 1,000 cars, a 3 x 4 in. wooden stringer was substituted and in the 1,000 now being built the Z bar has again been used.

The bolster, which is shown in one of the illustrations, is of the pressed steel diaphragm built up type, having ½ in. cover plates top and bottom. The bolsters extend below and beyond the side sills, which are connected to them by angles and corner brackets, as shown in the illustration. Near the centre of the underframe just below the door posts are two built up cross bearers composed of a pressed steel diaphragm with a 6 x ½ in. cover and bottom plates, neither of which extends all the way to the side sill connection. Both the bolsters and cross bearers are constructed to permit the intermediate sills, 4 in. in depth, to rest upon them. The end sill is a channel pressed out so as to permit the Z bar end post being secured back of it. Between the bolsters and cross bearers are two cross braces consisting of channels secured between the side and centre sills. There is also a diagonal brace from the corner of the car to the connection between the centre sills and bolster.

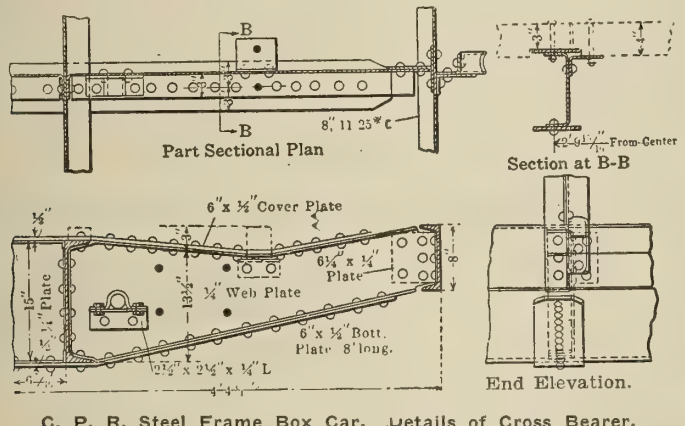
The wooden floor is nailed to 1 in. wooden stringers secured on top of the centre sill channels and bolted or nailed to the intermediate longitudinal sills. It is not fastened directly to the side sills, but is held down by the side sheathing, the connection at this point being shown in the small detail given in the illustration of general elevation. The side framing is composed of 3 in. standard Z bars secured outside of the side sills and to an angle iron plate, the top connection being reinforced with a gusset plate. The corner posts are 5 x 5 in. angles and the two centre end posts are 4 in. Z's, the intermediate end posts being 3 in. Z bars. These are secured to the steel end carlin, which is of the Z section. The carlins are of pressed steel in U section, being arranged to lip over the side plate and are secured by a rivet through the vertical flange of the plate.

The inside sheathing is tongued and grooved, 1½ in. x 5 in. pine being bolted to the framing. The holes in the steel parts are slotted, and there are tie straps hooked over the top of the sheathing, carried down inside through the side sills and secured with nuts. The inside sheathing extends 3 in. above the bottom of the plates, and as it dries out or loosens up the bolts are slacked off and the nuts on the bottom of the tie bars being drawn up will permit the tightening of the sides and ends of the car to the total of 3 in., without leaving an opening at the top. There are two of these tie bars at each end and four on either side. The trucks are of the standard C.P.R. type, equipped with 750 lb. wheels. They have McCord malleable iron journal boxes; Susemihl frictionless side bearings; Simplex bolsters and brake beams, and American Steel Foundries steel back brake shoe. The specialties on the car body are Westinghouse air brakes and Simplex couplers.—American Engineer and Railroad Journal.

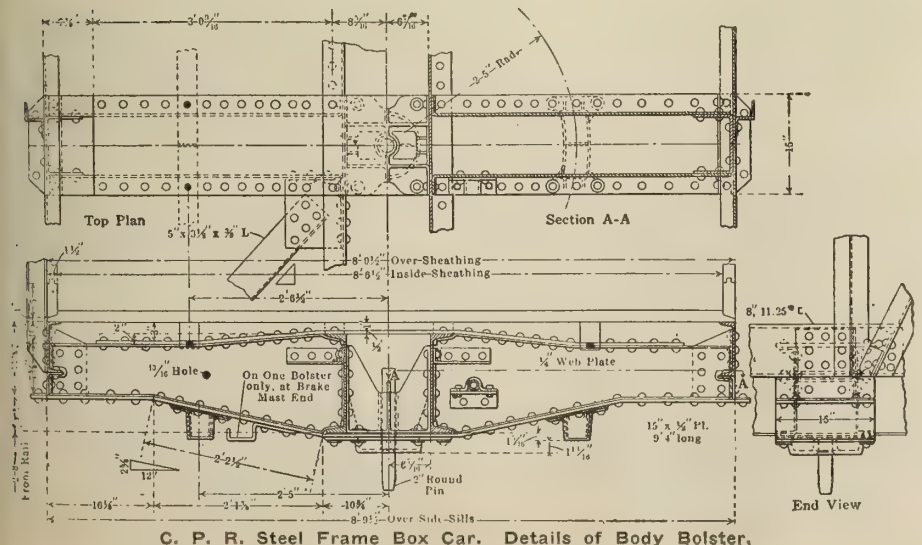




C. P. R. Steel Frame Box Car, End Elevation and Cross Section.



C. P. R. Steel Frame Box Car. Details of Cross Bearer.



C. P. R. Steel Frame Box Car. Details of Body Bolster.

Dominion Atlantic Ry.—Gross earnings for May $85.800, against $91,628 for May, 1909. Aggregate gross earnings for 11 months ended May 31, $1,076,550, against $1,045,605 for same period 1908-09.

It is said that the "interests friendly to the C.P.R." which have acquired the D.A.R., paid 60 for the preference stock and 20 for the common, which were quoted in the English market at 44 and 13 respectively. The amount of common stock is about £250,000 and the preference about £270,000, to that only a little over £200,000 would be required to secure the whole of both issues.

Temiscouata Ry.—Profits for May $5,732, and for five months ended May 31, $15,378.

TRACTION STRESSES.

By S. Blumenthal, A.M. Can. Soc. C.E.

In the design of bridge piers, trestle towers, and other similar structures, the effect of traction is an important consideration. Traction may be defined as the force parallel to the centre line of track produced by the live load, and acts at the level of the top of rail. Hence, in order to get structures that will be safe for the forces they have to resist, and that will be at the same time economically designed, it is essential that the actual conditions producing these forces be considered. There are two conditions where stresses due to traction would occur:—

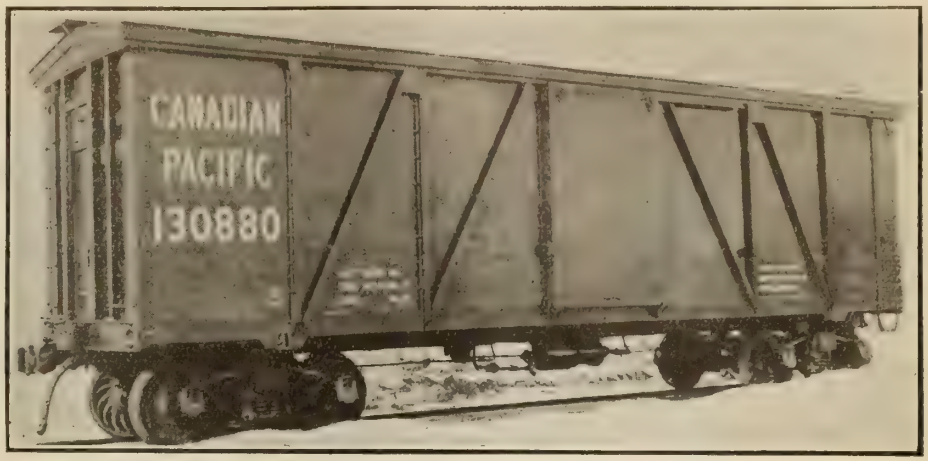
1. When a train is being hauled over the structure by a locomotive, with brakes off. In this case there would be a pull on the rails from the driving wheels of the locomotive, and an equal and opposite force due to the rolling and journal friction and atmospheric resistance in the rest of the train. On a structure of any length these would tend to neutralize one another, and on a span long enough to take the whole train, would obviously produce no traction stresses in the piers.

2. The second and most important case is the one where the brakes are applied to the wheels of a moving train. In this case, as long as the wheels revolve, the pull of the rails on the wheel = the pull exerted by the brakes on the wheels = pressure of the brakeshoes, multiplied by the coefficient of brakeshoe friction. When this latter force becomes equal to the pull of the rail, the wheel will slide on the rail.

In nearly all of the existing specifications the traction force is taken as 20% of the total live load on the span considered. This condition assumes that enough pressure is applied by the brakes to skid all the wheels of a loaded train, with a coefficient of friction between wheel and rail of .20. The standard American practice is to make the efficiencies of the brakes on the various classes of equipment as follows:

Passenger cars ....90% of light weight.
Freight cars .....70% of light weight.
Tenders .....100% of light weight.
Locomotive driving wheels .....75% of the loaded weight.
Locomotive truck wheels ....75% of the loaded weight.

By efficiency of the brakes is meant the ratio of the total maximum pressure exerted by the brake shoes on the wheels to the vertical pressure of the wheels on the rails.



Canadian Pacific Railway Steel Frame Box Car.

These percentages have been determined and adopted by the American Air Brake Association as best suited to actual service conditions, and are designed to prevent skidding and consequent flattening of wheels when the brakes are applied. The comparatively high ratio of 90% of the light weight is used on passenger cars because there is small variation between the light and loaded weights, and it has been found that at the comparatively high speeds at which these cars run, the coefficient of the brakeshoe friction is lower than that of freight cars which run at lower speeds.

The experiments of Capt. D. Galton and Geo. Westinghouse, Jr., made in 1878, show that the coefficient of friction between the cast-iron brakeshoes and steel-tired wheels varies from 5% at a speed of 60 miles an hour, to 25% at zero speed. The coefficients for locomotive driving wheels and trucks are based on the loaded weights, since for these the loaded weight is the working weight, which does not vary much.

Assuming the value of 25% and Cooper's E/50 loading, a formula giving the coefficient of traction on spans of various lengths may be obtained.

A locomotive, of this size would carry 12½ tons of coal, say	25,000	lbs.
And 5,000 gals. of water ..	50,000	"
	75,000	lbs.
Working weight of tender .	130,000	"
Light weight of tender	55,000	"
Per axle	13,750	"

Taking a span of 109 ft., the distance covered by two locomotives, the sum of the pressure exerted by the brakes on the wheels would be as follows:

75% of working load on 2 trucks=2 × .75 × 25,000 lbs. = ...	37,500 lbs.
75% of working load on 8 driving axles = 8 × .75 × 50,000 lbs. = ...	300,000 "
100% of light load on 8 tender axles = 8 × 1 × 13.750 lbs. =.....	110,000 "
Total brake pressure..	447,500 "

Total longitudinal force or traction = 447,500 × .25 = 111,875 lbs.
Total vertical force = weight of 2 locomotives with tenders at 355,000 lbs. = 710,000 lbs.
Coefficient of traction for this span (109 ft.) =

$$\frac{111{,}875}{710{,}000} = 15.75 \text{ per cent.}$$

The heaviest class of steel freight car in use at present, the short base 50-ton steel ore car, has an unloaded weight of about 1,500 lbs. per lin. ft. and a loaded weight of 5,000 lbs. per lin. ft., corresponding to the uniform load of 5,000 lbs. per lin. ft. behind the engines for Cooper's E/50 loading. For every foot of train load there would be added a vertical force of 5,000 lbs., and a horizontal force of 1,500 × .70 (the efficiency of the brakes) × .25 (the coefficient of the brakeshoe friction) = 262.5 lbs. From this the following formula has been derived:

Where T = the coefficient of traction or the ratio between the horizontal and vertical forces.
L = length of span covered by the live load.

$$T = \frac{111{,}875 + 262.5\ (L - 109)}{710{,}000 + 5{,}000\ (L - 109)}$$

simplified:

$$T = \frac{82{,}263 + 262.5\ L}{165{,}000 + 5{,}000\ L}$$

Or, in round figures:

$$T = \frac{82{,}000 + 265\ L}{165{,}000 + 5{,}000\ L}$$

From consideration of the above it will be seen that the coefficient of traction varies from a maximum of .75 × .25 = 18.75 per cent. for spans of from 0 to 1,500 ft., to $.7 \times .25 \times \frac{1{,}500}{5{,}000} = 5.25$ per cent. for a span of infinite length.

There is a possibility of the driving wheels of a locomotive skidding when the brakes are applied and the engine

Sarnia, Ont.

reversed. This would increase the coefficient slightly, and the effect would, of course, be greatest on the shorter spans. It would therefore seem reasonable to take a coefficient of 20% for spans up to about 60 ft., reduced for spans above this in accordance with the formula given above and as shown on the accompanying diagram.

The assumed maximum value of 25% for the coefficient of brakeshoe friction was obtained in the experiments of Westinghouse and Galton for very low speeds (about 1½ miles an hour) immediately after the application of the brakes. The value decreased to about .17 five seconds after the brakes were applied, and to about .12 fifteen seconds afterwards. The values given by the formula are therefore maximum values and would only be obtained for an instant after the maximum brake pressure had suddenly been applied to a train which is moving very slowly, a condition which seldom occurs in actual practice.

Since the efficiency of the brakes is based on the unloaded or tare weight of the car, with a given tare weight per lin. ft. of car, it follows that the total tractive force on any given span will be the same, whether the cars are unloaded or loaded.

The full line on the accompanying diagram shows the coefficients for spans from 60 to 500 ft., computed from the formula derived above, the dotted lines representing values for spans under 109 ft., calculated from the brake efficiencies and weights given in the beginning of the paper.

The foregoing paper was written for presentation before the Canadian Society of Civil Engineers.

TRANSPORTATION APPOINTMENTS.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Northern Express Co., Canadian Northern Telegraph Co.—Scott Griffin, heretofore Manager C.N.E. Co., and C.N.T. Co., having been appointed Manager Canadian Northern Steamships Ltd., the position of Manager C.N.E. Co., and C.N.T. Co., has been abolished.

W. C. Muir, heretofore Superintendent has been appointed General Superintendent. Office. Winnipeg.

C. A. Cunningham has been appointed Superintendent of Western Lines. Office, Winnipeg.

Canadian Northern Ontario Ry.—L. W. Mitchell, recently promoted from acting Treasurer to Treasurer Canadian Northern Ry., has also been appointed Treasurer C.N.O.R. Office, Toronto.

R. S. Gosset, Auditor Canadian Northern Steamships Ltd., and heretofore chief clerk Accountant's Department C.N.R., has also been appointed Auditor of Disbursements C.N.O.R. Office, Toronto.

Canadian Northern Quebec Ry.—L. W. Mitchell, recently promoted from acting Treasurer to Treasurer Canadian Northern Ry., has also been appointed Treasurer C.N.Q.R. Office, Toronto.

R. S. Gosset, Auditor Canadian Northern Steamships Ltd., and heretofore chief clerk Accountant's Department C.N.R., has also been appointed Auditor of Disbursements C.N.Q.R. Office, Toronto.

Canadian Northern Quebec Ry.—Quebec & Lake St. John Ry.—T. C. Hudson, Master Mechanic of both lines is also acting as General Car Foreman, A. R. Holtby having resigned to enter another company's service.

Canadian Northern Ry.—L. W. Mitchell, heretofore acting Treasurer, has been appointed Treasurer. Office, Toronto.

R. C. Vaughan, heretofore chief clerk to Third Vice President, has been appointed Assistant to Third Vice President. Office, Toronto.

J. D. Morton, heretofore General Accountant, has been appointed Assistant Comptroller. Office, Toronto.

R. S. Gosset, Auditor Canadian Northern Steamships Ltd., and heretofore chief clerk Accountant's Department C.N.R., has also been appointed Auditor of Disbursements C.N.R. Office, Toronto.

C. E. Friend, heretofore Auditor, has been appointed General Auditor. Office, Winnipeg.

Canadian Northern Steamships Ltd.—R. C. Vaughan. Assistant to Third Vice President Canadian Northern Ry., has also been appointed Assistant to Second Vice President C.N.S. Ltd. Office, Toronto.

Scott Griffin, heretofore Manager Canadian Northern Express and Telegraph Cos., Toronto, has been appointed Manager Canadian Northern Steamships. Office, Bond Court House, Walbrook St., London, Eng.

Canadian Pacific Ry.—John Morrow has been appointed Real Estate Agent for Eastern Lines, with charge of the purchase, sale and renting of property for the company. Office, Montreal.

G. I. Evans, heretofore Chief Draughtsman Locomotive Department, Angus shops, Montreal, has been appointed Mechanical Engineer. Office, Montreal.

With reference to the recent change in the designations of the Second, Third and Fourth Vice Presidents, to Vice Presidents, as announced in our last issue, we are officially advised that F. W. Peters of Winnipeg, and J. S. Dennis of Calgary, heretofore Assistants to the Second Vice President, will, in future, each be recognized as Assistant to the Vice President.

Referring to the creation of four grand divisions under Provincial designations, instead of three divisions, Central, Western and Pacific. as announced in our last issue, we are officially advised that the Manitoba Division consists of the territory formerly known as the Central Division, with the exception of District 5; the Alberta Division of territory covered by Districts 2, 3 and 4, of the former Western Division, the numbers of which were changed to 1, 2 and 3, respectively; while the Saskatchewan Division is formed by District 5, of the former Central Division, and District 1, of the former Western Division, becoming Districts 2 and 1, respectively.

J. A. Douglas, heretofore electrical foreman locomotive shops, has been appointed Electrical Engineer Western Lines, vice H. H. Boyd transferred. Office, Winnipeg.

A. L. Powell, has been appointed Travelling Passenger Agent, Brandon, Man., vice W. J. Wells transferred.

R. W. Young has been appointed Superintendent of Telegraphs Saskatchewan Division. Office, Moose Jaw.

R. C. Harris. heretofore transitman at Calgary, Alta., has been appointed Resident Engineer, Medicine Hat, Alta., vice J. Robertson transferred.

J. McAnany has been appointed Travelling Engineer, District 3, Alberta Division, vice F. G. Rutley assigned to other duties.

F. W. Alexander, heretofore Resident Engineer at Cranbrook, B.C., has been appointed Assistant Division Engineer, Alberta Division. vice T. Martin transferred. Office. Calgary, Alta.

J. Robertson. heretofore Resident Engineer, Medicine Hat, Alta., has been appointed Resident Engineer, Cranbrook, B.C., vice F. W. Alexander promoted.

H. H. Boyd. heretofore Electrical Engineer Western Lines, Winnipeg, has been appointed District Master Mechanic at Cranbrook, B.C., vice A. T. Shortt promoted.

A. N. McIntyre, heretofore yardmaster at Revelstoke, B.C., has been appointed Trainmaster at Field, B.C., vice T. H. Crump promoted.

T. Hope, heretofore yard foreman at Field, B.C., has been appointed yardmaster there, vice A. N. McIntyre promoted.

A. Halkett, heretofore conductor at Nelson, B.C., has been appointed Assistant Trainmaster, District 2, British Columbia Division. Office, Kamloops.

T. H. Crump, heretofore Trainmaster at Field, B.C., has been appointed Trainmaster District 2. British Columbia Division, vice J. M. Cameron promoted. Office, Vancouver.

J. Fletcher has been appointed Superintendent of Telegraphs British Columbia Division, vice J. Wilson retired. Office, Vancouver.

W. H. Snell. heretofore Travelling Passenger Agent, Boston, Mass., has been appointed Eastern Passenger Agent of New York territory, vice F. W. Dudley resigned. Office, New York City.

A. A. Polhamus, heretofore Travelling Passenger Agent, has been appointed General Agent Passenger Department, with district comprising Southern California, Bakersfield, Santa Barbara and south. Office, Los Angeles, Cal.

Reid Newfoundland Co.—A. Spence has been appointed Chief Dispatcher, St. John's, vice A. Pretty deceased.

S. Walsh has been appointed Roadmaster Division 4. between Bishop's Falls and Bay of Islands, vice J. Peddle transferred.

The First Canadian Railway.

What is said to have been the first railway in Canada was built between Laprairie and St. Johns, Que., to replace the stage coach in carying passengers between Montreal and the waterway which reached to New York. The charter was obtained in 1832 and it provided for a line of 16 miles. The authorized capital of the company. known as The Champlain and St. Lawrence Rd Co., was £50,000, divided into 1,000 shares of £50 each, a capitalization of a little over £3,000 a mile. Work was commenced in April 1835 and the line was opened in July 1836, horses at first being used to haul the cars. The first rails were what were known as "straprails," strips of wood covered with a thin plate of metal, but these were soon replaced with iron T-shaped rails.

In writing of this earliest of Canadian railways, the late J. J. Lanning, for some time Assistant General Manager of the G.T.R., said: "The line was opened for traffic in 1836, being laid with wooden rails and worked by horse power during the first year of it existence." In this latter statement, Mr. Lanning was evidently in error, for in The Montreal Transcript, of Oct. 27, 1836, appeared the advertisement of this railway service, giving the time table and fare, and it is stated there that the trains were hauled "by locomotive."

What the early passenger trains were like is best told by the accompanying illustration, which is a reproduction of a picture now hanging in the G.T.R. board room in Montreal.

The advertisement in The Montreal Transcript anounced that "The Champlain and St. Lawrence Rd. Co., in connection with the steamboat Princess Victoria, will continue to run as follows: Steamer from Montreal precisely; 9.30 a.m., 3 p.m. Cars from Laprairie, 10.30 a.m., 4 p.m., by locomotive." Then followed the time of the return trips and the times of the Sunday service. The fare for the return trip on the same day was 7s 6d; single fare. 5s; children half price.

This advertisement appeared after the railway had been in operation only a few months. In the same issue of The Transcript appeared the following news paragraph which shows how early the new line developed freight traffic: "A number of American speculators have been engaged in this city for the last two weeks in buying up wheat and salt for the American market. The steamer Princess Victoria has already brought 35,000 bushels of wheat and 20,000 bushels of salt to Laprairie to be taken to St. Johns via the said road. What does this portend?"

The political troubles of 1837-38 arrested railway expansion and not much more was done until 1845, when a charter was granted to the St. Lawrence and Atlantic Ry. Co. authorizing it to build a line from the St. Lawrence, opposite Montreal, to the U.S. frontier, there to connect with a line running to Portland, Me. In 1847, the line from Montreal to Lachine was opened; in 1850, the line to Portland was opened as far as Richmond, Que., and a charter was granted to build a branch from Richmond to Levis, opposite Quebec. In 1852, the St. Johns-Laprairie line was brought down to St. Lambert, which became the general junction point, and eight years later the southern terminus of the Victoria Bridge. These early railways are today parts of the G.T.R. system.

The First Railway Train in Canada, which began running between Laprairie and St. John, Que., in the Summer of 1836.

Grain Elevator Notes.

The Alberta Pacific Elevator Co. is arranging, according to a recent statement of the manager, to erect a number of elevators in the province, in order to deal with the expected large crop.

D. W. McCuaig, who was recently appointed chairman of the Manitoba Elevator Commission, announced, July 7, that he would resign the presidency of the Manitoba Grain Growers' Association.

A special meeting of the Montreal Grain Elevating Co. stockholders was held recently, when the resolution passed by the directors. May 30, that it was in the interests of the company that it be wound up voluntarily, was confirmed. A. MacDougall, Managing Director, T. A. Crane, R. Reford, B. McLennan and A. G. Thomson were appointed liquidators.

The Sovereign Grain Co., Ltd., has been incorporated under the Manitoba Companies' Act, with a capital of $300,000, and office at Winnipeg, to carry on a general grain, grain elevator and warehouse business. The provisional directors are, B. McBean, A. Johnson, H. Metcalf, H. McBean and D. Richardson, Winnipeg.

E. H. Heaps, President A.B.C. Elevator Co., is reported to have stated, recently, that the company would commence construction, at an early date, of a large elevator at Vancouver, B. C., provided a satisfactory arrangement could be made with the city. Failing this, it would probably erect the elevator at New Westminster.

Press reports from Winnipeg, recently stated that C. C. Castle, Government Inspector of Elevators, had sealed up a number of bins in the terminal elevators at Port Arthur, with a view to prosecutions for manipulation of grades. He subsequently denied that anything of the sort had taken place, but stated that investigations were being made in the ordinary way.

The commission, consisting of Prof. McGill, J. R. Green and G. Langley, appointed by the Saskatchewan Government to enquire into all questions relating to the grain trade, elevators, etc., has held a number of sittings in various parts of the province, hearing evidence. The enquiry is taking a wide scope, and will be of considerable assistance in arranging the system of operation and control which the Government will adopt.

Over 50 applications have been made to the Manitoba Grain Elevator Commission, under the recent act, for the erection of elevators. On receipt of an application, the Commission dispatches agents to investigate the desirability of such construction, and view possible sites. E. P. Estier is reported to have been appointed Chief Engineer to the Commission, and to be engaged in drawing up a new elevator system for the province.

The Maple Leaf Milling Co. is reported to have given contracts for the erection of 17 elevators at various points in Saskatchewan, to the W. A. Harper Construction Co., Winnipeg. These elevators will, it is said, be erected along the Pheasant Hills, Sheho-Lanigan and Arcola branches of the C.P.R., each having a capacity of 30,000 bush., with flour house attached. In addition to this, it is reported that the company intends erecting a 1,000,000 bush. elevator at Port Colborne, Ont.

The Western Farmers' Milling and Elevator Co., which was to have erected elevators at Bow Island, Winnifred, Burdett, Chinn and Seven Persons, Alta., has decided, in view of the defalcation of its secretary-treasurer, mentioned in a recent issue, not to proceed. The materials which had been accumulated at these points had been taken over by the Alberta-Pacific Elevator Co., which will carry out the work intended as soon as deliveries can be completed.

The Governor-General in-Council has approved the Montreal Harbor Commissioners' bylaw, providing that the commissioners will unload grain from vessels in the harbor, and load it into steamships by floating elevators for six-tenths of one cent. a bush., half of which will be payable by the vessel out of which the grain is loaded, and the other half by the vessel into which it is loaded, and, for the shovelling in vessels unloading, such vessels shall pay $1.75 per 1,000 bush.

The Great West Milling Co. of Canada, Ltd., has been incorporated under the Dominion Companies Act, with a capital of $1,000,000 and office at Kenora, Ont., to manufacture and deal in all kinds of grain and its products, and in connection therewith to own and operate elevators, warehouses, steam and other vessels, wharves, docks, etc. The provisional directors are, T. Walsh, J. T. Brett, A. Shragge, W. G. Cameron, G. M. Rioch, J. P. Earngey, W. J. Chapman, J. C. Baxter, J. Brenchley and G. A. Toole, Kenora, Ont.

Among the Express Companies.

The Dominion Ex. Co., has opened offices at Aldersyde and Redcliffe, Alta.

G. C. Taylor, heretofore Manager Pacific Division American Ex. Co., has been appointed Vice President and General Manager, with office at Chicago, Ill.

In connection with the relief fund for those who suffered in the fire, which practically desolated Campbellton, N.B., in the early part of July, the Canadian Ex. Co., transmitted donations free of charge from all points within Canada.

The Dominion Ex. Co. has moved its money order department from St. Lawrence Hall to temporary offices in St. James St., Montreal, until the company's new office building on the St. Lawrence Hall site is completed.

Express companies operating in Canada, in accordance with an order issued by the Board of Railway Commissioners, are preparing a directory containing the delivery limits in all centres having a population of 10,000 and over.

In our last issue, we announced the appointment of V. G. R. Vickers, as Manager Dominion Ex. Co.'s Foreign Department, Montreal. We are officially advised that he assumed this position in connection with his duties as Superintendent of the Atlantic Division.

It has been held in U.S. courts, that an express company is not liable for the depreciation of millinery due to change of fashion, on its failure to give notice of the refusal of goods by consignee and their return, when it had no notice that delay would result in such depreciation.

The express companies have agreed to carry horses for show purposes, on a similar basis to race horses, so far as the number of attendants travelling with them is concerned, but reserve the right to apply later to the Board of Railway Commissioners for an increase in the rate.

The contract for the building of the Dominion Ex. Co.'s offices on the St. Lawrence Hall site, Montreal, has been awarded to P. Lyall and Sons, the contract price being quoted as about $700,000. The demolition of the old premises has commenced, and it is expected that the structural steel work, and the granite construction of the first story will be completed this year.

The Dominion Ex. Co., by arrangement with the Upper Ontario Steamboat Co., now accepts c.o.d. shipments for Elk Lake City, via Latchford, Ont., the charge for collection and return being governed by Classification 16. In all cases the charge for each company must be shown on the c.o.d. wrapper, with instructions as to whether such charges be collected from the consignee or not.

S. G. Tate, who has recently sentenced to nine months imprisonment at Liverpool, for defrauding the White Star Steamship Co., by means of false bills of lading, was, from Mar., 1902, to Mar., 1907, Travelling Freight Agent M.C.R., St. Thomas, Ont.; Mar. to Dec., 1907, Contracting Freight Agent G.T.R., Liverpool, Eng.; Dec., 1907, to May, 1910, Traffic Agent United States Ex. Co., Liverpool, Eng.

Proceedings are reported to have been commenced against local officials of the Canadian Northern Ex. Co., at Beautiful Plains, Man., for alleged contempt of court, in connection with the recent elections in Manitoba. It is stated that the returning officer delivered his return to the company, as his agent, for dispatch to the Government, and it was so delivered, notwithstanding the fact that an injunction had been obtained to prevent it.

U.S. courts have decided that where a package is delivered to an express company, where the shipper was not asked to declare the value, and where the value is not given in the receipt, the evidence is insufficient to show that there was fraud in attempting to get the goods carried for less than the established rate. The limitation of liability to $50, at which sum the property is valued, contained in the receipt, is void, and the company cannot escape liability on the theory that if it pays the entire value it will be liable to prosecution for discrimination in rates.

The Dominion Ex. Co. has opened an office at Stewart, B.C., at the head of the Portland Canal. Shipments should be billed through to destination and charged regular tariff rates to Vancouver, and in addition a separate graduate from Vancouver to Stewart, of $3.25 per 100 lbs. on merchandise, or $5.50 per $1,000 on money. When the value of any merchandise shipped c.o.d. or otherwise, exceeds $50, a charge for value, of 25c. for each $100 value, or fraction thereof, is made, in addition to the valuation charged to Vancouver. Marine insurance, if desired, from Vancouver, on merchandise, 35c. per $100, or $2.50 per $1,000 value, with a minimum charge of 25c.; on money, 20c. per $100, or $1 per $1,000, with a minimum charge of 25c.

J. Richardson and Sons, Ltd., elevator and ship owners, etc., Kingston, Ont., has been licensed, under the Companies Act respecting extra-provincial companies, to carry on business in British Columbia. A. F. Macnee, Vancouver, is its attorney.

The Great Northern Ry. is assembling material for the installation of a system of telephone train dispatching on a number of its divisions, including that from Everett, Wash., to Vancouver, B.C., 265 miles. The whole work, which will involve the erecting of about 4,600 miles of wire and the installation of 726 telephone stations, will, it is expected, be completed by Jan. 1, 1911.

A large delegation of the Grain Growers Association of Manitoba which waited on Sir Wilfrid Laurier at Brandon, July 18, urged the appointment of Andrew Graham, of Pomeroy, to succeed the late T. Greenway as a member of the Board of Railway Commissioners. He is a cousin of the Minister of Railways. The Premier replied that the person to be appointed to the vacancy would be a western man and a representative of the farming community.

Notes on Electric Freight and Express Traffic.

By H. D. W. Miller.

The subject of freight and express business, as handled by electric lines, is one of such varied phases and conditions that any hard and fast methods of procedure are difficult of arranging without detailed knowledge of conditions which obtain on the particular system under consideration. However, there are certain general methods of organizing and successfully operating a freight and express business, which will be found necessary to any conditions, physical, competitive or otherwise, and it is with these conditions that this paper deals.

The ideal conditions for a large and lucrative freight and express business for an electric road are: A large wholesale and manufacturing centre which originates a great amount of staple articles in grocery, dry goods, hardware and manufactured lines, and, in turn, consumes the products of the farm; a rich surrounding country, with many thriving country towns and moderately-sized cities, which consume the products of the larger city and supply to the city its necessities. The interurban operating under such conditions need have no difficulty in establishing a freight or express business which will well repay the money invested if the business is handled on the right basis.

TERMINALS.—The location of freight terminals in large towns and cities presents many questions which must be handled in line with local conditions. There should be one general terminal as conveniently located as possible to the wholesale and manufacturing districts. A site so located is expensive, and difficulty of acquirement. However, in the end a few thousand dollars more expended in the procurement of such a site is money invested to best advantage, as it places the company in a secure and favorable position for getting and retaining the business, and business is what the company is after—not idle cars and unused tracks. This site should also be so located that there will be little interference with the regular passenger equipment of the line, either by trucks and teams which deliver and receive freight at the terminal or by the freight cars using lines already heavily congested with passenger traffic.

The use of the heavy lines is unavoidable in many cases, but in the selection of a terminal site a careful inspection of all territory should be made and consideration given to this feature as well as to cost of site. Freight and express traffic should all be handled through one terminal. A series of pickup and delivery stations throughout a city can only result in confusion to the public, delay to both outbound and inbound business, and a consequent accumulation of claims for loss and damage. By the concentration at one well-equipped and well-managed terminal the traffic is handled at far less cost per ton, the public quickly learns where to deliver and receive freight, confusion of traffic accounts is avoided and, as goods are beter housed, stored and handled, there is a minimum of delay, loss and damage and consequently a substantial reduction in the claims account. Such a terminal as the writer has in mind should be constructed of wood or steel with corrugated iron sides and sheet metal roof with plenty of skylights arranged for proper lighting. A frostproof compartment of sufficient dimensions should be provided wherein to store perishable products in winter and this might also be used as a coal room during the heated term, if much business requiring such a convenience is handled. This idea of a terminal is only advisable or desirable in large places where it is necessary to handle a large amount of traffic promptly. It may be greatly modified to suit varying needs and conditions, especially in the smaller places, where, indeed, nothing approaching the above is necessary. However in all cases plenty of room for proper storage and handling of traffic should be provided and the obstruction of sidewalks and streets be avoided as far as possible.

THE ROLLING EQUIPMENT used in freight traffic should be fully up to the best passenger equipment in power, etc., to insure getting over the road. By all means do not operate small freight cars. The operation of small cars results in more loss and damage claims than any other one thing on the list. All kinds of freight are presented for shipment and with small cars and loaded to their capacity it would mean a mixture which would result in goods spoiled and refused at destination, claims presented for value of same, both shipper and consignee displeased and future business gone to a competing line. Good roomy cars will go far towards reducing the claim account and also towards retaining old and acquiring new business.

SOLICITING.—In the large cities a live solicitor should be constantly at work. Not the freight agent who has enough to do keeping things going at his office, but a good live man who has nothing else to do but to keep in touch, not only with the outbound shipper, but also with those who are handling the product of the surrounding towns and country. He should devote the greater share of his time to the city but also should make regular visits to every town or village on the system, put the local agents next to possible business, and, in turn, exact from them all the information possible as to prospects for business from their stations and keep them on the alert for all items which will affect the company's business. The solicitor should be fully informed as to competitive lines, steam road, boat, old line express or electric companies. He should be thoroughly familiar with their rates, schedules, and form of service and every other item which will in any way affect his company's business or suggest some improvement thereto. He should inform himself of the details of all claims and endeavor to secure prompt and equitable adjustments thereof. He is the one who comes in contact with the public and he should ever be ready to listen to complaints and have them adjusted to the interests of both the patrons and the company. Nothing tends more to cordial relations between the company and its patrons than for the latter to feel that they are dealing with a company which is ready and anxious to give them a square deal. The solicitor is the one on whom considerable depends for the establishment and continuance of this cordial feeling.

ORGANIZATION OF STAFF.—It is of the utmost importance that the traffic offering be taken care of promptly and efficiently, otherwise all previous trouble and expense go for naught. The right kind of men must be employed to secure the desired results. Pay them as good salaries as they could get from steam roads and you are then in a position to exact the best of service and when such is not rendered dispense with them and get men who will render such service. Cheap wages make cheap men, but cheap men are a costly proposition in the claims account alone, laying aside the loss of business sure to result from a cheap and inefficient service. The writer advocates the employment of steam road men, as far as possible, in the electric freight and express service for these reasons: Railways accounting and the handling of freight are in a class by themselves. An experienced commercial accountant would be wholly out of his element in a freight or express office. He would require coaching before making an entry and as for going ahead with his work he simply could not do it until he obtained months of experience in all the varied methods and forms of handling railway accounts. From the very nature of the business it is absolutely indispensable that electric freight accounts be handled after the approved forms of steam road or old line express accounts. Electric freight or express accounting is simpler than steamroad accounting, in that, for the most part, the business is of a strictly local character, therefore fewer men will handle the same amount of business to better advantage than in a steam road office. A sufficient force should always be employed to keep accounts strictly up-to-date and traffic moving promptly.

STORAGE, HANDLING AND LOADING.—Freight should always be loaded on cars in station order, goods for station farthest away in first and to the ends, and loading in order to the doors where the freight for the first stations out should be placed. Too much care cannot be taken in properly storing freight in cars and warehouses. If possible, oil and other liquid or dirty freight should be entirely removed from eatables or anything else liable to become soiled or tainted therefrom. Care in loading mirrors, furniture and other freight of a fragile nature will result in material reductions in the claims account and greater attention should be paid to this feature of the business. One careless freight handler will cost the company more in loss and damage claims than the extra wages necessary to secure a careful and reliable man. Claims for loss and damage arise from many different causes, but a large percentage of them are due to careless and indifferent employes and cramped space in warerooms and in cars.

THE FREIGHT CLAIMS DEPARTMENT is of the utmost importance. The transportation of freight and express is today largely a local business, and through business, in which two or more distinct companies participate, is the exception. The mileage of the electric lines is short and stations few as compared with most steam roads. As a result it is much easier to locate the cause of delay or damage from which a claim arises. A large percentage of claims for loss, delay and damage may be entirely abated by proper terminals, roomy equipment, careful storage, loading, and handling as explained in detail previously. Claims are bound to be incurred and on the average electric line of to-day there is no excuse for delay in making a thorough investigation and prompt adjustment of same. Any other course simply means a dissatisfied shipper, or consignee, and loss of business. A policy of prompt adjustment of legitimate claims not only hold business already secured but is also an important factor in making new business. In connection with claims the subject of O. S. & D.

(over, short and damage) reports should be considered and every local freight agent should be required to issue these reports as necessary. If issued promptly they greatly assist the claims department in adjusting claims for damage and in placing responsibility for same. Without such a system of O. S. & D. reports the company lays itself liable for many claims which it is not in position to handle with any degree of justice to itself.

SERVICE AND SCHEDULES.—The service must be of such a nature as to fully meet all competition. Frequency of service will depend on competition and demands of traffic peculiar to the territory operated in. The schedule should be fast and reliable, but it is better to have a reliable service, with cars always on time, than to promise a schedule which cannot be maintained. The business man wants what he wants when he wants it, and he usually knows how to get it. If you cannot satisfy him he goes elsewhere. Make the service fully as good if not better than the other fellow's and the business is yours.

THE ACCOUNTING is a matter of so much detail that space will not permit of treating it, except in a general way. The electric transportation of freight and express is so nearly identical with the same business as handled by steam roads that it is essential that the general form of steam road accounting be adopted. With the latter there are varying details in method, but the same general principles apply throughout the country. By the application of the steam road system and with competent men this feature of the business becomes greatly simplified. The experience of the writer has been that with electric freight accounting, the systems in use have been totally inadequate in some few instances. Through lack of a thorough system of accounts and through lack of men at local stations and in audit office experienced in handling such accounts, it has simply been impossible to keep check of the business with any degree of satisfaction. With the system the writer has in mind the auditor is enabled at any time to ascertain the exact standing of any or all stations and to satisfy himself of any possible collusion between local agents or between agents and conductors on the runs.

PICKUP AND DELIVERY.—Except where absolutely necessary by reason of wagon express or old line express, competition, the store door pickup and delivery is unadvisable and should not be necessary. Where such competition is encountered, careful consideration of possible earnings, expense of wagon service, etc., should be given and there would have to be an especially bright outlook to invite the entrance of an electric line into the freight and express business under these conditions.

CLASSIFICATION AND RATES.—The standard official steam road classification usually governs in electric transportation, especially in less than carload business, and this classification may be safely adopted with some exceptions due to difference in equipment and operation. Rates must be made to meet competition in all cases, but where no competition exists care should be taken to conserve the interests of the company without exacting too much from the shipping public, otherwise the public will be content with the old methods of transportation and the company will suffer as a result.

THE MILK BUSINESS can be made a source of revenue to the electric lines and can be handled in a simple way as to accounting and return of empties. Rates will depend on local conditions, length of haul, etc. By careful and energetic solicitation of the dealer and producer, a good volume of business may usually be secured at satisfactory

2 GRAND PRIZES AND 5 GOLD MEDALS

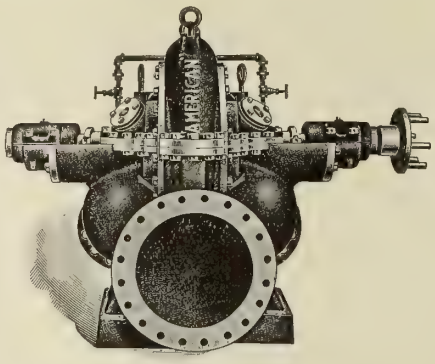
—more than was given to all other makes of pumps combined—were awarded by the Alaska-Yukon-Pacific Exposition to

"AMERICAN" PUMPING MACHINERY

The reason why "American" volute Centrifugal Pumps attain higher mechanical efficiencies than others is they are so designed that there is a shorter passage and less friction of fluid in passing through the pump.

The impeller is accurately machined to fit the casing, leaving clearance for only a film of fluid and preventing back-flow.

At the entrance of the discharge pipe is a cut-off, preventing fluid passing the discharge pipe and being repumped.



The same care that is employed in designing the principal features of the pump is carried out in every detail of construction; in balancing the impeller, overcoming the end thrust, water-sealing the inner end bearings and oiling the main outer end bearings with rings and chains and oil cellars.

"American" Volute centrifugals are made in both horizontal and vertical types in any number of stages, in any size from 1 inch to the largest installations made and equipped with any power.

Give us the opportunity to prove to you the superiority of "American" centrifugals for any installation adapted for this type of pump.

rates. Issue coupon tickets in denominations of five and ten gallon cans. These should be consecutively numbered, issued and charged to the local agents. The shipper buys these coupons in lots to suit his convenience. The tickets are attached to the cans in denominations according to the capacity of the can. The conductor detaches the coupon from the can and turns it in to the audit office, the stub remains on the can to serve as a direction for return of empty to shipper. As the coupons are issued to the local agent and sold by him for cash the accounting is a simple matter.

THE HANDLING OF BAGGAGE on electric roads is a troublesome problem and to attempt to do it on the present steam road basis is out of the question. Interurban passenger rates are lower, the service more frequent, and equipment not of sufficient capacity to encourage the handling of baggage on any other basis than that of revenue. When the day shall have arrived in which electric roads operate a train service, as the steam roads do now, then the free transportation of baggage may receive consideration. As generally handled to-day by the interurbans a flat rate per piece is usually charged, the rate varying only as the length of haul. Thus a sample trunk, in which may be samples to the value of several hundreds of dollars, goes for the same charge as a small or inexpensive piece. Considering the greater risk incurred, weight carried, and space occupied, the company is clearly entitled to a greater revenue for the sample trunk than for the small piece. However, to adopt a system of classifying, rating, and billing baggage is so cumbersome and slow of execution that the game is not worth the candle. Baggage usually accompanies a passenger. Little time is given for loading, quick delivery must be made, and ready means of identification employed. On a revenue basis, therefore the flat rate per piece and a simple form of way billing must be used. A form of check which serves as a quick means of identification and delivery of property the same having spaces to designate the amount of charges and whether prepaid or collect should be used. The agent uses a manifold baggage way bill book. All baggage for the same station, forwarded on the same car is entered on the same way bill in indelible pencil. This way bill shows date, way bill number, check number, station from, destination and also the amount of charges and whether prepaid or collect. When the car is ready to leave the station, the agent tears out and hands to the conductor the original way bill, covering baggage for the various towns, taking the conductor's receipt on the duplicate remaining in his books. The conductor in turn delivers the baggage and way bills at the various towns. The passenger presents his duplicate check and receives his baggage promptly, paying charges if way bill and check indicate the charges are to be collected. The forwarding agent takes to account the prepaid charges on the manifold copies of way bills and the receiving agent takes to account the original way bills received with the baggage, charging himself with all collect items appearing thereon. Weekly abstracts are made by each station of both forwarded and received way bills. These abstracts go to the audit office and are checked, one against the other, and the accuracy of the accounts established. This system entails but little more detail than the steam road system where baggage is handled on a free basis and, at the same time, absolute accuracy of accounting is secured and collusion between agents is impossible as all checks are numbered consecutively and every check must be accounted for as well as the way bill. If any checks are missing or unaccounted for they are easily traced to the agent responsible for them and settlement made.

INTERCHANGE OF BUSINESS with steam roads and old line express companies is receiving much attention. The general interchange of such business is bound to come with the rapid extension of interurbans into new territory, and the matter of appealing to the government to compel steam roads and old line express companies to interchange business with the interurbans on an equitable basis is being agitated. With such an arrangement there is no doubt that the interurbans would originate much new business for distant points and also participate in much business from a distance and from which they would be entirely barred if the interchange arrangements were not in effect. Where would the steam road be to-day which refused to interchange business with other steam roads? In fact, but for the interchange policy, with through rates and traffic arrangements, we would be to-day where we were 50 years ago. Certainly the steam roads have greatly benefited by this policy and the writer believes it a matter of vital importance to the interurbans to go deeply into the matter of interchange with all transportation companies with a view to working out satisfactory plans for the closest traffic relations. The Brooklyn Rapid Transit (electric) is interchanging both carload and less than carload traffic with several of the eastern trunk lines, with through tariffs and divisions in effect, and carrying an immense amount of business on an extremely satisfactory basis. Several other electric lines in the west and middle western states have such arrangements and are also netting a nice revenue. The policy of interchange with all transportation lines opens up an almost illimitable field to the electric lines which it is not wise for them to neglect. In the writer's opinion it is not a wise policy for the electric lines to enter into contracts or leases with the old line express companies on any other than an interchange basis. At least one instance can be cited where an electric line will refuse to renew a lease to an old line express company on expiration of the present contract, taking the ground that the old line company is now receiving considerably more than the lion's share of the profits on a fixed payment basis.

PERISHABLE PRODUCTS.—By careful attention to the handling and quick delivery of fresh meats, fruit and other perishable products a large business may be created and satisfactory revenue derived therefrom. It is a class of business however that must be handled with greatest promptness and care to protect against loss through delay and consequent spoiling of shipments. Local agents should get in touch with growers and shippers of berries, vegetables and other produce and should keep the soliciting department informed so that the shipper and consumer or dealer may be put in touch with a view to securing a large portion of this business from the country towns.

CITY MATERIAL AND REFUSE.—One of the best paying propositions for the city electric lines is the handling of city paving and building material, ashes and refuse in car lots. This business is usually handled from railway stations or docks to the points where material is required, storage yards, or to city dumping grounds. It is usually handled during the night or after the passenger cars have pulled in, thus avoiding delay to schedules and complaints from the public. The revenue is on a satisfactory basis to the company and at the same time the city effects great saving over what the same service would cost if handled by teams. As this business is handled in carloads and at carload rates, terminal and handling expenses are at a minimum and where it is shown that a substantial saving is made to a city this fact tends greatly toward kindly feelings between the city officials, the general public and the company. Suitable cars should be provided for this business.

LEGAL DIFFICULTIES.—Much trouble has been encountered in various sections of the country because of legal restrictions placed in the way of handling freight and express by the interurbans. This is a serious handicap and, in some instances, shuts out the interurbans entirely. The steam roads are in a great degree responsible for this state of affairs. The trend of public sentiment should be distinctly on the side of the electric lines in this matter and the writer believes that this can be brought about by properly placing the facts before the government and the people. With the universal complaints relative to steam road rates, shortage of equipment, and many other unsatisfactory conditions, it seems a case of "biting one's nose off to spite one's face" when the people of a community will deliberately turn down the electric lines in their efforts to give a service which will greatly ameliorate the present conditions of freight transportation and it should be the policy of the electric lines desiring to engage in this business to go fairly before the public and make plain the advantages to be derived from such a service.

EARNINGS.—The writer recently had occasion to canvas the electric freight and express situation in certain territories as to whether or not the business was profitable to those engaged in the same and the following statement will enable those lines contemplating the installing of such service to judge as to its merits. One of the largest systems in the United States with a total mileage of 575, and operating 57 express and box cars, together with a number of gondolas and flat cars, all of which are equipped with motors, had for nine months of a fiscal year ended recently, gross receipts $205,715, expense for operating $123,560, net earnings $82,155 or $9,130 per month. The expense for operation mentioned above includes repair and renewal of track, buildings and cars, electrical equipment of cars, miscellaneous shop expense, power, operation of cars (superintendence) other car service, motorman and labor, car house employes, car house supplies, other car expenses, etc. Another line with 160 miles of track and serving 20 towns with a total population of 60,000 and operating 10 express cars with a number of flat cars is doing a freight and express business, had net earnings of $12,000 per month with capital invested $150,000, cost of operation, per car mile 10c., net earnings per car mile for the year vary from 35 to 60c., according to length of haul. The capital invested includes all terminals on the system together with equipment, etc. There has been a decided yearly increase in the business since its inception. Another line with 60 miles of track and serving 12 towns with a total population of 85,000, and operating three express cars with capital invested $30,000, is doing a business of $2,000 a month net earnings, net earnings per car mile 23.11c., net earnings per car hour $2.31. This line is also showing a decided increase each year. Another line with 18 miles of track and two cars and serving seven towns has a business of $175 net earnings per month. Another line with 56 miles of track and operating 3 cars and serving 13 towns is doing a business of $950 net earnings per month. Another line with 27 miles of track, operating 2 cars and serving 3 towns has a business of $700 per month net earnings or $1.47 per car hour. Another line with 12 miles of track operating one car and serving 3 towns is do-

ing a business of $110 net earnings per month. The expense of operation on the above lines include repairs to equipment, power, salary agents and clerks, light, heat, water, stationery, platform expense, miscellaneous car service, etc., rent, track and terminal. Since the inception of freight and express business on each of the systems referred to above a decided increase in revenue has been shown each year over the previous one. These increases range from 40 to 90%, and the results of this department are highly satisfactory to the management.

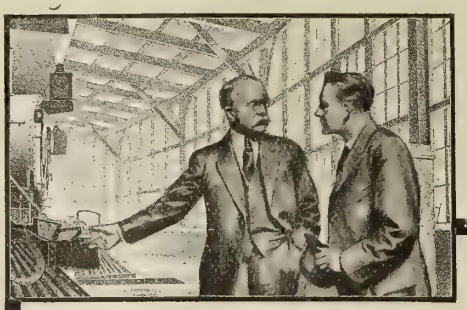
IN CONCLUSION; the transportation of freight and express by the electric lines is bound to become of as much, if not of more importance than the passenger business. The experience of the steam roads teaches that the ones who look to the future will surely reap the benefit. Now is the time to provide for and build up a great transportation business. Thoroughly organize your men to handle the traffic in a business-like manner. Keep ever abreast or a little ahead of the times. Reach out for new business and create it along your line, but while striving for new friends and new business don't let the old get away from you. Keep what you've got and get all you can by fair and business-like treatment of the public.

Sherbrooke Railway & Power Co.

This company, which was incorporated last session of the Quebec Legislature, has power to issue $1,500,000 of ordinary shares, and $1,500,000 of 5% thirty year bonds. There has been issued $700,000 of common stock, and $700,000 of 5% consolidated first mortgage sinking fund bonds, of which bonds there is held in escrow $100,000 to retire an outstanding issue of $100,000 of Sherbrooke St. Ry. Co. bonds due in 1927, the balance of the common stock and bonds being held in the treasury to be sold as required to meet the cost of developing the company's power plant and extension plans. Of the bonds $600,000 were sold at 95 and accrued interest, at 40% stock bonus being added. The bonds and stock bonus were to be delivered on the completion of payments.

The company has acquired the property and franchises of the Sherbrooke Street Ry. Co., which has been operating under a charter granted by the Quebec Legislature in 1895. At that time Sherbrooke's city population was about 9,000, now it is over 17,000 and still increasing. The gross earning for 1909 were $31,222, on a small mileage and limited rolling stock. When the line is complete and the changes proposed there will be about 15 miles of track, 12 of which will be in Sherbrooke city and three outside. A five miles extension to Brompton, with 12,000 population, and a further eight miles extension to Windsor Mills, with about 4,000 population, are under consideration, but are not included in the present plan. Other extensions are also proposed in several directions, but these are all matters of the future.

The main feature of the company's plans is the power development. There is an old company, the British American Land Co., a concern which, under an English charter, about 75 years ago acquired most of the Eastern Townships. It owned vast tracks of land and all the water powers, as well as those which flow down upon the Magog River through the centre of Sherbrooke. The land company is being wound up and the S. Ry. and P. Co. has acquired the water powers on the Magog River in Sherbrooke. It is proposed to develop about 3,500 horse power and have about 3,000 for sale when the development is complete. The power department will, of course, be the chief profitable revenue producer.



"Here's The Job—Now PRODUCE"!

"The last man at this job was a fine chap, but he couldn't 'make good,' so we had to let him go. As I said before, the position calls for a TRAINED man.

Now It's 'UP TO YOU.'"

Suppose it were up to you—could you "make good?" What is the difference between you and the fellow able to "produce" as a foreman or superintendent or manager? Training—that's all. A thousand jobs await the man able to "produce." Employers want him—are always eager to secure his services. The world has no pity for failures; it says to every man, "get ready to 'produce.'"

Every month there are received at the I. C. S. upwards of 300 voluntary letters from men that spare time study has qualified to "produce." Those letters prove conclusively that there is a way for every man—for you—to get ready to "produce." The I. C. S. can help you. Are you willing to help yourself?

To find out all about how you can learn to "produce," mark and mail the coupon. Doing so will cost you only postage and will place you under absolutely no obligation.

THOS. HAMPTON, Manager for Canada

330 St. James Street, MONTREAL

The company intend purchasing another power, but this has not been decided upon definitely.

Sherbrooke is the centre of the Eastern Townships which forms one of the most prosperous sections of Canada. Besides this Sherbrooke is a manufacturing place and a railway centre, but the electric railway has not been extended or improved to meet the requirements of the increase of the population. On the contrary it lapsed into a state of decay. The new company is proceeding with the reconstruction of the line and the development of the water power. The contracts are all let, both hydraulic and electric, and it is expected to have the new work in operation by Nov. 1. The directors and officers are: President, C. J. McCuaig, Montreal; Secreary-Treasurer, F. Thompson, Montreal; other directors: W. Farwell, Sherbrooke, Que.; E. T. Hopper, Montreal; W. H. Brouse, Toronto. F. Thompson, of F. Thompson & Co., Montreal, is at present acting as secretary-treasurer, and his firm together with that of McCuaig Bros., are jointly interested in the project. The officials of the company are: Acting general manager, C. B. Hibbard; Superintendent J. C. ,Goodwin; controlling engineers, Ross & Holgate.

Montreal Street Railway Steel Cars.

The M.S.R. is adding to its equipment fifty steel pay-as-you-enter cars of its regular semi-convertible monitor roof type with an extreme length of 46½ ft. They are built of steel, with the exception of floor, roof, doors, windows and interior finish. The sides of the car are vertical from sill to belt rail with a 2½ in. cut in from belt rail to roof and are composed of 3-16 in. plate reinforced at the bottom edge with a 6 in. channel and the top edge with a steel belt rail 3 in. by ⅝ in. The main body is 32 ft. long over corner posts with an extreme height of 8 ft. 7 ins. and an extreme width of 8 ft. 4 ins. The arrangement of body is in accordance with the standard P.A.Y.E. system, one swing entrance door on the left looking forward and one double sliding exit door of the M.S.R. type on the right. The front end has one single sliding exit door in the centre of bulkhead, and the motorman controls the outside vestibule door by means of a lever. The rear platform is 7 ft. long and fitted with brass railings to divide the incoming from the outgoing passengers, and also from the people standing on the platform. The front platform has one lateral rail. which with the vestibule exit door when open completely divides the motorman from outgoing passengers. Both platforms are supported by 7 ft. x 3½ x ⅝ in. angles reinforced on their bottom edges with 3 x 2½ x ⅜ in. angles, and secured to the end sills with a heavy steel casting. On the step side these angles are offset that they may clear the wheels when taking curves. The side posts are all of steel T shape 2½ x 2½ ins. covered with wood to take windows, and are riveted at their top ends to an angle iron runner 4 x 2½ x ⅜ ins. These posts are also riveted to the 3/16 in. side plate, giving this plate the required vertical stiffening. All the corner posts for body and vestibule have large round corner and are pressed from 3/16 in. plate. The interior framing and cross sills are made from 6 ins. channel. End sills of 6 ins. ship building channel with a 3½ in. flange and are connected by a heavy steel angle casting with side sills. The bolster is of the regular open diamond pattern with a top plate of ¾ x 10 ins. and bottom plate 1 x 10 ins., the two brought together at their ends, riveted and bent to form an L shape upon which the side sill rests. The side sill channels at this point are filled with a steel casting through which the rivet headed bolts securing the bolster pass from the outside face of side plate.

The roof is of the usual wooden construction reinforced with 1½ x ⅝ in. steel rafters at each post which are connected directly to the 4 x 2½ x ⅜ in. angle iron runner by a malleable iron casting. The lower or main roof in this car, instead of being rounded, as is usual in most cars of the type which have been made so far, is made flat and given a pitch of about 1 in 12 ins. in order to give sufficient height for the window used, most of the older windows being of a drop type. The floor is made of 1¼ in. Georgia pine nailed to pine filler pieces in cross still channels. The aisle and standing space at both ends is covered with ⅜ in. interlocking rubber tiling in two colors, let flush into wooden floor. The motor traps and openings are edged with brass to preserve the rubber.

All of the 24 windows in the body of the car are made in two pieces, the smaller upper part remaining stationary and the unusually large lower portion is arranged to rise and lock in any position up to full opening. When opened to the fullest dimension, the bottom of window is well above the passenger's head, thus giving a large free opening for observation and circulation of air. Front and rear vestibule windows are arranged to drop into wall pockets for about two-thirds of their lengths and the panelling in front of these is secured with screws to facilitate removal for cleaning and repairs. Four of the monitor deck sashes at each end on both sides are hinged at their rear ends to swing outwards for ventilating purposes. The front and rear steps of the car are made of oak covered with checked tread plates of hard lead.

The seating capacity of this car is 42, and somewhat changed from the ordinary seating arrangement heretofore followed. Longitudinal seats are used in front and rear. and 12 cross seats are placed in the centre of the car. These seats are all covered with rattan with brass trimmings. and there is a brass hand grip in the top corner of seat back at aisle end.

Electric lighting is done by four clusters of two lights each set in the monitor roof and five lights on each side set on main roof at edge of clearstory. The rear platform has one cluster of three lights and two lights are placed on the roof of such vestibule for illuminated signs. The electric signal bell is operated by a push button in each post, placed within easy reach for signalling conductor.

The car is heated with electric heaters distributed throughout the car body beneath the seats. and two in addition are placed in the motorman's vestibule, thus affording an easily regulated and well distributed heat. These are controlled by a locked iron case at the rear of the car. Air brake compressor and governor are placed in the front vestibule, together with the front end sand box. The rear end sand box is placed beneath the longitudinal seat.

All window openings in car body are guarded with brass rod guards. The guard on the outside or step side of car is three bars high. while the guard on the inside of the car is six bars high. Emergency hand-brake of a folding type is placed in rear vestibule and regular ratchet brake in usual position in front vestibule.

The painting of the car is the standard M.S.R. type and the usual warning of P.A.Y.E. is given by having the number in large figures on front vestibule. The front, rear and side signs are of the standard illuminated roller type.

ELECTRIC RAILWAYS.

Projects, Construction, Betterments, Etc.

Brantford and Hamilton Ry.—The Board of Railway Commissioners has passed an order dividing the cost of the reconstruction of the Market Street Bridge at Brantford, Ont., between the B. & H.R. and the T., Niagara, St. Catharines and Toronto Ry., provided it did not withdraw its plans. If the plans be withdrawn the cost of reconstruction will be divided among other parties. Application has been made for permission to build a wooden foot bridge across the canal level and the B. & H.R. at Mary St., Brantford. The matter was referred to the Board's engineer. (July, 1909, pg. 521).

British Columbia Electric Ry.—The Vancouver, Fraser Valley and Southern Ry. Co., a subsidiary of the B.C.E. Ry., was incorporated by the Dominion Parliament, to build a line from near the south-east portion of False Creek, easterly through Hastings and Burnaby to the south of Burnaby Lake, and entering New Westminster by way of Sapperton. The company may extend its lines south of the Fraser Valley, but at present no plans for such extensions have been made. The line which will be built to the standard of the steam railways, will be on its own right-of-way, and will be operated by electricity. The right-of-way for the line from False Creek to New Westminster has already been acquired: construction has been started and the line will be completed within a year. There are three construction camps on the route one at Hastings townsite. one at Burnaby Lake, and the third at Cumberland St. The work to be done is not heavy, but there are a good many culverts to be built, the largest being at Burnaby.

A contract is reported let to McAlpine, Roberts & Co., for the grading of 1.66 miles of line from the end of the present Lynn Valley line to the school house on the Pipe Line road near the Capilano Canyon. The route is along the Mackay road. and it is expected that the line will be completed and put in operation this season.

A regular car service was put in operation on the New Westminster-Chilliwack line as far as Milner, July 1. The line has been completed so as to enable a car to be run into Abbotsford, and it is expected that a regular service will shortly be installed. Track has been laid to about a mile on the Chilliwack side of Huntingdon, and ballasting is being gone on with. It was expected that the wiring which is being gone on with ahead of the tracklaying would be completed July 15, and that the whole line would be completed so as to be put in operation Oct. 1. Plans for the station at Chilliwack have been prepared and tenders for its construction are under consideration.

A bylaw has been passed by the Point Grey council. and was submitted to the ratepayers July 23, providing, among other things. for a 40-year contract between the municipality and the company. The contract authorizes the building of certain lines within the municipality. and sets out the terms upon which they are to be operated. The municipality may upon giving notice take over the lines at the end of 40 years.- otherwise under the provisions of clause 34, the contract is to run for 99 years. upon terms to be mutually agreed upon at that time.

At a meeting of the South Vancouver council. July 6. the company was given permission to build a second track on Westminster Ave., between 25th Ave. and Bodwell road.

The B.C.E. Ry. through the Vancouver Power Co. is preparing to start

work upon the development of the water power at the outlets of the Chilliwack and Jones lakes, about 60 miles east of Vancouver. It is estimated that 110,000 continuous h.p. will be developed, at an approximate cost of $9,354,000. The work is expected to be completed in about five years. Under the terms of the order-in-council the company has five years to complete the work at Jones Lake, which will give 30,000 h.p., and 10 years that at Chilliwack Lake, which will give 80,000 h.p. The water in the lakes will be controlled by dams 50 ft. high, and will be carried in a flume and pipe lines to the power house, with a total fall of 1,800 ft. It will be possible to utilize a considerable quantity of water from the flume for irrigation purposes.

Grand Valley Ry.—The Brantford, Ont., city council has directed the company to resume the service to West Brantford according to the terms of the franchise; and agreed to support the company's application to the Board of Railway Commissioners for permission to build a siding along the front of Jubilee Park to connect Holmedale with the G.T.R., and the Toronto, Hamilton and Buffalo Ry. This application has been refused by the Commissioners. A contract is reported to have been let for the construction of 11 miles of track in the city. The track, it is said, will be laid on oak ties embedded in 12 inches of concrete, 80 lb. steel to be used. (June, pg. 495).

Hamilton, Waterloo and Guelph Ry.—A report was current in Hamilton, Ont., July 9, that the proposal to build this electric railway was likely to be abandoned, but those who are in touch with J. Patterson, who is promoting the company, discredit the report. He went to London, Eng., about a month ago, to arrange for the financing of construction, and nothing definite will be known as to construction prospects until his return. The project had been favorably reported upon by the Westinghouse Church-Kerr Co. The cost of the entrance into Toronto, and of the terminals was expected to be high; owing to the fact that a tunnel, two miles long might have to be built. The cost of the entrance into Hamilton was also expected to be high, and some authorities think it is altogether prohibitive. (June, pg. 495).

Hull Electric Co.—In connection with the extension of the line along Brewery St., from Main St., out to the first toll-gate on the Chelsea road, an agreement has been reached by which the company will repair the street between these two points, the city supplying rough stone free, and crushed stone at 50 cents a yard at the crusher. (July, pg. 584).

Kingston, Portsmouth and Cataraqui Ry.—The Kingston, Ont., board of works, has decided to ask the company if it will pay a share of the cost of new rails and ties and a concrete foundation, should Princess and King Streets be relaid. It was stated at the meeting of the board, July 8, when this decision was reached, that the President of the company had stated that it would not pay anything. (June, pg. 495).

Monarch Radial Ry.—At a meeting of the Barrie, Ont., town council, July 6, consideration was given to a proposed agreement with this company for the construction of an electric railway through the town. The company desired to purchase its own right of way from Toronto to Barrie, and from Barrie to Owen Sound, but it desired to run over Allandale and Barrie streets, using the main line as the basis of a local system. A provisional arrangement has been made for a 25 year franchise, and the town solicitor is drawing up a by-law for submission to the electors. Franchises are reported to have been granted to the company in several rural municipalties, and Orillia Town Council is now being approached. (Mar., pg. 231).

Toronto, Cobalt, Winnipeg, Rossland, Vancouver, Halifax

Montreal Street Ry.—The Montreal city council has under consideration a proposal for the erection of poles in the city sufficient to carry all the electrical wires, now carried by the street railway company's poles, and other electrical companies having independent pole lines.

The question of additional lines is being considered by the city council and considerable opposition is being made to the company's application for permission to build on Dorchester and Sherbourne streets.

Plans for new car barns have been prepared, the estimated cost being put at $1,000,000. (June, pg. 495).

Moose Jaw Electric Ry.—We are officially advised that the title of the company with which an agreement has been made for the construction of an electric railway in Moose Jaw, Sask., is the Moose Jaw Electric Ry. Co., and that the officers and directors are as follows:—President, A. A. Dion; Vice President, N. J. Ker; directors: J. D. Cashman, E. J. Daly, P. D. Mellon, D. O'Connor, Jr., E. M. Saunders, D. R. Street. Messrs. Cashman and Saunders reside in Moose Jaw, the others in Ottawa, Ont., and D. R. Street is Secretary. It was expected that construction would be started under the agreement by the end of July, and it is hoped to have six miles of track laid during the present season.

J. McRae, Consulting Engineer, with H. A. Dion, as Assistant Engineer, arrived in Moose Jaw from Ottawa, July 16, to supervise the construction of the line.

The M.J.E.R. Co. has been incorporated under the British Columbia Companies Act with a capital of $400,000 in $50 shares, to construct electric railways, etc., in British Columbia and Saskatchewan, and elsewhere. (See Moose Jaw, Sask., July, pg. 585).

Nanaimo, B.C.—The Dominion Stock and Bond Corporation, through G. H. Salmon, Vancouver, has submitted an offer to the city council of Nanaimo, B.C., to build and operate an electric railway there. The proposal is to build altogether 20 miles of single and double track lines, to serve Nanaimo, Wellington and Ladysmith, provided the city guarantee the company's bonds to $15,000 a mile, or a total of $300,000, the city taking a first mortgage on the line and rolling stock. An arrangement was made by which the project will be discussed at a public meeting.

Nelson Elecric Street Ry.—The work of overhauling the old electric railway line has been practically completed. The overhead work has been renewed, and a new switchboard has been installed in the sub-station. The electric work has been done under the charge of R. A. Brown, city electrician. The line was expected to be re-opened for traffic July 30. (July, pg. 585).

Ontario West Shore Ry.—The point in dispute between the company and the Colborne township council, as to the crossing at Dunlop, is just what a crossing is. Instead of making the shortest possible crossing of the public road, the company laid its track along the highway for a short distance in order to avoid having to purchase and take down a building. The settlement made upon the Ontario Railway and Municipal Board's advice involves the abandonment of all proceedings, each party paying its own cost, the Board to decide whether a by-law will be necessary in order to permit the track to remain—and the company to protect the crossing and to be liable for damages through accidents caused at it. The company has purchased a locomotive and is using it upon construction. (July, pg. 585).

Owen Sound, Ont.—Dr. C. S. Fenton, and T. Fleming, of Cleveland, Ohio, recently visited Owen Sound, Ont., and looked over the situation with a view of submitting a proposition for the building of an electric railway there, and taking up the project for the construction of the Owen Sound and Meaford Ry. R. M. McDowell, C.E., gave them all information available as to routes, etc., and E. Lemon, chairman of the local railway committee discussed the possible details of a franchise.

Peoples Ry.—We were advised July 13, that work had been started by the company itself on the grading of this projected electric railway between Berlin and Guelph, Ont., and it was intended to let a contract for grading between Berlin and New Hamburg in about 10 days thereafter. It is hoped to have this grading completed by Dec. 1. This covers the 29 miles for which tenders were recently asked. The work includes the building of five piers in the Grand River to carry four steel spans of 100 ft. each. It is expected to have the piers completed by Dec. 1, to have the steel work in place during the winter; and to have track laid between New Hamburg and Guelph by June or July, 1911, and the line in operation in Aug., 1911. The track will be laid with 70 lbs. T rails; and the tenders under consideration provide for the fencing of the line, and the overhead work. A grading outfit was being delivered at Berlin, July 5, and teams and men were engaged by A. U. Warfield, July 6, and following days.

The agreement with the city of Guelph has been drawn up and is before the city council for final approval. The agreement calls for the purchase by the city of $85,000 of cumulative 6% preference stock. The grading for the line from Bloomingdale to Guelph must be done by Dec. 31, 1910, and the line from Berlin to Guelph completed and cars running by Oct., 1911. Construction on the Guelph to Arthur line must be commenced by April 1, 1911, and the line from Arthur to Fergus and Elora must be completed and in operation by June, 1912, and the line to Arthur by Dec. 30, 1912. The company must apply for legislative authority to construct the Guelph-Puslinch Lake line, and shall commence construction by April 1, 1911, the line to be in operation by June 15, 1912. An allowance of six months will be made to the company in case of delays occasioned by default other than its own; the company must not issue bonds to the amount of more than $16,000 a mile; any extra cost on paved streets is to be paid by the company, and if the bylaw, to be submitted, fails to carry, the company is to pay the entire cost of its submission.

The ratepayers of New Hamburg, Ont., have passed a bylaw granting a franchise through the village to the People's Ry., and the ratepayers of Wilmot tp. have passed a bylaw authorizing the township to subscribe for $30,000 of stock in the company.

Port Arthur and Fort William Electric Ry.—The manager has been instructed by the joint board to complete the Arthur St. extension as quickly as the time at his disposal will permit. The Ontario Railway and Municipal Board has reserved judgment on an application to compel the joint board to operate what is known as the Montreal St. extension at West Fort William. The reason why it has not been operated up to the present is that it crosses 12 railway tracks on the level and it is claimed that Fort William should have built a subway at the crossing according to the terms of an award of the Ontario Railway and Municipal Board.

The question of the operation of the line on Montreal St., Fort William, Ont., is still under consideration by the Commissioners. The line across a number of steam railway tracks, under which the Port Arthur people say the Fort William people should build a subway, or undertake to pay the damages arising out of any accident if the cars be operated on the level across these tracks. (May, pg. 399).

Toronto's Tube Ry. Proposals.—The New York Engineers, Messrs. Jacobs and Davis, who were engaged by the Toronto city council to make a report as to the construction of a tube system of railways in the city, have been supplied with all the information available. Some members of their staff spent some days in the city looking over the proposed routes, borings to show the strata were made and other information collected. An interim report is expected at an early date. (June, pg. 497.)

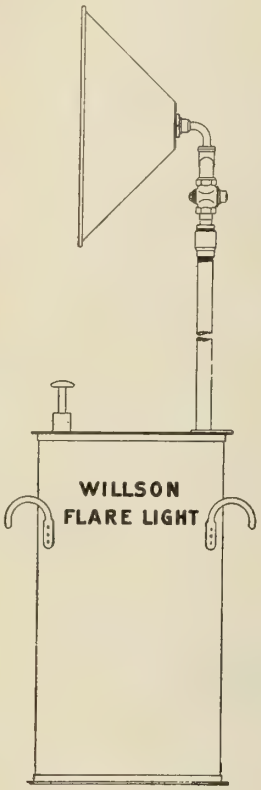
Quebec Ry., Light, Heat and Power Co.—We are officially advised that the company filed plans July 11 for the building of an upper level railway to the Montmorency Fall's part. The line will branch off from the present main line just east of Beauport station, 2.5 miles east of Quebec, and follow south of the main road to within 150 ft. of the park, when it will cross the road to the north and loop round in a lot owned by the company. The length of the new line will be 3.3 miles. It will be double track, and its construction will obviate the very tedious delays at present experienced by passengers to the park having to take the elevator, which is not of sufficient capacity. The right-of-way is being acquired, for the line for which a very good location has been secured, the gradient not exceeding 3% at any one point. It is intended to proceed with construction at once and it is hoped to have the line in operation by Sept. 1.

At a meeting of the city council, June 30, the plans for the new building on the site of the Jacques Cartier market were considered, and the company was given permission to build out under the sidewalks, on all four sides, the roadway to be restored to its present condition. The council also discussed the question of an extension of the line to St. Valier tollgate and up Lesage Ave., and the construction of bridges over the St. Charles River. This question subsequently had been before the Board of Railway Commissioners, so far as the crossing of the C.P.R. at two points was concerned the city's application being thrown out on the grounds that it had no power to act. The matter was discussed by the directors June 30, when it was stated that an arrangement might be made with the city by crossing the C.P.R. once instead of twice. As to the building of bridges across the St. Charles River the directors favored the policy of building in conjunction with the city.

The matter of the extension of the line in St. Saveun and Limoilon was discussed with the city council privately July 7, but nothing definite resulted. The suggestion is that the line should be extended from its present terminus at the exhibition grounds as far as Charlesbourg road which the directors were in favor of doing at as early a date as possible, to take care of the largely increasing business.

The arrangements for the extension of the line to Sillery, which is to be built under the Quebec County Ry.'s charter are being completed. An agreement has been made with the Montcalm town council, by which a 30-year franchise has been granted for the line along St. Cyrille road, from Maple Ave. to Belvedere road, about half the length of the proposed line. The opening of St. Cyrille road to Sillery is being arranged with the land owners. The plans were ratified by the directors July 11, and the building of the line is expected to be put in hand at once. (July, pg. 585).

Regina, Sask.—In connection with the project to construct an electric railway



THE WILLSON PORTABLE FLARE LIGHT

Brilliant Powerful Economical

Specially adapted for use in all kinds of construction work.

Its candle power varies from 1,000—8,000 according to the size of apparatus. The cost of 8,000 candle power is less than 6c. per hour.

O'Brien & Fowler, Contractors to the G.T.P., say:—

"During the past two or three years we have used various kinds of lights, but none of them have proved the equal of yours, either in the matter of economy or usefulness. The effectiveness of your light is beyond dispute."

in the city, an estimate of the cost of miles of line has been submitted to a committee of the city council. The estimate provides for a double track on paved streets and single track on unpaved streets; and all necessary overhead work, but excluding cost of cars, car barns or power plant. Double track on Albert St., and Dewdney St., south through the subway, 2.25 miles would cost $78,750; and 1.75 miles of single track would cost $31,500; engineering and overhead expenses would cost $4,750, making a total cost of construction of $115,000. (June, pg. 497).

Saskatoon, Sask.—Application has been made to the city council, on behalf of a British company, that the ratepayers be asked to vote on the question of the construction of an electric railway in the city, and whether they are in favor of private or municipal ownership.

Stratford, Ont.—The city council decided to submit a bylaw, July 29, granting a franchise for an electric railway in the city. The new company is said to be in no way associated with the Peoples Ry., the Stratford and St. Joseph's Radial Ry., or any of the other companies which have been trying to get the money to build an electric railway in and through Stratford. The proposed bylaw sets forth that T. O. Robson, H. L. Rice, D. Bouis, and A. Baird, of St. Mary's, propose to apply to the Ontario Legislature incorporating the Stratford Ry. Co. with power to build electric railways in and through Stratford and in the neighborhood; and provides that in the event of the charter being granted the company may build and operate an electric railway on certain streets within the city; build sidings to factories fronting or abutting on streets whereon the railway is built; may carry freight and baggage as well as passengers; but only on certain streets; freight is not to be collected or delivered except from sidings or a freight shed, and freight cars are not to be permitted to stand on the streets except at certain specially designated points. When the city population has reached 30,000 the company is to build an additional half mile of track for each 2,000 of population above 25,000. Provision is also made in the bylaw as to passenger fares, rates of speed, etc., and for the starting of construction within six months after the passing of the act. It is also provided that power is to be taken from the Hydro-Electric Power Commission from the stepping down station at Stratford.

Local reports refer to this line as being promoted in the interests of the St. Marys and Western Ontario Ry., which is controlled by the C.P.R. Of those named in the agreement with the Stratford city council. T. O. Robson, was one of the original directors of the St. M. and W.O. Ry.

Toronto and Eastern Ry.—An engineering party is reported to be engaged in making a survey for this projected electric railway, from Toronto to Cobourg, Ont., with a branch northerly from Oshawa to Lindsay, and an extension southerly to the Oshawa harbor. Press reports state that it is the company's intention to proceed with the construction of the line between Toronto and Bowmanville this fall.

Toronto Ry.—The question of the condition of the tracks on Dundas St., West Toronto, came before the Ontario Railway and Municipal Board, July 7, when it was admitted by the company that 25% of the track required to be relaid. Some of the condition of the line, it was stated, was due to work done about three years ago by the West Toronto city council, before its amalgamation with the city of Toronto. Judgment was reserved.

H. S. Osler, K.C., informed the Ontario Railway and Municipal Board by letter, July 14, that the company accepted the terms of the Board's order of May 18, given in our July issue, pg. 585, providing for the extension of its tracks and the building of new cars. It is expected that the building of the new lines will be gone on with at once.

Toronto, Niagara and Western Ry.—The Board of Railway Commissioners order referred to in our last number, was issued July 12. It authorizes the company to construct its line on the level across a large number of streets in the north west part of Toronto, but is added that if at any time the C.P.R. is ordered to elevate its tracks in the north of the city, the T.N. and W.R. must follow suit, and that it shall also provide such protection at the crossings as shall be directed by the Commissioners from time to time.

Plans of the revised location for the section of the line between Burlington and Hamilton, have been filed with the Hamilton city clerk. The new route for the east will carry the line along the north shore of the bay, skirting the water instead of the high land; crossing the bay on trestles, and under the G.T.R. at Desjardins bridge, and paralleling to the city limits the short piece of line owned by the C.P.R. which gives that company a connection between the G.T.R. and T., H. & B.R. tracks. The Dundas council, as well as the Hamilton city council, is opposing the plans before the Board of Railway Commissioners, particular objection being taken to the bridge over the Desjardins canal. The Commissioners decided that the company would have to make a special appeal to the Government as to the bridge. The matter is still under consideration. (July, pg. 585).

Welland, Ont.—C. J. Laughlin, who is negotiating franchises for an electric railway in Welland, and to Welland Jct. Ont., stated recently, that the company would have its line completed within five months from starting work, and would give a 15 minute service between the two points named.

The Dunnville, Wellandport and Beamsville Ry., and the Niagara Falls, Welland and Dunnville Ry., have charter powers covering such a line.

Winnipeg Electric Ry.—No progress is being made with the company's application to the courts to have bylaw 5907 passed by the city council, respecting poles and wires, quashed. (July, pg. 585).

Electric Ry., Finance, Meetings, Etc.

British Columbia Electric Ry.—Gross earnings for May, $256,806; working expenses $156,065; net operating revenue, $100,741; renewal funds $17,852; net earnings $82,889; approximate income from investments, $16,500; net income $99,389, against $197,802 gross earnings; $116,000 working expenses; $81,802 net operating revenue; $13,958 renewal funds; $67,844 net earnings; $13,550, approximate income for investments; $81,394 net income for May, 1909. Aggregate gross earnings for 11 months ended May 31, $2,728,437; net earnings, $1,147,106, against $2,098,154 gross and $942,925 net for the same period 1908-09.

The Dominion Power and Transmission Co., for the past half year has not paid any dividends on its stock, using the available profits for improvements upon its electric railway lines. It is reported that at the July meeting, held in Hamilton, the directors decided to resume paying dividends next half year.

Halifax Electric Tramway.—Railway receipts for June, $18,257.05, and for two weeks ended July 14, $9,975.77, against $17,300.48 and $8,648.09 for same periods 1909.

London St. Ry.—Gross earnings for May, $19,294.92; operating expenses $14,603.04; net earnings $4,691.88; deductions $2,441.75; net income $2,250.13, against $19,172.85 gross earnings; $14,191.27 operating expenses; $4,981.58 net earnings for May 1909. Aggregate gross earnings for five months ended May 31, $94,359.60; operating expenses $70.571.68; net earnings $23,787.92; deductions, $11,893.85; net income, $11,894.07, against $89,809.25 aggregate gross earnings; $67,246.16 operating expenses; $22,563.09 net earnings for same period 1909.

Port Arthur-Fort William Electric Ry.—The financial statement for April shows; passenger earnings, $9,250.17 gross earnings $9,650.24; expenditure $6,798.99; net earnings, $2,851.25. Car mileage, 39,385 miles; gross earnings per car mile, $24,533; operating expenses per car mile, $17,285; net earnings per car mile, $7,248.

St. Thomas St. Ry.—The receipts for the five months ended May 31 were, $8,345.67, against $9,241.63 same period 1909; and the expenditures $14,546.53, against $12,321.77. In the expenses for 1909 there was included $2,062.94 for power, but nothing has been paid on account of power this year. During the five months to May 31, there were 120,176 passengers carried, against 165,600 in the same period of 1909. The number of pasengers has been steadily falling off since 1907, and the manager stated two causes had tended to bring about the decrease, one being the institution of the delivery of letters by the post office and the other the opening of the Ross St. subway. The question of the rental of the right to run over the city lines by the London and Lake Erie Ry, and Navigation Co., (The old South Western Traction Co.,) was considered, and it was suggested that the company be asked to pay an increased rental as it is now going a seven instead of a six-day service.

Montreal St. Ry.—Passenger earnings for June, $373,258.80; miscellaneous earnings $11,305.31; total earnings $394,564.11; operating expenses $198,848.62; net earnings $185,715.49; city percentage on earnings $39,463.79; interest on bonds and loans $15,036.62; rent leased lines $552.90; taxes $4,000; total charges $59,053.31; surplus, $126,662.18; expenses per cent. of earnings 51.71, against $342,293.02 passenger earnings; $12,624.57 miscellaneous earnings; 354,917.59 total earnings; $187,320.38 operating expenses; $167,597.21 net earnings; $33,120.71 city percentage on earnings; $14,514.96 interest on bonds and loans: $498.67 rent leased lines; $3,000 taxes; $51,134.34 total charges; $116,462.87 surplus; 52.78 expenses per cent. of earnings for June 1909. Aggregate passenger earnings for nine months ended June 30, $3,018,903.81; miscellaneous earnings $72,895.75; total earnings $3,091,799.56; operating expenses $1,806,291.83; net earnings, $1,285,507.73; city percentage on earnings, $205,108.34; interest on bonds and loans $131,681.65; rent leased lines $4,813.35; taxes $36,000; total charges $377,603.34; surplus $907,904.39, against $2,730,032.60 aggregate passenger earnings; $61,940.67 miscellaneous earnings $2,791,973.27 total earnings; $1,688,603.30 operating expenses; $1,103,369.97 net earnings; $169.241.78 city percentage on earnings; $136.324.08 interest on bonds and loans; $4,325.34 rent leased lines; $25,800 taxes; $335,691.20 total charges; $767,678.77 surplus for same period 1908-09.

Montreal Terminal Ry.—Officials of the Montreal Street Ry., owning the M.T. Ry., stated July 13, that there was

Specifications with Prices on Application

no truth in the press reports that the section of the M.T. Ry. from Maisonneuve and Bout de l'Ile had been sold to the C.P.R. This section of the line is largely used by the C.P.R. for switching cars from its lines to the factories in the Maisonneuve district.

Quebec Ry., Light, Heat and Power Co.—It is said application will be made to have the company's stock listed on the Bourse in Paris, France, and on the London, Eng., stock exchange.

Toronto Ry.—Gross earnings for May, $353,791; operating expenses $170,426; net earnings $183,365, against $323,722 gross earnings; $155,919 operating expenses; $167,803 net earnings for May 1909. Aggregate gross earnings for five months ended May 31, $1,656,842; net earnings $786,460, against $1,483,750 gross and $708,744 net for same period 1909.

Winnipeg Electric Ry.—Gross earnings for May, $238,240; operating expenses $117,812; net earnings $120,428, against $189,564 gross earnings; $96,014 operating expenses; $93,550 net earnings for May 1909. Aggregate gross earnings for five months ended May 31, $1,289,774; net earnings $629,587, against $1,017,067 aggregate gross earnings, and $503,589 net earnings for same period 1909.

Electric Railway Notes.

The Quebec Ry., Light, Heat and Power Co., has received two 18-seat pay-as-you-enter cars, from the Ottawa Car Co., Ottawa.

The Montreal board of control proposes to recommend to the city council that it take over and operate the incline Ry. at Mount Royal.

The Peoples Ry. has received tenders for the supply of a number of car bodies, and trucks. It is proposed to complete the cars at Berlin, Ont.

The Edmonton Radial Ry., has received two pay-as-you-enter cars, with 27 G.1 trucks, and one tower wagon from the Ottawa Car Co., Ottawa.

The Judicial Committee of the Imperial Privy Council, has disallowed the appeal in the case of the Berlin and Waterloo St. Ry., against the city of Berlin, Ont.

The B.C. Electric Ry. Co., has been given permission by the British Court of Chancery, to extend its powers in the direction of acquiring gas works, mining and lumbering interests, etc.

R. Smith, of the London and Lake Erie Ry. and Transportation Co.'s staff, was presented with an address and a marble clock by the passenger staff, on the occasion of his marriage recently.

An increase of wages has been given to the men employed on the Port Arthur-Fort William Electric Ry., and the strike, which was threatened at the end of June has been averted.

E. Zimmerman, motorman, one of the survivors of the Lakeview car accident, near Vancouver, B.C., in Nov., 1909, has been awarded $6,500 and $520 expenses, against the B.C. Electric Ry.

Press reports from Port Arthur, Ont., state that N. C. Pelcher, Manager Port Arthur and Fort William Electric Ry., has resigned, on acount of disagreements with one of the members of the commission operating the railway.

D. J. McQuarrie, formerly manager of the B.C. Electric Ry. city and interurban service, New Westminster, was presented with an address, an arm chair and a silver tea service, by the employes, on his leaving the service recently.

The Toronto Suburban Ry., has ordered two pay-as-you-enter cars, with 32 ft. bodies, 7 ft. vestibules at each end, 46 ft. total length, on trucks with wheel base 4½ ft., 4 ft. 10⅝ ins. gauge. The car bodies are finished within and without in cherry.

The Nipissing Central Ry., operating between Cobalt and Haileybury, Ont., is reported to have ordered two trailers from the Preston Car and Coach Co., Preston, Ont., and also an additional generator set. The traffic, especially in the evenings, has increased at a quicker rate than was anticipated.

British Columbia courts have awarded $10,000 damages to the widow and child of a man who was killed in the Lakeview accident on the B.C. Electric Ry., last year. The company admitted liability and left it to the jury to assess the damages. Mrs. A. E. Kealy of North Vancouver has also recovered $700 for injuries sustained in the same accident.

The Montreal board of control has passed a resolution calling upon the Montreal Street Ry. to take steps to lessen the number of fatal accidents arising out of the operation of the railway. The board of which F. L. Wanklin, formerly manager of the M.S.R. is a member should know that the company is more interested in the prevention of accidents than anyone else.

A difficulty has arisen in Montreal as to the payment by the Montreal St. Ry., of percentage on fares. Since the agreement between the company and the city was entered into, there have been several annexations to the city, and the point which is being discussed, is whether the city is entitled to collect a percentage on fares paid on a route which is only partly within the city limits.

A board of conciliation has been appointed under the Lemieux Act, in the difference between the Toronto Ry. and its employes. The men ask 25c. an hour for first year men and 28c. an hour for all others, while the company suggests the adoption of the Montreal scale which is at the rate of 20c. and 21c. an hour. This rate, except for first year men, is less than is at present paid in Toronto. The board consists of J. G. O'Donoghue, K.C., representing the men; J. P. Mullarkey, representing the company, with Judge Barron, Stratford, Ont., as Chairman.

Telegraph and Cable Matters.

B. S. Jenkins, Superintendent of Telegraphs, C.P.R. Western Lines, visited a number of Pacific coast points during July, on a trip of inspection over the company's telegraph system.

It was announced in London, Eng., July 11, that the Marconi Wireless Telegraph Co., would receive messages for transmission, by wireless, to Eastern Canada, at sixpence a word.

The St. John Nfld., city council has decided to dismiss the Commercial Cable Co.'s application for exemption from taxation on its cables on the city streets.

The Newfoundland Government has decided to erect wireless telegraph stations at Fogo, Grey Islands, Belle Isle and along Labrador, to enable communication to be kept up with the sealing steamers during the season, and for general purposes.

Representatives of the Western Union Telegraph Co., returned to St. John, N.B recently from Newfoundland, where they had been for the purpose of locating a site for the landing of cables. It is understood that Bay Roberts has been selected, but nothing definite has been decided.

The Board of Railway Commissioners will sit in Winnipeg, Sept. 22, to hear, among other things, an application by the Winnipeg Board of Trade, and the Grain Exchange for the setting aside of the tariff of telegraph tolls charged by telegraph companies operating into and out of Winnipeg.

W. C. Muir, heretofore Superintendent Canadian Northern Telegraph and Express Companies, has been appointed General Superintendent Canadian Northern Telegraph and Express Companies, with office at Winnipeg, Scott Griffin, heretofore Manager at Toronto, having been appointed Manager Canadian Northern Steamships Ltd., London, Eng.

The board of conciliation appointed to enquire into the matters between the C.P.R. and its commercial telegraph operators, consists of J. E. Duval, Manager Canadian Car Service Bureau Eastern Lines, Montreal, chairman; F. H. McGuigan, Toronto, formerly Fourth Vice President G.T.R., representing the company, and D. Campbell, Toronto, on behalf of the operators.

The Dominion Government is reported to have entered into an agreement with the United Wireless Telegraph Co., as to the charges for communication between Dominion Government stations on the Pacific coast and vessels equipped with the United company's system. The rates generally are based on those agreed to at the Berlin convention, to which the U.S. was not a party, but by which the company has agreed to abide. The charge is $2 for 10 words and 2c. a word, of which amount, the land station receives 60% and the vessel 40%.

R. F. Easson, Superintendent of the press and commercial news department G. N. W. Telegraph Co., Toronto, who retired from the service recently, entered telegraph service with the Montreal Telegraph Co., at Toronto, in 1844, as messenger, and with the exception of a short period, from 1853 to 1855, spent in Chicago, his entire service has been in Toronto. He was appointed chief operator Montreal Telegraph Co., in 1864, and on the taking over of the property by the G.N.W. Telegraph Co., in 1882, he was appointed to the position which he has just resigned.

The balance sheet of the Marconi Wireless Telegraph Co. for 1909, presented at the recent annual meeting in London, Eng., shows a net profit of £11,400, out of which, interest on the 7% cumulative preference participating shares has been paid, and the balance carried forward. The report states that considerable progress was made during the year, and but for the fire which destroyed the Glace Bay station, then nearing completion, the result would have been better still. The new station is better in every way than the previous one, and a large increase has been made in the business handled. It is also stated that arrangements have been made, whereby the Canadian company will be in a position to repay the greater part of the £144,300. owing by it to the English company.

Dominion Telegraph Company.

The report for the year ended June 30, shows assets of $1,309,876.25, and liabilities of $1,015,878.63, with a balance at credit of profit and loss of $293,997.62. The Western Union Telegraph Co., which has a 99 year lease of the property, has distributed the guaranteed interest at 6%, quarterly, in advance, for the past 30 years. Following are the officers and directors for the current year: President, T. Swinyard; Vice President, Sir Henry M. Pellatt; Secretary and Treasurer, F. Roper; other directors, B. Brooks, T. F. Clark, Col. R. C. Clowry, Æ. Jarvis, C. O'Reilly, and A. G. Ramsay.

C. P. R. LANDS

The Canadian Pacific Railway Company have 3,000,000 acres of selected lands for sale in Manitoba and Saskatchewan.

Our new, illustrated handbooks describe them fully and will be promptly sent free to any applicant.

Write at once for any of the following books—maps and price lists will accompany them:—

"The Heart of the Saskatchewan Valley."—Describes lands for sale in part of Western Saskatchewan.

"Where Wheat is King."—All about Central and South-eastern Saskatchewan.

"Western Canada."—An illustrated handbook of the Canadian West.

"Western Progress."—An illustrated monthly bulletin, presenting in concise form up-to-date information concerning agricultural and commercial conditions in Western Canada, and containing announcements regarding the Company's new towns.

Address Desk R.,
F. T. GRIFFIN, Land Commissioner, Winnipeg.
J. L. DOUPE, Asst. Land Commissioner.

CANADA NORTH-WEST LAND CO.

This Company has 525,000 acres of selected lands in Manitoba and Saskatchewan which offer excellent opportunities to settlers and investors who desire to secure good lands in well-selected districts. These lands are on sale at the Company's Office at Winnipeg, and at the various land agencies of the Canadian Pacific Railway Company.

F. T. GRIFFIN. Land Commissioner, Winnipeg.

Montreal Street Railway Dump Car.

The Montreal St. Ry. Co. has recently added to its freight equipment a new type of dump car for handling stone. Several types of car were tried, with the result that all were found to be too slow in regard to unloading. The car that was required was one that would dump its load all to one side, free of the track, and do it quickly so as not to hold up passenger traffic. From these requirements the present car was developed with the result that one car was built by the Dominion Car and Foundry Co., in March, 1909. It was given a thorough test and was found to fulfil the requirements, and 24 more were built between July and Sept., 1909, and 25 more have been ordered from the Canadian Car & Foundry Co. On the cars last ordered. a plow device is added to the rear truck which spreads the rock after the car has deposited it beside the track. This plow device is detachable and is folded in when the car is in running position. The car can be dumped and righted in one minute, in fact the car body rights itself as it is balanced on rockers instead of hinges. The rocker feature is a decided advantage over the old hinge design as it allows the car to settle easily to the dumping position and thus avoids all the shocks that have always accompanied the old style of dumping car.

Montreal Street Railway Dump Car, unloading.

The car is built entirely of steel with the exception of the cab. The centre sills are composed of 12 in. 25 lbs. channels, braced with six 8x8 lbs. channel separators at rocker bearing point, and further tied together with a ⅞ rocker plate. The side is composed of 10x15 lbs. channel reaching from end sill to end sill secured with rolled connection angles. The end sills are also a 10 in. 15 lbs. channel faced with an oak beam 5 ins. thick, and securely bolted to the web of the end sill channel. The body bolsters are composed of 5 in. x 11.6 lbs. Z bars with ¼ in. cover plates top and bottom and secured to side and centre sills with ¼ in. gusset plate.

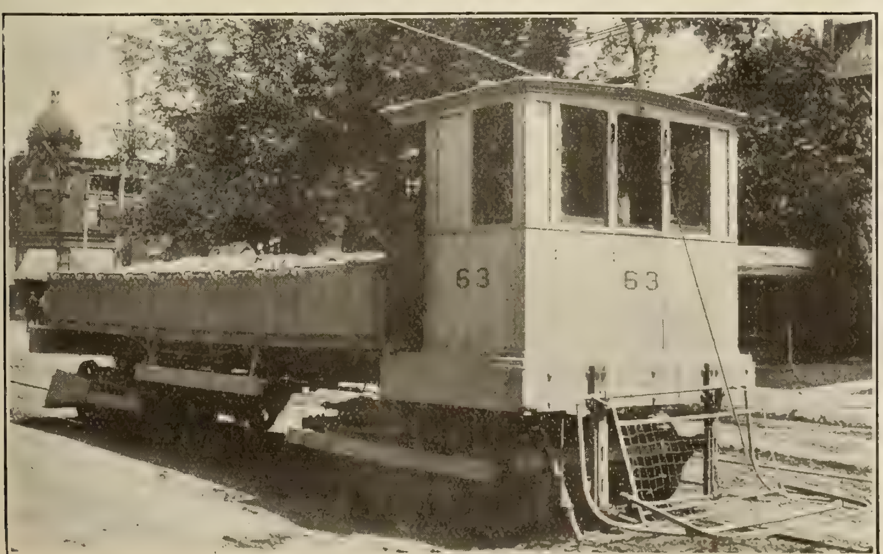
The car is not symmetrical, as the 10 in. side sill is on one side only. There are four channel diaphragms 5 ins. deep, reaching from the center sill to the side sill on the non-dumping side of the car; rivetted to these channels are the bearing plates that secure the operating shaft.

The car body is composed of light angles and ¼ in. plates securely rivetted together and is divided into five separate compartments; each compartment being 5 ft. wide by 7 ft. 11 ins. long, thus allowing different classes of material to be carried at the same time.

The car body rests on cast steel rockers, one at each end and at each partition. The cast steel rockers have lugs that engage openings in the ⅞ in. rocker plate. These rocker castings allow the car to rock easily to the dumping side of the car without any undue shock, and the car body is so balanced that it can easily be righted again.

The dumping mechanism is composed of two cast steel racks with pinions secured to the operating shaft; all easily controlled from the motorman's cab.

There are five doors of 3-16 in. plates reinforced with bars. They are hinged at the bottom and open downward so that when the car is dumped they form an extension and help to throw the load away from the track. The locking device for the doors is composed of a shaft 1½ in. round, extending the full length of car body; secured to this shaft are 10 malleable iron hooks, two to each door. The hooks lip over the top edge of doors, thus holding them securely in place. At each end of the door shaft there is a short lever which is connected to a toggle on the center sill by a connecting bar with turn buckle for adjusting. When the car body reaches a certain angle in dumping it operates the door locks automatically and releases the doors. Buffers are provided for the doors to fall on. Wood buffers are also provided on the trucks.



Montreal Street Railway Dump Car, loaded.

The trucks are the Montreal St. Ry. pattern but any standard truck may be used, although a truck with a short wheel base is preferred. The car is built with motors on each axle, hand brakes only, with the usual electrical equipment in cab. Sanding box and fenders are also used.

Following are the general dimensions:

Length over end sills, 33 ft.
Truck centres 21 ft. 3 ins.
Width of box 7 ft. 3 ins.
Length of box 25 ft.
Height of box 21¼ ins.
Box spring draft gear.
Angle of dump, 35 deg.
Capacity 40,000 lbs.
Cubic contents, 20 cubic yards.
Weight 26,000 lbs. without motors.

The Quebec Railway Light, Heat & Power Co. had two similar cars built by the Canadian Car & Foundry Co. in July as a trial order.

Montreal St. Ry. Mutual Benefit Association.

Following are extracts from the report for the year ended Apr. 30: A summary for the relief work done during the year shows that 705 members were disabled through sickness or injury; $8,874.90 was paid for sickness and injury; $1,614.85 for medicine, and $289.50 for pensions; $99.70 for withdrawals, and $12,183.35 for death and burial insurance. The sixth annual picnic showed a profit of $8,928.22. During the year, $19,189.75 was invested, the total amount invested being $67,915.25, the securities being deposited with the Royal Trust Co. The receipts include a special Christmas donation from the Montreal St. Ry., of $3,000, making a total received from the company of $15.476.53, which, added to the members' fees and dues of $14,075.50, and the proceeds from the picnic, interest on investments, and bank deposits, amounting to $13,864.88, makes a total revenue of $43,416.91. The expenses for the year were $30,898.73. leaving a surplus of $12,518.18.

At the annual meeting, the following committee of management was elected: W. G. Ross. D. McDonald, A. Gaboury, A. S. Byrd, R. H. Hannaford, H. G. Taylor, P. Dubee and D. E. Plair, on behalf of the company. and S. Dupras, O. Besner, J. Thibault. S. Chartier, J. Millette, Jno. Hughes and J. Poirier, on behalf of the men.

The Hamilton St. Ry. has received two pay-as-you-enter cars, 43 ft. over bodies, with longitudinal ~~bodies~~, from the Ottawa Car Co., Ottawa. seats

Stranding of the s. s. Ben Cruachan.

Judgment has been delivered in the matter of the stranding of the s.s. Ben Cruachan, near Port Nova island, N.S., May 31, while bound from Baltimore, Md., to Chatham, N.B., as follows:—The court finds that the Ben Cruachan was well found in all respects and was carefully navigated by the master up to noon on May 31; that from this time the soundings were too far apart to be of any practical value in determining the ship's position in the prevailing weather. The chart used was on too small a scale and did not show sufficient detail for coasting purposes. The master and officers being entire strangers to this coast were evidently misled in the fog signal as given by Louisburg, and considered it was that of Scatterie island, but the master having a list of fog signals on board should have been forewarned by the fact that there was a similarity between the signals of these two places, and should have taken more soundings to determine his position with greater accuracy. The court considers that the mate was somewhat careless in making the entries in the ship's log book, and also considers that the fog signals at Scatterie and Louisburg are too similar in character, considering the distance they are apart. Taking into consideration the care shown by the master in the navigation of his ship, we are of opinion that the cause of stranding was due to an error of judgment by the master and officers, and consider it necessary to caution the master, since he is an entire stranger to these ports, that while navigating along the Nova Scotia coast, and the Eastern provinces, he should supply himself with a chart on a larger scale, and also full sailing directions.

The St Andrews Lock and Dam.

The lock and dam which have been constructed on the Red River, between Winnipeg and the outlet of the river into Lake Winnipeg, were formerly opened by the Minister of Public Works, July 14. The work was practically completed last fall, and the lock was opened for navigation at the commencement of the present season.

The lock is similar in type to those on the Welland canal, and will accommodate a vessel 215 ft. long, 45 ft. wide, with a draught of 90 ft. The dam is 800 ft. long, and 25,000 cub. yds. of concrete was used in its construction. The main concrete piers are about 134 ft. centre to centre, carrying the steel superstructure, which is of the double deck type, the lower level being used in connection with the movable curtain dams, with an electric travelling crane for their operation, while the upper level is used as a traffic bridge, to connect the two sides of the river. The top of the submerged dam forms a bearing for the castings sustaining the girders of the curtain frame. The main piers are 14 ft. wide by 55 ft. long at the top, and 14 by 76 ft. at the base, with an average height of 50 ft., the piers facing up stream, are projected 21 ft. at an angle of 45 deg., with a 7 ft. radius, dropping vertically to bed rock, as a protection against ice. The lock is equipped with gates 28 ft. long by 37 ft. high, at the upper end, and 28 ft. long by 23 ft. high at the lower end. The curtains of the movable dam consist of wooden laths 7 ft. 3¾ ins. long by 3 ins. connected with copper links. In the complete structure, there are 110 such curtains. These are operated by four electric cranes.

The dam has the effect of raising the water level at Winnipeg 2 ft., thus giving 9 ft. of navigable water there. The Minister of Public Works, stated some time ago, that exclusive of the sums spent on this work in earlier years, the improvement had cost $1,100,000.

The Dominion Premier, in a speech at the formal opening, said that there was now a clear space of navigation for 300 miles; this, though a considerable achievement, was only the beginning. the Red River had been opened to navigation to Winnipeg, and it now remains to open the Saskatchewan River to Edmonton. Engineers are already surveying the Saskatchewan, and, he believed, that before many years had passed the river would be open to navigation. Tributes were paid to the contractors, Haney, Quinlan and Robertson, and to A. R. Dufresne, engineer in charge, for the ability shown in the carrying out of the work.

The s. s. Thomas J. Drummond.

This vessel, which has recently been added to the Algoma Central and Hudson Bay Ry. Co.'s fleet and named after the company's president, is of the single deck type, and of the following dimensions: length 248 ft., breadth 44 ft., depth moulded 26 ft. She is built to British Corporation Survey with scantlings, entitling her to trade in any waters, and is specially designed for carrying rails and bulk cargo, her arrangements being such that these may be handled with the greatest possible facility. The hold space is divided into three compartments, and extra strength is introduced in the structure of the vessel where additional strains are likely to be experienced when engaged in her special trade. A cellular double bottom of extra depth over rule requirements, and fore and after peak tanks, are arranged for carrying water ballast. Her deck machinery, including winches, windlass, and capstan, is all arranged for the speedy and easy handling of the vessel. The steam steering gear works direct on to the rudder quadrant, the rudder being of the usual balanced lake type, and fitted with coupling to permit of easy removal. A large coal bunker is fitted on deck as well as bunkers alongside boilers, all arranged so that trimming can be practically dispensed with. Electric light is fitted throughout the vessel, including holds. Accommodation is provided in the forecastle forward for mates, wheelmen, watchmen, and deck hands; a suite of rooms with bathroom is arranged for owner, while the captain's accommodation, including bedroom, bathroom, office, and chart room, is arranged in texas house on top of forecastle. A wheel house is fitted on top of texas house, with telegraph for docking and telegraphs and whistle pulls to engine room. The engineers are accommodated aft, where also the dining saloon, pantry, galley, mess-room, and ice house are placed. The vessel is propelled by machinery of the triple expansion single screw type having cylinders 20½, 33 and 54 by 36 in. stroke, supplied with steam from two boilers 14 by 10½ ft., working at a pressure of 190 lbs. The main engines are controlled by steam and hydraulic starting and reversing gear, and have also steam turning gear; a special feed pump is fitted, also feed heater, there is an atmospheric self-tipping ash hoist, and the whole engine room equipment is thoroughly up-to-date.
